1942

FOREWORD

Naturally, in this YEAR BOOK of the events of 1941, the consultant will immediately seek the effects of total war—or the effects as each link toward total war was forged—on the field of his particular interest. The story is here. In some few instances the war was but little more than a shadow by the end of the year; in others it had entirely replaced normal peace-time activities. "War," as stated editorially in *Engineering News*, "uses all the construction tools, materials, equipment, and supplies of peace. It uses them harder, consumes them, and destroys them." The emphasis might well be on "all supplies of peace . . . and destroys them," for, as the last war and all previous wars have shown, the salvage of all but human supplies when war is over is negligible.

Almost every contributor to this YEAR BOOK, no matter how remote from warlike activities his topic might appear during ordinary years, found that "all out" war actually means *all* out—that no one and no interest is exempt, that "war consumes all." So startling was that realization to many contributors after the events at Pearl Harbor brought the United States forcibly into active participation that they seemed to think that their readers might miss the significance. Their articles, each of course written after the close of the year, were introduced (in the copy) by a recital of the dastardly attack on Pearl Harbor and the effect from that latest blow on world progress.

War is definitely the key-note in this volume. Its ugly head has obtruded even into such quiet realms as Photography, in many ways; into Literature, through the under-cover efforts in occupied countries to bolster national morale; into Religion, where it seeks to destroy faiths; even into such non-military pursuits, among many, as Dentistry and Psychiatry. By the time this record is printed, every resident of the country will have learned by the bitterness of lessons that, no matter how humble or exalted his station, he has been obliged in some degree to modify his ordinary habits. Certain articles of food can no longer be obtained; scarcity of rubber and of gasoline is curtailing reliance upon motor transportation; building material, plumbing supplies, and even certain textiles are not available for private use. The paper upon which this book is printed is not as white as the publishers would like, because chlorine, used by paper-makers to bleach the pulp, is more imperatively required in the production of explosives.

Ships, airplanes, and guns; trained men to use them and trained men to produce them—these, in war-time, take precedence over all other wants or desires.

If one were able to detach his mind from personal feeling and view the record objectively, it would be fascinating. A tremendous forest fire is nonetheless a grand spectacle, though it be devastating. So with the swift move of this cataclysmic war. Hitler's strategy—a clasp of friendship with the right hand, a rapier-stab with the left—was again employed successfully against Yugoslavia and, not so successfully, against Russia. By the end of the year, Japan had shown herself an apt pupil of the same maneuver, and with her perfidy War completed its encirclement of the northern hemisphere. Through the year the moves were those of a gigantic chess game—pawns moved cautiously about, a misleading threat by bishop or knight, capture of an occasional minor or major piece, sudden swoop of queen or rook, elusive countermoves. But no move could be made advantageously except through the cooperation of whole nations supporting the pieces on the board.

The record, then, includes not only the gains or losses of military forces and naval forces in the several campaigns, but also the more significant gains or losses of vast bodies of men far from the battle line without whose help battles could not be won. The internal histories of the countries at war, as well as those still at peace, their political developments through the year, their productions of food and other supplies, their achievements in the maintenance of health, their discoveries of new resources, their persistence with that ephemeral thing called "morale"—resulting, in part, at least, from continuance with sports, painting,

FOREWORD

theater, motion-pictures, literature, radio—all are vital factors in the struggle; any one may determine ultimate success or failure.

As with earlier YEAR BOOKS, the topics herein are alphabetically listed, each under logical key-word, but with copious guiding cross-references. The editor and his staff have been confronted with a more arduous task than ever before—to retain all the desirable features, authority, and accuracy for which this YEAR BOOK has long been noted, but in addition to provide space for many new Federal agencies and for adequate treatment of the greatly expanded war itself, and of the many topics closely bearing upon the conduct of the war. Certain curtailments have been necessary. The editor begs the indulgence of contributors whose articles he has been obliged to condense.

Dr. H. A. DeWeerd extends his masterly review of the War (now listed under WORLD WAR) to cover not only the campaigns in Europe and Africa, but also the involvement of Japan and the United States. For many years, the annual review on NAVAL PROGRESS has been ably offered by Captain C. H. McMorris and was to have been again prepared by him. Captain McMorris was stationed at Pearl Harbor on December 7th. Though he promptly wrote that he would be unable to fill the assignment, his letter did not reach the editor until the last day of the year. A more able successor than Mr. Allan Westcott would be difficult to find. The editor is especially grateful to him for his willingness to accept the post of a friend and on short notice to prepare an exceptionally comprehensive and complete review of this most important subject. Similarly, the editor is extremely grateful to Dr. Allan Nevins who, on equally short notice, lent his valuable and understanding assistance to the preparation of the article, UNITED STATES.

So much of interest or value is offered in these pages that it may safely be said that one can scarcely open the book at random without finding some important fact to arrest the eye. Many new topics are included; many new contributors are presented. Among the latter may be named Prof. Alrik Gustafson, DANISH and SWEDISH LITERATURE; Dr. Einar Haugen, NORWEGIAN LITERATURE; A. W. Lehman, RADIO PROGRAMS; Bert Pierce, MOTOR VEHICLES, and Alfred Senn, SWISS LITERATURE. To each who is new to these pages, to those who again honor these pages, and to the hundreds of others who have gratuitously supplied countless items of fact without thought of recognition, the editor desires to acknowledge his indebtedness publicly. To the editors of newspapers throughout the country who have supplied material concerning their respective States, the editor also extends his appreciation.

But above all, no fitting tribute can be paid to the members of the staff of this YEAR BOOK, especially to Mr. Kain, Miss Harmon, Mr. Vizetelly, and Mr. Whitmore. The editor can merely say that from the depths of his heart he appreciates the loyal cooperation, tireless energy, valuable suggestions, and willing spirit constantly displayed by each member even in the face of requirements that often seemed impossible of achievement.

**THE NEW
INTERNATIONAL
YEAR BOOK**

SPECIAL FEATURES

A thousand or more titles will be found in the YEAR BOOK, arranged alphabetically from AAA to Zoology, and numerous cross-references will direct the reader specifically to the subject he seeks. For convenient reference, certain special features are listed below. For all other titles, see the main topic in its alphabetical position; as, "National Defense," see pages 391-2.

	PAGE		PAGE
Academicians	1, 225	Government Employees	135
Accident Rates	2, 3, 721	Highways of the Western Hemisphere . . .	571

ACADEMY, French. See FRENCH LITERATURE.

ACADEMY OF ARTS, Royal. The Royal Academy of Arts, founded by King George III in 1768, is maintained, through the public support of its Exhibitions, for the promotion of the Fine Arts: its main functions are the conduct of a free Art School of Painting, Sculpture, and Architecture; the holding of Exhibitions, free of charge to the exhibitors, of Painting, Sculpture, Architecture, Drawing, and Engraving; and the distribution of charitable funds for the relief of distress among artists and their widows. It is also the chief center in Great Britain for the discussion of matters affecting the interests of the art and artists of the country, and for combined action toward the preservation or creation of important works of art. The Royal Academy carries on its work entirely by the services of its own Members and Staff, who are subject only to the approval of the Sovereign, and not responsible to or financially dependent on any Department of the State. Besides its free Art School it maintains a comprehensive Art Library and a permanent collection of works by Old Masters.

The Membership consists of forty Academicians and thirty Associates, elected by ballot by the Members from among the most distinguished painters, sculptors, architects and engravers practicing in the country.

During 1941 the Royal Academy held its Summer Exhibition as usual, from May 5 to August 9. During September it lent some Galleries for Exhibitions of the National Savings Committee (Posters Competition) and the London Fire Service Artists' Committee; and in November the Royal Society of Portrait Painters held its annual exhibition in a part of the Galleries. During December the Royal Academy, in collaboration with the other principal Art Societies of Great Britain, organized a United Artists' Exhibition of works to be sold in aid of H.R.H. the Duke of Gloucester's Red Cross and St John Fund. The Officers of the Royal Academy for 1941 are as follows: President and Trustee, Sir Edwin L. Lutyens, K.C.I.E., P.R.A.; Keeper and Trustee, Sir Walter W. Russell, C.V.O., R.A.; Treasurer and Trustee, Sir Edwin Cooper, R.A.; Trustee, Sir William Reid Dick, K.C.V.O., R.A.; Secretary, W. R. M. Lamb, C.V.O., M.A.

ACADEMY OF ARTS AND LETTERS, American. A society founded in 1904 by members of the National Insti-

tute of Arts and Letters for the purpose of furthering and representing the interests of literature, painting, sculpture, architecture, and music. Its membership is limited to 50 chairs, vacancies caused by death being filled by elections from the membership of the Institute.

The membership of the Academy as of Nov., 1941, consisted of the following in the order of their election: Bliss Perry, Abbott Lawrence Lowell, Nicholas Murray Butler, Herbert Adams, Archer Milton Huntington, Newton Booth Tarkington, Charles Dana Gibson, Royal Cortissoz, Wilbur L. Cross, Hermon A. MacNeil, James Earle Fraser, Robert Frost, James Truslow Adams, William Lyon Phelps, Adolph Alexander Weinman, Walter Damrosch, Anna Hyatt Huntington, Paul Manship, Cecilia Beaux, Eugene O'Neill, Henry Dwight Sedgwick, Walter Lippmann, M. A. de Wolfe Howe, Frank Jewett Mather, Jr., Stewart Edward White, Deems Taylor, Charles McLean Andrews, Van Wyck Brooks, Herbert Putnam, William Adams Delano, Charles Warren, Bernard Berenson, Chauncey Brewster Tinker, Albert Spalding, Sinclair Lewis, Stephen Vincent Benét, Willa Cather, Ellen Glasgow, Thornton Wilder, Ralph Adams Cram, Edna St. Vincent Millay, Carl Sandburg, Agnes Repplier, Charles Hopkinson, and Paul Philippe Cret.

Throughout 1941 (with the exception of the summer months) a joint exhibition of the works of Childe Hassam, a member of the Academy who died in 1935, and of Edwin Austin Abbey, a member of the Academy who died in 1911 has been shown in the art gallery, and will continue indefinitely. The Abbey paintings were lent by Yale University. This gallery and the permanent museum are open and free to the public from 1 p.m. to 5 p.m. weekdays and from 2 to 5 p.m. Sundays and holidays.

Officers of the Academy elected in 1941 were: President, Walter Damrosch; Chancellor and Treasurer, James Truslow Adams; Secretary, William Lyon Phelps; Directors: Stephen Vincent Benét, Van Wyck Brooks, William Adams Delano, Charles Dana Gibson, Deems Taylor, and Chauncey Brewster Tinker. Administrative offices are at 633 West 155th St., New York City.

ACADEMY OF DESIGN, National. An organization of American artists, established in New York in 1825 and incorporated in 1828 for the purpose of "cultivation and extension of the arts of design." In 1906 the Society of American Artists merged with the Academy.

The Academy maintains annual Exhibitions of painting, sculpture, and engraving, to which all

artists may contribute, subject to jury. At these exhibitions various prizes are awarded. It conducts an Art School at which no tuition is charged. It also administers the Henry W. Ranger Fund for the purchase of paintings to be presented to various museums. Its membership is limited to professional painters, sculptors, workers in the graphic arts, and architects.

The Academicians elected at the annual meeting in April, 1941, were: Painters—Paul Sample, Luigi Lucioni, Alphaeus P. Cole, N. C. Wyeth, Junius Allen, Isabel Bishop, Dines Carlsen. Sculptors—Charles L. Hinton, George Snowden. Architect—Benjamin W. Morris. Graphic Arts—Stow Wengengroth.

The Associates elected in March, 1941, were: Painters—Peter Hurd, Ernest N. Townsend, Carroll S. Tyson. Sculptors—Richard Recchia. Architect—Charles D. Maginnis. Graphic Arts—Grace Albee, J. J. Lankes, Rudolph Ruzicka.

Elected officers are: Hobart Nichols, President, Edward McCartan, First Vice-President; John Taylor Arms, Second Vice-President; Charles C. Curran, Corresponding Secretary; Georg Lober, Assistant Corresponding Secretary; Charles S. Chapman, Recording Secretary; Frederick Ballard Williams, Treasurer; Charles Keck, Assistant Treasurer. The Galleries and Executive Offices are located at 1083 Fifth Avenue, New York.

ACADEMY OF SCIENCES, National. The National Academy of Sciences was incorporated by Act of Congress in 1863 for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art whenever called upon by any department of the United States Government. Membership is by election, as described in the **YEAR BOOK** for 1940.

At the Annual Meeting held in Washington, D.C., April 28, 29, and 30, 1941, 15 new members and three foreign associates were elected. The Henry Draper Medal was presented to Dr. Robert Williams Wood, of Johns Hopkins University, in recognition of his contributions to astronomical physics.

At the Annual Meeting, the Academy established, under its charter, the organization for the National Science Fund for the promotion of human welfare through the advancement of science. The National Science Fund will receive from individuals or others, donations, bequests, grants or other gifts of money to be expended in such manner as in the judgment of the Board of Directors of the Fund will best promote human welfare through the advancement of science. The Board of Directors consists of the President and Treasurer of the Academy, the Chairman of the National Research Council, and the President of the American Association for the Advancement of Science, during and by virtue of their office, together with additional members (both members and non-members of the Academy) appointed by the Council of the National Academy of Sciences. The Fund will be operated exclusively for scientific, literary, or educational purposes and no part of the net earnings of the Fund shall inure to the benefit of any private individual, and no part of the activities shall consist in carrying on propaganda or otherwise attempting to influence legislation. The Board of Directors of the National Science Fund have an office at 515 Madison Avenue, New York City, to which should be addressed all inquiries concerning the Fund.

The Autumn Meeting was held at the University of Wisconsin, Madison, Wisconsin, on October 13, 14, and 15, 1941. The Academy publishes an

Annual Report, Biographical Memoirs of its deceased members, occasional scientific *Memoirs*, and monthly *Proceedings*. The officers of the Academy are: Frank B. Jewett, President; Isaiah Bowman, Vice President; L. J. Henderson, Foreign Secretary; F. E. Wright, Home Secretary; J. C. Hunsaker, Treasurer; and Paul Brockett, Executive Secretary. The Academy building is at 2101 Constitution Avenue, Washington, D.C.

ACCIDENTS. The 1941 accident toll in the United States, according to National Safety Council estimates, amounted to 101,500 deaths, about 9,300,000 persons injured and direct costs aggregating 3¼ billion dollars. These totals represent increases of 2 to 5 per cent from 1940. The preliminary estimate of property destroyed or damaged by fire was \$322,000,000, also 5 per cent above the comparable preliminary estimate for 1940.

The trend of accidental deaths over the last decade has been mixed. In 1931 the total was 97,261. In 1932 it reached the low of 89,031, but in 1934 it was up to 100,977 and in 1936 to 110,052. These two high totals were in part due to the large number of deaths from excessive heat.

The following table shows the 1940 and 1941 death totals for the four principal classes of accidents, together with the per cent increase in each class:

	1941	1940	Change
Total	101,500	96,885 *	+ 5%
Motor Vehicle	40,000	34,501 *	+ 16%
Public (not motor vehicle)	14,500	15,000	- 3%
Home	32,000	33,000	- 3%
Occupational	18,000	17,000	+ 6%

* The 1940 figures for total and motor vehicle are from the U.S. Census Bureau. All others are National Safety Council estimates. The totals exclude duplication of occupational-motor vehicle deaths.

The 1941 accidental death rate per 100,000 population was 76.2. Comparable rates are: 1940, 73.4; 1930, 80.5; 1920, 71.3; 1910, 84.4.

Heart disease, cancer, cerebral hemorrhage, and nephritis were the only causes of death exceeding accidents in 1940, according to U.S. Census Bureau data. Preliminary information indicates the same ranking for 1941. Among males, alone, accidents have for several years been either the second or third most important cause of death, being exceeded by heart disease and, in some years, cancer. From age 3 to 25, both sexes, accidents caused more deaths than any disease in 1940. In 1939, among males they were first from age 3 to 38.

The 1941 accidental deaths were distributed by age as follows: 0-4 years, 7,150; 5-14 years, 7,100; 15-24 years, 14,250; 25-64 years, 45,350; 65 years and older, 27,650. The 1940 Census population figures by age are not yet available, but it is certain that the highest death rate per 100,000 population was for 65 years and older—in the neighborhood of 310. In contrast, the rate for children 5 to 14 years old was only about 32, or one-tenth as much. In most recent years the rate for elderly people has been rising steadily, while that for school children has been going down, although in 1941 there was a small reversal of this trend.

Motor Vehicle Accidents. The 1941 motor vehicle accident death total of 40,000 represents an increase of 16 per cent from 1940. However, there were also 11 per cent more vehicle-miles driven in 1941, and the death rate per 100,000,000 vehicle miles therefore, rose only 4 per cent to 12.6. Since 1931, when the death rate was 17.0, there has been a 26 per cent reduction in the rate.

In addition to the deaths, about 1,400,000 per-

sons received nonfatal injuries in motor vehicle accidents during 1941, or one out of each 95 persons in the United States. Wage loss, medical and insurance costs amounted to about \$900,000,000; and property damage to approximately an equal amount—a grand total of \$1,800,000,000.

The increase in motor vehicle deaths from 1940 to 1941 came principally from rural accidents. These rose about 21 per cent to a total of 25,500, while deaths from accidents in towns and cities went up only 7 per cent to 14,500. Pedestrian deaths increased 11 per cent, to a total of 13,900. Nonpedestrian fatalities totalled 26,100—up 19 per cent from 1940.

Increases in deaths were recorded for all age groups. There were 11 per cent more fatalities among children under 5 years in 1941 than in 1940. Deaths in this group numbered 1,300, compared to 1,176 for the previous year. Deaths of school children, 5 to 14 years, rose 16 per cent, from 2,584 to 3,000. This is one of the few increases that have interrupted the downward trend that started two decades ago. Deaths in the 15–24 age group went up 24 per cent from 6,846 to 8,500. In the 25–64 age group fatalities numbered 20,900, or 15 per cent more than in 1940. For persons 65 years or older the death total rose 11 per cent from 5,651 to 6,300.

Public Accidents. Deaths from public (not motor vehicle) accidents decreased to 14,500 in 1941, from the 1940 total of 15,000. In 1931 these deaths numbered approximately 20,000. The ten-year decrease amounted to 27 per cent. The 1941 nonfatal injury total was approximately 1,750,000. Wage losses, and medical and insurance expenses amounted to about \$400,000,000.

Some types of fatal public accidents decreased in 1941; others increased. Deaths from burns dropped sharply, partly due to the 1940 total including the Natchez, Miss., dance hall disaster. Falls decreased about 1 per cent. Drownings rose 2 per cent; fire-arms accidents 9 per cent. Airline companies had four fatal accidents. Thirty-five passengers were killed in these accidents, the same number killed in the three 1940 accidents. Railroad passenger fatalities dropped to about 30, according to 11-month reports, but trespasser deaths rose 7 per cent to approximately 2,300.

Home Accidents. Deaths from home accidents decreased from 33,000 in 1940 to 32,000 in 1941. In 1931 home accident deaths totalled only 29,000. Nonfatal injuries in 1941 numbered about 4,700,000. Wage losses, medical expense and insurance costs amounted to approximately \$600,000,000. Most types of accidents shared in the decrease. Falls dropped 2 per cent, burns 4 per cent, absorption of poisonous gas 9 per cent, and poisonings 11 per cent. Firearms accidents, in contrast, increased 12 per cent.

Occupational Accidents. The 1941 death total for occupational accidents was 18,000, an increase of about 6 per cent from the 1940 total of 17,000. The 1931 total was slightly lower—17,500. There were approximately 1,600,000 nonfatal injuries in 1941. Total wage loss, and medical and insurance expenses amounted to about \$750,000,000.

The only major disaster in 1941 was a ship and pier fire at Brooklyn, N.Y., in which 34 longshoremen and 2 repairmen lost their lives.

The increase in occupational accidents was accompanied by greater employment. According to the U.S. Department of Labor, manufacturing employment increased 17 per cent over 1940, and total nonagricultural employment went up 9 per cent. However, accident rates based on man-hours

worked, and covering both fatal and nonfatal injuries, were higher in 1941. Plant safety contest reports show an increase of 8 to 20 per cent in the frequency rate (injuries per million man-hours), but a substantial decline in the severity rate (days lost per thousand man-hours).

ADULT EDUCATION. See EDUCATION; LIBRARY PROGRESS. Compare topics listed under DEFENSE TRAINING.

ADVANCED STUDY, Institute for. An institution of higher learning founded in 1930 by Mr. Louis Bamberger and Mrs. Felix Fuld. The Institute is different in character from any other American educational institution in that it is planned for students who wish to pursue advanced research beyond the level of the doctor's degree. It has no tuition fee, no routine requirements, no examinations, and awards no degrees. The work is largely individual, though there are seminars and courses of lectures in some subjects. The Institute consists of three schools: mathematics, economics and politics, and humanistic studies. It maintains also in cooperation with Princeton University the Gest Oriental Library on Chinese literature. Since September, 1940, several members of the Economic and Financial Section of the League of Nations have been housed in Fuld Hall, where they carry on the regular work of their department of the League.

The Institute for Advanced Study is supported entirely by an endowment which amounts to just over \$8,000,000. In addition to the gifts made by the founders, the Rockefeller Foundation has contributed half the cost of the Gest Oriental Library, and the Carnegie Corporation and the Rockefeller Foundation have contributed funds which maintain a number of promising scholars. Located at Princeton, N.J., the Institute has the cooperation of Princeton University, which generously made available all its resources in faculty, libraries, and other facilities for advanced work. In 1941–42 there were 53 members working at the Institute and 32 scholars on the staff, in addition to the director, Frank Aydelotte. Abraham Flexner is Director Emeritus. Headquarters: Fuld Hall, Olden Lane, Princeton, N.J.

ADVENT MOVEMENT. A religious movement which originated in America with William Miller (1782–1849), who believed in the imminent, personal second coming of Christ. There are six Adventist bodies in the United States, the largest being the Seventh-day Adventist Denomination, formally organized in 1860, which observes Saturday as the Sabbath of the Scriptures. Headquarters, Takoma Park, Washington, D.C. For statistics, see RELIGIOUS ORGANIZATIONS.

ADVERTISING. See FASHION EVENTS; LIQUOR PRODUCTION; NEWSPAPERS AND MAGAZINES.

ADVISORY COMMISSION TO THE COUNCIL OF NATIONAL DEFENSE. See NATIONAL DEFENSE AND WAR AGENCIES; TRANSPORTATION DIVISION.

AEGEAN ISLANDS, Italian. See ITALIAN AEGEAN ISLANDS.

AERONAUTICS, Military. By the end of 1941 there could be no further question of the controlling im-

portance of air power in modern warfare. The German sweep through the Balkans, the dramatic capture of Crete, the Japanese drives in the Philippines and Malaya added new lessons to those of the Polish, Norwegian, and Western European campaigns in the effectiveness of a combination of air supremacy with strong surface forces. The 1941 successes of the British in Libya were largely controlled by the air strength they could bring to bear upon the Axis forces and supply lines. The attack upon Pearl Harbor and the sinking of at least three British and Japanese battleships in the first weeks of the Pacific War were a devastating proof of the vulnerability of capital ships to determined air attack. In Russia an unsuspected aerial strength of the defenders, and the Soviet strategy of dispersing their air bases in depth as well as width, prevented the Germans from ever achieving the extreme air supremacy they had exploited so successfully in earlier campaigns. Even so, concentrations of Nazi air power and tank forces played major roles in the sweep that almost reached Moscow and the ultimate extent of Russian counter-offensives seemed at the beginning of 1942 to depend upon Russia's ability to maintain and increase its airpower.

In any case, it was apparent from the programs of production announced by President Roosevelt after his conference with Prime Minister Churchill that the United Nations realized that ultimate victory would require an overwhelming air supremacy in every theater of the war no matter how important land and sea forces might also prove in future campaigns. Within a few weeks after its entry into the war, the United States was rushing preparations to add the facilities of a large part of its automotive industry to the capacity of factories already working on a program for the production of military aircraft which it had inaugurated in 1940 and expanded during 1941. Funds in vast quantities were already appropriated and more would certainly be available as needed. It seemed unlikely that any matter of executive jurisdiction, property rights, or labor privilege would be allowed to cause serious interference with the achievement of a goal of 60,000 airplanes in 1942 and 125,000 aircraft in 1943.

The relative strength of the air forces (combat units) of the chief warring powers was estimated as follows in the *New York Times*, Dec. 14, 1941. See also MILITARY PROGRESS; NAVAL PROGRESS; WORLD WAR.

WARRING AIR FORCES*

	<i>Allies</i>	<i>No. of Planes</i>
United States	3,000-5,000
Great Britain	4,500-5,500
Russia	?
China	100-200
Netherlands Indies	500-600
	<i>Axis</i>	
Germany	5,500-8,500
Japan	5,000 [?]
Italy	1,500-3,000
Hungary	400-600
Finland	200-300
Bulgaria	100-300
Rumania	500-700

* Corrected for known losses up to Dec 12.

Two great questions did however remain. The first concerned the quality of American aircraft. The second was the problem of converting factories, machine tools, and labor to the production of a new product within the limited time permitted under the production proposals.

The comparative military excellence of aircraft is an extremely complicated subject and the answering of some published criticisms of American

aircraft was a difficult task. Some American pursuit planes rushed to England or Africa had been found deficient in some respects. Some of these related to armament and armor and were promptly remedied in later production. Others had to do with the necessity of meeting in American types greater requirements of fuel range than are needed in the specialized task of defending the British Isles. Still other complaints seem to have been caused largely by the lack of familiarity of British pilots with American engines and engine control systems and were withdrawn after such familiarity was acquired. American dive bombers and medium bomber aircraft were admittedly the equals of corresponding types in any other air force and long range heavy bombers as built by Boeing and Consolidated were almost universally admitted to be unrivalled elsewhere. With at least four new pursuit types in production or about to go into production which could fly faster than 400 m.p.h. with full armor and armament, American aircraft manufacturers were confident as to the quality of their product.

The nation's ability to meet the production schedule it had set for itself depended upon many complex factors outside the aircraft industry such as the availability of aluminum, magnesium, and other critical metals; the ability of the nation to protect its coastal factories from attack or interruption until inland units got into capacity manufacture; the organization of new supplies of such non-aeronautical items as machine guns and cannon; the effectiveness of thousands of sub-contractors and suppliers of accessory parts who share in the production of modern airplanes, engines, propellers, and instruments.

The task of meeting a huge numerical quota was also heightened by the fact that the program set called for swiftly increasing proportions of units with a large gross weight and high unit horsepower requirements. Most encouraging, however, was the fact that production in 1941 plotted by months coincided almost perfectly with the chart set for production in that period. Starting with 630 units in January, the curve of actual production rose steeply to an output of approximately 2,400 in December. Total output of the year was approximately three times the total production for 1940 and within a few per cent of that planned for 1941. Another favorable factor holding considerable promise of success of the 1942 program was the fact that the automobile industry had since 1940 been in intimate contact with aircraft problems, had made some substantial contributions to the 1941 effort, and was already geared for active aircraft production on a large scale during 1942 according to a plan in which automotive units were to feed sub-assemblies into new assembly factories being rushed toward completion at a number of mid-western cities. Biggest new task set by the program of January, 1942, was to supplement this automotive participation with production in already existing automobile factories converted to aircraft work. See MOTOR VEHICLES.

World Air Transport. In a world so dominated by war, a surprising amount of international air transport activity continued throughout 1941. While all international air services moved unmistakably toward a state of becoming government instruments for the transport of passengers, mail, and express of importance to national military or political programs, the operating status of most world airlines was little changed between the beginning of 1941 and the entrance of the United States into the war.

The Axis nations maintained at least skeleton services over a number of airlines in Europe. In

fact, even at the end of the year, transport planes of Germany, Italy, Spain, Great Britain, and the United States were continuing to meet in the air over Portugal, to which Pan American Airways was still operating the sole remaining commercial transport service between North America and Europe. The British, in addition to their service to Lisbon, kept up air connections between those parts of their Empire in Africa, India, and Australasia. Although forced steadily to yield to an American drive to eliminate them from the Western Hemisphere, Axis-owned Airlines and affiliates were, in November, still operating more than 30,000 miles of air routes in Latin America, and an Italian line was operating a service across the South Atlantic between Europe and Brazil.

Under the American flag, Pan American Airways in the first eleven months of 1941 carried out wide improvements of service on routes established prior to 1941 in Latin America, Alaska, across the North Atlantic, and across the Pacific to China and New Zealand. In China the China National Airways, in which Pan American Airways is associated with the Chinese National Government, kept open a service between Hong Kong and Chungking. This formed the only link other than the Burma Road between the Chinese capital and the outside world. Many thousands of miles were added during 1941 to the Pan American network. The trans-Pacific route was extended to connect Manila and Singapore on alternate weeks. Cooperating with United States Federal authorities, Pan American and its partner company, Pan American-Grace Airways, added some 15,000 miles of air routes to their lines in South America, largely at the expense of Axis-owned or Axis-dominated operators.

Colombia nationalized the once German airline SCADTA. Peru grounded the Lufthansa subsidiary in that country. Bolivia took over Lloyd Aereo Boliviano, another German subsidiary. Ecuador cancelled permits for still a third German-controlled operation. In every instance Pan American, or Pan American-Grace was promptly awarded operating privileges or at least management contracts. At the same time Brazil was permitting Pan American to extend its operations in her territories in such a way as to parallel and offer superior service along many routes originally established by German companies.

In November, after extensive preparatory efforts, Pan American started service on a 12,000 mile airline from Miami to Khartoum, Egypt, designed to facilitate delivery of American-built military aircraft to the Middle East. Intermediate bases were located in Puerto Rico, Trinidad, Brazil, Liberia, French Equatorial Africa, and the Belgian Congo.

Courtesy of The New York Times

NEW PAN AMERICAN AIRWAYS ROUTE TO THE BELGIAN CONGO

The operation included a clipper service between Miami and Africa, a trans-African landplane airline, and an organization to ferry military aircraft over the entire route. The clipper planes crossing the South Atlantic from Natal, Brazil, landed at either Bathurst, Gambia, or Monrovia, Liberia, and continued on to Leopoldville, Belgian Congo, where they connected with the South African airway network.

The outbreak of the war in the Pacific immediately involved Pan American bases at Midway, Wake, Guam, Manila, and Hong Kong and thus caused the suspension of trans-Pacific service west of Hawaii and the final cutting of the Hong Kong-Chungking operation. Elsewhere, the entry of America into the war left Pan American operations unaffected for the time being. On the positive side, the prompt anti-Axis reactions throughout Latin America after the attack at Pearl Harbor promised an early termination of all European competition in that sphere. See countries under *Transportation and History*.

Domestic Air Transport. The national defense program, the general high level of business activity, and a steadily widening acceptance of air travel combined, in 1941, to produce record volumes of all types of traffic for the seventeen operators of airlines within the continental limits of the United States. Specifically, year-end estimates showed these carriers had, during 1941, transported 3,765,000 passengers, 44,000,000 pounds of air mail, and 18,200,000 pounds of express. These figures represented an increase of almost 40 per cent in both passenger travel and in air-mail poundage and an almost 50 per cent increase in air express over figures for traffic carried during 1940.

The establishment of traffic records better than those of previous years was an old story to the airline industry which had witnessed an unbroken advance of travel and cargo volumes each year since 1934. There were big differences, however, between the way in which such new increments were handled in 1941 and the way they had been handled in previous years. Up to 1941 each operator, in general, had increased the seating and cargo capacity of his airline fleet in step with the growth of public acceptance of his services. In 1941, however, the requirements of America's military forces and the lend-lease program not only cut off the industry's supply of new planes but actually decreased its planes-on-hand through emergency appeals for the diversion of all spare aircraft.

As a result, the airline traffic records of 1941 must be counted largely as triumphs of the airlines' operating and maintenance personnel in making each transport airplane available for substantially more service per year. Of far more permanent significance in the art of air transport than the mere traffic figures is the fact that with fewer units in service, the nation's air transport planes in 1941 actually flew some 134,000,000 miles, a 32 per cent increase over the record of 1940.

Despite the extra burden thus placed upon equipment and personnel, the airline safety record was not markedly discouraging. Although the domestic operators together suffered five fatal accidents during the year, the distance flown per fatal accident—approximately 26,800,000 miles—compared favorably with the average distance of approximately 24,000,000 miles flown between fatal accidents in the preceding three-year period.

Toward the end of the year the Office of Production Management (q.v.) announced the tentative allocation of new aircraft which would permit the nation's airlines to acquire 112 new transport

planes during 1942. Another 116 units were to be held in reserve for possible delivery in 1943. Of the 228 planes thus earmarked for airline service, 156 were to be Douglas DC-3 transports identical with those now in service; 52 were to be Lockheed Lodestars similar to the Lockheed planes delivered in large quantities to the British for coastal patrol work; 20 were to be four-engined DC-4 planes of larger capacity than any planes now in domestic airline service. The only absolutely new transport landplane in active development in the United States during 1941 was the four-engined long-range Lockheed Constellation, of which three were authorized for delivery to TWA and the Pan American Airways System. What effect America's actual war-time requirements would have on these tentative allocations was, of course, not immediately apparent. See States under *Transportation*.

Private Owner Aviation. The relationships between modern war and the development of flying as an activity for the individual are complex. In any area where actual aerial hostilities are in progress, civil flying is necessarily curtailed or completely forbidden, and civilian aircraft and flying facilities are impressed into military service. There has been, in fact, little or no private flying in Europe since August, 1939. Offsetting such deterrents to the current practice of individual flying in certain regions, the tremendous expansion of military air activities offers every expectation that a corresponding increase of peace-time flying will occur once hostilities are ended. Flers, mechanics, and aeronautical specialists are being trained by tens of thousands. Airports are being increased and enlarged. Great productive capacities for aircraft are being created. Air consciousness is being spread in every edition of every newspaper.

In the United States, even after the attack on Pearl Harbor, no serious restrictions upon individual flying were deemed necessary beyond a suspension of Federal certificates for airmen and aircraft until the individual holders thereof could establish their unquestioned loyalty. In the vast majority of cases this was a period of only a few days. Meanwhile the positive effects of the war upon individual flying were already making spectacular aviation statistics in this country.

Prior to 1939 all private flying in the United States had been undertaken and financed entirely under individual initiative. Even under such circumstances, American progress in this field led that of all other nations but there were still at the beginning of that year only 22,983 certificated pilots in the nation. Individuals paying their own expenses for flight training have increased through recent years until they now number about 36,000. In 1939 the Federal government began subsidizing flight training through the Civilian Pilot Training Program, administered in more than 500 colleges by the Civil Aeronautics Authority. By the end of 1941 the total of pilots, both self trained and trained under the C.P.T.P., had reached a figure a few hundreds over an even 100,000. In addition, some 90,000 Americans had taken out student pilot permits and were in some stage of civilian flight training short of qualifying for their Private Pilot's Certificate. During 1941 alone the total of active pilots' certificates (not including student permits) had increased by more than 60 per cent from the 63,113 listed at the end of 1940.

As of Jan. 1, 1942, some 14,000 C.P.T.P. graduates had enlisted in the Air Corps and in the air service of the Navy, and many more thousands were expected by the end of the 1942 school year. The program had also furnished approximately

2,800 civilian instructors for training centers operated directly by or for the military services in the United States and Canada. Immediately after the entry of America into the war a movement was launched to enroll a large part of the nation's civilian pilots who could not enter the military services into a Civil Air Patrol to cooperate with Army and Navy authorities in maintaining an air watch above coastal regions or centers of key industrial importance. They were also to perform other useful duties within the capabilities of civilian aircraft.

Meanwhile, this growth of civilian flying resulted in an increase of civilian aircraft from 17,500 to 27,500 during the year. Figures on the year's production of aircraft for domestic civil use are not yet available, but figures for the first half of 1941 indicated an increase of 65 per cent over the production in 1940, when 6,748 units were delivered.

The great majority of these planes (more than 75 per cent) consisted of two-place single-engined landplanes of less than 100 horsepower. Almost all of them were of a type of construction which differed so radically from that of combat aircraft that their production was considered no serious diversion from the military aircraft program, although the Air Corps had begun ordering several types of these small planes for courier service in the last months of the year.

Active design progress was also achieved in the small plane field during 1941. A second plane, the "Skyfarer" took its place beside the "Ercoupe" as being absolutely incapable of spinning and thus substantially safer for the inexperienced pilot than the orthodox airplane. Several new private-owner aircraft of plastic-bound moulded plywood were placed on the market. At least four substantial aircraft manufacturers were actively pushing the development of helicopters and autogiros. The Northrop Corporation of California disclosed successful test-flights of a "flying wing" airplane from which fuselage and tail surfaces had been entirely eliminated. While all these aircraft had military potentialities and were being actively studied by the military authorities, they were likewise of great potential importance to the future of private-owner aviation.

As a result of regulations requiring the greatly increased use of radio in airport traffic control, low-priced radio equipment for the private flyer became far more widely available than in earlier years.

Airports. With all forms of aviation in the process of tremendous expansion, airports and other ground facilities were substantially extended during the year. With an emphasis on military aviation the airport program in the United States was naturally directed largely to the construction, enlargement or improvement of air fields needed for the direct use of military and naval forces, or so located to be potentially of strategic importance. However, projects involving terminals primarily for transport purposes were not neglected.

Most outstanding event of the year for American airport specialists was the opening of the Washington National Airport in June. Built on soil largely dredged from the bottom of the Potomac River, the new field gave the nation's capital a convenient airport larger than the airports serving New York, London, Paris, or Amsterdam. Berlin's great airport at Tempelhof is still the largest landing field serving a capital city, but the long paved runways and clear approaches of the new Washington field easily make it the equal of Tempelhof

in aeronautical utility. The result of two and a half years' work by several Federal agencies operating cooperatively, the Washington Airport is equipped with a large and well-equipped passenger terminal, several big hangars, and systems for lighting and traffic control which are designed to serve as a model of advanced design for airports throughout America.

During the year the WPA, PWA, NYA, and CCC continued the program of construction, enlargement, or improvement of airports. For some eight years this has been a feature of Federal and work-relief agencies, and of great benefit to aviation. Expenditures during 1941 for such projects involved something over \$100,000,000.

For their own direct use, the U.S. Air Corps and the Bureau of Aeronautics of the U.S. Navy developed a number of permanent new fields. From the viewpoint of airport engineering the most outstanding were the great new naval aviation training centers at Miami, and Jacksonville, Florida and at Corpus Christi, Texas. Military or naval air base projects of great strategic importance were those at Trinidad and Puerto Rico, Panama, Alaska, Hawaii, and other Pacific Islands. The defense of Wake Island, where an important Naval airport project was well under way at the time of attack by the Japanese in December, focused particular attention on this phase of American airport activity.

A number of new airports of strategic value were built during the year in South American countries, particularly Brazil. Many of these were financed largely with U.S. funds furnished for the purpose through American flag airlines.

Within the United States, itself, still another airport program was inaugurated. Carried forward by the Civil Aeronautics Administration of the Department of Commerce, some 385 "defense landing areas" were designated for construction or improvement at a cost of approximately \$200,000,000. A special feature of this program was the provision that each project had first to be approved as of defense value by the Secretaries of War, Navy, and Commerce.

At the end of 1941, the nation's domestic airports numbered 2,453 compared with 2,331 in 1940. They were divided as follows: 1,082 municipal; 901 commercial, 31 private, 78 Army; 39 Navy; 40 miscellaneous government; 283 intermediate fields along Federally maintained airways. Improvement of airport facilities was reflected in the Federal designation of 64 of these airports as "Class 4" airports, adequate for any transport or military aircraft use as against only 23 so designated in 1940. Those of small size and minimum facilities designated as "Class 1" dropped in number from 1,641 to 1,501.

DANIEL SAYRE.

AFGHANISTAN. A kingdom in central Asia. Area, about 251,000 square miles; population, approximately 10,000,000. Estimated populations of the chief towns: Kabul (capital), 80,000; Kandahar, 60,000 (with suburbs); Herat, 50,000; Mazar-i-Sharif, 30,000. Persian, Pashto, and Turki are the principal languages and Mohammedanism is the chief religion. Schools in 1941 included 130 primary, 4 secondary, 13 military, 1 normal, 1 medical college, and a few technical, art, and commercial schools.

Defense. One-eighth of the male population of each city and village must serve in the army for two years. There is also a regular army recruited by life-long enlistment. The normal peace strength of the army is 60,000 men, including the small air force of 100 men with some European-trained pilots. Numerous tribesmen armed with modern rifles are available for service in time of war.

Production. Agriculture and stock raising are the chief occupations, the main products being cereals, fruits, vegetables, cotton, wool, hides and skins, and meat from the native fat-tailed sheep. The mineral resources include iron, copper, lead, gold, silver, lapis lazuli, coal, and petroleum. There are state-owned factories at Kabul, Kandahar, and elsewhere for the manufacture of arms, ammunition, boots, military clothing, furniture, matches, buttons, leather, soap, cotton goods, and wool products.

Trade. India, the U.S.S.R., and Iran are the main trading countries, the chief exports being fruits, nuts, timber, spices, cotton carpets, wool, and skins (1,273,225 Persian lambskins, valued at \$7,422,501, were exported to the United States in 1940). The aggregate value of the transit and direct trade with India in the year ended Mar. 31, 1939, was 46,400,000 rupees (rupee averaged \$0.3328 in 1939, \$0.3659 in 1938).

Communications. Afghanistan has no railways and practically no navigable rivers. Four thousand miles of roads are suitable for motor transport in dry weather, but the bulk of merchandise is still carried by pack animals. An all-weather highway from Kabul to Peshawar, India, was under construction in 1941. It was announced on April 26, 1941, that Russian workers had completed a 500-mile motor highway from Stalinabad, Turkestan, to Khorog, on the Afghanistan border. There are telephones in most of the larger towns. The country has five wireless stations including an installation at Kabul for world-wide communication.

Government. Annual revenues of the state are estimated at 180,000,000 Afghanis (3.95 Afghanis equal 1 Indian rupee). The government is a constitutional monarchy, with legislative power vested in a parliament consisting of the King, a senate of 45 members appointed by the King for life, and a national assembly of 109 elected members. Mohammed Zahir Shah succeeded to the throne Nov. 8, 1933, upon the assassination of his father, Mohammed Nadir Shah.

History. Afghanistan was drawn toward the vortex of the European War in 1941 as a result of the

German attack upon the Soviet Union, the Anglo-Russian occupation of Iran, and German efforts to use Afghan territory as a base for anti-British and anti-Soviet propaganda and intrigue. The young King was reported friendly to Britain, but German agents succeeded in obtaining key positions in technical and commercial fields. In August and September there was a considerable influx of German agents into Afghanistan from Iran to escape capture by the British and Russians. In July the British Minister at Kabul formally objected to German activities in the kingdom. Early in October, the British and Soviet Governments jointly demanded the expulsion or internment of all German residents in Afghanistan. At the same time, British military preparations along the Indian frontier were intensified. On October 19 the Kabul radio announced that the Government had decided to deport all German and Italian nationals. At the end of the month 101 Germans and Italians reached Peshawar, India, on their way home under British safeguard.

See GERMANY, INDIA, and IRAN, under *History*.

AFRICA. A continent of the eastern hemisphere. Area, about 11,740,000 square miles (30,330,000 square kilometers). Population (Jan. 1, 1938, estimate), 155,500,000. See the separate articles on its countries and territories, such as ALGERIA, EGYPT, ITALIAN EAST AFRICA, KENYA, MOROCCO, SOUTH AFRICA, UNION OF; TUNISIA.

AGRICULTURAL ADJUSTMENT ADMINISTRATION (AAA). See AGRICULTURE, U.S. DEPARTMENT OF.

AGRICULTURAL COOPERATION. Agricultural cooperative associations in the United States now constitute one of the most important groups of farmers' organizations. Altogether, there are more than 15,000 farmer-owned and farmer-controlled cooperative associations and mutual companies now operating in this country. Of this number, 10,600 are engaged primarily in marketing farm products, purchasing farm supplies, or performing related services. Mutual irrigation companies number approximately 2,500 and farmers' mutual fire insurance companies number 1,900. In addition there are more than 600 rural electrification cooperatives and a larger number of farmer-owned telephone companies.

On the basis of reported membership and patronage data, it is estimated that more than 3 million persons hold membership in these organizations and at least one-half million more patronize them without accepting the responsibilities of membership. Sales of farm products and farm supplies by cooperatives now exceed 2 billion dollars annually with approximately 300 associations reporting annual sales of more than a million dollars each and 35 or 40 associations reporting sales in excess of 10 million dollars each. However, no "still picture" of agricultural cooperation as it exists today can give a true conception of the farmers' business organizations. The above statistics, while impressive, do not tell the whole story. Behind the current picture is the idea of a democratically controlled self-help institution as well as a pattern of cooperative evolution which has shaped present activities and which may be expected to influence the future.

In each of the commodity fields and in each of the business service enterprises where farmers' cooperatives are operating, there have been a number of distinct developments which have gained momentum in recent years. Over the field as a whole, these developments mark a rapid expansion

into new kinds of cooperative business on the one hand and a development of new ways of conducting business on the other hand.

Among the new kinds of cooperative enterprises, the cooperative cotton gins head the list. About 300, or more than half the total, have been organized in the past 6 or 7 years, and there has been no let-up in the rate of organization or the growth of individual units in the past year. Another recent expansion in the South is in cooperative cottonseed-oil milling. One of the newest associations is owned and operated by a federation of 32 cooperative gins. This association began crushing cottonseed about a year ago.

Frozen food locker plants represent another distinct development in which farmers' cooperatives have participated to no small degree. While a few of our present locker plants antedate the first World War, the 4,000 odd modern-type locker plants which dot the United States today are almost entirely a product of the last 5 or 6 years. Of these, about 300 are farmer-owned and controlled.

From the standpoint of rapid expansion, cooperative purchasing of farm supplies also shares the limelight. More than a thousand such associations have been organized during the past 10 years and a large majority of the 2,600 now in operation have been organized during the last two decades. Within the past year or two, the purchasing groups have continued their advance into new types of business—an advance which has carried them further toward the original source of supply through their manufacturing of fertilizer, feed, and other supplies and the refining and blending of petroleum products.

Aside from the new types of business there has been during the past year, a distinct trend on the part of cooperatives toward expanding their existing business from purely marketing or purchasing to include additional phases of both. This trend toward the undertaking of more functions has permitted increased savings to members and has worked to assure satisfactory quality of products handled.

Two relatively new developments in marketing farm products have had a pronounced effect on cooperatives: (1) The auction method of selling and (2) the increased use of motor trucks.

Cooperative auctions have gained favor as the auction method of selling continues to grow throughout the United States. The first cooperative egg auction was organized in New Jersey in 1930. Now there are 29 of these country-point egg and poultry auctions operating in 11 States, all but two of which are producer-owned and controlled. Country fruit and vegetable auctions date back to 1902 in Ohio, but most of the 68 now operating are of fairly recent origin and are concentrated for the most part in the five seaboard States from New Jersey to North Carolina. Almost half of these auctions are cooperative. Interest in wool auctions is developing in a number of western States. Live-stock auctions are found in all livestock areas, but are most numerous in the Corn Belt.

Of all the modern-day developments which have affected agriculture, perhaps none has caused as many cooperative readjustments as has the growth and expansion of commercial trucking. This has been particularly true for many of the cooperatives handling livestock, dairy products, grain, and fruits and vegetables. The term "truck problem" has become commonplace in discussions of marketing. There has been a tendency of late for cooperatives to meet the problem head-on by recognizing the commercial truckers as a new and distinct type

of customer requiring certain services which the co-operatives in many States can adjust themselves to provide.

The past 10 or 15 years in agricultural cooperation has been a period of consolidating gains. Co-operative leaders have turned their attention more and more toward bringing about improvements in the operation of existing cooperatives in order to put them on a more permanent foundation and in a position to do a better job for their farmer-members. Much less emphasis than formerly has been placed upon the formation of new associations and the advancing of price through monopoly control. This no doubt has been a sound procedure. In the past, many cooperatives were formed by farmers because the margins taken by private handlers were excessively large. For example, the early successes of the cooperative grain elevators and, more recently, of the cooperative petroleum associations were due in large part to the wide operating margins that prevailed in these fields before the cooperatives were formed. Generally speaking, the margins now have been reduced to a point where they approximate actual handling expenses under present conditions, and the cooperatives realize that if other substantial reduction is to be made it must come as a result of increased efficiency in operation through improved handling methods, by the use of more modern equipment, or as a result of consolidation or reorganization of the present marketing machinery.

W. W. FETROW.

AGRICULTURE. American agriculture, nearing the close of 1941 with the biggest volume of food in the nation's history, shouldered new responsibilities consequent to entry of the United States into World War II. Food in abundance for the United States and its allies, food in increasing volume of shipment overseas, had become a major need for victory. The new goals for 1942, revised in view of Pearl Harbor, according to Secretary of Agriculture C. R. Wickard, called for the greatest production in the history of American agriculture and for putting every acre of land, every hour of labor, and all farm machinery, fertilizer, and other supplies to the use which would best serve the wartime needs of the nation. Supporting the Food-for-Freedom campaign were the continuing Governmental efforts at soil conservation, economic security for low-income farmers, commodity loans to support prices near parity levels, farm credit on production and on mortgage debt, insurance of crops against natural hazards, purchase and distribution of foods to improve the nutrition and health of low-income people, and marketing of products under agreement between producers and processors. These forces were supplemented and strengthened by the research of the State experiment stations and Bureaus of the U.S. Department of Agriculture and extension service activities. (See AGRICULTURE, U. S. DEPARTMENT OF.)

Farmers in 1941 had the best cash income in years, the total from marketing and Government payments being 11.8 billion v. 9.1 billion in 1940. Production of many agricultural products was the largest on record—acres and yields of many important food and feed crops were larger than in 1940, although cotton made a comparatively small crop. Aggregate supplies of food were the largest in history, and the supply of feed grains was the biggest in 20 years. Food consumption—total and per capita—was the largest on record. Prices received by farmers in 1941 averaged 22 per cent above 1940, advancing in response to record con-

sumer buying power, increased commodity loans, and Government buying for domestic consumption and lend-lease export. Significant trends included a substantial improvement in the farm real estate market, with a movement toward fewer and bigger farms, further decline in the volume of farm mortgage debt and reduction in foreclosure sales, plentiful credit on good terms, a moderate decline in farm population, prospective tax increases, higher costs for farm machinery, shortages of building materials and supplies, and wages to farm hands the highest in years. Exports of farm products had fallen to the lowest level in 74 years, but gradually increased since April, when a large part of the Lend-Lease appropriation was earmarked for agricultural commodities. Competing imports exceeded the exports in value and complementary imports remained about the same size. Further details on these and other major factors and problems of agriculture are set forth in the following paragraphs.

See also the articles on the countries under *Production* and States under *Agriculture*, leading crops, as CORN, COTTON, TOBACCO, WHEAT, AGRICULTURAL COOPERATION, AGRICULTURE, U. S. DEPARTMENT OF, BUSINESS REVIEW under *Commodity Prices*, DAIRYING, ENTOMOLOGY, ECONOMIC, HORTICULTURE, LIVESTOCK, MARKETING under *Haw Materials*, NATIONAL INCOME; POULTRY, TRADE, FOREIGN, UNITED STATES under *Legislation*.

Agricultural Situation. Farm Income. The cash farm income for 1941 was estimated by the U.S. Department of Agriculture at about \$11,771,000,000 (1940, \$9,097,000,000), which comprised \$11,185,000,000 (1940, \$8,331,000,000) from marketings and commodities under loan and \$586,000,000 (1940, \$766,000,000) government payments. Total was about 500 million dollars more than in 1929 and nearly 954 million above the average for the period 1924-29. A gross farm income of about \$14,000,000,000 (1940, \$11,014,000,000) was indicated when the farm value of products retained for home consumption, \$1,600,000,000 (1940, \$1,229,000,000), and rental value of home were considered. Cash income from all crops, \$4,794,000,000 (1940, \$3,510,000,000), included grains \$1,334,000,000 (1940, \$1,007,000,000), cotton and cottonseed \$1,007,000,000 (1940, \$646,000,000), tobacco \$325,000,000 (1940, \$241,000,000), vegetables \$752,000,000 (1940, \$630,000,000), and fruits and nuts \$607,000,000 (1940, \$445,000,000), and from all livestock and livestock products \$6,391,000,000 (1940, \$4,822,000,000), including meat animals \$3,335,000,000 (1940, \$2,390,000,000), dairy products \$1,860,000,000 (1940, \$1,527,000,000), poultry and eggs \$1,012,000,000 (1940, \$754,000,000), and wool \$143,000,000 (1940, \$110,000,000).

Cotton and cottonseed yielded farmers over \$1 billion, the first time since 1929. A marked increase in the size of the 1941 wheat crop, together with substantially higher prices, resulted in the largest income from wheat since 1929. Income from most other farm crops, particularly truck crops, soybeans, rice, and several of the fruit crops showed substantial increases in 1941 over 1940. Returns from livestock and livestock products were about 25 per cent larger than in 1940, and the largest since 1929. Income from meat animals recorded the largest percentage increase over 1940, but the increase from poultry and eggs was nearly as large. Income from dairy products also was substantially larger than in 1940, the total exceeding the 1929 figure of \$1,800,000,000.

Farm Real Estate and Tenure. The national average of farm real estate values per acre during the year

ended Mar. 1, 1941, rose one point, reaching an index of average values per acre of 86 per cent of the 1912-14 level, compared with 85 in 1940, 84 in 1939, and 85 in 1937 and 1938, and about 18 per cent above the 1933 low of 73. The continuous cautious response of farm real estate values to improved price and income levels might be attributed to such considerations as number of farms available for sale in many areas and uncertain price outlook for some of the major agricultural products. Largest gains in real estate values since 1933 were made in the East South Central, South Atlantic, and East North Central States. The smallest rises from the depression low were in the West North Central States where the index of value was 67 versus 64 in 1933 and in New England States where the index was 107 versus 104 in 1934 and 1935.

Tabulations on farm land and people on the land, as reported in 1941 by the U.S. Bureau of Census from the 1940 census, totaled number of farms 6,096,799 (1935, 6,812,350, 1930, 6,288,648); land in farms 1,060,852,374 acres (1935, 1,054,515,111; 1930, 986,771,016 acres); average size of farms 174 acres (1935, 154.8, 1930, 156.9 acres); farm population 30,475,206 (1930, 30,445,350); total value of farm land and buildings \$33,642,000,000 (1930, \$47,880,000,000); full owners 3,084,138 (1935, 3,210,224; 1930, 2,911,644); part owners 615,039 (1935, 688,867; 1930, 656,750); tenants 2,361,271 (1935, 2,865,155; 1930, 2,664,365), and sharecroppers 541,291 (1935, 716,256; 1930, 776,278). The percentage of tenancy rose from 25.6 in 1880 to 42.4 in 1930, declining to 38.7 per cent in 1940. Of the total number of farms in 1940, 23.5 per cent were without milk cows in 1939, 38.2 per cent without hogs and pigs, and 15.2 per cent were without poultry.

Land values and mortgage debts followed farm prices up in the inflation period. After prices came down, reported the U.S. Department of Agriculture, these debts remained and were a heavy burden on farmers for years thereafter. The rapid advance of farm returns per acre up to 1919 was followed by a slower advance in farm taxes and interest per acre and in farm mortgage debts. After prices turned down, taxes and interest and mortgage debt continued to mount. In 1925, debt per acre was nearly three times the pre-war debt, and taxes and interest were 2.5 times pre-war. In the meantime, farm returns and farm values were following a downward trend and were running around only 1.25 times pre-war. All through the 1920's taxes, interest, and mortgage debt were more than twice as heavy a burden, compared to farm returns, as in the pre-war period. During the 1920's hundreds of thousands of farmers lost their farms through foreclosure and thousands of country banks failed. Debts and civic improvements which appeared easy to pay for in the flush of wartime inflation proved to be a long and bitter burden. Not until the great depression of the 1930's and the efforts by local, State, and Federal Governments to lighten taxes on farmers and to refinance or readjust farm debts did the tax and debt burden on farmers begin to be reduced. Even so, it still remained in 1941 relatively far heavier than before World War I.

Prices. Local market prices received by farmers for agricultural commodities sold during 1941 averaged 122 per cent of the 1909-14 (pre-war) average, compared with 98 in 1940, and the 1941 level was the highest since 1930 when the index was 126. Prices of farm commodities had regained most of the losses sustained during the last decade, although still not up to the level maintained in the late

1920's. The all-commodity index reached its lowest point in 1941 at 103 in February and March; thereafter it rose steadily to 139 in September and October. A loss of five points in November was more than recovered in December when the index reached 143, highest since January, 1930. Improvement in prices was general for all commodity groups. Most groups experienced a wide range of prices, the widest being 70 points in cotton and cottonseed and the smallest range 29 points for fruit. The low points were in the first 3 months, and the high points largely in the last 3 months of 1941. With production heavy in 1941, supplies of agricultural commodities were abundant and demand, both for domestic consumption and for export, continued strong enough to support prices higher than in other years of large supply.

Average prices received by producers Dec. 15, 1941, based on reports to the U.S. Department of Agriculture, with preliminary seasonal average prices for crops in parentheses, were estimated for wheat \$1.022 (95.6¢) per bu., corn 66.9¢ (70.9), oats 45.2¢ (38.7), barley 56.1¢ (49.4), rye 57.8¢ (53.1), flaxseed \$1.78 (\$1.725), soybeans \$1.47 (\$1.472), rice (rough) \$1.439 (\$1.185), potatoes 82.7¢ (69.5), sweet potatoes 86.6¢ (92.6), apples \$1.09 (90.3¢) per bu., tobacco 26.2¢ (25.7) per lb., peanuts 4.79¢ (4.58), cotton 16.23¢ (16.10¢) per lb., and cottonseed \$44.65 (\$48.04), and hay \$9.43 (\$9.01) per ton. Beef cattle sold for \$9.38 per 100 lb., hogs for \$10.21, veal calves \$11.22, lambs \$9.86, and sheep \$5.15. Eggs brought 34.1 cents per doz., butter 33.9 cents per lb., and whole milk wholesaled at \$2.66 per 100 lb. Wool brought 37.1 cents per lb. and live chickens 15.8 cents. Milk cows sold for \$79.70 each, horses \$67, and mules \$86.90. The corn-hog ratio (number of bu. equal in value to 100 lb. of hogs) was 15.3 versus 10.3 in December, 1940, and 11.9 the 1909-13 average. The ratio of prices received to prices paid by farmers rose from 82 in December, 1940, to 100 in December, 1941.

Foreign Trade in Farm Products. Exports of agricultural products from the United States, exclusive of forest products, fell in value to \$349,873,000 during 1940-41, about 53 per cent below the total of \$737,640,000 during 1939-40. Farm exports were the lowest in 69 years, i.e., since 1871-72, representing only 9 per cent of all exports, and for only the second time on record were exceeded in volume by imports of farm products similar to those grown in the United States. The ratio of imports to exports in 1940-41 was 179 as compared with an average of 69 for the 10 preceding years, which, moreover, was due almost entirely to decline in exports, for the volume of imports was approximately the same in 1940-41 as in the past decade. According to indexes of quantity, all major groups of these exports, except dairy products, were lower for 1940-41 than for 1939-40. Cotton exports, which accounted for over 70 per cent of the decline, were \$67,567,000, 81 per cent below 1939-40; fruits, fruit preparations, and juices \$27,715,000, -59 per cent; tobacco \$39,090,000, -40 per cent; grain and grain products \$65,675,000, -21 per cent; feeds and fodders \$1,676,000, -83 per cent; pork and lard \$23,650,000, -35 per cent; dairy products \$31,777,000, a gain of 282 per cent; and other farm products \$92,723,000, a decrease of 23 per cent. The operation of the Lease-Lend program, which began in April and gained momentum in succeeding months, brought exports out of the severe decline that held from September, 1940, through January, 1941. In each of those months the export rate was about \$240,000,000 per year, but in June the rate rose to

\$740,000,000, comparable with the 10-year average. The gain, however, based mainly on government expenditures, did not represent a normal resumption of commercial trade. The rising trend continued into the first quarter of 1941-42 (July-September), which closed with exports of farm products 136 per cent higher in value than a year earlier.

Farm products imported into the United States during 1940-41 were valued at \$1,475,357,000, an advance of 19 per cent from 1939-40, which totaled \$1,239,444,000 and compared with \$1,536,695,000 in 1936-37, and \$614,000,000 in 1932-33, the low point of the depression. Supplementary (competitive) agricultural imports in 1940-41 totaled about \$627,955,000, 10 per cent more than in 1939-40. The import situation was dominated by wool imports, valued at \$117,565,000, 21 per cent over 1939-40, to meet current consumption needs and to build up reserve supplies. Increases were shown by other commodities in this group, e.g., hides and skins valued at \$58,453,000 in 1940-41, +20 per cent; nuts and preparations \$15,351,000, +10 per cent; cotton and linters \$14,239,000, +38 per cent; and molasses \$17,818,000, +67 per cent. Imports of sugar, tobacco, cattle, and feeds and fodders did not change much from 1939-40. Decreases were registered by several important commodities, as vegetable oils \$44,092,000, -26 per cent, as well as by flaxseed -46 per cent, cheese -66 per cent, and canned beef -23 per cent. Complementary agricultural imports, made up largely (about 95 per cent) of rubber, coffee, raw silk, wool for carpets, bananas, cacao beans, tea, and spices, during 1940-41 were 27 per cent above the 1939-40 level, the principal increases being in rubber, coffee, and cacao. Agricultural imports made up about 52.5 per cent of all imports, \$627,955,000 being supplementary items and \$847,402,000 noncompetitive. Imports during the first quarter of 1941-42 were at levels far above that quarter of 1940-41. The total increase of \$80,000,000 in all agricultural imports could be accounted for almost entirely by very large increases in value of rubber and wool imports and in imports of hides, molasses, cotton, bristles, and tea. To offset these were the steep declines in imports of silk and of coffee in this quarter. Foreign trade in farm products was discussed in detail in the *Report of the Secretary of Agriculture for 1941* (pp. 11-22, 29-31, 37-54) and in *Foreign Crops and Markets 43* (1941), pp. 362-406 (Sept. 30, 1941), pp. 792-816 (Dec. 20, 1941) (both U.S. Dept. Agr.).

Population. People living on farms in the United States on Jan. 1, 1941, according to U.S. Department of Agriculture estimates, totaled 29,860,000, a decrease from 30,071,000 a year ago, attributable to a greater migration from farms than to farms. While the decrease was general in all parts of the country, the West South Central States, particularly Oklahoma and Texas, reported the largest loss, and the West North Central States also sustained a substantial decline. Tabulation released in 1941 from the 1940 census placed the total farm population at 30,475,206 on Apr. 1, 1940, virtually no change from 30,445,350 in 1930 but definitely below the 31,614,269 in 1920. Several sections, notably the Pacific Coast and certain Western States, showed some gains, while the largest decreases were in the Plains States of the central West. Declines in farm population in States hard hit by drought reflected the harsh conditions which led to some consolidation of farms and to some actual abandonment. Increase in part-time farming was indicated by the increase of people living on farms near factory towns and

large cities. That there were fewer children and more old people on farms than in 1930 was significant.

Crop Production. Conditions for crop production during 1941 were unusually favorable; a primary factor was above-normal rainfall in the western half of the country where low rainfall had limited crop production during much of the 1930-39 period. Yields per acre, the U.S. Department of Agriculture reported, were the highest on record, averaging 2 per cent above yields made in 1940 and 21 per cent above the 1923-32 (predrought) average. Yields were at least fairly good in nearly all parts of the United States except in the western Gulf Coast region, in South Carolina, and in some smaller scattered areas. Wheat seemed to be the only important crop to set a new high record of yield, while rice was about the only one to show below-average yield per acre. The 1941 acre yields of corn, tobacco, potatoes, sugar beets, beans, and soybeans were exceeded only once or twice in the last 70 years, and yields of oats, barley, grain sorghums, rye, buckwheat, flaxseed, cotton, hay, and peanuts were at high levels attained only in unusually favorable seasons.

While the acreage planted or used for the 46 principal field crops was about the same as in 1940, the area lost in 1941 from crop failure was the lowest in more than a decade. About 337,798,000 acres were left for harvest, 1 per cent more than the 334,171,000 acres harvested in 1940, but still 7 per cent under the peak of 364 million acres harvested in 1932 which included 24 million more acres of corn and 14 million more of cotton than in 1941. In spite of the smaller acreage in corn and cotton, the exceptionally high level of yields per acre in 1941 resulted in a near-record volume of crop production, about 11 per cent above the 1923-32 level. Aggregate production in 1940 was 8 per cent above the 1923-32 level and in the highest year (1937) was 12.6 per cent above.

The 1941 harvest included small crops of cotton and tobacco, and slightly below average crops of potatoes and sweet potatoes, but large production of nearly all other groups. Total grain production was larger than in other seasons since 1920. New high production records were established for hay and forage as a group, for fruits, and for vegetables other than potatoes and sweet potatoes. Individual crops which surpassed previous production totals include barley, grain sorghums, sweet sorghum for forage, beans, soybeans, oranges, peas, sweet corn, and tomatoes (the 3 principal vegetables grown for canning), carrots, celery, and a few other vegetables for fresh market. The corn crop was the largest since 1932 and the wheat crop the largest since the bumper crop of 1919. Rice production approached within 1 or 2 per cent of the record crop. The flaxseed crop was the largest since 1902 and the second largest on record. Although the peanut crop was smaller than in 1940, it was larger than the crops of other years. The acreages and production of farm crops in the United States, as estimated by the U.S. Department of Agriculture, and yields for cereals in foreign countries, as reported by the International Institute of Agriculture and other agencies are shown in the accompanying crop tables (pp. 13-14) and in the articles on individual crops; as, CORN, WHEAT, ETC.

Experiment Stations and Extension. Contributing to the steadily increasing efficiency of agricultural production, the experiment stations and extension services, centered as a rule at the agricultural colleges, were meeting the challenge of defense needs and adjusting their well-developed programs to

cope with the urgent demands of actual war. Problems of agriculture, the rural home, and rural life were under intensive study at the State experiment stations of each State and territory in more than 8,370 active research projects. Financed from State and Federal funds, many of these projects were cooperative among groups of stations and with the U.S. Department of Agriculture and other agencies.

Noteworthy achievements in the research of the stations during 1941 included new and better varieties of field crops, vegetables, and fruits; improved strains of livestock and poultry, effective cultural and field practices and harvesting, storage, and handling methods insuring maximum crop yields and enhancing desirable market and technological qualities; better control methods aiding in the defeat of insects, plant diseases, and weeds; definition of soil types and their values for cropping; better methods of conserving soils and their fertility; appropriate fertilizer formulas and suitable place-

ments, and substitution of green manures for some of the costlier minerals and chemicals; the development and adaptation of mechanical farm equipment; greater efficiency in use of farm power and in use of electricity in farm operations and bringing modern facilities into farm homes; more efficient production structures and better farm homes; irrigation methods conducive to the best use of available water supplies; and profitable drainage practices. Home economics research resulted in more effective use of foods and higher dietary levels, benefiting national health and increased use of such commodities as vegetables, fruits, and dairy products. Benefits to both producer and user of textile fabrics came from studies of clothing fabrics. Studies of family income and consumption have had important bearings on agricultural planning.

Economic research was featured by great advances in agricultural planning—broadened to include economic and sociological as well as technical phases—involving results obtained in farm management, marketing costs, taxation and tenure, and new types of investigation on alternative uses of land, diet, and health of more families, and much short-term or service research. Farmers were also aided by other phases of economic and social research on population problems, rural education, transportation facilities, and the rural family and its consumption needs in terms of food, clothing, and shelter. Accomplishments in the numerous investigations were published in station bulletins and reports, and in many technical journals and trade papers. Findings having major significance in the solution of current problems and representative of the wide range of subjects under study were reviewed, along with pertinent statistical data, in *Report on the Agricultural Experiment Stations, 1941* (U.S. Dept. Agr.). The experiment stations received from Federal grants \$6,862,500 and from State and other supplementary sources \$15,571,050, making a total of \$22,433,550 available for their administration and research during the fiscal year 1941.

The work and accomplishments of nine special research laboratories, each dealing with a problem of significance in the region where located, established, 1935-39, under the provisions of Bankhead-Jones Act of June 29, 1935, and cooperative among Bureaus of the Department of Agriculture and the stations and supplementing their investigations, and progress made by four regional laboratories for research on new and extended uses for surplus farm commodities, were set forth in *Report of the Chief of the Office of Experiment Stations, 1941* (U.S. Dept. Agr.).

The Extension Service increasingly concentrated all resources on the call for all-out defense. County agents were in every county of agricultural importance, home demonstration agents in nearly two-thirds of the counties, and 1,650 State subject-matter specialists were available to advise the agents. More than 700,000 volunteer local leaders were organized and trained to help to plan and lead community activities. Extension home-food production committees were established early in the year, and in nearly every State an expanded coordinated food production and preservation program was launched, largely by placing major emphasis on defense, nutrition, and discussion phases of programs already established. Local mass educational programs for encouraging and helping farm people to produce the needed pork, dairy, and poultry products, tomatoes, and other foods were started. The service was making a major contribution in helping farm people meet urgent problems of defense and ad-

justments following such an emergency as they did in the first World War.

Extension agents assumed the lead in most communities in conferences between farmers and manufacturers, distributors, cooperative association leaders, and others to assure marketing distribution and processing facilities for increased production in each locality. Much of this and related food-for-defense information was carried to farm people through cooperative marketing and purchasing associations, including nearly a million farmer members, organized or assisted by extension agents during the year. Through 1,140,000 members of organized home demonstration clubs, food-for-defense and increased-home-food-production needs and practices reached farm women in every farm community. Home gardening, health and nutrition, and food production projects received major attention of the nearly 1,500,000 farm boys and girls in 4-H clubs.

Of the grand total of \$33,194,380 of funds allotted in 1940-41 for cooperative extension work in the United States and territories, \$18,590,925 came from Federal grants, \$6,707,118 from State and college funds, \$6,806,873 from county appropriations, and \$1,089,464 from farm organizations, etc.

The extension agents intensified and enlarged established programs in better nutrition, improved food habits, and production and preservation of food for home needs. The most fundamental work extension home demonstration agents did in developing better food habits was in training farm women to be local leaders. More than 110,000 farm women gave of their time and skill as local leaders in their communities in food and nutritional educational work. Through these and other extension local leaders, about 1,700,000 rural homes were led to adopt improved food and other home-making practices, which in turn led to better farm living and a stronger nation.

Major national contributions were made in organizing and providing facts for and otherwise assisting groups of farm people in systematic group discussions largely on the present national emergency, issues facing democracy, and possible steps to meet the situation. Educational efforts in behalf of conservation, long-time land use planning, more efficient farming, better marketing of farm products, low-cost home improvements, inexpensive clothing, and other farm and home problems were continued and related to present situations and defense needs. On the broad educational front, special assistance was given to Negro farmers by 504 Negro county and home demonstration agents, in addition to the work that white extension agents did with Negro farmers.

Extension agents cooperated with other governmental agencies in assisting farmers in defense acquisition areas to become relocated or to find other employment. Aid was rendered to farmers in such defense areas in organizing to provide Army cantonments with locally grown produce. Extension workers also devoted considerable time to explaining local application of provisions of the Agricultural Adjustment, Rural Electrification, Farm Credit, Surplus Marketing, and Farm Security Administrations; Soil Conservation Service; Tennessee Valley Authority; and other agencies and in helping farmers make best use of loans, conservation payments, and other services of these agencies in meeting local problems.

World Relations of American Agriculture. The situation of world agriculture in wartime had become clearer as the war in Europe entered its third year. Germany had extended her control from France to

the Central Ukraine, the U.S.S.R. was resisting German aggression, and the United States was throwing its full economic power into a national defense program and aid to Britain and her allies, a task that became more difficult with the United States at war. Current world trade in agricultural products, as viewed by the U.S. Department of Agriculture, bore little resemblance to the trade carried on before September, 1939. Food had become a critical need of every nation at war; and in none of the warring or occupied countries were supplies of food or other agricultural products kept at pre-war levels. On the other hand, many nations still at peace were faced with curtailed export markets and record surpluses of certain crops. In importing countries there had been a change from pre-war patterns of consumption—substitutions as well as actual curtailments; while in exporting countries, pressure of surpluses, together with new demands brought about by the war was causing a change in the patterns of production. An outstanding development, from the viewpoint of United States farmers, was the passage of the Lend-Lease Act, under which foods, munitions, and other supplies were made available to nations resisting aggression (refer above to *Foreign Trade in Farm Products*). The United States was seeking improved trade relations with the other American republics by cooperating in efforts to increase the output of agricultural products marketable in but non-competitive in the United States, and by participating in efforts to regulate trade in surplus and competitive crops. It also was providing technical and financial assistance to a number of countries in programs to raise living standards through increased production of subsistence crops and greater agricultural efficiency. These efforts were reviewed in *Agriculture in the Americas* (vol. 1, 1941), a monthly. Commodities receiving special attention included rubber, quinine, cocoa, coffee, tapioca, rotenone, fibers, fats and oils, and fruits.

American agriculture in its world trade relations was affected by many factors and activities in other countries and regions, including wartime policies, controls, and trade agreements affecting agricultural trade, and objectives and problems of price control; world war, hemisphere trade, and the American farmer; western hemisphere trade in cotton, and world cacao production and trade; agriculture's role in hemisphere defense; the Inter-American Coffee Agreement; agriculture in the São Paulo-Northern Paraná region; agriculture in the Argentine trade agreement; the agricultural economy of Colombia, Mexican vanilla production and trade; rationing and cotton control in the United Kingdom; food rationing in Germany; agriculture and food control in Switzerland; the Russo-German war and Soviet agriculture, and grain exports from the Soviet Union; agriculture and agricultural policies in British Malaya; regulation of rubber and tea; impact of war on the Japanese cotton-textile industry, the Japanese silk industry facing a new crisis, and Manchurian agriculture under Japanese control; agriculture in unoccupied China since 1937; agriculture in French West Africa; and wartime aspects of Egyptian agricultural economy. These and other factors of significance have been treated in *Foreign Agriculture* (vol. 5, 1941), *Foreign Crops and Markets* (vols. 42 and 43, 1941), and *Report of the Director of the Office of Foreign Agricultural Relations, 1941*. (All U.S. Dept. Agri.) See the respective countries under *Production*.

HENRY M. STEECE

AGRICULTURE, U.S. Department of. As part of the national defense program the Department of Agriculture expanded some of its activities in 1941 and undertook many new ones. In fact, defense involved almost every detail of the Department's work. Some of the tasks were: (1) Assisting agriculture to provide adequate supplies of farm and forest products for domestic consumption and lend-lease exports; (2) aiding consumers to win better health through better nutrition, (3) collaborating with other Government agencies in providing critical and strategic raw materials, (4) developing substitutes for imports that the war reduces or cuts off, (5) finding new defense uses for farm and forest products; (6) assembling data useful in locating new defense industries, (7) dealing with price relationships in the defense economy, (8) aiding defense agencies in locating, acquiring, and servicing new military establishments, (9) assisting in plans for economic defense, and (10) promoting hemisphere solidarity.

Food-for-Freedom Campaign. In a "food-for-freedom" drive the Department announced a plan to support the prices of dairy products, hogs, chickens, and eggs up to June 30, 1943, and to cushion the possible shocks of the post-defense period. It sought to establish price-differentials that would favor the desired balance among dairy products. Later, on the authority of an amendment to an act that extended the life of the Commodity Credit Corporation, it undertook to support the prices of hogs, eggs, evaporated milk, dry skim milk, cheese, and chickens up to Dec. 31, 1942, at not less than 85 per cent of parity to the extent that the funds available allowed. In the fall the Department worked out goals for a record total output in 1942, got the help of State agencies in breaking down the goals to a State and county basis, and launched a farmer-pledge campaign. The goals took account of the expected demand at home and abroad, the need for machinery, fertilizer, insecticides, container materials, storage, and agricultural labor, the seasonal and biological problems involved in rapid crop expansion, the availability of necessary credit, the nutrition standards considered desirable for the United States, and the need to divert excess staple export acres to other uses.

Lend-Lease Buying. The agency responsible in the Department for carrying out the food buying part of the lend-lease program is the Surplus Marketing Administration. When the lend-lease bill was before Congress, the implications for agriculture had to be considered. It became apparent that quick action would be necessary to lay the groundwork for operations under the measure. Several problems stood out. It was recognized that each buying operation would need to be conducted with speed and efficiency, and with the least possible disturbance of normal marketing. How to carry on the purchasing of agricultural products so as to bring the greatest benefit to farmers was another problem. Also prominent was the fact that the anticipated export need for farm products would have to be taken care of in addition to rapidly increasing domestic demands. Since lend-lease money could not be made available in advance, the Surplus Marketing Administration made arrangements with the Commodity Credit Corporation for purchases of commodities needed under the lend-lease program. The Corporation allocated \$90,000,000 for the purchase of reserve supplies of lend-lease materials for which the Corporation was to be reimbursed from lend-lease funds collected in payment for goods turned over for export. This arrangement paved the way for a flexible buying program.

Promoting Better Nutrition. Better use of food for health calls for many-sided collaboration among the Department's specialists. It enlists especially the services of the Bureau of Home Economics, the Surplus Marketing Administration, and the Extension Service. Representatives of these agencies serve on planning committees of the national nutrition campaign. They help farm people to produce more meats, fruits, and vegetables for themselves. The Department's nutrition campaign deals with food requirements and uses, vitamin values, family spending, and the proper combination of foods in the diet. Getting national strength from food is a problem also in income distribution. Through relief distribution, the food stamp plan, school lunches, and low-cost milk programs, the Department brings food and needy people together.

The AAA's Wartime Job. The Agricultural Adjustment Administration's job increased in wartime. It is not, however, a different job. It is the old job, with simply a change of emphasis among the priorities and an increase in the size of the undertaking. As the Government agency that aids the farmers in cooperative crop adjustments, the AAA seeks to assist the farmers in producing more of what the country needs and less of what it does not need. Moreover, the commodity emphasis is not basically different from what it was before the war began. We still need more dairy and meat products in particular and less wheat, cotton, tobacco, and other surplus crops. Change of priority among AAA objectives results from the fact that the war situation almost automatically boosts the farm income, and at the same time creates urgent new needs for particular crops. The AAA's task is bigger because, in a changed crop balance, we need a record total farm production.

Besides machinery developed during eight years of crop adjustment experience, the AAA has new price incentives made available by Congress. In the basic crops, for example, there is a higher level of loan rates coupled with higher penalties for excess marketing. There is power here to encourage a switch from overproduced to underproduced lines. In nonbasic crops Congress has authorized purchasing for lend-lease export, price supports, offers of protection to farmers against sudden price changes

in the post-defense period, and other incentives to increased production. The existence of a well-defined ever-normal granary enables the AAA to assist farmers in getting feedstuffs for livestock, dairy, and poultry production. Shaping its programs to fit the needs of the emergency, the AAA works with farmers through the U.S.D.A. agricultural defense boards, the farmer committee system, and Federal and State field workers. Along with its established objectives, the AAA program takes on a new and broader national meaning in which the prevention of surpluses, the conservation of resources, the maintenance of the Ever-Normal Granary, and the support of farm prices and farm incomes become parts of the greater purpose of national defense.

Commodity Loan Facilities. Organized in the fall of 1933 the Commodity Credit Corporation was originally an independent agency, but is now part of the farm program machinery. Its total resources are two and three-quarter billion dollars. Its investment at the present time in loans and in commodities owned totals about one billion dollars. It has outstanding loans of nearly 400 million dollars in the hands of banks, cooperative associations, and other lending agencies. The remaining resources, when supplemented by loan repayments and proceeds from sales of owned commodities next season, should suffice to make necessary loans on the 1942 crops. Losses of the corporation have been small compared with the benefits it has realized for farmers, but the defense emergency emphasizes the importance of reducing the expense as much as possible through close coordination of the loan program with acreage adjustments and marketing controls.

Entomology in Defense Activities. In the Department of Agriculture the agency concerned with work on insects and plant pests is the Bureau of Entomology and Plant Quarantine. It has joined defense units and within the limit of its funds and authority is helping to meet the wide variety of needs associated with the defense program. See ENTOMOLOGY, ECONOMIC.

Coordination of Federal and State Research. Farm conditions are changing so rapidly that farm research must change too. The agricultural experiment stations in the several States and in Alaska, Hawaii, and Puerto Rico are alive to this fact. They are scrutinizing carefully their old and their new research projects, so as to give them maximum defense effectiveness. The emergency has necessitated some redirection of the work both as regards production needs and as regards adjustment to changed economic conditions. It appears on the whole, nevertheless, that the activities of the experiment stations, with some change of emphasis, fit in well with defense requirements. The Department's Office of Experiment Stations helps to coordinate the projects, under legislation which requires it to pass on proposed expenditures with Federal funds. See AGRICULTURE.

Agricultural Chemistry and Engineering. Chemists and engineers in the Bureau of Agricultural Chemistry and Engineering attack together a great variety of problems in farm production, in the protection of crops from pests, in transportation and storage, in processing, and in the utilization of crops by industry and by the individual consumer. The results have important defense applications. Four new regional laboratories recently built and equipped, together with the laboratories previously established at Washington and at the various field stations, help to solve many urgent problems, as well as to carry on long-time research projects.

Among the accomplishments of direct value in defense are contributions to the improvement of

camouflage materials and methods, demonstrations of the usefulness of certain agricultural materials for direct war purposes, such as the making of smokeless powder and protective helmets for civilian defense workers, improvements in equipment used by fighting forces, and foods better adapted for use under exacting conditions of transportation and storage, such, for example, as dehydrated vegetables. Other research results in this category contribute indirectly to defense. Examples of this type are new methods and equipment that make certain farm products sources of good substitutes for imported materials now not readily obtainable; improved ways of turning out food products useful in maintaining a high standard of nutrition; better storage methods and structures for food products, more economical production and processing of fibers; procedures that save fuel oil in house heating; more efficient processing of turpentine and rosin, possible new sources of vegetable oils, and ways of increasing commercial production of soybean protein as a substitute for other proteins.

Animal Industry Research. Research in the Bureau of Animal Industry continues to furnish growers with facts that enable them to produce more livestock at less cost and to overcome difficulties that formerly have caused loss and discouragement. There is space here for just one example. Investigations with phenothiazine for combating internal parasites of livestock came to fruition near the end of 1940. The research work showed conclusively that this chemical was effective, in small therapeutic doses, for removing injurious and devitalizing internal parasites from cattle, sheep, and goats. Among such parasites were stomach worms, hookworms, and nodular worms. The same chemical was found to be the most effective remedy yet discovered for the removal, from horses and mules, of red, or palisade, worms and related roundworms, which are as injurious to equines as hookworms are to human beings. The work of the Bureau's investigators has been confirmed by workers elsewhere in the United States and abroad with indications that phenothiazine will become the most valuable treatment yet known for the removal of internal parasites from domestic animals.

Developments in Plant Science. In work done in the Bureau of Plant Industry many superior new strains and varieties of crop plants emerged from test plots and began to be useful under commercial growing conditions. Certain developments in this field bore closely on the defense efforts. The program to grow rubber in the Western Hemisphere got off to a good start. The trend toward wider and more efficient use of grasses and legumes developed into a nationwide movement. Work to improve the nutrition quality of our food plants had increased importance. In the South especially efforts were made to develop a wider range of adapted varieties of vegetables. The Bankhead-Jones Vegetable Breeding Laboratory at Charleston, S.C., reported many valuable developments. Wise use of our water resources in the West, and the effect on the nation's agriculture of bringing in large areas of new irrigated farm lands, were plant-science problems with defense aspects.

Rural Electrification. During the fiscal year 1941 systems financed by the Rural Electrification Administration continued to advance the program of rural electrification as rapidly as permitted by the loan funds provided. On June 30, 1941, allotments totaled \$369,027,621. Full development of the systems for which these allotments have been made will provide electric services to approximately 1,171,867 rural consumers and serve a population

in excess of five and a half millions. At the close of the fiscal year 732 of the 823 borrowing organizations had energized part or all of their lines and were serving 780,933 farm families and other rural users. This is in contrast to a total of 549,604 rural users on the same date in 1940; 268,000 in 1939; and 104,528 in 1938.

The Farm Security Program. All regular phases of the Farm Security Administration program have been enlisted in the interests of national defense, and several new FSA activities have been undertaken as a result of the defense program. Families aided by the FSA rehabilitation program have increased their production of foodstuffs, especially their production of milk, eggs, and meat. Farm Security loans and supervision are currently serving to strengthen the morale and to improve the health and skill of more than 480,000 active standard borrowers. More than 900,000 borrowers have been assisted by the FSA since 1934. The progress of these economically distressed rural families toward recovery was revealed by a survey made at the end of the 1940 crop year. The average net annual income of borrower families had risen from \$480 in the year before they had FSA aid to \$650 in 1940, an increase of 35 per cent. Their average net worth had ascended 21 per cent—from \$871 to \$1,051. Thus was a total gain of \$75,289,838 in net income and of \$79,702,251 in net worth.

The Emergency Forest Problem. It should be frankly recognized that defense production, as we have conducted it up to the present, will further cripple our forest resources and plant seeds of rural problems. This is not only unfortunate, it is unnecessary. Relatively simple methods of forest cutting and other practices if applied on a nation-wide scale could give us what we need from the forests for defense programs and at the same time build up the forest resources. Studies made in the Forest Service indicate that an increased output of forest products can be obtained without excessively depleting our forest resources. It is possible, in other words, to get adequate supplies of forest products both for defense and for civilian use by methods which at the same time will strengthen our forest resources for the long pull. The Forest Service is cooperating with State agencies and with private forest operators to advance this dual aim.

Farm Credit Policy. The Farm Credit Administration is conducting a program to head off land boom dangers. It includes measures that will encourage farmers to build reserves for rainy days. The program emphasizes five primary credit objectives: (1) To make normal values a primary factor in all appraisals for farm real estate loans. This is the soundest basis of appraisal in a situation like the one now confronting us. (2) To impress upon present borrowers the wisdom of making use of higher incomes now available for the repayment of existing debts. This will be a factor in preventing inflation. (3) To encourage farmers to build reserves out of higher incomes today to bridge the period when incomes may not be so high, by offering inducements to borrowers to accumulate funds to meet future payments. (4) To avoid fostering speculative increases in production, while giving careful consideration to the needs for extending credit for making necessary shifts and increases in production. (5) To encourage the sound use of credit to foster a better balanced agriculture that yields a higher and a more secure standard of living to the family farm.

Soil Conservation. As an important part of the conservation program, the Department's Soil Conservation Service is classifying farm and range land so that eventually we will be able to ascertain

quickly the precise areas where, in case of emergency, we can expand or contract farm production most efficiently. As we learn the capabilities of our soil resources for varying uses, we can partially eliminate the chances for waste of manpower, fuel, seed, and equipment on inefficient areas. Similarly, we can diminish the likelihood of ill-advised, indiscriminate plow-ups such as took place during and after the last World War. The facts about America's land resources are being assembled by the Soil Conservation Service on "land use capability" maps. With one of these maps, a farmer can determine almost at a glance which areas are best for inter-filled crops, where his poorest acres are located, and which land is best suited for grass and trees.

Cooperative Land-Use Planning. Cooperative land use planning, or agricultural planning as it is now coming to be known, is a joint program of the Department of Agriculture and the State Land-Grant Colleges. It has spread in less than 3 years to 47 States and to nearly two-thirds of our agricultural counties. Designed as a democratic means of unifying national, regional, and local farm interests and of coordinating public agricultural program, agricultural planning has developed rapidly in the defense emergency. By democratic procedures, it promotes the full cooperation of farmers, agricultural experts, and administrators of farm programs in plans and policies to increase the contribution of agriculture to the defense of democracy, and to promote rural well-being. During the past year, State Agricultural Planning Committees have been active in 47 States, county and community agricultural planning committees have been at work in nearly 1,900 counties in these States. More than 10,000 community committees have participated in the program. The State and county committees include farm men and women and representatives of Federal and State agencies, while the community committees are composed primarily of farm men and women. See AGRICULTURE.

ALABAMA. An east south central State. Area: 51,609 sq. mi., including 531 sq. mi. of inland water, but excluding Gulf of Mexico coastal waters, 560 sq. mi. Population: (1940 census) 2,832,961. The urban population comprises 30.2 per cent of the total (U.S. average, 56.5 per cent); non-white pop-

ulation, 34.8 per cent (U.S. average, 10.2); elderly (65 years and over), 4.8 per cent. Alabama ranks 28th among the States in area, 17th in population, and 20th in density, with an average of 55.5 per sq. mi. The capital is Montgomery with 78,084 inhabitants; largest city, Birmingham, 267,583. There are 67 counties and 14 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to A. H. Collins, Superintendent of the Department of Education, there were 686,767 pupils enrolled in the public schools of Alabama during the school year 1940-41, 496,973 in elementary schools and 189,794 in secondary schools. Teachers numbered 19,393 and received an annual average salary of \$719. Total expenditures for the year were \$24,178,703. See UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 6,471, of which 6,271 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 347,123; 273,114 were private and commercial automobiles, 3,892 busses, and 62,847 trucks and tractor trucks. Gross motor-fuel consumption was 259,915,000 gallons. Net motor-fuel tax receipts were \$15,535,000, the rate being six cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$4,548,000.

Railways of all classes extended 5,052 miles (Dec. 31, 1939) 2.15 per cent of the total mileage in the United States. Class I steam railways (4,191 miles) reported 20,195,532 tons of revenue freight originating in Alabama in 1940 and 14,788,360 tons terminating in Alabama. There are 34 airports and landing fields in the State (14 lighted fields) and one seaplane anchorage. On July 1, 1941, according to the Civil Aeronautics Authority, there were 153 civil aircraft in the State and 935 commercial and private pilots (798 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 7,502,500, as compared with 7,791,500 acres in 1940. According to the latest census, there are 231,746 farms, valued at \$408,782,488, averaging 82.6 acres each. Farm population numbered 1,344,349 or 47.5 per cent of the total. Leading crops with production were: Cotton lint, \$64,780,000, 790,000 bales; corn, \$38,933,000, 51,228,000 bu.; cottonseed, \$16,579,000, 352,000 tons; peanuts, \$10,332,000, 252,000 lb.; hay, \$9,369,000, 3,643,000 tons; sweet potatoes, \$7,050,000, 3,240,000 bu.

Manufacturing. According to the latest census (1939) the total value of manufactured products was \$574,670,690. For details, see 1940 YEAR BOOK.

Mineral Production. Leading mineral products in 1940 included the following (with 1939 figures in parentheses): Pig iron, 3,476,072 net tons valued at \$49,706,851 (3,043,602 net tons, \$43,902,681); coal, 15,150,000 net tons (11,995,000 net tons, \$27,708,000); coke, 4,727,378 net tons, \$13,748,837 (3,854,505 net tons, \$10,917,559); iron ore, 7,330,412 gross tons, \$12,606,369 (5,985,208 net tons, \$9,971,024); cement, 5,249,759 barrels, \$7,617,405 (5,042,921 barrels, \$6,690,765). According to the U.S. Bureau of Mines, the total value of mineral production in 1939 was \$52,124,382 or 1.23 per cent of the total value for the United States. (Duplications are eliminated in State totals; e.g., iron ore is included, pig iron omitted.) Alabama ranks 20th among the States in value of mineral products.

Trade. According to the 1940 census there were 1,943 wholesale establishments in Alabama, employing 14,202 persons, reporting net sales for

1939 of \$415,688,000 and annual pay roll of \$18,910,000. There were 23,916 retail stores with 51,830 employees, reporting sales of \$435,973,000 and pay roll of \$37,826,000. Service establishments numbered 9,001, employing 17,977 persons for \$9,961,000 per year, and reporting a business volume amounting to \$31,361,000. The leading business center of the State is Birmingham which reported wholesale sales of \$182,932,000, retail sales of \$100,136,000, and \$7,610,000 receipts for its service establishments. Montgomery reported sales of \$56,851,000 wholesale and \$30,930,000 retail, Mobile, \$43,976,000 and \$30,838,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Alabama was \$37,596,000. Under the Social Security program, financed by Federal funds matching State grants, 20,068 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$9.14 (U.S. average pension, \$21.08); 16,815 dependent children in 5,801 families received average monthly payments of \$13.79 per family (U.S. average, \$32.73); and 615 blind persons received \$9.07 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 2,387 and received \$8.95 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 8,175 (\$542,000); NYA student work program, 3,529 (\$31,000), NYA out-of-school work program, 11,758 (\$221,000); WPA, 32,037 (\$1,535,000); other Federal emergency projects, 86 (\$12,000); regular Federal construction projects, 16,306 (\$2,191,000). The Farm Security Administration certified subsistence payments totaling \$656,000 for the month to 7,471 cases.

Legislature. The Legislature convenes quadrennially until 1943 when biennial sessions will be introduced. (The last session was in 1939.) It is composed of 35 Senators (34 Democrats and one vacancy in 1941) and 106 Representatives (101 Democrats and five vacancies).

Finances. Total tax collections in Alabama for the fiscal year ending in September, 1940, were \$55,134,000. Total sales taxes amounted to \$26,792,000, including general sales, \$7,756,000, motor fuel, \$15,301,000. Taxes on specific businesses and occupations ran to \$6,363,000, while general and selective property taxes came to \$5,103,000. The net income taxes were \$2,670,000. Cost payments for the operation of general government totaled \$44,469,000 in 1939, the latest year available. (Revenues for the general government for that year were \$65,781,000.) Cost of operation per capita was \$15.81. Total gross debt outstanding in 1941 was \$69,730,000 as compared with \$82,343,000 in 1932.

Officers and Judiciary. The Governor is Frank M. Dixon (Dem.), inaugurated in January, 1939, for a four-year term; Lieutenant Governor, Albert A. Carmichael, Secretary of State, John Brandon; Attorney General, Thomas S. Lawson; State Treasurer, Charles E. McCall; State Auditor, Howell Turner. Chief Justice of the Alabama Supreme Court is Lucien Gardner; there are five associate members elected by popular vote for six-year terms.

See BIRTH CONTROL; PRISONS.

ALAND ISLANDS. See FINLAND under *History*.

ALASKA. An organized, noncontiguous Territory of the United States, situated in the far northwest of

the North American continent, including the Aleutian Islands. Area, 586,400 square miles, inclusive of inland waters. Population, 1940 (taken Oct. 1, 1939) 72,524; 1930, 59,278. Whites (1939) numbered 39,170; Indians and Eskimos, 32,458. Capital, Juneau; population (1940) 5,729. Governor, Ernest Gruening.

These population figures do not tell the whole story, however, according to Governor Gruening's annual report for the fiscal year 1941. The large scale defense program in Alaska brought a sudden influx of workers to the territory, which continued to the end of the year and swelled the total population to 80,000 people.

Mineral Production. Plans for work in Alaska by the U.S. Geological Survey for 1941 included an intensive search for some of the strategic minerals urgently needed by the United States for the war program. Search for Alaskan sources of tin, nickel, chrome, mercury, tungsten, and antimony were pressed with especial activity.

The mineral output of Alaska was valued at \$28,470,000 in 1940 which compared with \$25,296,000 during the preceding year, and was greater than at any time since the first World War, according to the U.S. Geological Survey. The value of the gold produced in 1940 marked an all-time high. The following table shows the value of the mineral output of Alaska in 1940 and 1939:

Minerals	1940	1939
Gold	\$26,178,000	\$23,279,000
Silver	143,000	138,000
Copper	13,800	30,000
Lead	84,000	106,000
Platinum metals	1,093,000	997,000
Tin, metallic	52,000	37,300
Coal	695,000	585,000
Miscellaneous	211,200	123,700
Total	\$28,470,000	\$25,296,000

Fisheries and Furs. Products of the Alaska fisheries in 1940 decreased considerably, the total quantity being the smallest for any year since 1927. Two important causes of the decline were light runs of salmon and herring in certain localities, which necessitated rigid curtailment of operations, and suspension of operations by the Alaska whaling stations because of the low prices for whale oil. Halibut, clam, and shrimp products showed a gain both in quantity and value. Salmon products represented about 81 per cent in volume and about 91 per cent in value of the total fisheries output in Alaska in 1940, as compared with 73 per cent in volume and 91 per cent in value in 1939. In 1940, 25,199 persons were employed in the commercial fisheries of Alaska, a decrease of 5,373 from 1939. The total value of Alaska fishery products was \$36,440,660, a decrease of \$3,663,833 from the preceding year.

At the Pribilof Islands 65,263 fur-seal skins were taken. The computation of the fur-seal herd as of Aug. 10, 1940, showed a total of 2,185,136 animals of all classes, an increase of 164,362 over the previous year. Fur farming retained its place as an important industry, with 217 licensed farmers last year. The Territorial experimental fur farm at Petersburg became an important source of aid for the fur farmer. As in previous years, mink and blue and silver foxes were the main species propagated with the ranching of other fur bearers such as white fox, marten, land otter, beaver, and fitch being more or less in an experimental stage. The raising of marten and lynx was not entirely successful. Domestic production of muskrats and nutria is to be attempted.

Last year 546,295 pelts were taken in the Territory; the value of those shipped out totaled \$1,944,719. Muskrats, selling for an average price of \$1.10

per pelt, yielded a total of \$498,630; mink, \$371,467.

Commerce of Alaska. Shipment values (as compiled by the Collector of Customs) were:

	Years ended June 30,		Decrease
	1940	1941	
Alaska to United States			
Canned salmon	\$20,740,427	\$29,560,296	\$180,131
All other fish and fish products	5,626,421	4,890,638	735,783
Total fish	35,366,848	34,450,934	915,914
Furskins	2,844,202	2,565,414	278,848
Gold	20,951,797	20,410,755	541,042
Silver	79,075	65,749	13,326
All other products	4,003,969	3,661,022	342,947
Grand total	\$63,245,951	\$61,153,874	\$2,092,077
United States to Alaska	43,827,202

Agriculture and Colonization. Agricultural interests remained focused on the Matanuska Valley colonization project. About 4,500 acres of fir and spruce forest were turned into fields of thriving crops of wheat, barley, oats, peas and oats, hay, potatoes, and numerous vegetables. The dairy industry in the valley expanded greatly. There were 133 occupied and 8 unoccupied farms in the project. A number of the original 40-acre tracts were combined with others to make 80- or 120-acre farms. Additional land was cleared on the unoccupied tracts to make them more valuable for farming. There was sufficient farming experience in the Matanuska Valley to prove agriculture a distinct success.

Reindeer Service. Congress passed the Reindeer Act (1939) appropriating \$795,000 to buy up all nonnative owned reindeer as a conservation and Eskimo-protection measure. In 1941 there were approximately 205,000 reindeer in Alaska of which natives owned about 161,000 and the government 44,000. These animals graze 56 ranges on the west coast between Kodiak Island and the Arctic rim east of Barrow, an area of 166,000 square miles. There were 36 native reindeer associations in 1941, in which 3,190 Eskimos, Aleuts, and Indians owned stock. Over 14,000 people, including native families, were dependent upon reindeer as an essential source of food and clothing.

Transportation and Communications. Records of the five regular steamship companies serving Alaska disclosed a considerable increase in travel to Alaska over previous years. Both passenger traffic and freight tonnage over the Alaska Railroad showed a noteworthy increase for the year due to the defense construction activities in Anchorage and Fairbanks. In addition to the usual funds for the Alaska Road Commission, \$1,000,000 was made available by congressional appropriation for a road connecting the Anchorage road system with the Richardson Highway, thus connecting with the Fairbanks road system. Length of road to be built is 145 miles and estimated cost, \$1,500,000. Work was well started on the new road from Palmer to the Richardson Highway with construction under way in various stages over a distance of 40 miles. The cost during the year was \$991,967, of which \$276,294 was for new work and \$715,673 for maintenance and improvement. Total expenditures during the fiscal year were \$1,212,995.

Today there are 155 commercial air fields in Alaska. Work completed during the fiscal year 1941 by the Airways Engineering Division provided the Territory with an airways system from Nome to Ketchikan. Improvements during the fiscal year will expand the system to the Alaska Peninsula and the Aleutian Islands.

Education. The University of Alaska in 1940-41

enrolled 250 resident and 60 nonresident students. The Territorial Board of Education, during 1940-41, operated 116 day schools, 5 special schools, and 2 vocational boarding schools with a total enrollment of 6,900. Several factors have contributed to a steadily increasing enrollment in Native schools for the past six years.

Events. Headlines in the story of Alaska for 1941 were the vast naval and air base defense programs launched to strengthen the position of the United States in the Pacific, and the sudden strategic importance of Alaska to the United Nations with the entry of the United States into World War II. The Aleutian Islands are 800 miles nearer to Japan than Pearl Harbor; only 2,300 miles lie between Dutch Harbor and Yokohama. And it is no secret that Alaska's wealth of minerals and her annual output of 250,000 lbs. of canned salmon are prizes greatly coveted by Japan, to say nothing of the value a foothold on Alaskan soil would be for an offensive against the west coast.

Huge sums of money were appropriated and spent in 1941 to make Alaska impregnable. By June an initial \$70,000,000 had been authorized. The strong Naval air and submarine base at Dutch Harbor was commissioned Sept. 1, 1941. Huge inland Army air bases at Fairbanks and Anchorage were almost completed by the end of the year, the one at Anchorage with a 1,000-bomber capacity. The Navy put a listening post on Kiska in the Aleutians, and additional flying fields for the Army were well under way at Yakutat on the Gulf of Alaska and at Metlakatla. Still other naval bases were being built at Kodiak and Japonski Islands near Sitka. The airfield program included major airports on Annette Island near Ketchikan, at Boundary, Big Delta, West Ruby, Bethel, and Cordova.

A program of tax reform was presented by the governor to the legislature in January, 1941, which proposed levying two new basic taxes, a corporate and personal income tax and a general property tax, and the repeal of more than 30 existing so-called "nuisance" taxes. This proposal was designed to correlate the increased prosperity of individuals in Alaska with the revenues needed for the betterment of the Territory. But the old frontier psychology of "Get in, get rich, get out" prevailed, and the reforms were defeated by a small but active lobby representing the absentee gold-mining and cannery group. Also defeated were a bill to create a much-needed Department of Health, a bill to remedy the code for juvenile offenders, and a bill to appropriate \$386,500 for new construction for the University of Alaska. The legislature cut the appropriation for the care of crippled children from \$30,000 to \$25,000, and abolished the Alaska Planning Council, which was established in 1937, and had since brought to light important and pertinent facts about the absence of adequate taxation in the Territory.

One constructive piece of legislation was the establishment of a Territorial Department of Labor. Jokers were inserted in the hope that the bill would be so bad that the Governor would have to veto it. These included a 10-year residence requirement for every employee of the Department, a 35-year age qualification for the Commissioner of Labor, and a salary for the Commissioner 28 per cent lower than that of all other Territorial officials. Nevertheless the Department was organized in the hope that subsequent legislatures would do better by it.

See *ARCHAEOLOGY; GEOLOGICAL SURVEY; LABOR LEGISLATION.*

ALBANIA. A former Balkan kingdom on the east shore of the Adriatic Sea, occupied by Italian

troops on Apr. 7, 1939, and proclaimed an Italian protectorate the following day. Excluding the districts of Kossovo and Ciamuria in Yugoslavia, annexed to Albania in 1941, the area was 10,629 square miles and the estimated population 1,063,000 on Dec. 31, 1939 (1,003,124 at the 1930 census). Capital, Tirana (pop. 30,806 in 1930); other chief towns, Scutari (Shkoder), 29,209; Koritsa (Korce), 22,787; Elbasan, 13,796; Durazzo (Dures), the chief port, 8,739. Most of the cities of southern and central Albania were badly damaged during the Italo-Greek war of 1940-41.

Education and Religion. Primary education is nominally compulsory, but illiteracy remains high. In 1939 there were 663 state primary schools, with 56,936 pupils; 19 intermediate schools, with 6,235 pupils; and about 500 Albanian students in various foreign universities. The estimated religious division of the population was: Moslems, 685,280; Orthodox Christians, 210,313; Roman Catholics, 104,184.

Production. Albania's chief products are corn, tobacco, wool, timber, hides, dairy products, fish, olive oil, and petroleum (see 1939 *YEAR BOOK* for available production figures). The December, 1938, livestock census showed 391,175 cattle, 1,573,857 sheep, 932,333 goats, 54,426 horses, 44,579 asses, and 10,391 mules. Besides petroleum, with an output estimated at 1,659,000 bbl. in 1940, there are copper, chrome, and other mineral resources which Italy commenced to exploit in 1940 and 1941. Flour, olive oil, and cheese are the principal manufactures.

Foreign Trade. Imports in 1938 totaled 22,397,890 gold francs (1 franc equalled 6.25 Italian lire), of which 8,337,109 francs were from Italy, exports, 9,749,959 francs (6,665,257 to Italy). Wool, hides and furs, cheese, cattle, eggs, and timber are the chief exports.

Finance. Budget estimates for the fiscal year ended Mar. 31, 1940, balanced at 40,000,000 gold francs. The public debt in 1938 was 68,200,000 gold francs, outstanding from a series of loans extended by Italy in return for political and economic concessions (see 1938 *YEAR BOOK*, p. 27).

Transportation. The highway network extended 1,759 miles in 1940 (750 miles suitable for motor traffic), but this was badly disrupted by war in 1940-41. Italian air services connect Tirana and other Albanian cities with Rome and other points. Construction of a railway between Durazzo and Elbasan, the first line in Albania, was begun in May, 1940.

Government. King Zog I, proclaimed King of Albania by an independent National Assembly Sept. 1, 1928, was dethroned Apr. 12, 1939, by an Italian-controlled Constituent Assembly, which abrogated the existing constitution. An Italian-sponsored government then offered the Crown of Albania to King Victor Emmanuel of Italy. A personal union between the two kingdoms was thus effected Apr. 14, 1939. The following June 3 Victor Emmanuel issued a constitutional statute making the Albanian throne hereditary under his dynasty and vesting legislative, judicial, and executive powers in the King's hands. Legislative powers were delegated in part to an Albanian Fascist Corporative Council, based on a newly organized Albanian Fascist party, and executive and judicial powers to Albanian officials acting under Italian guidance. Albania remained the official language. A treaty signed the same date placed Albania's foreign relations in the hands of the Rome Government (see *YEAR BOOK* for 1939, p. 22).

History. The Italo-Greek war that began Oct. 28, 1940 (see *YEAR BOOK* for 1940, p. 19) continued

on Albanian soil until the second week of April, 1941. Then the success of the German attack upon Yugoslavia and Greece forced the withdrawal of the Greek armies. Yugoslav forces that attempted an invasion of Albania after the German attack upon Yugoslavia had made but slight progress when German victories ended this threat to the encircled Italian armies (see *WORLD WAR*). Nevertheless war-ravaged Albania continued to suffer from hunger, disease, and the underground struggle against the Italian overlords that followed the sanguinary Italo-Greek hostilities.

Albanian nationalists in the main supported the Greeks in their war with Italy, hoping that an Anglo-Greek victory would permit the reestablishment of an independent Albania. When the Greeks indicated their intention of retaining the Albanian territories conquered from Italy, Albanian patriarchy living in exile in Balkan capitals appealed to Prime Minister Churchill in mid-February for a declaration by the British Government in support of Albanian independence. London authorities issued no public statement on the issue but reportedly sought through diplomatic negotiation to restrain Greek territorial aspirations.

With the collapse of Yugoslavia and Greece, Italy extended Albania's frontiers to include the districts of Kossovo in Yugoslavia and Ciamuria (Tsamuria) in Greece. Both contained considerable Albanian populations. Beginning May 10, King Victor Emmanuel of Italy made his first visit to Albania since the Italian occupation. The King and Premier Shevket Verlaci of Albania had a narrow escape from the bullets of an assassin near Tirana on May 17. Vasil Laci Mihailov, said to be a native of Ciamuria, was hanged for the crime. The puppet government at Tirana announced on June 28 that Albania was at war with the Soviet Union. On July 31 it was officially announced in Rome that Albanian authorities had assumed control of the protectorate's affairs under a special agreement with Italy, the terms of which were not reported.

Unrest and anti-Italian sentiment remained rife, however, and beginning in August Albanian tribes were reported to have joined in the anti-Axis revolt sweeping through the occupied countries of Europe. Assisted by Serbian Chetniks, Albanian guerrillas harassed Italian garrisons in the mountains of central and northern Albania. Widespread sabotage of the oil pipeline, mines, and equipment valuable to the Italians was reported.

Resignation of Premier Shevket Verlaci's Cabinet in favor of a new Ministry headed by Mustapha Merlika Kruja was announced in Tirana and Rome December 3. A pro-Italian, Kruja supported the Italian invasion of Albania and was subsequently appointed a Senator.

See GREECE, and ITALY under *History*; *WORLD WAR*.

ALBERTA. A prairie province of Canada. Area, 255,285 square miles, including 6,485 square miles of fresh water. Population (1941 census, preliminary), 788,398, compared with (1936 census), 772,782. Chief cities (1941 census figures): Edmonton, capital (92,404), Calgary (87,264), Lethbridge (14,238), Medicine Hat (10,473), Red Deer (2,846), Drumheller (2,687), Wetaskiwin (2,285). Vital statistics (1940): 17,329 living births, 6,198 deaths, and 8,778 marriages. Education (1938-39): 178,757 students enrolled in schools and colleges.

Production. The gross value of agricultural production for 1940 was \$203,721,000 (including field crops \$133,734,000, farm animals \$38,947,000, dairy products \$19,844,000, poultry products

\$5,385,000, fruits and vegetables \$3,750,000). Field crop yields in 1940 were wheat (187,000,000 bu.), oats (103,000,000 bu.), barley (32,000,000 bu.), rye (3,000,000 bu.), potatoes (93,100 tons), hay (899,000 tons), grain hay (1,800,000 tons), sugar beets (334,000 tons). Livestock (1940): 1,366,000 cattle (including 417,000 milk cows), 1,371,000 swine, 883,000 sheep, 658,000 horses, and 7,697,900 poultry. The 1940 wool clip amounted to 4,001,000 lb. Furs (1940-41): 2,601,424 pelts valued at \$2,806,073 (3,977,118 pelts, \$2,514,877 in 1939-40 and 2,273,826 pelts, \$1,345,129 in 1938-39). Forestry products (1939) were valued at \$3,268,000.

Mineral production (1939) was valued at \$30,691,617 (see *YEAR BOOK* for 1940, p. 20). In 1940, crude oil production amounted to 8,494,500 bbl.; natural gas, 22,736,000 M cu. ft., coal, 6,202,936 short tons. Manufacturing (1939): 961 factories, 12,712 employees, \$32,618,153 net value of products.

Government. Finance (year ended Mar. 31, 1940): \$24,410,040 for revenue and \$21,922,189 for expenditure; net funded debt, \$142,926,187. The executive power is vested nominally in the lieutenant governor but actually in the ministry, or cabinet, of the legislature. Legislative power is vested in the legislative assembly of 57 members elected by direct vote of the people (36 Social Credit, 19 Independent, and 2 other members were elected at the provincial general election of Mar. 21, 1940). Alberta is represented by 6 senators (appointed for life) and 17 elected commoners in the Federal parliament at Ottawa. Lieutenant Governor, J. C. Bowen (appointed Mar. 20, 1937); Premier, William Aberhart (Social Credit).

History. On Sept. 2, 1941, the provincial government defaulted on a \$2,250,000, 6 per cent bond issue, that fell due on September 1, but continued to offer to pay interest at one-half the coupon rate. A majority of the Supreme Court of Canada, on Dec. 2, 1941, decided that the Alberta Debt Adjustment Act of 1937 as amended in subsequent years is unconstitutional and beyond the powers of the legislature of the province. The Alberta government announced on Dec. 16, 1941, that it would enter the life insurance business on Jan. 2, 1942, under the terms of the Insurance Act as amended at the last session of the legislature. Four types of insurance will be offered—the 20-pay life, ordinary life, term insurance for 5 years, and insurance up to 65 years. Two years ago the province entered the fire insurance business. See CANADA.

ALFALFA. See HAY.

ALGERIA. A north African colony of France. Area, 851,350 square miles, of which all except 222,206 square miles are desert. Capital, Algiers (Alger). The estimated population (Dec. 31, 1938) was 7,490,000. At the 1936 census there were 7,234,684 inhabitants (6,592,033 in the Northern Territory and 642,651 in the Southern Territory), including 987,252 Europeans (853,209 French citizens) and 6,247,432 Moslem natives. On July 22, 1940, there were 20,000 Italians permanently established in Algeria. Chief cities (1936 populations): Algiers, 264,232; Oran, 200,671; Constantine, 113,777; Bona (Bône), 86,332; Philippeville, 66,112; Sidi-bel-Abbes, 54,754. Education (1938): For non-Moslem education, there were 21,249 pupils in 120 infant schools, 159,725 pupils in 1,224 primary

schools, 9,386 pupils in 30 higher primary schools, 14,306 pupils in 18 secondary schools, 484 students in 6 normal schools for teachers, and 2,248 students in the university at Algiers. For Moslem education, there were 77,022 students in 692 schools.

Production. The main occupations of the people are agriculture and stock raising. In 1939 yields of important cereal crops (in metric tons) were: Wheat 1,160,000, barley 1,100,000, oats 220,000. Other important products (1938 production figures in metric tons unless otherwise stated) were: Olive oil 7,000 in 1940-41, potatoes 145,300, tobacco 19,400, wool and mohair 7,400, wine 567,703,479 U.S. gal. Dates, figs, bananas, and almonds grow abundantly. Livestock (1938): 181,000 horses, 182,000 mules, 319,000 asses, 789,000 cattle, 5,965,000 sheep, 2,737,000 goats, 170,000 camels, and 60,000 swine. Mineral production (1938), in metric tons (figures are for metal content of ore): iron ore 1,640,000, lead 4,400, pyrites 44,000, zinc ore 7,000, antimony ore 150. The output of phosphate rock was 584,000 metric tons.

Foreign Trade. In 1938, imports totaled 4,995,000 francs; exports, 5,639,000 francs. Normally over 80 per cent of Algeria's trade was with France. See TRADE, FOREIGN.

Finance. Budget estimates (1940): Revenue, 2,526,128,968 francs; expenditure, 2,525,778,285 francs.

Transportation. In 1940 Algeria had about 2,734 miles of railway line in operation, 43,239 miles of roads (see ROADS AND STREETS), and air services connecting Algiers with other North African cities and with Marseille, France. Construction of a trans-Saharan railway linking the Algerian and Moroccan railway network with the Niger River in French West Africa was begun in 1941. In 1938 a total of 3,956 vessels discharged 3,925,179 tons of merchandise in Algerian ports and 4,540 ships of 7,920,844 tons cleared with 7,290,377 tons of Algerian produce.

Government. Administration is centralized in the hands of a Governor-General appointed by the French Government. Previous to the collapse of the French Republic, the departments of Algiers, Oran, and Constantine in Northern Algeria were represented in the French Parliament by 10 deputies and 3 senators. Southern Algeria had a French military government. Under the Vichy regime, full executive and legislative powers for the colony were vested in the Governor-General, who was made responsible to Gen. Maxime Weygand, Vichy's Delegate-General in French Africa. In July, 1941, General Weygand replaced Admiral Jean Marie Abrial as Governor-General of Algeria, at the same time retaining his post as Delegate-General.

History. Although Admiral Abrial in an interview on February 17, asserted that all factions in Algeria were solidly behind the Pétain Government in France, the colony was influenced by the tide of resistance to Vichy's policy of collaboration with Germany that swept France during 1941. In January six persons were killed in a riot of French troops stationed at Maison Carrée, Algeria. Executions or imprisonments of de Gaullist spies and conspirators were reported from time to time. A breach between General Weygand and the Vichy Vice Premier, Admiral Darlan, over the issue of collaboration with the Reich was reported and on August 27 the French War Minister shifted the command of French troops in Algeria. See FRANCE under *History*.

Charges were made in the United States (*Nation*, May 3, 1941) that thousands of Spanish and other

refugees were subjected to forced labor on the trans-Saharan railway project and to maltreatment by French officials. These charges were officially denied by the Governor-General's office in July.

In line with the Vichy Government's program in France, the Governor-General's office in Algiers proceeded with the reorganization of the colony on a corporative basis. A decree of Apr. 7, 1941, called for the creation of an Organization Committee for each branch of industrial or commercial activity. The Committees were to assume full control and direction of all persons and companies in their respective occupational groups and to regulate production, distribution of raw materials and stocks, working conditions, etc.

See FRANCE under *History*.

ALIENS, ALIEN REGISTRATION. See IMMIGRATION; also, ENEMY ALIENS, FEDERAL BUREAU OF INVESTIGATION. For alien assets in the United States, see FINANCIAL REVIEW. For the ALIEN ENEMY CONTROL UNIT and HEARING BOARDS, see ENEMY ALIENS.

ALL-AMERICAN CANAL. See AQUEDUCTS.

ALSACE-LORRAINE. The two border provinces annexed by Germany after the Franco-Prussian War and returned to France by the Versailles Treaty (June 29, 1919). They were reoccupied by German troops in June, 1940, and reincorporated in the Reich on or about Nov. 30, 1940. Area, 5,605 square miles; population (1936 census), 1,915,627. Lorraine was merged with the Saar district (Saarpfalz) to form the new German province of Westmark. See FRANCE under *History*.

ALUMINUM. Aluminum is essential in the production of war materials. It is needed for naval construction, for all aircraft construction, especially for fighter planes, because of its lightness, great strength and freedom from oxidation. It comprises half the weight of every airplane: at a rough estimate, 13,000 lb per fighter plane, 30,000 lb. to a bomber.

Aluminum was the first of the five critical materials to be put under priority control by the OPM (February, 1941). Government rationing began in April with A-preference ratings given to defense orders. The nondefense industry was warned as early as March by the Director of Priorities to seek substitute materials. By April almost the entire supply in the United States was going into military production. By mid-1942 aluminum demands are expected to double when more and more huge aircraft manufacturing plants swing into the projected 60,000-plane program. On Jan. 26, 1942, the entire supply of United States aluminum was requisitioned for war contracts only, and at once, by Conservation Order. This bans its use for any civilian purposes whatever.

The national defense program as early as 1940 had increased aluminum production in the United States 26 per cent over 1939. Imports of crude aluminum increased 26 per cent and exports fell 25 per cent. Production in 1941 increased 33 per cent over 1940 with 300,000 tons of aluminum plus 70,000 tons from secondary sources. The Aluminum Company of America did the whole production job until 1940 when four new companies came into the field. The price fell from 20¢ to 17¢ a lb. in 1940 and to 15¢ a lb., September, 1941, where it remained to the end of the year. Early 1942 will see the United States producing aluminum at the rate of more than 450,000 tons per year. With eventual war needs figured at 800,000 tons by the OPM, the nation's production goal is

725,000 tons by the end of 1942 and a 750,000 ton yearly rate by 1943. Canada sends the United States about 20,000 tons of aluminum every year but is expected to ship in 100,000 tons in 1942.

Production of bauxite in the United States, according to the U.S. Bureau of Mines, totaled about 899,500 long tons in 1941 compared with 438,913 in 1940. Of this Arkansas contributed 92 per cent; the other 8 per cent came from Alabama, Georgia, and Virginia. Consumption of bauxite broke every record with about 1,700,000 tons against 1,072,000 tons in 1940. Of this, 70 per cent went to the aluminum industry, 16 per cent and 12 per cent to the chemical and abrasive industries respectively.

The U.S. Bureau of Mines estimated that the United States had about 32,511,360 tons of bauxite in reserve, not counting the wealth of bauxite at Surinam (Dutch Guiana), where the United States established a military outpost, Nov. 24, 1941, to protect that invaluable and indispensable supply. Bauxite imports went up 75 per cent, January-September, 1941, according to the Bureau of the Census. Of these, 85 per cent were from Surinam; 10 per cent from British Guiana and 5 per cent from the Netherlands Indies. No foreign trade statistics later than September, 1941, will be published until after the war.

To prevent United States dependence on other countries for aluminum, however, the U.S. Bureau of Mines and Geological Survey began investigations for new sources of supply and reported that aluminum can be gotten from deposits in the United States of alunite, kaolinite clay, shale, nepheline syonite, feldspar mica, Wyomingite, prophanite, kyanite, and also from coal ash in minute quantities.

AMERICAN LEGION, The. An organization of World War veterans chartered by Congress in 1919. Its 23d national convention was held in Milwaukee, Wis., Sept. 15 to 18, 1941. Color was supplied the convention by a 12-hour parade, Tuesday, September 16, by 80,000 marchers before 1,000,000 spectators. The next convention will be in New Orleans, La., Sept. 21 to 25, 1942.

The convention defined the national objective in these words: "Our present national objective is the defeat of Hitler and what he stands for, and all diverting controversies should be subordinated to the main objective. We appeal for unity on this national objective." The convention also resolved: "We have confidence in and pledge our support to our Government, our President, our War Department, and our Navy Department."

It called for: (1) Repeal of the neutrality act. (2) Removal of geographic limitation on the movement of American troops. (3) Indorsement of the foreign policy of the President and the Congress. (4) Upholding the traditional policy of freedom of the seas, and opposition to any appeasement toward the aggressor nations, Germany, Italy, and Japan.

National Defense. The Milwaukee convention defined the basic elements of national defense to be:

(a) The ability to apply any fraction or all of our manpower and war industrial resources promptly and efficiently—by universal military training and federal regulation of war supply agencies. (b) The ability to carry war, when unavoidable, to our enemy, and thus prevent him from bringing war to us.

The national executive committee in Indianapolis, Nov. 6 and 7, 1941, recommended a five-point program for eliminating waste and confusion, increasing efficiency and accelerating the attainment of present national defense objectives, as follows: (1) Immediate creation of a national defense agency by the government, similar to the war industries board of the Great War, to be given full authority and responsibility for attaining the national defense objectives. (2) Placing into immediate effect of a temporary, equitable plan to utilize the manpower of the country in national defense. (3) Outlawing strikes in defense industry and making it a criminal offense in any way to obstruct defense production. (4) Drafting defense industry if selfish advantage is placed above the welfare of the nation. (5) Immediate stabilization of prices, wages, and rent.

Major Legislative Program. The committee designated the major national legislative program for 1942 as (1) The national defense program in full, as adopted at the Milwaukee national convention; (2) Those bills pertaining to the disabled veterans and to widows and orphans of the World War which have passed the House of Representatives and now are pending before the Senate finance committee.

Defense Accomplishments. During 1941 The American Legion with its 11,780 posts and more than 1,105,000 members, practically went on a complete war basis to throw the full weight of its manpower, prestige, and influence into America's all-out national defense effort. All its other activities were coordinated with this main program. Accomplishments included: Registration of 900,000 Legionnaires for national defense service; support of all defense legislation, including lend-lease bill and amendment of Selective Service Act to reduce age bracket; supplying innumerable leaders to defense posts of all kinds, ranging from President's cabinet down to local councils of defense and draft boards; establishing division of defense at national headquarters; sending a Legion mission at its own expense to Great Britain to study civilian defense functions in modern warfare; publishing first civilian defense handbooks outlining air raid warning and air raid precautionary services; enrolling and training tens of thousands of aerial observers; organizing thousands of air raid warning posts; enrolling and training thousands of air raid wardens; participating and scoring high in air raid warning tests conducted by the Army; sponsoring blackout tests in cities and towns; conducting large scale recruiting for the Navy; enrolling flying cadets for the Army and Navy; aiding in the organization of local "volunteer offices" everywhere to coordinate community resources for defense under the Office of Civilian Defense; suggesting the national aluminum collection and vigorously participating in it; investing post, department, and national funds in defense bonds, and supporting bond buying; cooperating in the United Service Organization fund campaign; establishing blood banks; organizing "ham" networks of amateur radio operators for emergency service; launching a nation-wide program of physical education under the direction of Frank G. McCormick, athletic director of the University of Minnesota, to toughen the national fiber for defense; cooperating with the Federal Bureau of Investigation against spies, saboteurs, and other dis-

loyal elements; enrolling in State guards; sponsoring model defense legislation in all States to curb any fifth column; extending its free rehabilitation services to all members of the present armed forces and their families in pressing any claims for compensation arising out of disabilities incurred in their present military or naval services; helping find employment for draftees who have returned from military service.

Americanism. In 1941 34 Boys' States were conducted in which 15,000 boys were trained in civic government, 400,000 boys under 17 again enrolled in junior baseball. Many thousands of students in 46 States participated in the annual high school oratorical contest; 13,055 medals were awarded by Legion posts and Auxiliary units to public school pupils outstanding in scholarship and leadership qualities; 3,483 copies of the suggested course of study on flag education were distributed, and 1,448,573 copies of the flag code. Nearly 3,000 Boy Scout troops were sponsored. A nation-wide effort was made to rid public schools of un-American textbooks.

Child Welfare. Thirty thousand volunteer workers carried on this activity. Incomplete reports showed the known total of \$6,279,470 was expended in emergency financial aid to 629,993 needy children during the year, mostly for food, clothing, and medical treatments. Physical fitness of American childhood was adopted as the 1942 national defense objective of this activity.

Rehabilitation. A total of \$2,603,747 in various contested government benefits was recovered without cost to the beneficiaries, by the Legion through its national rehabilitation service, for World War veterans and their dependents during the fiscal year ending June 30, 1941.

Membership. During 1941 the Legion reached a new high in membership. Dec. 31, 1941, there were 1,107,075 members. The posts numbered 11,790, also a new high. The Auxiliary also enrolled its highest membership, 523,328 in 9,351 units. The Sons of The American Legion closed the year with 53,892 members in 3,508 squadrons. The Forty and Eight membership climbed to a new peak with 45,139 members in 750 ventures. The Eight and Forty pushed to a new high enrollment of 7,810 members in 284 salons.

National officers elected for 1941-42 were: National Commander, Lynn U. Stambaugh; Vice Commanders, W. C. "Tom" Sawyer; DeLacey Allen; Charles E. Booth; V. M. Armstrong; and John F. Sullivan; National Chaplain, the Rev. Father Frederick J. Halloran, National Historian, Thomas M. Owen, Jr.; National Adjutant, Frank E. Samuel; National Treasurer, John R. Ruddick; National Judge Advocate, Ralph B. Gregg. National headquarters are at 777 North Meridian Street, Indianapolis, Ind. Legislative, rehabilitation, and employment director offices are maintained in the Legion-owned building at 1608 K Street, N.W., Washington, D.C. Editorial and advertising offices of *The American Legion Magazine* are at 1 Park Avenue, New York City. Editorial office of *The National Legionnaire* is at 777 North Meridian Street, Indianapolis, Ind.

ANDORRA. A small republic in the Pyrénées between France and Spain, under the joint suzerainty of the French chief executive and the Spanish Bishop of Urgel. Area, 191 square miles; population, 5,231. Capital town, Andorra. The language spoken is Catalan. Sheep rearing is the main occupation of the people. There is a governing body called the council-general consisting of 24 members (12 elected every 2 years) elected for 4 years by male citizens of 25 years of age or older. The council-general nominates the First Syndic (President) and Second Syndic (Vice-President). In a decree published Sept. 24, 1940, Marshal Henri Philippe Pétain, French Chief of State, assumed the title "co-prince of Andorra" formerly held by the President of the French Republic. In line with anti-democratic trends in France and Spain, universal suffrage was abolished in 1941 and electoral rights restricted to heads of families.

ANGLICAN COMMUNION. See ENGLAND, CHURCH OF.

ANGLO-EGYPTIAN SUDAN. A British-Egyptian condominium in northeast Africa. Area, 969,600 square miles; estimated population, 6,342,477 including 53,625 non-natives. Chief towns: Khartoum, the capital (46,676 inhabitants), Omdurman (110,959), Khartoum North (107,720), Atbara (19,757), Port Sudan (18,554), and El Obeid (17,300).

Production and Trade. Cotton (ginned) and gum arabic (80 per cent of world's supply) are the principal export products. The chief grain crops are great millet (the staple food of the Sudanese) and bulrush millet. Other products: sesamum, cottonseed, groundnuts, dates, doom-palm nuts, ivory, mahogany, ghee, shea nuts, salt, and gold. Live-stock (1938): 2,700,000 cattle, 2,500,000 sheep, 2,000,000 goats, 420,000 camels, 75,000 asses, and 23,000 horses. Trade (1940): £E3,695,776 (excluding government stores) for imports (cotton piece goods £E766,663, tea and coffee £E591,648); £E5,204,000 for exports (cotton accounted for £E2,690,000, gum arabic £E680,969). The £E (gyptian) averaged \$5.0130 for 1940.

Communications. At the end of 1940 there were 14,240 miles of roads, 1,991 route miles (3.5 ft. gauge) of railway, 2,325 route miles of river transport, 5,854 miles of telephone and telegraph routes, and 23 wireless stations. Shipping (1938): 746,591 tons entered and cleared Port Sudan.

Government. Finance. It was announced in August, 1941, that the financial returns for 1940-41 would show a surplus of £E29,461. Budget estimates (1941-42): £E4,066,172 for revenue and £E4,639,184 for expenditure. Some important features of the 1941-42 budget were the withdrawal of the Egyptian subsidy, and the extension of financial assistance by the British government for the expanded Sudan Defense Force. The governor-general is appointed by Egypt with the assent of Great Britain (Anglo-Egyptian Convention of 1899; reaffirmed by the Anglo-Egyptian Treaty of 1936). Ordinances, laws, and regulations are made by the governor-general in council. Governor-General, Lieut.-Gen. Sir Hubert Huddleston (appointed Oct. 16, 1940).

History. The first months of 1941 witnessed the elimination of the Italian threat to Khartoum and the cotton-growing district along the Upper Nile that developed with the capture of Kassala and other points in the Anglo-Egyptian Sudan in 1940 (see YEAR BOOK for 1940, p. 25-26). On January 9 the British began an offensive that led to the recapture of Kassala on January 18, the expulsion of Italian troops from the Sudan, and the subsequent invasion

and conquest of Italian East Africa (see *WORLD WAR; ITALIAN EAST AFRICA* under *History*).

An epidemic of yellow fever that claimed some thousands of victims in the Anglo-Egyptian Sudan during the year led British authorities throughout East Africa to take precautions against the further spread of the disease.

ANGOLA. A Portuguese colony in West Africa, south of the Belgian Congo. Area, 481,228 square miles; population (1936), 3,484,300, of whom 59,000 were Europeans and 21,800 were half-castes. Chief towns: Nova Lisboa (Huambo), Loanda, Benguela, Mossamedes, Lobita, and Malange.

Production and Trade. The chief crops (1938-39 production figures, in metric tons) were maize (316,800), sugar (38,200), coffee (17,600); (19,000 for 1939-40), wheat (6,400), palm oil (8,100, exported). Other crops included cacao, sisal, cotton, and tobacco. Mineral output (1940): 785,000 metric carats of diamonds and 25,000 metric tons of salt. There are deposits of copper and lignite. Trade (1938): 231,923,965 angolares for imports (textiles, foodstuffs, and coal were the main items); 338,541,274 angolares for exports (diamonds, maize, and coffee were the chief exports). The angolar averaged \$0.443 for 1938; \$0.0404, 1939; \$0.0371, 1940. Communications (1940): 2,080 route miles of railway, 22,990 miles of roads, 5,790 miles of telegraph lines, 259 miles of telephone lines, and 19 wireless stations.

Government. Budget (1940): 256,506,396 angolares. Public debt (June 30, 1937), 970,458,740 angolares. Angola is divided into 5 provinces and 14 administrative districts (decree of May, 1934). Governor General, Dr. Marques Mano (appointed Feb. 10, 1939).

ANTHROPOLOGY. Disease, Prehistoric, in America. The subject of disease among the American Indians and Eskimo before the advent of the Spaniards and other Whites (1492—), and that of the African Negro (1510—), has in the course of time received much attention, without to this day being fully elucidated. There are three main sources of information in the line—first, the writings of the old Spanish padres, and later those of the English and French missionaries; second, the more exact observations and records of medical men who came into direct contact with the natives, and of special scientific observers; and third, the collections of prehistoric skeletal remains, some carrying marks of disease, accumulated in the course of time in various institutions.

The evidence thus gathered is of unequal value. The padres and missionaries, while not seldom among the best educated of their time, had but a limited or no real knowledge of many of the diseases, were handicapped by the false notions of their times, and were unable to differentiate between what had been native in these respects and what was introduced by the Whites or the Negro. The information gathered later by medical men and scientific observers was much more satisfactory in this regard, but these men came late, over three centuries after the discovery of America, when the natives were already much admixed and modified

in many particulars; as a rule they did not know the language of the people they were reporting upon, and often they had but a limited time for their observations. The skeletal materials, finally, until recently were insufficient in quantity, could only show diseases or injuries which affected the bone, and in many individual cases there could be no certainty as to whether or not a given skeleton was pre-White or later.

It is plain that all generalizations concerning the subject of disease in pre-Columbian America must suffer from these defects and can never be fully true and satisfactory. There are nevertheless individual pathological conditions on which so much evidence is already on hand that a serious error regarding them is improbable. They are the conditions that have left their indelible marks on the bones. The latest studies in this field are reported in "Diseases of and Artifacts on Skulls and Bones from Kodiak Island," Ales Hrdlička, *Smithson. Misc. Coll.*, 1941, vol. 101, No. 4, Publ. 3640, 14 pp., 11 pl.; "The Antiquity of Congenital Syphilis," R. C. Holcomb, *Bull. Hist. Med.*, 1941, X, No. 2, pp. 148-177.

The Primates. An event of outstanding importance of the current year, for all workers engaged in studies on the Primates, has been the publication, by the Yale Medical Library, of an exhaustive analytical Primate bibliography, *Bibliografia primatologica*, by T. C. Ruch, with 16 assistants, (1935-41). The exemplary volume contains 4,630 entries. Its scope may best be appreciated from the headings of its principal subdivisions: Works on Knowledge of the Primates in the Ancient World and Middle Ages; Anatomy and Morphology of the Primates; Physiology, including Reproduction and Development; Psychobiology; Phylogeny; Primates in Mythology, Legends, Arts; Conservation. The only part of the field that is not fully covered, though there are various references to it, is Primate Pathology. The volume will be exceedingly useful to both Anthropology and Biology, and its excellent make-up harmonizes with the contents.

Archeological Researches in the Soviet Republics. In harmony with its general scientific policies, the Soviet government is paying greater attention to archeological researches year by year. These are directed in part to what may be called the classical or early historic, but largely also to prehistoric archeology, and to the period of early man. Every summer scores of expeditions are sent out by such institutions as the Leningrad and Moscow Anthropological Museums, under the auspices of the Soviet National Academy of Sciences, to carry on careful excavations, some of which reach large dimensions.

So far these expeditions have been directed mainly to the southern European and Asiatic regions of the country, with parts of northwestern and southeastern Siberia, but as personnel and interests develop they are to be extended to all parts of the Soviet territory where remains of ancient man or of early civilizations may be expected.

One of the latest and most noteworthy explorations is being carried on at Samarkand, Uzbekistan, central Asia. In June a party of scientists working under the direction of the Uzbek branch of the Soviet Academy and the Alishir Nevayi Museum, opened the old tombs of Timur (Tamerlane), the great Mongol warrior and ruler (14th-15th century), of his grandson, Ulugh Beg, a famed astronomer, and of Kazy-Zade Rumi, a poet and scientist. The remains were found in fair condition and confirmed the historical accounts of the men as to their stature and other matters; the skull of Timur, how-

ever, had been somewhat damaged by water. The talented Russian restorer, M. Gerasimov, attended the work and will endeavor, on the basis of anthropometric measurements, morphological study, and the early accounts, to reproduce the features of the three men. The expedition also uncovered the Ulugh Beg astronomical observatory, which had been covered with dirt and sand by the Mohammedans on their advent to power.

On the eve of the Nazi invasion of the country, the Ukrainian branch of the Soviet Academy of Sciences was organizing 30 archeological parties which were to excavate in different parts of the republic, the majority had already begun their work when war began. The fate of these expeditions, and that of the scientifically highly valuable anthropological and archeological Kiev, Odessa, and Kharkov collections, is as yet unknown.

Alaska. The principal Russian libraries, particularly those in Leningrad and Moscow, are rich in as yet unpublished materials relating to the Russian expeditions to and colonies in America. Two such documents of outstanding value to American students of the Far Northwest have recently come to light in the Public Library of Leningrad. The first is the complete journal of Sven Vaxel, Captain of the Russian Navy, who accompanied Vitus Bering on the 1741-2 expedition which discovered Alaska and some of the Aleutian Islands. The manuscript has now been published. It gives many details on the fateful journey, including notes on the first contacts with the native Alaskans.

The second document, even more important for American-Siberian anthropology, is the journal of Dr. Merk, who accompanied the Billing's 1791-2 expedition to the Bering Sea and surrounding regions. This journal, which had been believed lost, is said to contain highly valuable data on the Chukchi, Eskimo, and other natives of the region covered by the expedition. It was to be published in the June or July number of *Sovietskaia Arktika*.

Trepanation, in America. The practice of trephining of skulls in life originated during neolithic times in the Old World, spread particularly over the central and western parts of Europe and over portions of northern Africa, and was evidently brought to America, by way of Asia, during the latter part of that period. In America, while distributed from Alaska deep into western South America, it remained rare over the northern part of the continent, but reached its greatest development as well as frequency in the Andean regions of Peru and in parts of Bolivia. It was everywhere pre-Columbian, but has persisted in isolated spots in the Andes and in the Sierras of northern Mexico to recent times.

The operation, large collections now show, was not in general of thaumaturgic nature as had been supposed, but surgical and curative, partly for wounds of the skull, partly in all probability for painful and other affections of the head and the brain. Subjects of both sexes, from mid-childhood to past middle age, though not in senility, were operated upon, as a rule successfully so far as the procedure was concerned, and in instances repeatedly. No part of the vault proper was excluded from the operation; its size in traumatic cases depended on that of the lesion; and when there was danger of brain hernia the operators used gourd, shell, or silver plaques, and possibly also animal bone, as stoppers.

The instruments with which the operation was performed were in the main stone knives and drills, though in the Andes bronze knives were also employed. The methods used for the operation were cutting, sawing, scraping, drilling, or a combination

of some of these. If cautery was used it was not for trepanation. The native medicine-men, who were the surgeons, must have been acquainted with some narcotics (datura, cocoa, and perhaps others) with which to make the operation bearable; and also, empirically, with some antiseptics, which prevented infection. They had developed effective bandaging, and their operations in nearly all cases resulted in excellent healing.

Large collections of old American trephined skulls are to be found especially in the Smithsonian Institution, in the Harvard Medical Museum, and in the American Museum of Natural History.

ALES HRDLIČKA.

ANTIGUA. An island presidency of the British Leeward Islands. Area, 171 square miles, including its dependent islands (Barbuda and Redonda, 63 sq. mi.). Total population (1939), 35,527. Capital: St. John, 10,000 inhabitants. The chief products are sugar and cotton. Trade (1939): £230,874 for imports and £220,460 for exports. Finance (1939): £127,327 for revenue and £152,311 for expenditure; public debt, £94,493. Antigua, in addition to representation in the federal legislative council of the Leeward Islands, has a local government consisting of an executive council (presided over by the governor) and a legislative council (3 official, 3 nominated, and 5 elected members) of which an administrator is president. Administrator, H. Boon (appointed Apr. 2, 1940).

History. On Dec. 20, 1940, the legislative council of Antigua approved the leasing to the United States for 99 years of sites for a seaplane base called for under the Anglo-American accord of Sept. 2, 1940, and delimited on Nov. 18, 1940 (see YEAR BOOK for 1940, p. 28). The formal treaty for the leasing of the base sites was signed in London Mar. 27, 1941, by the British and U.S. Governments (see GREAT BRITAIN under *History*). The sites consisted of (1) approximately 430 acres on Crabbs Peninsula in Parham Harbor and, in addition, Rat and Mouse Islands, and (2) approximately 1½ square miles of land along the shoreline of Judge's Bay. For text of treaty and lease, see *The Department of State Bulletin*, Mar. 29, 1941. Construction of the base, estimated to cost \$2,920,000, was carried forward during the year.

ANTIMONY. Antimony suddenly leaped in 1941 from the comparative obscurity of a "miscellaneous metal" to a place among the sinews of war. Its principal use is for hardening lead for bullets and battery plates and in the manufacture of babbitt metal for bearings. The first warning that the nation's supply might decrease came in 1939 with the outbreak of war in Europe, Germany's confiscation of the output of central and southern European countries, the continued decrease of deliveries from China resulting from Japanese occupation of eastern China, and an increasing demand for it in United States industry. United States consumption, normally about 10,000 tons per year until 1939, jumped to some 17,000 tons in 1940. It was listed among the strategic raw materials by the Army and Navy Munitions Board (1940) and soon afterwards the Reconstruction Finance Corporation was authorized to acquire reserve stocks of metallic antimony. By April, 1941, the Metals Reserve Co. had received 6,796 tons of Chinese antimony and 250 tons of domestic. Deliveries continued at the rate of 250 tons a month until the stockpile contracted for was completed. South China has been producing two thirds of the world's antimony, but the hazards of transportation via the Burma road kept

shipments to the United States at a minimum. Antimony ore imports in 1941 came principally from Bolivia and Mexico, which have doubled their production, 1936-41, and now produce almost four fifths of all antimony, which is about 32,000 metric tons (pure metal) per year. Total 1941 imports amounted to 14,645 short tons, as compared with 15,733 short tons in 1940. Mining experts of the U.S. Bureau of Mines discovered new deposits of antimony in 1941 which can become valuable in case of emergency. The price on domestic antimony remained at 14¢ a lb. (June, 1941), on Chinese antimony at 16½¢ a lb. (June, 1941). See GEOLOGICAL SURVEY; MINES, BUREAU OF.

ANTISEMITISM. See FASCISM; REFUGEES.

ANTISEPTIC CLOTHING. See CHEMISTRY, INDUSTRIAL under *Textiles*.

ANTI-TRUST LAW. See LABOR CONDITIONS under UNION MOVEMENTS; RADIO.

APPEASEMENT POLICIES. See UNITED STATES under *Foreign Affairs*; also BULGARIA, FRANCE, JAPAN, SWEDEN, THAILAND, UNION OF SOVIET SOCIALIST REPUBLICS, and YUGOSLAVIA under *History*.

APPROPRIATIONS. See UNITED STATES, foreign countries, and States.

AQUARIUM. See ZOOLOGY.

AQUEDUCTS. In the development of aqueducts for domestic or municipal water supply, a notable event of 1941 was the completion of the Colorado River aqueduct of the Metropolitan Water District of Southern California. (For this and the New York City project, see WATER WORKS.) To provide an adequate supply of water to the city and naval base at Key West, Florida, an 18-in. pipe-line 134 miles long is to be built, the pipe being carried from the mainland for nearly 100 miles along the Key West highway. Of the total cost of the pipe-line, the Florida Keys Aqueduct Commission will pay \$1,125,000, and the U.S. Navy Department will pay \$2,200,000.

At Boston, three shafts are to be sunk for the extension of the water-supply pressure tunnel from the Charles River to the existing Chestnut Hill reservoir. The river shaft will be 260 ft. deep, the intermediate shaft at Newton, 280 ft., and the shaft at the reservoir, 260 ft. At Toledo, Ohio, the new water supply from Lake Erie, eliminating a polluted supply from the Maumee River, was put in service December 1, 1941. It has a lake intake two miles from shore, two miles of 108-in. concrete pipe to a shore pumping station, nine miles of 78-in. steel pipe to a filter plant and high-service pumping station with a million-gallon elevated tank, thence seven miles of 72-, 60-, and 42-in. pipe to the city. At Muskegon Heights, Mich., a new intake line was built, 4,620 ft. long, consisting of 30-in. pipe laid in a trench dredged in the bed of Lake Michigan. Pipes 60 ft. long were welded into lengths of 120 ft., which were laid by a float- ing crane, the joints between the sections being made by divers.

A number of aqueducts and canals are included in the irrigation works of the U.S. Bureau of Reclamation. In April, work began on the 40-mile Madera canal from the Friant dam, in California, to the Chowchilla River. The Provo River irrigation project, in Utah, completed in July, includes a 47-mile aqueduct from the Deer Creek reservoir to Salt Lake City for a combined domestic and irrigation supply. On this line, two tunnels have been driven and a nine-mile section of pipe-line is under way.

The 70-mile All-American Canal for irrigation

in the rich Imperial Valley, California, was completed and opened for its entire length in June. It supersedes a smaller canal which had 60 miles of its length in Mexico. Water is taken from the Colorado River at the Imperial dam, and one of the four hydro-electric plants is already in operation. The upper end of the canal has a bottom width of 160 feet, with 21 feet of water; its last section has a 60-ft. bottom and 12-ft. depth of water. By April, 1942, the canal will be supplying all water for the Imperial Valley. A desilting plant at the dam will remove coarse silt, but so far it has not been needed. The fine silt in the water seals the canal from leakage where it is cut through a sand-hill region. A branch canal extends northwards through the Coachella Valley, and the two together will irrigate about a million acres.

An independent project is for a concrete-lined canal 170 miles long, from the Rio Grande at Zapata to Brownsville, Texas. It is to serve a district of 750,000 acres, partly under cultivation, but needing protection from droughts.

Pipe-lines for the transportation of oil by pumping, which may well be classed as aqueducts, became of special importance in 1941, owing largely to war conditions under which long-distance lines were projected to supplement ship and railroad carriage. In 1939 there were about 100,000 miles of pipe-lines. Construction reached 5,000 miles that year, and 6,500 miles in 1940, while 10,000 miles was predicted early in 1941. However, some of the larger projects had to be abandoned, owing to priority restrictions on the supply of steel.

Among the longest lines projected were the following: Texas to New York Harbor, 1,820 miles (24-in. oil pipe-line and 20-in. pipe for gasoline); Baton Rouge, La., to Greensboro, N.C., 1,260 miles; Port St. Joseph, Fla., to Chattanooga, Tenn., 450 miles, and from refineries at Marcus Hook, N.J., to Pittsburgh, Pa., 400 miles. Two important pipe-lines were built in 1941: (1) Portland, Maine, to Montreal, Canada, 240 miles of 12-in. pipe, with eight pumping stations. It was built in 132 days and pumping was started in November. It enables tankers from South American ports to discharge oil at Portland and avoid the long trip around by the St. Lawrence to Montreal. (2) Fall River, Mass., to Waltham, Mass., 60 miles, with a branch to Worcester. It consists of a line of 6-in. electrically welded pipe, with pumping at a pressure of 1,000 lb. per square inch. Tankers discharge to storage tanks at Fall River, and the oil is pumped to groups of refineries at the two inland cities. See illustrations facing page 70.

E. E. RUSSELL TRATMAN.

ARABIA. A large peninsula in southwestern Asia. Area, 1,000,000 square miles; population, said to be 10,000,000. For the various divisions of Arabia see below. Arab countries outside the Arabian peninsula are presented in the separate articles on EGYPT, IRAQ, PALESTINE, SYRIA AND LEBANON, and TRANS-JORDAN.

Aden. A British crown colony at the southern tip of Arabia, about 100 miles east of the Red Sea. Included in the colony is the island of Perim (5 sq. mi.; pop., 2,346) in the southern entrance to the Red Sea. Total area, 80 square miles; total population (1931), 48,338, excluding the military forces. Education (1939): 75 schools and about 4,000 students. Aden has a fortified naval base, a free port, and is a fueling station for ships. Early in 1940 the port was made a contraband control port for shipping. The transit trade is important. Local products are salt, soap, cigarettes, dhows, and cured fish.

Trade (1939): Rs68,566,887 for imports and Rs39,095,919 for exports (rupee averaged \$0.3328 for 1939; \$0.3016, 1940). During 1939 the merchant shipping that entered the port totaled 8,005,764 tons (net). Finance (1939-40): Rs2,722,901 for revenue and Rs1,964,583 for expenditure. Aden's government is administered by a governor, aided by an executive council of five members. Governor and Commander-in-Chief, Sir John Hathorn Hall (appointed Oct. 24, 1940).

Aden Protectorate. The region in southern Arabia extending east, north, and west of the colony of Aden. Area, 112,000 square miles; estimated population, 600,000, mostly Arabs. It is divided into two parts: (1) Western Aden Protectorate, comprising 19 sultanates of which the premier chief is the Sultan of Lahej. (2) Eastern Aden Protectorate, comprising the Hadhramaut (made up of the Qu'aiti State of Shihir and Mukalla, and the Kathiri State of Seiyun), the Mahri sultanate of Qishn and Socotra, the Wahidi sultanates of Bir'Ali and Bilihaf, and the sheikdoms of 'Irqa and Haura. The Sultan of Qishn and Socotra resides on the island of Socotra (1,400 sq. mi.; pop., 12,000), 150 miles from Cape Guardafui, Africa. Dates, gums, tobacco, and butter are the main products. There are large numbers of sheep, cattle, and goats. The local rulers have protective treaty relations with Great Britain and manage their own affairs subject to general supervision by British officials who are under the control of the governor of Aden.

Bahrain Islands. The chief islands of this state in the Persian Gulf are Bahrem, Muharraq, Nebi Saleh, and Sitra. Total area, 213 square miles, population, 120,000, of whom 75 per cent belong to the Shia sect, and the remainder to the Sunnis. Capital, Manama (25,000 inhabitants) on the island of Bahrem, is joined to the town of Muharraq (25,000 inhabitants) by a causeway. Chief products—pearls, crude oil (972,000 metric tons in 1940), boats, sailcloth, reed mats, and dates. Fine white donkeys are raised. Trade (1938-39): Rs27,326,230 for imports and Rs20,843,990 for exports (excluding oil). The rupee averaged \$0.3016 in 1940; \$0.3328, 1939, \$0.3659, 1938. Ruler, Sheik Sir Hamid bin Isa al Khalifa (in treaty relations with Great Britain).

Kuwait (Koweit). An Arab state south of Iraq. Area, 1,930 square miles; population, 50,000, exclusive of some Bedouins. Capital, Kuwait. Pearls, wool, dhows, and horses are exported. Trade (1937-38): imports Rs5,477,488; exports Rs2,320,075 (rupee averaged \$0.3659 for 1938; \$0.3733 for 1937). Oil was discovered during 1938. Kuwait is in treaty relations with Great Britain, which is represented by a political agent. Ruler, Sheik Sir Ahmed ibn Jabir al Subah.

Muscat and Oman. An independent sultanate in southeastern Arabia. Area, 82,000 square miles; estimated population, 500,000, mainly Arabs, but there is a strong infusion of Negro blood near the coast. Chief towns: Muscat, the capital, 4,200 inhabitants; Matrah, 8,500. On the northern coast of the Gulf of Oman is the port of Gwadar which is a possession of the sultanate. Chief products: dates, pomegranates, limes, and dried fish. Camels are raised by the inland tribes. Trade (1938-39): imports Rs4,876,193; exports Rs3,331,939. Muscat is the only port of call for steamers. Pack animals are used for inland transport. There is a motor road connecting Muscat and Matrah and extending to Kalba. Roads suitable for motor vehicles join Hagar, Boshier, and Qariyat with Matrah. A new treaty of friendship, commerce, and navigation was signed with Great Britain on Feb. 5, 1939. Sultan, Sir

Saiyid Said bin Taimur (succeeded Feb. 10, 1932).

Oman, Trucial. The Arab states (Abu Dhabi, Ajman, Debai, Shargah, Ras al Khaimah, and Umm ul Qawain) on the Persian Gulf. Area, 6,023 square miles; population, 75,000 to 85,000. Chief capital, Abu Dhabi. Pearls are the chief export from the coast ports. The rulers of the six states are in treaty relations with Great Britain, which is represented by a resident agent who is under the control of the British political resident at Bushire, Persia.

Qatar. An Arabian sheikdom occupying a peninsula in the Persian Gulf. Area, 8,500 square miles; population, 25,000. Capital, El Beda. Relations with Great Britain are regulated by the Treaty of Nov. 3, 1916. Sheik, Abdullah ibn Jasim al Thani (accessed in 1913).

Saudi Arabia. An Arab state occupying the northern and central part of Arabia, formerly known as the Kingdom of Hejaz and Nejd. Pending the introduction of a single constitution for the whole country, there are two systems of government—one for Nejd and one for Hejaz. Ruler, King Abdul Aziz ibn Abdur Rahman al Faisal al Saud.

Nejd includes the Nafud and Dahna deserts and has an area of some 800,000 square miles. Population (estimated), 3,000,000. Chief towns: Riyadh (capital), Hufuf, Mubarraz, Shaqra, Anarza, Buraida, Hail, Jauf, Sakaka, and Hauta. Chief products: dates, wheat, barley, fruit, hides, wool, clarified butter, Arab cloaks, and petroleum (5,365,000 bbl. in 1940). Large numbers of camels, horses, donkeys, and sheep are raised. Trade: imports include piece goods, sugar, coffee, tea, rice, and motor vehicles, exports, except for petroleum, are very small. Nejd is governed in a patriarchal manner by the King whose eldest son (Emir Saud), the heir apparent, acts as Viceroy and Commander-in-Chief of the military forces.

Hejaz extends along the western coast from Trans-Jordan to Asir. Area, 150,000 square miles; population (estimated), 1,500,000. Chief towns: Mecca, the capital and holy city of Islam, 80,000 inhabitants; Jidda, the seaport for Mecca, 30,000; Medina, the site of Mohammed's tomb, 20,000; Yenbo, the seaport for Medina. Chief products: dates, butter, honey, fruit, wool, and hides. The annual pilgrimage of Moslems from abroad to Mecca and Medina is the chief source of income. Hejaz is governed under the constitution of Aug. 26, 1926, and later amendments. There is a council of ministers presided over by the King's second son, Emir Faisal, who is minister of foreign affairs, and Viceroy during the King's absence.

Asir, a province south of the Hejaz, was incorporated in the kingdom of Saudi Arabia during 1933. Area, 14,000. Capital, Sabiya, 20,000 inhabitants.

Yemen. An independent Arab kingdom in southwestern Arabia. Area, 75,000 square miles; population, 3,500,000. Chief Towns: San'a (capital), 25,000 inhabitants, Hodeida, 40,000, Taizz, Ibb, Yerim, Dhamar, Mocha, Loheiya. Chief products: coffee, barley, wheat, millet, and hides. Ruler, Imam Yahya b. Muhammed b. Hamid el Din.

History. The British conquest of Italian East Africa early in 1941 and the subsequent Allied military occupations of Iraq, Syria, and Iran isolated the Arabian peninsula from the spreading European conflict and revived British prestige in that region.

The influential King Abdul Aziz ibn Saud of Saudi Arabia maintained a friendly attitude toward Great Britain, although he was understood to have pressed London to transfer the strategically important Red Sea port of Aquaba from Trans-Jordan to his domains. Ibn Saud in mid-May rejected appeals from Premier Rashid Ali al-Gailani of Iraq

for diplomatic or other support during the latter's short war with the British. According to the British, Ibn Saud denounced Rashid Ali's attack upon them as a violation of the Anglo-Iraq treaty of alliance. Following the statement by Foreign Secretary Anthony Eden that Britain would support the movement for Arab unity, the Saudi Arabian ruler was reported to have advised a meeting of tribal leaders at Taif in August that Arab interests demanded cooperation with Britain. He interned more than 1,000 Italian and German refugees from Italian East Africa, and refused to allow the noted German political expert, Dr. Fritz Grobba, to remain as Minister to Mecca.

ARCHAEOLOGY. In spite of the European War scholars were able to pursue their archaeological investigations in Central America during 1941 without interruption. At Kammal Juyu, the site of a considerable Mayan city near Guatemala City, Dr. A. Ledyard Smith of the Carnegie Institution discovered further proof that a group of narrow, enclosed courts are, as previously suspected, such as were used for handball. The evidence for this was the finding of two parrots' heads in stone which have been recognized elsewhere as typical of the ball courts of ancient cities in Central America.

Also in Guatemala in Nebaj, Quiche, Dr. Mary Butler uncovered two interesting urn burials. One produced 28 large-sized urns and jars along with 165 small vessels, mostly of excellent workmanship. The large vases usually contained bones while the others were closely grouped around, or over, an extended burial. The second find consisted of 22 urns and 77 small vases set in the stone wall which enclosed the dirt platform. The material recovered from these two diggings proved to be of the same type as the Quiche type of the middle group of Mayan pottery which runs in the order of monochrome, polychrome, and plumbate. In some instances was noted a relationship with the Chama-Chupal area to the east, while others betrayed connections with the Zacualpa region lying to the southeast.

At Tegucigalpa in Honduras, a half mile from the village of Corcuin, Province of Copan, a ruined Mayan city has been brought to light. Near Managua, in Nicaragua, F. E. Richardson, working for the Carnegie Institution, found in the lava made by the volcanic mud the imprints of the feet of two small people who seem to have been fleeing for safety to a nearby lake. Since this occurred at the time of an eruption which took place from two to five thousand years ago, these footprints are the earliest proofs we have of human beings in Central America.

At Cerro de las Mesas on the Rio Blanca in southern Vera Cruz, Mexico, a joint expedition of the Smithsonian Institute and the National Geographic Society sank deep trenches which have established the fact that the site began to be occupied a little after Tres Zapotes and continued to be inhabited up to a date much nearer historic times. Fifteen stelae and eight carved monuments were found at this place. One of these, four feet in height, is almost a replica of the Tuxtla statuette. More important than this however was the finding on the site of an offering of 782 jades.

See ANTHROPOLOGY; CHEMISTRY, PURE.

OLIVER SAMUEL TONKS.

ARCHERY. Outstanding champions of archery in 1941 were Miss Ree Dillinger of Summit, N.J., who shot a perfect score for her last end (six arrows) to take the national title by one lone point in the

tournament held at Portland, Ore., and Larry Hughes of Los Angeles, who replaced Russ Hoogerhyde in the men's competition.

Miss Ann Webber, winner of the Women's national crown in 1940, lost several times to Miss Dillinger, but did manage to defeat her opponent and win the metropolitan tournament by the margin of 1,419 points to 1,290. Bill Sterner of Mount Vernon, N.Y., captured the men's metropolitan.

ARCHITECTURE. War put a crimp in architecture on five of the six continents. Wholesale destruction in Russia included such famous structures as the industrial complex at Kharkov, in its way a sublime monument of early "hardboiled" functionalism, and the great dam at Dneprostoy. In England, a large building society with 300,000 mortgages spread everywhere had 7,000 of its houses slightly damaged, some 2,000 badly damaged but repairable, and 480 demolished, by the end of 1940. Within certain industrial areas, however, damage as reported in the Commons on May 29, ran as high as 20 per cent of all dwellings demolished and "all others damaged or liable to damage before winter." Among belligerents fully engaged a representative opinion was given in *Architects' Journal*, (London): "The severer the struggle, the longer the war, the more necessary is it to reconstruct as we go along. Otherwise there will come a point when we can go on no longer."

The United States went over from a prewar boom, which carried building to its highest since 1928, into rationing and virtual interdiction of purely private building ventures. (See CONSTRUCTION INDUSTRY). Only in South American countries such as Brazil were there building booms not directly related to war efforts.

Industrial Building. Industrial building in the United States reached the record level of \$1,181,513,000 in the 37 Eastern States, nearly double the high of 1920. The typical factory plan remained one embracing acres under one roof and the typical location close to existing centers at fringes of large towns. Some examples were set of dispersion in location if not in plan, e.g. the plant of North American Aviation, Inc., at Grand Prairie, Tex., first wholly new airplane factory completed. (J. Lloyd Allen, John R. Kelley). The main shop, covering 855,000 sq. ft., is windowless, with corrugated steel wall on a base of 5½ ft. concrete (against splinters); is air-conditioned, lighted wholly by 7,000 fluorescent bulbs, and—prodigal of metal—is roofed with corrugated-steel. Air defense is based on remoteness of location, on permanent windowless blackout, baffles before openings, lightness of construction to give way and localize damage, camouflaging of the flat roof (though subsidiary buildings have shapes harder to hide). All services, such as water, sewage, streets, had to be supplied to the town created by 11,000 new workers. It was here that Roscoe P. DeWitt, Richard J. Neutra, David R. Williams, devised quite attractive prefabricated housing which the winning crew in a race managed to erect in 57 min. 58 sec., complete to publicity lady in bathtub. As elsewhere, prefabrication was done by the contractor at the site, mainly on jig tables set up in three huge circus tents.

Other factories of architectural interest included: foundry for Aluminum Co. of America at New Vernon, Cal. (Gordon B. Kauffman); parabolic laminated-arch signal depot, Lexington, Ky. (Wilson, Bell & Watkins). A few factories were still given pseudo-monumental, pseudo-streamlined "styling," e.g., the aircraft building for the River Rouge Plant of Ford Motor Co., by Giffels & Vallet, Inc. and L.

Rossetti. Conscious design did, however, turn three buildings for Johnson & Johnson near New Brunswick, N.J. (R. G. & W. M. Cory) into a splendid enhancement of the highway (U.S. 1). Compare topics listed under INDUSTRIAL BUILDINGS.

Defense Housing. This was a field full of controversy and complex administration. Unhappily the agency with by far the most housing experience and local contacts had politically the lowest standing—The U.S. Housing Authority (q.v.); on the other hand, the Public Buildings Administration, well considered in Washington but entering a new field, had to learn through blunders. One of PBA's best architectural achievements was the 550-unit Puuloa Hall project for families of enlisted men on Oahu Island in Hawaii. PBA's largest was Linda Vista at San Diego (3,000 units), with an interesting mesa-top plan by S. E. Sanders (shelter design by C. D. Persina, planning coordination by G. S. Underwood). Outstanding "outpost" architecture, besides that on Hawaii, was done for the Army by Caribbean Architect-Engineer (Voorhees, Walker, Foley & Smith, architects, and Parsons, Klapp, Brinckerhoff & Douglas, engineers) at the base near Trinidad. Involving provision for a large population, military and civil, in the tropical zone, this problem was solved with grace and directness by studied use of native devices.

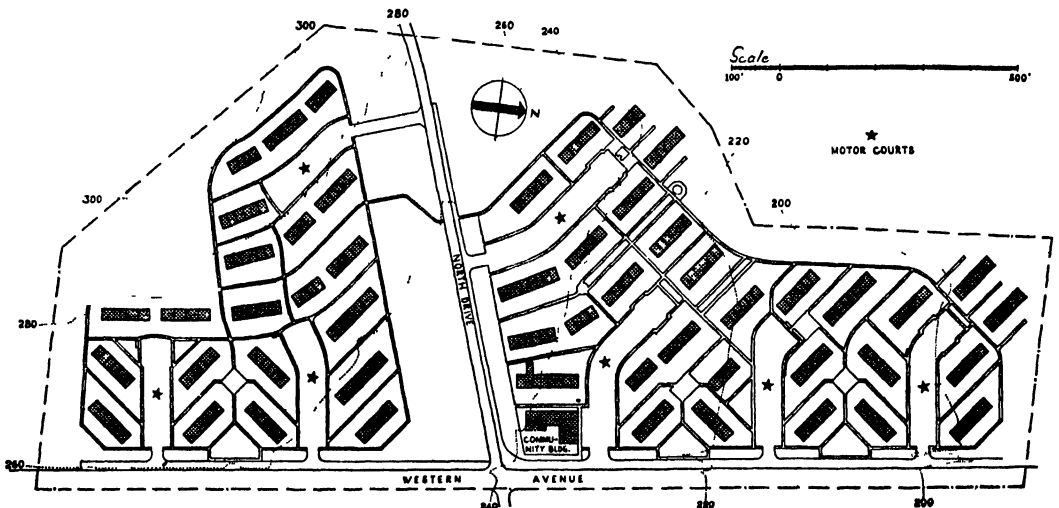

With the passage of the Lanham Act (Oct. 1940) Government housing construction for defense was centralized under the Federal Works Agency, and thereafter some of the most progressive work architecturally was done by the FWA Division of Defense Housing Coordination through able practising architects. Especially praiseworthy was the designation of a few units in some of the projects as "experimental" and released from the more rigid restrictions. Outstanding projects of the Division were the small 85-unit project at Windsor Locks, Conn., noted for its careful neat small-house design (Hugh Stubbins, Jr.), and the group housing on hillsides, with fine attention to orientation and access, by Gropius & Breuer at New Kensington, Pa., and at North Braddock, Pa., by James A. Mitchell and Dahlen K. Ritchey. A 400-unit project at Stamford, Conn., (B. Sumner Gruzen, Hugh A. Kelley, assoc.) was based upon the new device of chevron arrangement of house-rows upon the "cul-de-sac" side-street pattern already established in advanced site-

planning practise; whereas Eliel & Eero Saarinen arranged their 477 units at Center Line, Mich., charmingly about a central green.

Structural experiment under the Division was chiefly advanced at the Alexandria, Va., project by Kastner & Hibben (along with numerous plan variations) and included rammed-earth stabilized with cement. On the vast Mare Island Navy Yard development near San Francisco—a new city of 20,000 inhabitants—FWA added a 977-unit contingent, brilliantly designed by W. W. Wurster for a proprietary wood-frame prefabrication system and making a very handsome picture against the hills and sea.

The most spectacular new departure in "prefabrication" was Wallace Neff's small group of "bubble houses"—twin domed mushroom shells linked by a traditional service unit. Over an inflated semi-balloon, a "gunnite" cement shell was blown by air pressure; then a second shell added after a layer of insulation. These are at Falls Church, Va., under sponsorship of the Reconstruction Finance Corporation (q.v.). More representative of the average effort were TVA's portable cottages (Louis Grandgent and Carol Towne) transportable on trucks in three slices to be bolted together. Pierce Foundation's "horizontal bearing" system depended on the use of the whole above-window wall as an extended I-beam and on a single sheet of can-c-fiber coated both sides with asbestos-cement for combined protection and insulation; it was used with charming landscaping and color effect by Jan Porel in housing for Glenn Martin workers near Baltimore. The demountability of prefabricated houses was made use of during the year to cart away some of the 650 units erected the previous year under PBA at Indian Head, Md., by competing prefabricators in a test of their claims.

USHA architects produced an exceptionally fine project, as to site plan, design, and color, at Harbor Hills near Los Angeles (Reginald Johnson, ch. arch.; Donald B. Parkinson, Eugene Weston, Jr.; Lewis Eugene Wilson, A. C. Zimmerman, associates, Clarence S. Stein, consult. arch.). The site consists of 102 acres, much of it in deep canyons. Because of the hilly topography only a very limited area could be used economically. The 52 buildings are on 27 acres of land (see diagram). Another striking USHA job is the project at Yesler Terrace,

PLOT PLAN OF THE USHA HARBOR HILLS HOUSING PROJECT NEAR LOS ANGELES

Seattle (J. Lister Holmes, Wm. J. Bain, John T. Jacobsen, Wm. Aitken, Geo. W. Stoddard), its long horizontal houserows, with their handsome exterior boarding and fresh detailing, looking quaintly over the shoulders of the business center down at the sea. Other USHA successes were at Bethlehem, Pa., by Antonin Raymond, and at "Westpark," Bremer-ton, Wash., an 840-unit Navy project by Floyd A. Naramore, Clyde Grainger, and Perry B. Johnson.

Apartments. Manley Court at Summit, N.J., by McMurray & Schmidlin, and Country Gardens, Rye, N.Y., by Benson Eschenbach were superior exam-ples in the prevailingly favored "Colonial" mode. A large, ultra-modern set of apartments on a fine site at 240 Central Park South (actually finished 1940; designed by Mayer & Whittlesey) was most skillfully grouped and gave New York its first large banks of balconies. Other apartments of contem-porary design include Country Club Gardens, Den-ver (by Fisher, Fisher & Hubbell), and Governor Shepherd Apartments, Washington, D.C., by Joseph H. Abel.

Houses. Architects were still divided into "tradi-tionalist" and "modernist" camps, depending chiefly on preferences in draping plans increasingly con-temporary. In a less controversial area something like a basic twentieth-century architecture seemed to be shaping up, in which the scholarship was evocative rather than literal and the "modernism" direct rather than forced (For representative recent examples compiled with the aid of AIA, see *Architectural Forum* for April, with 81 houses regionally classified.)

Community Buildings. Economy and directness were increasingly essential in new defense *schools*; good precedents were furnished by such examples as the Consolidated School at College Station, Tex., designed by C. J. Finney and Ernest Langford on the basis of an exhaustive problem analysis by students of the Department of Architecture at Texas A. & M. College; and Garden Oaks elementary school at Houston, by Talbot Wilson & Irwin Mor-ris, with its original grouping and classroom plan-ning. A handsomely studied small school was the Grimes School at Burlington, Ia., by Holabird & Root; a monumental large one, the pie-shaped Cardinal Hayes High School in New York by Eg-gers & Higgins. Kleinhans Music Hall at Buffalo, (F. J. & W. A. Kidd, with Eliel Saarman, assoc.) finished earlier, was one of the truly distinguished buildings with "niceties of form and texture, of re-lationship and expression" of the sort which, de-clares Professor Hudnut, are now perforce becom-ing rare. Among *hospitals* were to be noted Bald-win House, Vassar College, Poughkeepsie, N.Y., by Faulkner & Kingsbury, with a neat three-pronged plan; Cairns Convalescent Center, Eleven-Mile Cor-ner, Arizona, by FSA architects. As a rarity among *churches*, the Church of Our Lady of the Lake, at Seattle, Wash., by Paul Thiry, took its departure from the Romanesque to arrive at an expression in brick—along with some plywood and other strictly modern materials—piously modest and simple, but withal decorative, in a manner illustrating the basic continuity of all fine building. The nave of the Cathedral of St. John the Divine in New York was opened to expose the full 601-ft. interior.

Government Buildings. A new rash of temporary structures once more defaced the Capital; some of the Government offices went into buildings to be described under "Commercial." Among the better post offices, done in the Office of the Supervising Architect (PBA), with H. L. Cheney as consultant, was that at Peoria, Ill., with an unusual, pleasing freedom, and the one at Gary, Ind., formal but

contemporary. At Philadelphia the combined post office and courthouse building was somewhat fussy and fluty as to exterior, but sumptuously elegant within.

Commercial. Federal Loan Agency, Washington, moved into an office building (A. R. Clas, arch., Holabird & Root, assoc. arch.) of that studied and elegant ultra-simplicity which is now as interna-tional among commercial and political capitals as the war itself. More commotion was created by the spirited Longfellow Building by Wm. Lescaze, with its appropriate, if stylistic, tier of balconies. It was rumored that Government offices would fill the new 1,000-room Statler Hotel under construction (Holo-bird & Root, arch's; A. R. Clas, assoc. arch.) In general character an insurance headquarters such as United Benefit Life Bldg., Omaha (Tinsley, McBroom & Higgins) is interchangeable with some of the post offices above, with the added feature of the most careful adjustment of complicated plan requirements. Small-town and suburban business blocks continued, by contrast, to be built as jum-bled aggregates of pasteboard fronts, so that a fluent, unified rendering, such as Corinne Griffith Bldg. No. 2 at Beverly Hills (Allen G. Siple) made a very superior impression. The outstanding store of the year was the highly sophisticated one de-signed by Raymond Loewy for Lord & Taylor on a suburban highway at Manhasset, L.I. (Starrett & Van Vleck).

England. Building was nearly at a standstill in England, but much that was new appeared in pro-jected programs of reconstruction. In their "in-terim" reports the committees of the Royal Insti-tute of British Architects placed unprecedented emphasis upon the need for "a national plan to cover the whole country, with regional divisions," and powers "mainly constructive in character rather than restrictive." Highly advanced recon-struction plans for Coventry, Birmingham, and Bristol were being prepared by the new Ministry of Works and Buildings under Lord Reith. At Cov-entry the city architect, E. F. Gibson, created a brilliantly improvised shopping center of demount-able materials such as corrugated sheets of asbes-tos. At Liverpool was exemplified, with equal bril-liance, the opposite approach—the city architect, L. H. Keay, produced solidly built, one-story house-rows cleverly planned for later conversion into two-story dwellings.

Germany. The ambitions of the State were fore-shadowed in the extensive treatment given by the architectural press to the problems of building in Africa, with examples garnered from as far South as the Cape. Meanwhile Dr. Ley, head of the La-bor Front, proposed prefabrication of house parts for storage and immediate erection in Germany after the war.

Latin and South America In their urban architec-ture, by virtue of strong influence from modern Italy and occasionally from the French LeCor-busier, these countries produced buildings equalled only by the best in North America in breadth and unity of effect. In *Colombia*, the Nuevo Colegio de San Bartolome by Trujillo Gomez & Martinez Cardenas or the group of apartments Cite Restrepo by Cuellar, Serrano, Gomez, might be mentioned. The output of *Argentina* showed a wealth of ur-bane, precise, polished work, as in the bold design of the Argentine Automobile Club at Buenos Aires by Antonio U. Vilar, or in several apartment blocks the work of Miguel M. Ibarra, Vargas & Aranda, Alberto Prebisch, Raul le Monnier, and others. The architect Jorge Vivanco achieved a pair of "mini-mal" two-story city houses taking rank with the

best designs anywhere of the past two decades. Among private houses, eclecticism was the vogue, with a strong demand for North American Colonial in the purest execution.

Russia. In Russia the ever hearty, ever unpredictable fantasy of the Slavic temperament showed the possibility of escape from that correct polished restrained anonymity which threatened to engulf the modern effort elsewhere. In locks on the Yaouza at Moscow, G. P. Golz achieved a riotous freedom with classical elements—including caryatids and the like—as decoration, occasionally throwing in a straight little Doric temple not unlike those of the early American classical revival. A review of the work of Prof. N. A. Trotski (deceased) showed the characteristic swing since 1918: beginning with a thoroughly “expressionist” project for the Soviet Palace of Labor (1922), going to absolutist modern in the district Soviet offices “Kirov” in Leningrad and a factory there, then again to the colossal, heavily studded, diamond-rusticated façade of the Leningrad Marine Academy (with whole projecting bays treated as pilasters supporting the characteristic heroic groups in naturalistic sculpture against the skyline)—then classical at Kuibyshev in the House of Culture (of the style family of the New York Metropolitan Museum) and again colossal and pseudo-classical in the Palace of the Soviets at Leningrad.

Other Countries. *Swiss* architecture included the new lecture building for the University of Basle by Dr. Roland Rohn, a design both sweeping in plan and refined in detail, and two very distinguished Catholic churches, one at Dornach by H. Baur, the other at Schönenwerd by Fritz Metzger, both in the general tradition of Karl Moser's other famous modern church at Basle. *Denmark's* high tradition was carried on in a group of row houses at Copenhagen by Kay Fisker, C. F. Moller, Eric Jensen, an Old People's Home (very striking and direct) by Arling Langkilde & Martin Jensen, and an Orthopedic Hospital at Aarhus (ch. arch. P. A. Poulsen) elegantly simple. *Japanese* architecture was most comprehensible to Europeans at its most Japanese; in this character it was well-nigh unbeatable as design; but a kind of jackdaw eclecticism made Japan the greatest repository since America's Gilded Age of serenely unconscious architectural humor.

See BUILDING, CONSTRUCTION INDUSTRY.

DOUGLAS HASKELL.

ARGENTINA. A federal republic of South America, consisting of 14 provinces, 10 territories, and the federal district, which includes the capital, Buenos Aires.

Area and Population. Land area, 1,079,965 square miles. Estimated population, Jan. 1, 1941, 13,318,320 (7,885,237 at 1914 census). Estimated populations of chief cities on Jan. 1, 1940, were: Buenos Aires, 2,364,263; Rosario, 514,613; Avellaneda, 230,775 (1938); Córdoba, 273,852; La Plata, 190,577 (1938); Tucumán, 146,577; Santa Fé, 144,587; Bahía Blanca, 115,148 (1938); Mendoza, 110,180; Mar del Plata, 62,415 (1938). The population is almost entirely of European (chiefly Spanish and Italian) extraction. In 1939 there were 88,806 marriages, 296,912 births, 141,267 deaths, 18,603 immigrants, and 13,932 emigrants.

Defense. As of Nov. 1, 1940, Argentina had 49,705 men in active military service, including conscripts; an additional 2,023 in the military and naval air forces, with about 200 planes; a trained army reserve of 282,503 men; and a naval force of 2 old battleships (recently modernized), 3 cruis-

ers, 4 old coast defense vessels, 16 destroyers, 3 submarines, 15 patrol vessels, and various auxiliary craft, all manned by about 11,500 men. The German military mission was discharged in 1940. In 1941 there were two U.S. naval officers on the staff of the Naval War College and seven U.S. air officers advising the government on aviation matters. See *History*.

Education and Religion. Illiteracy fell from 22 per cent of the voting population in 1930 to an estimated 16 per cent in 1939 (less than 2 per cent in the federal district). School statistics for 1939: Primary, 13,693 schools, 1,977,357 pupils; secondary, normal and special, 679 schools, 123,143 pupils; universities, six institutions with about 28,000 students. The Roman Catholic Church is supported by the state; all other faiths enjoy freedom of conscience.

Production. Agriculture, stock raising, and manufacturing are the principle occupations. Agricultural and pastoral products usually account for more than 90 per cent of all exports. Estimated yields of the chief crops (in metric tons): Wheat 7,505,000 in 1940-41; corn, 11,028,000 in 1939-40; linseed, 1,567,000 in 1940-41; ginned cotton, 80,000 in 1940-41; cane sugar, 540,374 in 1940; tobacco, 18,593 in 1939-40; grapes, 10,919,976 kilograms in 1940. Livestock slaughtered in “frigoríficos” in 1940 included 4,069,710 cattle, 5,481,050 sheep and 897,579 swine. Petroleum production in 1940 was 20,846,000 bbl., giving Argentina tenth rank among world producers. Small quantities of tungsten, lead, zinc, copper, gold, silver, and coal are mined. As of Dec. 31, 1938, there were 10,344 industrial establishments, with 29,001 employees and 212,841 workmen; during 1938 they produced goods valued at 2,416,776,400 pesos. In order of value of output, the leading manufacturing industries in 1939 were meat packing, textiles, electricity, flour milling, sugar refining.

Foreign Trade. Exclusive of specie, imports in 1940 totaled 1,498,757,000 pesos (1,338,332,000 in 1939) and exports 1,427,933,000 pesos (1,573,173,000 in 1939), on the basis of “real” values. Leading 1940 imports were fuels and lubricants, textiles, machinery and vehicles, iron manufactures, chemicals, foodstuffs. Values of the chief exports were (in pesos): Wheat, 284,169,758; chilled and frozen beef, 187,224,070; unwashed wool, 120,292,191; linseed, 119,165,833; cattle hides, 101,101,711; corn, 85,278,017; washed wool, 56,229,310. The United States furnished 29.1 per cent of the 1940 imports (17.2 in 1939); United Kingdom, 19.8 (19.9); Brazil, 7.8 (6.5). Of the 1940 exports, the United Kingdom took 36.4 per cent (35.9 in 1939); United States, 17.5 (12.0); Brazil, 5.3 (4.3). See TRADE, FOREIGN.

Finance. Budget estimates for 1941 placed receipts at 821,900,000 and expenditures at 1,082,000,000 pesos (854,320,000 and 1,062,343,500, respectively, in 1940). Actual governmental collections in 1940 were 982,881,000 pesos. The aggregate public debt of the national, provincial, and municipal governments rose from 6,486,230,000 paper pesos as of June 30, 1938, to 7,623,268,000 on June 30, 1940. On the latter date the debt was distributed as follows: National, 5,291,382,000; provinces, 1,584,408,000; municipalities, 848,745,000. Of the total debt, 5,870,270,000 pesos represented internal and 1,952,998,000 external obligations. The free market exchange rate of the paper peso was \$0.2309 in 1939, \$0.2288 in 1940.

Transportation. The railway mileage in 1941 was 26,184, of which 59 per cent was British-owned and 30 per cent state-owned. Gross operating re-

ceipts of all privately-operated lines declined from 413,110,000 pesos in 1936 to 360,000,000 in 1940. The net receipts of 26,000,000 pesos in 1940 barely sufficed to cover about one-third of loan interest requirements. For highways, see **ROADS AND STREETS**. In 1940 the nine domestic and foreign commercial air lines operating in Argentina flew 1,556,772 kilometers and carried 40,690 passengers, 77,059 kilograms of mail, and 62,272 kilograms of express. New schedules inaugurated by Pan American-Grace Airways in April, 1941, reduced the round-trip time between the United States and Argentina to one week. Net registered tonnage of ships entering Argentine ports fell from 9,453,000 in 1939 to 6,690,000 in 1940. For Argentine-Bolivian railway accords, see **BOLIVIA**.

Government. The Constitution of 1853 vests executive power in a president chosen for a six-year term by 376 electors representing the provinces and the federal district. The National Congress consists of a Senate of 30 members elected for nine years by the provincial legislatures and a Chamber of Deputies of 158 members elected for four years by universal male suffrage. One-third of the Senate retires every three years and one-half of the Chamber every two years. The governors of the provinces, elected by local suffrage, exercise extensive powers independently of the federal government. By the elections of 1940 (see **YEAR BOOK** for 1940, p. 37), the Radicals gained control of the Chamber of Deputies. President Roberto M. Ortiz, who assumed office Feb. 20, 1938, developed a chronic illness and on July 3, 1940, designated Vice-President Ramón S. Castillo as Acting President.

HISTORY

The extension and intensification of the World War during 1941 had severe repercussions in Argentina. It produced an acute economic crisis, aggravated political and ideological controversies, and aroused growing opposition to the government's policy of strict neutrality.

Political Events. Early in 1941 there was a widening of the breach between Acting President Castillo, leader of the conservative Government coalition, and the Radical party, which controlled the Chamber of Deputies. Charging that Government candidates had won through fraud and manipulation, the Radicals demanded annulment of provincial elections held in Santa Fé and Mendoza on Dec. 15, 1940, and Jan. 5, 1941. Acting President Castillo side-stepped this demand. However his Finance Minister, Federico Pinedo, made a deal with the Radicals whereby new elections would be held in both provinces in return for Radical legislative support of Pinedo's program for meeting Argentina's economic crisis (for program, see **YEAR BOOK** for 1940, pp. 37-38). When the Acting President repudiated this arrangement, Pinedo resigned (January 14). The Radicals retaliated by refusing to act on any legislation submitted by the Government.

Ortiz Return Sought. A week later Foreign Minister Julio A. Roca, a leading advocate of inter-American cooperation and mutual defense, resigned because of lack of confidence in Acting President Castillo. The two vacant Cabinet posts were filled by Dr. Enrique Ruiz Guinazu (Foreign Affairs) and Dr. Carlos Alberto Acevedo (Finance). But the political crisis continued, with the ailing President Ortiz taking a more active role in opposition to Castillo's policies. Although elected by the conservative coalition, Ortiz had won the support of the Radicals and other pro-democratic forces by his fight against electoral fraud and corruption. There was a growing demand that Ortiz resume his Presi-

dential functions, but this was stilled on April 17 when a Senate committee appointed to investigate his health reported that almost total blindness prevented the President from assuming office.

Castillo Strengthens His Hold. This report strengthened Acting President Castillo's position. On April 25 he announced that in view of the Radicals' legislative boycott he would govern temporarily by decree. Public opinion, once predominantly favorable to the Radicals, was being alienated by the legislative deadlock. Consequently the Radicals on May 6 were forced to end their boycott and announce that they would support all measures tending to solve Argentina's economic, social, and defense problems.

Nevertheless the sessions of the 78th Congress, which opened on May 28, were marked by continual bickering between the Acting President and Congress, particularly over the issue of German activities in Argentina. When Congress recessed on October 1 only a small part of the legislation urgently demanded by Castillo had been adopted. Congress approved the purchase of 16 Italian merchant ships and the allocation of \$127,000,000 for defense. But it failed to pass bills authorizing the 1941 budget, a public works program, purchase by the state of unsold farm surpluses, and the floating of a dollar loan in the United States.

Buenos Aires Council Dissolved. By withholding action on these measures, Congress hoped to force the convocation of an extraordinary session, which would give it an opportunity to check Government manipulation of elections scheduled to be held in Buenos Aires and two other provinces during December. Acting President Castillo, however, refused to call a special session. Instead he dealt the opposition a serious blow on October 10 when his Cabinet voted to supplant the elected Municipal Council of Buenos Aires with a board of 21 Government appointees.

Charges of racketeering and corruption had been made against certain members of the Municipal Council. Nevertheless, the press and pro-democratic parties and organizations attacked the Government's move as an unconstitutional blow at the democratic system. The Council, ousted from City Hall by the police, declared the dissolution order illegal and continued to meet regularly in other places. The Radical party, hinting at the approach of civil war, denounced the Acting President's action as an attempt to maintain himself in power "by arbitrariness." On October 25 the Radicals announced that they would seek to impeach Castillo for exceeding his constitutional authority, while the Municipal Council decided to carry its case to the Supreme Court.

Provincial Elections. The Radical attack upon the Acting President received a serious setback as a result of Government victories in provincial elections held in Catamarca (Castillo's home province) on November 23, in San Juan on November 30, and in the province of Buenos Aires on December 7. These elections tipped the national balance of political power in favor of the National Democratic party and indicated the probable victory of its candidate in the 1943 Presidential election. Catamarca gave the National Democrats 12,326 votes against 6,694 for the Radicals. In Buenos Aires Province, the Castillo Administration's candidate for Governor won by 293,604 votes to 193,284 for the Radical candidate. The defeated Opposition charged that the Buenos Aires election was won by means of "shameful" electoral frauds and demanded its annulment. The Radicals were prevented from pressing their charges by the declaration of a state of

siege on December 16, under which all constitutional guarantees were suspended.

The Anti-Nazi Drive. The suspicion with which democratic elements viewed the Castillo Administration had been deepened by its apathy toward German and pro-Nazi activities. These assumed a more violently anti-democratic character after the German victories in the Balkans during April and May. There was an alarming anti-democratic demonstration by the semi-militarized Nationalist Youth Alliance in Buenos Aires on May Day. Numerous other incidents indicated that Buenos Aires was the center of German fifth-column activities throughout South America, and that native Fascist and pro-Nazi elements were receiving active support and encouragement from Berlin.

Repeated charges that army officers were implicated in anti-democratic and pro-totalitarian activities led the Chamber of Deputies on June 11 to pass a resolution, 73 to 16, asking the Government to disclose what steps had been taken to curb fifth-column activities. The reply made by the Minister of Interior on June 18 was deemed unsatisfactory. The following day the Chamber voted 95 to 1 for the establishment of a special committee with full powers to investigate subversive activities. Headed by Deputy Raúl Damonte Taborda (Radical) and including representatives of the other recognized political parties, the committee launched a vigorous probe similar to that made by the Dies Committee in the United States. It conducted raids upon offices and headquarters of German and Argentine pro-Nazi organizations that uncovered important evidence. Beginning August 29, the committee published its findings in a series of reports that caused a profound revulsion of Argentine opinion against Germany and pro-Nazi movements in Argentina.

Investigating Committee's Report. On the basis of evidence submitted in its reports, the investigating committee charged that the German Nazi party continued to operate in Argentina although it had been dissolved by Presidential decree on June 15, 1939; that the party was organized on military lines, with "cells" widely distributed over the country; and that the German Embassy guided and helped to finance its activities. The committee reported that disbursements by the German Embassy rose from \$37,720 during the normal year ended June 30, 1939, to \$1,435,920 in 1940-41. Of \$120,000 worth of bearer checks, cashable without endorsement, issued by the Embassy during the last week of June, 1941, \$24,000 was traced to the pro-German newspaper *Pampero*.

The committee further charged that German schools in Argentina were controlled by the German Embassy; that the teachers were sent from Germany and required to take the oath of obedience and loyalty to Adolf Hitler; and that the textbooks were received from the Reich and distributed by the Embassy. The schools were said to follow regulations issued in Berlin rather than those established by Argentine law. These revelations were buttressed by findings of a secret inquiry into Nazi activities carried on by the Senate, which was controlled by the government parties, as well as by the exposure of plots and conspiracies against the republic by pro-Nazi army officers and organizations. Public opinion, aroused by these developments, forced the reluctant Government to take more active measures in defense of democratic institutions.

Pro-Nazi Conspiracies. Late in July the police in Paraná, capital of Entre Ríos province, broke up a plot by a "nationalist" organization to overthrow

the provincial and national governments by a sudden coup. The ensuing investigation produced evidence of a German military organization working in close cooperation with the local "nationalists." Arms and munition caches were discovered. Evidence uncovered in Paraná led to the discovery of similar German military organizations in the province of Córdoba, collaborating with Argentine "nationalist" factions in anti-democratic plots and propaganda.

The Minister of Interior on August 2 banned all activities in Buenos Aires of the Superior Council of Argentine Nationalism, led by the retired Gen. Batista Molina. The next day the Government ordered the dissolution of the Nationalist Youth Alliance, also headed by General Molina, as a totalitarian military organization. General Molina's activities led the Federal Attorney General to rule on August 5 that he must stand trial for sedition before a civil court.

On September 23 loyal troops frustrated a plot by pro-Nazi air force officers to overthrow the republic. The army seized military airdromes in Paraná and Córdoba, center of the conspiracy, and later extended its precautions to other parts of the country. A number of air force officers were arrested. On September 25 Gen Angel Maria Zuloaga, chief of the military air arm, was removed from his post. He was later confined to quarters for four months for making public his letter of resignation. In October the War Ministry effected a sweeping reorganization of the officer personnel of the air force. Radical Deputies charged that the military conspiracy represented a "Nazi attempt to seize control of the Argentine Government through Quislings," and accused Acting President Castillo of "joining in the plotting." Castillo, in turn, attributed the plot to Radicals, Nationalists, and others.

Enforcement of "Neutrality." Anti-Axis elements, mobilized by the powerful pro-Ally Accion Argentina movement, were stirred by these developments. They demanded revision of the Government's strict neutrality policy in favor of Britain and her Allies, and for stronger action against anti-democratic forces at home. Accion Argentina arranged for demonstrations of unprecedented size in Buenos Aires and 5,000 other places on November 29 to promote "the triumph of democracy, both inside and outside Argentina." Twenty-four hours before the meetings were to be held, Acting President Castillo ordered their cancellation on the ground that the Government could not tolerate public protests against its neutrality policy. The ban was enforced everywhere except in Entre Ríos Province, where the Radical Governor, Enrique Mihura, openly defied the Government's orders.

With the exception of *Pampero*, the press unanimously condemned the Acting President's policy. Nevertheless police broke up demonstrations favoring the United States after that republic became involved in the war. On December 13 a decree was issued declaring Argentina neutral toward Germany and Italy but giving the United States the privileged status of nonbelligerency. On December 15 Castillo announced his determination to curb pro-Axis propaganda and on the following day he declared a state of siege, ostensibly for this purpose. However the first application of the order was the cancellation on December 17 of an Accion Argentina mass meeting called to "pay homage to President Roosevelt" and to affirm Argentine adherence to the democratic cause. The press, which was overwhelmingly democratic, was forbidden to print anything affecting the neutrality of the nation, deprecating "the government, political regime, head of

state or officials" of any belligerent nation, or that would disturb friendly relations with other countries.

Friction with Germany. The German Ambassador to Argentina, Baron Edmund von Thermann, became the target of persistent criticism after agents of the Chamber's investigating committee on July 24 seized a wireless sending set of German make that was being sent secretly from Buenos Aires to Peru under cover of diplomatic immunity. Other incidents followed, particularly the flight to Brazil of the Embassy's press chief, Gottfried Sandstede, reputed head of the Gestapo in Argentina, to escape trial on charges of misusing public funds and forming an illegal organization.

On September 15 the Chamber of Deputies approved, 78 to 1, a resolution asking the Government to dissolve German social, charitable, and labor organizations as illegal fronts for the German Nazi party. The resolution also asked the Government to deport the leaders of these organizations and to deprive the German Chamber of Commerce of its legal registration. It further declared that the German Ambassador had "exceeded the functions of his office and abused his diplomatic privilege."

The German Ambassador protested strongly against the "insults" addressed to him during the debate in the Chamber, and the German press began an anti-Argentine campaign. On September 21 Acting President Castillo announced that his administration "dissociates itself from statements made in the Chamber of Deputies." Rejecting Congressional and other pressure for the dismissal of the German Ambassador, he declared on September 25 that the conduct of international affairs was the exclusive responsibility of the Executive. The Foreign Office sought to induce Berlin to withdraw Baron von Thermann voluntarily, but without success.

Defense Preparations. While continuing to discount the danger from the Axis powers, the Government in October obtained the approval of Congress for a five-year rearmament plan to cost 712,000,000 pesos for the navy and 646,000,000 pesos for the army. The War Minister announced November 27 that the standing army would be raised to 250,000 men.

The Government followed up actively the initiative taken in December, 1940, when Argentina and Uruguay invited neighboring republics to join them in strengthening defense facilities in the River Plate region. Military delegations from Brazil, Chile, Uruguay, Paraguay, Bolivia, Peru, and the United States attended the Argentine independence anniversary celebration in Buenos Aires on July 9, and staff talks on continental defense problems were reported. Talk of an Argentine-Brazilian-Chilean military alliance against overseas aggression followed the visits of the Argentine War Minister, Gen. Juan N. Tonazzi, to Rio de Janeiro in August and to Santiago in September.

Relations with United States. The negotiations with Brazil and Chile apparently had other objectives in addition to continental defense. It was indicated that the Argentine Government wanted to prevent an unrestrained rearmament race among the ABC powers, and also to lessen the need for the establishment of United States bases in South America. Anti-United States elements showed apprehension at the decision of Brazil and Uruguay to accept United States funds for the construction of naval and air bases, which would be placed at the disposal of the United States in certain circumstances. On June 27 the Argentine Government rejected the Uruguayan proposal that any American power at war with a non-American power should be treated as a nonbelligerent.

While displaying its traditional hostility to the spread of United States influence in South America, the Argentine Government was nevertheless drawn into more friendly relationship with Washington. This trend was due partly to Argentina's growing economic dependence upon the United States and partly to the predominantly pro-democratic sentiments of the Argentine people. The United States in 1941 displaced Great Britain as Argentina's best customer and chief source of finished goods. In October the Argentine Foreign Minister stated that Washington had earmarked \$70,000,000, or 295,000,000 pesos, for Argentina's use under lease-lend facilities. On November 27 an Argentine military mission sailed for the United States to purchase armaments.

Early in September the Argentine Government accepted an Anglo-American trade deal providing for the disposal of farm surpluses to the Allies and barring future sales of strategic war materials to the Axis powers. On November 27 it undertook to sell to the United States all of Argentina's tungsten production up to 3,000 short tons yearly for three years. The Argentine Congress in July ratified the important conventions signed at the Havana Conference of American Foreign Ministers in 1940. Later there was an exchange of visits by official delegations representing the Argentine Chamber of Deputies and the U.S. House of Representatives.

Reciprocal Trade Treaty. The Roosevelt Administration's eagerness to win Argentine friendship was indicated by the partial relaxation of the ban on imports of Argentine beef on April 1, and by the conclusion on October 14 of a reciprocal trade agreement that aroused vigorous protests from the farming and ranching sections of the United States. In Argentina the treaty had important political consequences favorable to the United States. Under the treaty, Argentina obtained U.S. tariff reductions on flaxseed, canned corned beef, etc., and a pledge not to raise duties on other export products. The concessions, or bindings of duties, covered 84 items which accounted for 75 per cent of Argentine sales to the United States in 1940. In return Argentina granted tariff reductions or bindings of duties on 127 items imported from the United States, accounting for 30 per cent of U.S. sales in 1940.

Other Foreign Relations. Continuing its program of developing closer economic and political relations with neighboring republics, Argentina concluded new trade deals with Brazil on January 29 and April 9. On November 21 the first step toward elimination of mutual Argentine-Brazilian customs barriers was taken, when their Foreign Ministers signed a treaty in Buenos Aires granting free entry to the products of new industries in either country.

Argentina participated in the Regional Economic Conference of the Río de la Plata (q.v.) in Montevideo beginning January 27. On February 10 representatives of Argentina, Bolivia, and Paraguay met in Buenos Aires and signed five agreements. One, signed by all three countries, provided for regularization of their joint navigation, irrigation, and other rights in the waters of the Pilcomayo River. Argentina and Bolivia signed two accords regulating and encouraging tourist travel and extending Argentine financial aid for the construction of a railway and exploitation of petroleum deposits in Bolivia (see BOLIVIA under *History* for details). Two agreements signed by Argentina and Paraguay provided for dredging and marking the channel of the Paraguay River, and for the establishment of a foreign exchange stabilization fund in Paraguay with Argentine aid.

A conference of highway engineers from Argen-

tina, Bolivia, Chile, and Peru, meeting in Buenos Aires in May, fixed the definitive routes of the Pan American Highway through those countries preliminary to the conclusion of diplomatic conventions for their coordinated development. The Argentine-Chilean controversy over conflicting claims to Antarctic territories was amicably settled by a preliminary agreement signed by representatives of the two governments in Santiago, Chile, March 26.

Early in the year the Argentine Government extended a 160,000,000-peso credit to Spain for the purchase of surplus Argentine wheat, cotton, and meat. Ambassadors—replacing Ministers—were exchanged with Bolivia and Japan.

ARIZONA. A mountain State. Area: 113,909 sq. mi.; including 329 sq. mi. of inland water. Population: (1940 census) 499,261. The urban population comprises 34.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 14.4 per cent (U.S. average, 10.2); elderly (65 years and over), 4.8 per cent. Arizona ranks 5th among the States in area, 43d in population, and 44th in density, with an average of 4.4 persons per square mile. The largest city and capital is Phoenix with 65,414 inhabitants. There are 14 counties and two cities of more than 10,000 inhabitants (see article on *POPULATION* in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see *VITAL STATISTICS*.

Education. According to the latest Biennial Survey of Education, there were 110,056 pupils enrolled in the State School System during the school year 1937-38. Of this total, 89,708 were enrolled in kindergartens and elementary schools and 20,348 in secondary schools. The instructional staff comprised 3,364 persons, who received an annual salary of \$1,535 (U.S. average, \$1,374); 802 or 25.5 per cent were men. Expenditures for all public schools in 1937-38 were \$9,773,856, making a total cost per capita of \$23.33 (U.S. average: \$17.15). For higher education, see under *Arizona* in the table of *UNIVERSITIES AND COLLEGES*.

Transportation. State highway mileage in 1939, including streets under State control, totaled 3,614, of which 2,902 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 143,451, 112,945 were private and commercial automobiles, 350 busses, and 25,108 trucks and tractor trucks. Gross motor-fuel consumption was 113,435,000 gal. Net motor-fuel tax receipts were \$4,769,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,225,000.

Railways of all classes extended 2,234 miles (Dec. 31, 1939) .95 per cent of the total mileage in the United States. Class I steam railways (906 miles) reported 2,619,457 tons of revenue freight originating in Alabama in 1940 and 5,622,933 tons terminating in Arizona. There are 44 airports and landing fields in the State (15 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 131 civil aircraft in the State and 588 commercial and private pilots (517 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 770,100, as compared with 676,800 acres in 1940. According to the latest census, there

are 18,468 farms, valued at \$153,676,675, averaging 1,388.9 acres each. Farm population numbered 115,349 or 23.1 per cent of the total. Leading crops with production were: Cotton lint, \$18,067,000, 203,000 bales; commercial truck crops, \$11,756,000; hay, \$6,807,000, 603,000 tons.

Manufacturing. According to the 1939 Census of Manufactures, there were 332 manufacturing establishments in Arizona, employing 6,096 wage earners who received wages of \$7,162,639 for the year. Total value of products was \$97,529,481; value added by manufacture, \$32,041,290.

Mineral Production. According to preliminary reports of the U.S. Bureau of Mines, Arizona continued as the largest copper-producing State in 1941, and its output (665,500,000 lb. valued at \$77,863,500) was greater than that in any year since 1929, which saw a record production of 830,628,411 lb. The 1941 figure was 18 per cent over 1940 (562,338,000 lb. valued at \$63,544,194). Other leading minerals are gold, 315,000 fine oz. valued at \$11,025,000 in 1941 (294,807 fine oz., \$10,318,245, in 1940) and silver, 7,551,000 fine oz., \$5,369,600 (7,075,215 fine oz., \$5,031,264). Total value of mineral production in 1939 was \$75,056,965, or 1.77 per cent of the United States total, giving Arizona 15th place among the States in value of mineral products.

Trade. According to the 1940 census there were 607 wholesale establishments in Arizona, employing 3,854 persons, reporting net sales for 1939 of \$96,528,000 and annual pay roll of \$5,623,000. There were 6,242 retail stores with 16,577 employees, reporting sales of \$162,003,000 and pay roll of \$17,119,000. Service establishments numbered 1,819, employing 3,283 persons for \$3,185,000 per year, and reporting a business volume amounting to \$10,880,000. The leading business center of the State is Phoenix which reported wholesale sales of \$49,519,000, retail sales of \$47,922,000. Tucson reported sales of \$12,750,000 wholesale and \$23,646 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Arizona was \$12,470,000. Under the Social Security program, financed by Federal funds matching State grants, 8,863 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$28.24 (U.S. average pension, \$21.08); 6,563 dependent children in 2,471 families received average monthly payment of \$32.83 per family (U.S. average, \$32.58), and 404 blind persons received \$27.40 per month (U.S. average \$25.58). General relief cases, which are supported by State and local funds only, numbered 2,799 and received \$16.56 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 4,626 (\$306,000); NYA student work program, 1,842 (\$12,000); NYA out-of-school work program, 1,778 (\$33,000); WPA, 5,608 (\$438,000); other Federal emergency projects, 34 (\$3,000); regular Federal construction projects, 2,005 (\$256,000). The Farm Security Administration certified subsistence payments totaling \$26,000 for the month to 1,338 cases.

Legislation. The Legislature convenes in regular session on Monday after the first Tuesday of January in odd years. It is composed of 19 Senators and 52 Representatives, all of whom were Democrats in 1941.

The 1941 Legislature adjourned Mar. 17, 1941,

after a 64-day session during which 135 measures were passed out of 517 introduced. Ten were vetoed by the governor leaving 125 new laws for the statute books; 37 carried the emergency clause, thus being exempted from the referendum provisions of the Constitution and taking effect immediately upon approval by the governor. The following is a brief summary of the Acts considered to be of chief importance, according to Director Mulford Winsor of the State Department of Library and Archives at Phoenix.

Chap. 5. Permits counties and municipalities to acquire and operate airports, or to execute contracts for the operation of publicly owned airports by other agencies, whether within or without the corporate limits *Chap. 9.* Repeals prior law requiring a prisoner in the State prison to serve full minimum sentence before being eligible to apply for parole *Chap. 24* Defines different grades of eggs, and requires egg producer to have eggs inspected and stamped before sale *Chap. 31.* Enabling act, permitting formation of sanitary districts outside of incorporated cities and towns for sewage disposal and related purposes. *Chap. 32* Increases maximum amount of old age assistance to any one recipient to forty dollars per month Former maximum, thirty dollars *Chap. 33* Sets up examining and regulatory board for osteopaths Formerly under board of medical examiners (Referendum petition filed against this act, hence, operation suspended pending general election in November, 1942) *Chap. 43* Enabling act for the formation of soil conservation districts *Chap. 44* Sets up five-member citizen board for administration of State hospital for insane Formerly under board of directors of State institutions *Chap. 57* Places regulation of child placement and child welfare agencies and institutions (primarily neglected and dependent children) under State department of social security and welfare No prior regulation. *Chap. 65.* Abolishes board of directors of State institutions Institutions placed under control of governor, and purchasing agent created for centralized purchasing of supplies for all State institutions *Chap. 80* Sets up complete new juvenile code for handling of neglected, dependent, and delinquent juveniles Principally court procedure. Prior law repealed. *Chap. 81* Completely revises existing law relating to agricultural and vegetable seed Regulation and inspection *Chap. 105* Creates new State department of health, governing administration of all State public health activities. Formerly under State board of health New board consists of five citizen members, five-year staggered terms Makes superintendent of public health full time job, five year term *Chap. 108* Provides for taxation of fuels other than gasoline used to propel motor vehicles on highways. Tax collected from consumer *Chap. 112* Creates examining and regulatory board for chiropractors. *Chap. 124* Complete revision of unemployment compensation law. (See also FIRE PROTECTION)

The legislature appropriated during the regular session a total of \$6,996,341.61 for operation of the State government during the ensuing biennium and for deficiencies in current operations. This sum does not include a number of continuing appropriations set up by law, which must be raised each year without further action by the legislature. Of the total sum, \$6,806,058.56 is contained in the general appropriation Act. Twenty-five other measures became law, appropriating \$190,283.05. Two of the latter were for expenses of the legislative session, totaling \$99,621. As usual, many relief bills were introduced, asking for payment of claims against the State for which funds were not otherwise available. Nine were passed, appropriating \$11,191.98.

Finances. Total tax collections in Arizona for the fiscal year ending in June, 1940, were \$20,194,000. Total sales taxes amounted to \$10,018,000, including general sales, \$4,010,000, and motor fuel, \$4,610,000. Taxes on specific businesses and occupations ran to \$483,000, while general and selective property taxes came to \$4,739,000. The net income taxes were \$1,363,000. Cost payments for the operation of general government totaled \$16,806,000 in 1939, the latest year available. (Revenues for the general government for that year were \$21,398,000.) Cost of operation per capita was \$34.23. Total gross debt outstanding in 1941 was \$2,830,000 as compared with \$3,708,000 in 1932.

Officers and Judiciary. The Governor is Sidney P. Osborn (Dem.), inaugurated in January, 1941, for a two-year term; Secretary of State, Harry M. Moore; Attorney General, Joseph W. Conway; State Treasurer, Joseph Hunt; State Auditor, Ana Frohmiller. Chief Justice of the Arizona Supreme Court is Alfred C. Lockwood, there are two associate members elected by popular vote for six-year terms.

ARKANSAS. A west south central State. Area: 53,102 sq. mi., including 377 sq. mi. of inland water. Population: (1940 census) 1,949,387. The urban population comprises 22.2 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 24.8 per cent (U.S. average, 10.2); elderly (65 years and over), 5.4 per cent. Arkansas ranks 26th among the States in area, 24th in population, and 29th in density, with an average of 37.0 persons per square mile. The largest city and capital is Little Rock with 88,039 inhabitants. There are 75 counties and nine cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Ralph B. Jones, Commissioner of Education, there were 472,014 pupils enrolled in the public schools of Arkansas during the school year 1939-40, 398,246 in elementary schools and 73,768 in secondary schools. Teachers numbered 13,173 and received an annual average salary of \$574. Total expenditures for the year were \$14,023,914. For higher education, see *Arkansas* in table of UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,173, of which 8,460 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 261,997; 190,589 were private and commercial automobiles, 430 busses, and 66,158 trucks and tractor trucks. Gross motor-fuel consumption was 191,421,000 gallons. Net motor-fuel tax receipts were \$11,412,000, the rate being six and one-half cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$3,399,000.

Railways of all classes extended 4,527 miles (Dec. 31, 1939) 1.93 per cent of the total mileage in the United States. Class I steam railways (2,961 miles) reported 8,438,975 tons of revenue freight originating in Arkansas in 1940 and 5,492,291 tons terminating in Arkansas. There are 24 airports and landing fields in the State (7 lighted fields) and one seaplane anchorage. On July 1, 1941, according to the Civil Aeronautics Authority, there were 175 civil aircraft in the State and 924 commercial and private pilots (824 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 6,618,000, as compared with 6,555,000 acres in 1940. According to the latest census, there are 216,674 farms, valued at \$456,848,156, averaging 83.5 acres each. Farm population numbered 1,113,662 or 57.1 per cent of the total. Leading crops with production were: Cotton lint, \$118,490,000, 1,445,000 bales; cottonseed, \$30,719,000, 644,000 tons; corn, \$30,609,000, 40,812,000 bu.; hay, \$16,311,000, 1,648,000 tons; rice, \$12,476,000, 11,342,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,178 manufacturing establishments in Arkansas, employing 36,254 wage earners who received \$24,577,234 in wages for the year. Total value of products was \$160,166,984; value added by manufacture, \$67,390,149.

Mineral Production. The chief mineral product is petroleum, of which 25,583,000 bbl. were produced

in 1940 (preliminary figures) as compared with 21,238,000 bbl. valued at \$16,790,000 in 1939. Total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$29,507,194, seven-tenths per cent of the total value for the United States. See GEOLOGICAL SURVEY.

Trade. According to the 1940 census there were 1,785 wholesale establishments in Arkansas, employing 7,890 persons, reporting net sales for 1939 of \$248,916,000 and annual pay roll of \$9,643,000. There were 20,328 retail stores with 32,581 employees, reporting sales of \$298,301,000 and pay roll of \$23,775,000. Service establishments numbered 6,696, employing 9,762 persons for \$5,933,000 per year, and reporting a business volume amounting to \$22,872,000. The leading business center of the State is Little Rock which reported wholesale sales of \$73,500,000, retail sales of \$41,063,000, and \$4,267,000 receipts for its service establishments. Fort Smith reported sales of \$24,772,000 wholesale and \$15,755,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Arkansas was \$29,840,000. Under the Social Security program, financed by Federal funds matching State grants, 26,046 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$7.69 (U.S. average pension, \$21.08); 16,486 dependent children in 6,462 families received average monthly payments of \$13.50 per family (U.S. average, \$32.58); and 1,142 blind persons received \$9.09 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 3,463 and received \$4.60 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 9,392 (\$622,000); NYA student work program, 1,377 (\$9,000); NYA out-of-school work program, 7,996 (\$115,000); WPA, 29,757 (\$1,329,000); regular Federal Construction projects, 2,788 (\$231,000). The Farm Security Administration certified subsistence payments totaling \$17,000 for the month to 692 cases.

Legislation. The General Assembly convenes in regular session on the second Monday of January in odd years. It is composed of 35 Senators (all Democrats in 1941) and 100 Representatives (99 Democrats and one Republican). The following summary of 1941 legislation is condensed from a report of the *Arkansas Gazette*.

The 1941 Legislature tried to solve its revenue problem by strengthening existing tax laws rather than levying new taxes. As a result no new tax was adopted, but two existing levies were revised to broaden their scope. These were the Strickland corporation income tax, estimated to bring in \$300,000 to \$500,000 in new revenue, and the Administration's gross receipts tax which, on July 1, will replace the retail sales tax without increasing the two per cent rate. Under the gross receipts tax law, every retail merchant in the State must obtain a permit (without cost) to do business and will be allowed to either absorb the tax himself or pass it on to the consumer. The Strickland tax was the most controversial. The bill was killed twice and passed on its third appearance by the exact three-fourths majority required. It eliminated the exemption of \$1,500 and a graduated tax up to five per cent on all corporation income over \$25,000 in place of the previous flat two per cent tax. Dividends from State and national banks are taxable but banks themselves are exempt.

The Assembly codified the liquor, cigarette, and

motor fuel tax laws. It replaced the inheritance tax with an estate tax that exempts small incomes and is designed to attract wealthy persons to Arkansas. The ferry tax was repealed and several license fees affecting farmers were reduced. Liquor dealers were given the right to sell native wines without having to purchase a special wine retailers license. To aid counties, a law was passed providing for appointment of delinquent personal property tax collectors. The gasoline 6.5 cents a gallon tax was applied to substitute fuels. Collection of severance taxes was tightened. The State was required to maintain highway continuations through all cities and towns, and the Highway Commission was permitted to let road construction contracts on a basis of need instead of sectional parity.

The schools were second on Governor Adkins' legislative "must" list and as a result the General Assembly treated them kindly. Teachers' salaries, which have been among the lowest in the nation, were given a boost with the Rozzell bill setting up State aid toward establishment of minimum salaries. The amount of State aid, however, was below expectations of proponents—only about \$300,000 a year instead of the \$600,000 sought. The Administration's school program was further carried out by reorganizing the State Board of Education; substituting for the Textbook Commission professional selection committees with local choosing of texts from multiple lists; reestablishing the county school supervision system; providing for annual teacher examinations by the chief county school officer. Revenue was provided to permit rural schools to operate full 8-month terms this school year.

Administration-sponsored legislation reorganized 12 State boards, commissions, and departments and abolished three existing commissions. The State vocational trade school in Little Rock and the Department of Aeronautics were created. A merit system was established for the Welfare Department to conform to Federal requirements.

The free-spending Legislature turned down less than half a dozen bills submitted by the Budget Committee and finally wound up with a total of \$62,249,300 appropriated for operation of the State government and \$136,330,557 for refunding of the highway debt. The model 1939 land policy act, which functioned on a single-cylinder basis during the past two years without an appropriation and without an effective land title law, was expected to operate on all four as a result of benefiting legislation passed; a chief appraiser and four assistants were provided for. Legislation affecting counties largely involved financial matters.

A trend toward legislative regulation of business and professional life started in Arkansas four years ago and was still strong this year with 34 measures subject to this classification. Included are items of price fixing, taxation, supervision, licensing, and confiscation. The dairy measure would improve quality of products by guarding their production. The optometry bill would restrict "cut-rate" competition. Prices would be fixed on native wines and barber work. The itinerant merchant measure is intended to keep out of the State many independent truckers. Few of the bills drew opposition, though critics charged that one result would be to increase living costs and drive out competition.

The Steel unemployment compensation bill was the most important enactment in the field of social security; it insures employers of a merit-rating system beginning in April, 1942. Retirement benefits were extended to several groups; assignment, sale or pledge of pension funds for any purpose was prohibited.

By legislation, the State joined the Interstate Oil Compact and a compact with Louisiana and Texas to promote the sale of rice.

The Pilkinton preferential primary law put back into effect the double primary election system with a two-year limitation. A "Litte Hatch Act" would prohibit State employees from contributing, even voluntarily, to any State campaign fund. The one-dollar penalty for delinquent poll tax assessments was abolished, and invalids were permitted to vote by absentee ballot. The procedure for filing initiative and referendum petitions was revised.

Efforts to revise the marriage laws almost came to naught despite a last-minute plea by Governor Adkins. The minimum marriage age of males was increased from 16 to 18 and of females from 14 to 16. Issuance of marriage licenses was prevented to persons intoxicated or under the influence of narcotics. Defeated were measures to require physical examinations and waiting periods before licensing. A new ground of divorce was added—insanity established by three years' hospitalization.

From start to finish refunding was the number one topic of legislative discussion. In addition to highway bond financing were measures affecting refunding in counties, cities, and school districts.

The Legislature had one ear cocked for measures to tie in with the national defense program. It passed bills designed to curb sabotage, subversive activities and un-American organizations. It enacted to aid selective service trainees and gave schools a patriotic holiday, Armistice Day.

Finances. Total tax collections in Arkansas for the fiscal year ending in June, 1940, were \$34,111,000 (partial report for 1941: \$31,767,000). Total sales taxes in 1941 amounted to \$22,086,000, including general sales, \$6,152,000, motor fuel, \$11,968,000. Taxes on specific businesses and occupations (1940) ran to \$1,520,000, general and selective property taxes, \$3,282,000, and unemployment compensation (1941), \$3,416,000. The net income taxes in 1941 were \$961,000. Cost payments for the operation of general government totaled \$23,006,000 in 1939, the latest year available. (Revenues for the general government for that year were \$41,063,000.) Cost of operation per capita was \$11.88. Total gross debt outstanding in 1941 was \$149,413,000, as compared with \$164,626,000 in 1932.

Officers and Judiciary. The Governor is Homer M. Adkins (Dem.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Robert Bailey, Secretary of State, C. G. Hall; Attorney General, Jack Holt, State Auditor, J. Oscar Humphreys; State Comptroller, Murray B. McLeod. Chief Justice of the Arkansas Supreme Court is Griffin Smith; there are six associate members elected by popular vote for eight-year terms.

ART. All activity in the field of art was speeded up in 1941. The art museums, to which the National Gallery of Art at Washington was an all-important

addition, expanded their facilities for display as well as their collections and serviceability to the public. More exhibitions were held than ever before, both of the works of old masters and of contemporary American artists, especial stress being placed on those of the latter under forty years of age. More commissions were given by the Federal Government for mural paintings and sculpture to decorate public buildings than in any previous year, and more emphasis was placed on wide-spread productivity—national output. During National Art Week, November 17–24, instituted for the second year by the President of the United States, exhibitions, over 1,000 in number, were held in every State of the Union under State and Federal auspices. The art market thrived and higher prices were brought for works of art sold at auction than for many years. The number of artists engaging professionally in print-making, sculpture, and painting showed considerable increase, despite economic conditions generally prevailing, and the art schools from coast to coast were overcrowded both winter and summer. The War which might have been expected to have a detrimental effect, to the contrary bestirred additional interest through exhibitions by those participating in warfare or held to raise relief funds. Perhaps, however, the most striking result of our country's isolation because of the World War was the more intimate relationship established through interchange of exhibitions between the United States and the South and Central American Republics.

The National Gallery of Art. The National Gallery of Art at Washington was formally dedicated and opened on the evening of Mar. 17, 1941. The Chief Justice of the Supreme Court presided at the ceremonies; the President of the United States made the dedicatory address; other speakers were Paul Mellon representing his father, the late Andrew W. Mellon, founder and donor, and Samuel H. Kress, also donor. Over eight thousand invited guests were in attendance; many from out-of-town, as well as those prominent in art, official, and diplomatic life at the National Capital. There was music by the Marine Band's Symphony Orchestra, and the two garden courts were decorated by more than five hundred blossoming acacias from the conservatories of Joseph E. Widener, one of the trustees, and well known collector.

Never before did a National Gallery of Art come into existence so well stocked and endowed. In the Mellon Collection there were 126 paintings covering all the great European Schools from the 13th to the 19th centuries, besides some early American paintings and 26 works in sculpture from the Italian Renaissance. The Kress Collection, limited to the art of Italy, comprised 375 paintings and 18 works in sculpture, dating from the late 13th to the early 18th centuries, and representing the Italian Schools as in no other museum in America and few abroad. Before the opening, Mr. Kress added 43 additional paintings and 22 pieces of sculpture to the gift collection, as indefinite loans. Also prior to the opening a superb collection of 300 prints from the earliest days of print-making to today was received from Miss Ellen T. Bullard and three anonymous donors, a selection of which was immediately placed on view, as was a group of early American portraits lent by Mr. and Mrs. Chester Dale.

Other important gifts and loans followed in quick succession. *Advice to a Young Artist*, a painting by Daumier, was presented by Duncan Phillips, and a portrait of *Don Bartolomé Surega*, by Goya, came as a gift from Mr. and Mrs. P. H. B. Freling-

huysen in memory of Mr. and Mrs. H. O. Havemeyer to whom it had belonged. Among the indefinite loans were: Whistler's *White Girl*, *Andalusian*, and a marine, *The Sea*, as well as two paintings by Degas and two by Renoir, all from the Whittemore Collection; from the Chester Dale Collection, 25 paintings by the leading French artists of the 19th century—David to Cezanne; and from Mr. and Mrs. Copley Amory the famous portrait of *The Copley Family* by Copley himself.

The galleries in which the paintings and a majority of the sculptures are exhibited are on the main floor opening from the two spacious halls, 100 feet long by 21 feet wide, which extend east and west from the great rotunda to the garden courts at either end. The arrangement is chronological and by countries, and, although the Mellon and Kress Collections are given separate galleries, the historical sequence is unbroken. Great care has been taken to provide appropriate backgrounds for the paintings. Thus the early Italian paintings are seen on plaster walls and those of a later period against damask. The Dutch and Flemish paintings hang on oak panels; the 18th century English, French, and American on wood panels painted, as was the custom of their time. The floors are dark oak; the lighting from above, well modulated.

On the ground floor are the administrative offices, auditorium, library, work and storage rooms, cafeteria, etc. Here also are a number of adjustable galleries in which from time to time exhibitions of the works of living artists may be shown, as well as study collections. The first showing in these galleries was of water colors acquired by the Section of Fine Arts, Public Building Administration, for placement in U.S. Marine hospitals; followed shortly by an exhibition of the "Art of Australia," sent to this country by the Australian Commonwealth under the sponsorship of the Carnegie Corporation of New York. The National Gallery of Art is administered by a specially appointed board of trustees under the Smithsonian Institution, with major administrative costs met by Congressional appropriation. David K. E. Bruce is President of the Board of Trustees; Donald D. Sheperd, Secretary and Treasurer; Harry A. McBride, Administrator; David E. Finley, Director, Macgill James, Assistant Director; John Walker, Head Curator, and Charles Seymour, Jr., Curator of Sculptor.

The attendance during the first three months exceeded one million.

Federal Patronage. From June 1 to Dec. 31, 1941, the Section of Fine Arts, Public Buildings Administration, Federal Works Agency, of which Edward Bruce is Chief, held thirty competitions for mural paintings and sculpture to decorate new Federal buildings not only in Washington but throughout the United States. These were all anonymous and judged by advisory juries composed of artists of high professional standing. The payment for these paintings and works of sculpture was on the basis of 1 per cent of building cost. The more important paintings therefore were for the buildings of greatest size and cost, among which are the new War Department Building in Washington, D. C., and the Los Angeles, Calif., Terminal Annex Post Office.

While these great buildings give opportunity for decorative composition on an imposing scale which are particularly rewarding to the artists, the Section of Fine Arts places great importance on the less sizeable projects which take art under government patronage to small communities in every section of the country. During the year no less than 240 commissions for mural paintings and sculpture were

completed, with 268 still in process. The total number of mural paintings and sculpture completed, under these auspices since Oct. 16, 1934, when the Section of Fine Arts was set up is 1,044, and the number of cities in which these may now be found is 894.

The WPA, under Holger Cahill, in cooperation with States, cities, and towns which have shared costs, has carried on an extensive work for the advancement of art and artists, conducting art centers, exhibitions, classes, and buying indigent artists' works. It has also added to the excellent "Index of American Design," and has undertaken the organization and conduct of "National Art Week" during which through numerous exhibitions all over the country, a high pressure campaign for the sale of works by local artists was put on in the hope of creating a stable market. The slogan was "A Work of Art for Every American Home," but nothing was said of merit. Thomas J. Watson was appointed National Chairman of National Art Week and Mrs. Eleanor Roosevelt served as Honorary Chairman. The dates were November 17 to 24.

Art and War. Art seems to have been accelerated rather than slowed down by war. This acceleration has shown itself in exhibitions by "Soldier Artists," as that officially opened in New York in May, and by exhibitions of masterpieces set forth for the purpose of raising funds for relief.

A collection of paintings, "Britain at War," by British artists, which was assembled under distinguished supervision in London, opened in this country in the Museum of Modern Art, New York, with the British Ambassador, Lord Halifax, in attendance and speaking. Smaller exhibitions of contemporary British art were also shown in the British-American Art Center, New York, and the Phillips Memorial Gallery, Washington, D.C.

One hundred and six paintings by British artists, serving as firemen, all depicting fires set by German bombs, which were selected by a group of experts in cooperation with the Director of the National Gallery of London, were shown first in the National Gallery of Art, Washington, then in New York, and later in Canada. The attendance at this exhibition in Washington was 150,000.

The American Academy of Arts and Letters and the National Institute of Arts and Letters, New York, appropriated \$5,000 for the purchase of paintings by British artists serving in the war, to be brought to this country and resold, in order that more works might, in like manner, be brought overseas. The number of paintings purchased was 35. If not all sold within reasonable time those remaining will be distributed to American Museums.

Among the notable exhibitions held for relief purposes were the following, all in New York City: Early American Paintings, for Bundles for Britain, twenty-five paintings by El Greco from private collections, for Greek Relief, eighty paintings by Renoir, public and private loans, commemorating the centenary of the artist's birth, for the benefit of the Free French. Mention should also be made of the sale of contemporary works of American art, held at the Ritz Tower Hotel, for the benefit of Chinese war orphans.

The comprehensive exhibition of "Australian Art" sent to this country by the Commonwealth of Australia, under semi-official auspices, and the exhibition of American paintings by contemporary artists sent to and shown in Cape Town, South Africa, may both be regarded as tokens of international good-will in a world torn by hate.

The American Academy in Rome, being closed, and travel abroad impossible, competitions for prize awards open to painters—unmarried men under thirty—were conducted in 1941, in lieu of fellowships. Preliminary competitions were held in six different sections of the United States and final awards made upon the basis of competing regional winners.

By the end of 1941 the painters began having difficulty in securing certain desired pigments; the etchers in obtaining copper plates, and the sculptors in buying bronze metal.

Latin America. Sponsored by the Coordinator of Cultural Relations between the American Republics, a collection of 300 paintings (200 oils and 100 water colors) was assembled by the Metropolitan Museum of Art, the Museum of Modern Art, the Whitney Museum, and the Brooklyn Museum, working in cooperation. Three groups of approximately 100 paintings each were arranged and sent out on tours to cities of Central and South America. The first group began its tour at Buenos Aires; the second, a little later, at Mexico City, and the third, later still, at Santiago, Chili. Collectively, the three visited most of the important Latin American cities and were everywhere enthusiastically and cordially received.

In addition to these government sponsored groups, an exhibition of "Contemporary Paintings of the Western Hemisphere," assembled by the International Business Machines Corporation, was sent out early in May to visit sixteen National Museums and Departments of Fine Arts in practically the same territory. This opened in Rio de Janeiro in June; it comprised 93 paintings and 150 prints, and was sent, free of expense, to the places that showed them. Almost all of the exhibits included therein had been purchased of the artists by the I.B.M. Corporation.

At the Nation's Capital the Pan American Union has rendered excellent service by showing in its handsome building a succession of exhibitions of the Arts and Crafts of Latin American Countries. Among those of special note were prints from Uruguay, craft work from Mexico, a rare and extensive collection of hand-wrought silver from South American countries, and 200 water colors of ancient Peruvian Arts by a distinguished archeologist, Dr. Constantino Malinovsky.

Other exhibitions of contemporary Latin American art were brought to Washington through diplomatic channels. The works of two South American sculptors were shown, one in the Pan American Union, the other in the Corcoran Gallery of Art; the former, by Marino Nunez del Prado of Bolivia, the latter by Maria Martins, wife of the Brazilian Ambassador.

Under Governmental auspices and appropriation, there has been an interchange of students and scholars between the United States and Latin American countries. But perhaps the best "ambassadors of good-will" have been artists of the United States and the Republics to our south, who, traveling independently and practicing their art, have been most successful in breaking down prejudice and creating neighborly cordiality.

Art Museums. A new Art Museum was opened in Santa Barbara, California, on June 5, 1941, with an exhibition entitled "Painting Today and Yesterday," consisting of 140 works by American artists. The building was the old Post Office, purchased from the Federal Government by the County of Santa Barbara, and reconstructed. Two stories high, it has six galleries, a sculpture court, music room, auditorium, kitchen, as well as offices and work rooms.

The sculpture court and several of the galleries were given by individuals. At the opening \$50,000 for administrative purposes was pledged by charter patrons and valuable bequests were assured.

On November 1 the Philadelphia Museum of Art opened twenty new galleries in which paintings from the J. G. Johnson collection were placed on view. This famous collection comprises over 1,200 works from the 12th to the 19th centuries.

An important gift received by the Philadelphia Museum during 1941 was a suite of furniture designed by Robert Adam, about 1766, for Sir Lawrence Dundas of Moor Park, Hereford, England.

The Metropolitan Museum of Art, New York, redecorated and rehung, in chronological order, a large number of its picture galleries, exercising selective choice with regard to works placed on display in order to uphold high standards and prevent overcrowding. In the autumn this Museum also established a Junior Museum, setting aside five rooms on its first floor for this purpose, wherein under trained supervision special exhibitions, programs, art work, etc. are made available to approximately one thousand young visitors a day.

From Thomas J. Watson, a trustee, the Metropolitan Museum of Art received as a gift an extensive broadcasting system to be used principally for educational work within the Museum but capable of tuning in with outside. So extensive is this system that its installation will take nearly a year.

On the death of George Blumenthal, June 26, 1941, the one million dollar fund, which during his Presidency he had given the Metropolitan Museum under certain restrictions, became available for the purchase of works of art. He had also bequeathed to the Museum his home in New York City and all of his art properties, dated earlier than 1720, certain pieces excepted, which were left for life to his wife.

Among other important acquisitions made by the Metropolitan Museum of Art this year were a wainscoted study from the palace of Frederigo da Montefelto, Duke of Urbino, which was handsomely installed; and the furnishings of the Samuel Verplanck drawing room, given by descendants and installed in appropriate setting in the American Wing.

The Cloisters—branch of the Metropolitan Museum of Art—received from John D. Rockefeller, Jr. a 15th century doorway for the tapestry room and a small limestone statue of Mary Magdalene.

The Metropolitan Museum of Art, the Brooklyn Museum, and the Museum of Modern Art, New York, as well as the Cleveland Museum abolished pay days this year under the conviction that everything should be done to keep up interest in cultural things during the blackout in Europe. The Cleveland Museum also announced two evening openings each week.

A "Provisional Exhibition Gallery" was established by the Museum of Fine Arts, Boston, toward the close of the year. In this gallery will be displayed contemporary works by living artists acquired by the Museum "on trial," and which will not be considered a part of the permanent collection until sufficient time has passed to prove their worth. In December this museum placed on permanent view a collection of 18th century American Arts, given by Mr. and Mrs. Maxim Karolik of Newport, R.I., consisting of 250 objects—furniture, textiles, glass, silver, pottery, paintings, prints, and drawings—fine in design and workmanship, assembled on a purely esthetic basis during a considerable period by the donors in close cooperation with the Museum's representatives.

The J. B. Speed Memorial Museum, Louisville, Ky., received from Dr. Preston Pope Satterwhite, formerly of that city, a collection of art objects from the Gothic Period to the 18th century, and handsomely installed it in two large galleries set aside for its permanent display.

The M. H. De Young Memorial Museum, San Francisco, acquired and set up in adjacent Golden Gate Park a Spanish Monastery purchased and brought to this country by William Randolph Hearst in whose collection, dispersed in 1941, it was included.

An Art Gallery and School, costing \$250,000, together with a collection of 100 contemporary English and American paintings and funds for operation, were given to Palm Beach, Florida, by Mr. and Mrs. Ralph H. Norton, of Chicago. Included in the gift were sculptures by Paulanship—replicas of his *Acteon* and *Diana*—placed on either side of the entrance, and a panel in relief on the façade.

The William Rockhill Nelson and Atkins Museum, of Kansas City, Mo., added six new galleries in April, greatly increasing its display space.

As a bequest from James M. Hamilton, architect of Cleveland, the Art School and Museum of Ft. Wayne, Ind., received \$150,000 and an art collection which he had assembled.

The Rochester Memorial Art Gallery was given, by R. T. Miller, Jr., \$25,000, part of which, it was stipulated, should be used for the acquisition of American furniture of the Classical Revival Period and the remainder for American paintings.

The Philbrook Art Museum, Tulsa, Oklahoma, opened a new auditorium and a glassed-in terrace in October, both the gift of the museum donors, Mr. and Mrs. Waite Phillips who donated \$50,000 to meet the cost.

A building to be devoted to Art, Music, and the Drama was erected at a cost of \$300,000 for the use of the Department of Art of the University of Georgia, at Athens, Ga.

In 1941 a small art museum, sponsored by the Boise Art Association, was built at Boise, Idaho. It is 108 ft. by 36 ft., simple but dignified in design, and built of native sandstone quarried by WPA workers.

Flint, Mich., in 1941, opened an art museum with an exhibition entitled "Art Marches On," made up of objects from public and private collections showing the development of art through the centuries.

The Mulvane Art Museum and also the Art Department of Washburn College, Topeka, Kansas, were taken over by the city to be henceforth supported from municipal funds as city institutions.

The little gallery of Early Christian and Medieval Art, which at *Dumbarton Oaks*, on Georgetown Heights, Washington, D.C., houses the Bliss Collection, now owned and administered by Harvard University, has been opened freely to the public, as well as the Research Library in connection therewith.

Acquisitions. Among the most important acquisitions made by art museums in 1941 are the following: A painting by Rubens, illustrating a dramatic scene from Herodotus, 80" by 121" in dimensions, recently owned by the Earl of Harewood, acquired by the Museum of Fine Arts, Boston; *Madonna and Child* and also *Beggar Boy*, by Murillo, and *Returning from Work*, by Jules Breton, the Carnegie Institute, Pittsburgh; *Les Demoiselles de Village*, by Courbet, and *Portrait of James Tissot*, by Degas, the Metropolitan Museum of Art; *Portrait of Artist's Brother*, by Vignée Le Brun, and *Christ and Wom-*

an of Samaria, by Veronese, the latter formerly in the Duke of Marlborough's collection, Blenheim Castle, acquired by the St. Louis City Museum; *The Infanta Margareta*, by Velasquez, and *Lady with Red Flowers*, by Barthel Bruyn, Elder, the San Diego Museum; *Les Trois Paniers*, by Derain, the Cincinnati Museum; and *Portrait of a Lady*, thought to be Condesa de Gondomar, by Goya, obtained by the Detroit Art Institute.

Art Sales. Taking into consideration the War, the consequent heavy increase in taxation, and the uncertainty of the future, it was surprising to learn, July 1, through the report issued by the Parke-Bernet Galleries, N.Y., America's largest Art Auction House, that receipts for the season, from Oct. 1, 1940 to June 30, 1941, were 54 per cent higher than for the same period of the preceding year, and, in fact, the highest for any Art and Book Auction House in the United States since 1929. The total amount was \$3,606,381.75. Also it was stated that many of the collections brought between 25 and 40 per cent more than the auctioneers' advance estimate. The attendance was large at these sales (140,000), among them were representatives of foreign museums, collectors, dealers, as well as, happily, a good many small buyers. The Plaza Art Auction House in New York reported sales covering the same period amounting to \$1,178,789—20 per cent higher than in the previous year. This upward tilt is explained by the statement that in times of critical international relations people commonly desire to invest money in personal property of permanent international value.

Some of the best known private collections in this country were dispersed in New York in 1941. Among them were those of Mrs. Henry Walters, Ralph Pulitzer, J. Horace Harding, Paul D. Cravath, Mrs. Walter P. Chrysler, Arthur Curtis James, and B. F. Jones.

The William Randolph Hearst collection of 15,000 art objects, assembled during 50 years, and long stored in warehouses, was offered for sale "over the counter" in two large New York department stores—Gimbels and Saks—the former giving a whole floor to it. Every piece was priced and plainly labeled, the range being from several dollars for a Staffordshire plate to more than \$100,000 for a Spanish Monastery. The Clarence Mackay collection was also offered for sale at Gimbels, as was that of Warner S. McColl, the latter consisting of 18th Century French and English masters.

The famous Stotesbury Collection, made up chiefly of works by the great British School, also came into the market. First shown and offered in a New York dealer's gallery, and afterwards sent out as a sales collection to the Pacific coast, where it was shown in two of the largest of the western art museums.

Of the collections sold at auction in New York by the Parke-Bernet Galleries, that of Mrs. Henry Walters brought the greatest amount, \$646,684, including, however, not only works of art but library. The collection of Mrs. B. F. Jones, Jr., the next in total value, realized \$463,520 for 112 paintings. The paintings and art property from the J. Horace Harding estate sold for \$183,152. At the Arthur Curtis James sale 40 paintings fetched \$44,305.

The highest price paid for a single painting was \$39,000 given at the Jones' sale for Hoppner's portrait of *Miss Frances Beresford*. Next highest was \$34,000, for a portrait of a child, *Victor Guye*, *Nephew of J. Nicholas Guye*, by Goya, which was included in the Harding collection. In the Jones' collection a portrait by Romney of *Capt. Wm. Kirkpatrick* brought \$31,000, Hobbema's *View in*

Westphalia, \$30,000, *Rt. Hon. Wm. Pitt* by Gainsborough \$26,000, and *Little Artist* by Romney \$25,000. In the Harding collection Reynolds' portrait of *Mrs. Freeman, Jr.* brought \$15,000. Gainsborough's portrait of *Mrs. Fitzherbert* \$11,000, and *Pastoral Landscape*, by the same artist, \$13,000. Other top prices for the year were: \$16,500 for *Le Moulin* and *Le Cours d'Eau*, by Boucher; \$12,500 for a portrait by Romney of *Lady Prescott and Her Three Children*; \$12,500 for *Blind Man's Buff*, by Fragonard; \$12,000 for *Mrs. Scott Moncrieff*, by Raeburn; \$9,750 for *Portrait of Child in Blue*, by Renoir; \$12,000 for a marble bust of Voltaire, by Houdon, and \$12,500 for a small terra cotta *Nymph and Satyr*, by Clodion.

Selling in London was reported, even during the blitzkrieg, as surprisingly good, especially for paintings by the masters of the British School. The National Art Collections Fund made several purchases of exceptionally fine works for British museums which would seem to indicate and induce confidence in eventual restoration of peace.

Exhibitions. Exhibitions increased in number and importance in 1941 and were of many kinds. The Art Museums of this country have long since accepted the transient exhibition as essential to interest and many of those organized under such auspices were of great educational value.

Within this category during 1941 were "Coptic Art," held in the Brooklyn Museum; "Portraiture Through Forty-five Centuries," set forth by the Museum of Fine Arts, Boston; "The Italian Baroque," shown in the Palace of the Legion of Honor, San Francisco; "The Art of the Third (French) Republic," assembled and displayed first in the Worcester Art Museum and later in San Francisco. The Art Institute of Chicago not only showed an impressive exhibition of paintings, prints, and drawings by Goya, made up of loans from museums and private collections in the United States and Canada, but also during the course of the exhibition held a seminar at which five scholars gave learned discourses on Goya's art. An exhibition of "Spanish Painting from the Twelfth Century to Goya" was held in the Toledo Art Museum, assembled by Jose Gudiol, formerly director of the Episcopal Museum at Vich, Spain.

Two important exhibitions of "refugee" paintings were on circuit in the United States in 1941. One of these consisted of French paintings which had been sent to Argentina as a gesture of good will by the Daladier Government and forwarded from there to San Francisco with the permission of the Government at Vichy. This consisted of 180 paintings of the 18th, 19th, and 20th centuries, from the Louvre, Petit Palais, Carnavalet, and provincial museums as well as private collections. After being shown in San Francisco, with an attendance of over 105,000, the collection was divided and about half was sent to the Metropolitan Museum, N.Y., where more works by artists of the same school, lent by American collectors, were added. The other half went to the Los Angeles Museum for the summer.

The second "refugee" collection on circuit, consisted of 38 works from three of the greatest art museums in the world—the Louvre, Paris; National Gallery, London; and the Rijks Museum, Amsterdam, which had been lent to the two World's Fairs on our east and west coasts in 1938 and 1939 and could not safely be returned because of the war. This collection, organized by Dr. Valentiner, director of the Detroit Institute of Art, after visiting 11 cities, from Massachusetts to California, with a final showing in Detroit, was placed in storage for the duration of the war.

The interest evidenced in the works of painters of the past did not seem to interfere with or discount that in Modern Art. For example, the Picasso Exhibition, organized by the Museum of Modern Art, New York, and the Art Institute of Chicago, after visiting eight cities and coming to a close in Minneapolis, was found to have been viewed by 370,000 persons. In March the Museum in Los Angeles put on an exhibition "From Cezanne to Picasso," which in part covered the same ground. Meanwhile "The Rouault Exhibition," which originated in Boston, late in 1940, then went to the Phillips Gallery, Washington, to San Francisco and back to New York, attracted almost as much attention.

In the Virginia Museum, Richmond, from mid-January to March, the collection of modern paintings, sculpture, and drawings, assembled by Walter J. Chrysler, an ardent exponent of this school, was shown, for the first time. The purpose of this display, as stated by Thomas C. Colt, Director of the Museum, was "to provoke dissension, discussion and reevaluation," all of which it was said to have accomplished. Following the exhibition in Richmond the collection was displayed in the Philadelphia Museum.

A novel, engaging, and very serviceable exhibition was that entitled "The China Trade and Its Influence," shown during the summer in the Metropolitan Museum of Art. This consisted of paintings, sculpture, prints, textiles, porcelains, lacquer, etc., and illustrated the impact of Eastern culture on the art of the West.

While much emphasis was placed on the art, past and present, of other countries, that of America today was by no means forgotten. In fact it was especially brought to attention by innumerable exhibitions in every conceivable place that works of art could be shown. First in importance came the regular exhibitions of the artists' professional organizations, such as the Pennsylvania Academy of the Fine Arts, National Academy, New York, the various water-color clubs and societies, etc., as well as institutions like the Corcoran Gallery of Art, the Whitney Museum, and the Art Institute of Chicago. In all of these annual exhibitions young artists were especially favored. The Whitney Museum, toward the latter part of the year, held an exhibition which consisted solely of works by "Young American Artists Under Forty." The Carnegie Institute in place of its International Exhibition, impossible because of world conditions, set forth in October an exhibition illustrating "New Directions in American Art" which consisted of 302 paintings by as many artists selected from 5,000 submitted from all parts of the country.

At an open air exhibition held in San Francisco, in which 500 contemporary artists were represented by 1,000 works, many sales were reported. Other open air exhibitions were held with success by local artists in Washington, D.C., and in New York.

A large exhibition of sculpture by Carl Milles, formerly of Sweden, now of Bloomfield Hills, Michigan, was first shown in Baltimore, then in New York and elsewhere, attracting much attention.

For a decade, annual exhibitions of Ceramics have been held in the Syracuse Art Museum. This year this museum, in cooperation with the International Business Machines Corporation, organized and sponsored the "First Exhibition of Ceramics of the Western Hemisphere," in which were shown works from all parts of the United States, Latin American countries, Canada, and little Iceland. Over one thousand dollars was distributed in prizes; all the exhibits from Latin America were pur-

chased, and arrangements made for the circulation of the entire collection among American museums.

Twenty-five water-color drawings by William Blake to illustrate Bunyan's *Pilgrim's Progress*, lately discovered in England, were exhibited for the first time anywhere at Knoedler's in New York (prior to reproduction by the Limited Editions Club), for the benefit of two British relief organizations.

Painting. The impetus given mural painting through commissions awarded by the Government for Federal buildings continued to bear fruit as well as to focus attention on this branch of art. Some imposing commissions were given privately as well. On May 28, 1941, a great painting nearly 100 feet long by 25 feet high, commemorating the first World War, was unveiled in the Worcester Municipal Auditorium, Worcester, Mass. It was the work of Leon Kroll, assisted by Claude Domoe and Nicholas Carone, and represented the *Dream of Life set in Idyllic Landscape*.

Of great artistic importance are the murals by Ezra Winter in the Jefferson Memorial Reading Room, Library of Congress Annex, dedicated on "Bill of Rights Day." These murals, which were commissioned by the U.S. Congress in 1939, illustrate quotations from Jefferson's writings concerning democracy and life in the new republic.

Barry Faulkner, a former Fellow of the American Academy at Rome, was commissioned by the trustees of the Edwin A. Abbey Memorial Trust Fund to paint four mural panels illustrating State history for the State Capitol of New Hampshire. This was the first award made under this fund. Jose Maria Sert, Spanish painter, was commissioned to complete a series of murals in the main hall of Rockefeller Center, New York, and also to replace those destroyed in Vich Cathedral, near Barcelona, Spain. Diego Rivera, who was obliged to flee Mexico to escape the bullets of assassins in 1940, was recalled by the Mexican Government in 1941 to paint a 3,600 square foot mural in the National Palace. An interesting and successful experiment in the painting of murals on wall paper was tried by Hildreth Meiere and a group of associates when decorations of this order were desired for the Navy Y.M.C.A. at Norfolk, Virginia.

A surrealist portrayal of the *Story of Boston* by John G. Wolcott was unveiled in the lobby of the Park Square Building of that city during the summer of 1941.

The Popular Prize in the Corcoran Gallery of Art's Biennial Exhibition was voted to a *Portrait of John La Farge*, by Luigi Lucioni.

The American Water Color Society and the New York Water Color Club merged in 1941 after holding their regular Annual Exhibitions.

American Negro Artists held a 5th Annual Exhibition of members' works sponsored by Dillard University, New Orleans, April 17-May 10.

Prints. Four large and valuable collections of prints were given to public institutions in this country in 1941: (1) The collection of 300 given to the National Gallery at Washington by Miss Ellen T. Bullard and three anonymous donors illustrating, by fine examples, print-making from the earliest day of the art to the end of the 19th century. (2) The still larger collection assembled by Albert H. Higgins (formerly President of the Chase National Bank) and given by him to the Public Library of Boston, on which special emphasis is placed upon the work of the 20th century print-makers, some of whom are represented by their complete output. With this collection went several thousands of books on prints. (3) A selection of 228 prints from

the notable collection assembled by the late Felix M. Warburg, given by his widow and children to the Metropolitan Museum of Art on the seventieth anniversary of his birth. (4) A collection of nearly 2,000 fine prints from the 16th to the 20th century, given to the Huntington Library, California, by a member of "The Friends of the Library."

An extraordinarily fine private collection, that of Herbert Greer French, a trustee of the Cincinnati Institute of Fine Arts and Curator of Prints of the Cincinnati Art Museum, consisting of 236 examples from the 15th through the 18th centuries, was shown in the Cincinnati Museum in October.

An exceptionally fine exhibition of prints by Callo was held in the Grolier Club, New York; and at the Art Institute of Chicago an exhibition of prints of the 14th and 15th centuries, illustrating "The First One Hundred Years of Print-Making," was set forth.

A collection of 200 prints by Currier & Ives, 146 of which were of race horses and 10 of "The American Fireman and his Life," was given to the United States Museum by Miss A. S. Colgate.

Yale University gave to the John Heron Institute a set of twelve dry points of Yale buildings by Samuel Chamberlain.

The International Business Machines Corporation, through its president, Thomas J. Watson, purchased for exhibition purposes a collection of 101 prints assembled by John Taylor Arms, Chairman of the National Committee on Engraving, illustrating, at its best, "American Print-Making Through 300 Years."

The National Committee on Engraving was very active in 1941 assembling and circulating exhibitions and arranging the interchange of exhibitions of prints between the United States and Latin America. The Committee also sponsored an exhibition of prints by British artists in service.

The interest in prints seemed to be more widespread than before, print exhibitions were in great demand; more prints were produced and more were sold. One hundred fifty prints were purchased from the Society of American Etchers' Annual Exhibition during the first two weeks it was open. Print societies apparently flourished and their number was increased. Located in all parts of the United States, these societies do much to encourage print-making and, through the issuance of prints to lay members, induce collecting. Among the societies issuing prints by contemporary print-makers for distribution were The Society of American Etchers, the Chicago Society of Etchers, California Print-Makers, American College Society of Print Collectors, Prairie Print-Makers, Southern Print-Makers, Wood Block Society, and Friends of Contemporary Prints. An addition to this list was the Miniature Print Society, formed in 1941, with headquarters in Kansas City, which distributes not one but three prints a year to its members.

The Division of Fine Arts, Library of Congress, steadily added, through purchase from the Pennell Fund, to the collection of prints by contemporary print-makers. The number of such purchases was approximately 450. The Library of Congress received from Cadwallader Washburn, distinguished etcher, a collection comprising 101 of his own fine dry points.

Sculpture. Toward the close of 1941, through a series of three competitions, Rudolph Evans, sculptor, was awarded the commission for the statue of Thomas Jefferson to be placed in the rotunda of the new Jefferson Memorial at Washington, D.C. This monumental building, designed by the late John Russell Pope, was completed in November,

1941, and will be dedicated early in 1942, but the statue will not, it is thought, be ready for placement before the 200th anniversary of Jefferson's birth, Apr. 13, 1943. It will be in bronze, 18 feet in height, and shows Jefferson at about the age of 60, standing with head erect, arms dropped at his sides, holding in his left hand a folded manuscript. His dress is that of the period with the traditional fur-trimmed overcoat. The types followed are those of the Houdon portrait bust and the Sully painting, both of which were done from life. Evans is a Washingtonian by birth, but has long maintained a studio in New York. He is represented in the Luxembourg Museum, Paris, the Metropolitan Museum of Art, and numerous other public and private collections.

As an outcome of the International Exhibition of Sculpture, held under the auspices of the Philadelphia Museum in the summer of 1940, five sculptors in 1941 were awarded commissions for sculpture to be placed in Fairmount Park by the Fairmount Park Art Association. Four of these, Harry Rosin, Henry Kreis, Edwin F. Frye, and Wheeler Williams were selected to create groups or figures to form the second unit of the Ellen Phillips Samuel Memorial on East River Drive, and the fifth, Paul Manship, to design and model a memorial to Pennsylvania aviators who died in World War I.

A huge granite frog, weighing 1,800 lbs., carved by Cornelia Van A. Chapin, set on a pedestal designed by Paul Cret, was acquired through public subscription by the Philadelphia Print Club and permanently placed in Rittenhouse Square adjacent to the Club's headquarters.

Henry Warnecke was commissioned by the Class of 1940, Pennsylvania State College, to carve a lion (from Indiana limestone) for the campus, the carving to be done when and where the students could watch its progress.

A site for an equestrian statue of General Longstreet was ceremoniously dedicated at Gettysburg, and announcement was made that Paul Manship would be the sculptor.

A full length statue of Huey Long, by Charles Keck, was placed in the Capitol of the United States as representing an outstanding citizen of the State of Louisiana.

Comparatively few commissions for monumental sculpture were given in 1941, other than those awarded through competitions by the Section of Fine Arts, Public Buildings Administration, at Washington. That the sculptors themselves were eager and active was manifested by the fact that for one of these competitions for large sculptural groups to be placed on either side of the main entrance of the new War Department building, four hundred models were submitted by sculptors from all parts of the country.

The Society of Medalists, in its twelfth year, as usual distributed two medals to its constituent membership, one by Joseph Renier, the other by Irwin Springweiler.

A "Medal of the Month Club" for boys and girls of school age was founded. As its name signifies, each member received a medal a month. The first of these was by Brenda Putnam and showed, in low relief, a portrait of Amelia Earhart.

Several notable exhibitions of sculpture were held during the year; possibly first in importance that of the works of living American sculptors, held at the Carnegie Institute, Pittsburgh, in February. An outdoor sculpture exhibition was held by the Sculptor's Guild, in New York, as usual, but in Greenwich Village, instead of, as heretofore, in the heart of the business district. This comprised 100

works by 65 sculptors. Demonstrations were given to create interest and inform the public. A successful outdoor sculpture exhibition was held under the auspices of the Art Alliance in Rittenhouse Square, Philadelphia. A noteworthy exhibition of sculpture in terra cotta, especially purposed for garden decoration, was held in New York City. Owing to the shortage of metal required for armament, etc., many sculptors in 1941 turned to other media than bronze for expression.

Civic Virtue, by Frederick MacMonnies, was removed from City Hall Square, Manhattan, where it had never found favor, and set up opposite Queensborough Hall in Kew Gardens to the great satisfaction of those especially concerned.

The second collection of early Romanesque and Gothic sculpture assembled by the late George Grey Barnard was placed on sale in May, 1941, in the "Little Cloisters" which he himself had built, the purpose being to finance the erection of the *Rainbow Arch, Monument to Peace* which he considered the consummation of his life's work. The collection comprised 260 items, priced from \$10 to \$175,000.

The carving of colossal portrait heads of Washington, Jefferson, Lincoln, and Theodore Roosevelt in high relief on the rocky heights of Mt. Rushmore, North Dakota, was halted when nearing completion, by the death, on March 6, of the sculptor, Gutzon Borglum. They will be completed, it was announced, by his son, who for some time had been working with him.

ASBESTOS. The Province of Quebec continued to produce almost all of Canada's asbestos in 1941, and with only two exceptions all the asbestos mines and mills in the province were going at full speed throughout the year. Because of war conditions in both hemispheres Canada found herself minus her accustomed European markets and with Far Eastern markets rapidly vanishing. Yet the rising demand for asbestos in the United States was enough to meet these losses. The United States war program called for ever increasing amounts of asbestos for brake bands and clutch facings for all kinds of motor transport equipment. The United States imported from Canada 50 per cent more asbestos than in 1940, when the figure was 225,856 short tons imported, including blue fiber and mill and short fibers. Canada's 1940 total production figure was 345,581 tons.

According to the U.S. Minerals Year Book, 19-174 short tons of asbestos were produced in the United States in 1940. Domestic production was centered chiefly in the extensive deposits of slip fiber near Hyde Park, Vermont. Small quantities also were mined in Arizona, Georgia, Maryland, and North Carolina. Prices remained constant throughout 1941, but a 10 per cent increase was slated to go into effect as of Jan. 1, 1942.

ASTRONOMY. The largest group of sunspots since January, 1940, crossed the sun's disk between Sept. 10 and 23, 1941. The group was a complex stream of spots some 150,000 miles in length. At central meridian passage on September 16 8 G.M.T., the center of the group passed within 4 degrees of the center of the sun's disk. Thus the earth was in a favorable position to be affected by a corpuscular stream that might be shot out from this disturbed region within a day or two of September 16. Statistical data of sunspots and magnetic storms show that out of every 10 sunspot groups of great size seven groups are associated near the time of their central meridian passage with a magnetic storm, the mean position of the group at the time of the commencement of the storm being about one day past the central meridian. In the present case a brilliant eruption was observed at Greenwich on September 17 at 8½ hours. About 20 hours later a magnetic disturbance began. This storm was one of the most intense in the present solar cycle. The maximum sunspot frequency occurred in 1937-38. This sunspot was accompanied by very brilliant auroral displays over most of the United States. See PHOTOGRAPHY under *Applied and Scientific*.

Jones has announced a new determination of the solar parallax. In 1930-31 Eros came within 16,200,000 miles of the earth. No equally favorable approach will occur for a long time to come and the planet was extensively observed. In recent years two or three tiny asteroids have been discovered which at times come much nearer to the earth than Eros but it is doubtful whether they will be more valuable for the determination of the solar parallax. To begin with, these very near approaches depend upon an even closer coincidence of the time of passage of the earth and the planet through the right point on their orbits so that they will be very rare. Just because the approach is so close the planet stays near the earth for only a few days, while Eros can be followed for months. Finally the smaller bodies are so faint that even when close they can be photographed only with powerful instruments, while Eros under such circumstances is of about the same apparent magnitude as the stars which are used as reference points on the photographs and good images can be obtained with short exposures.

The general discussion of the observations of Eros in 1931 was placed by general agreement in the hand of H. Spencer Jones, Astronomer Royal, at Greenwich, who had proved his skill, thoroughness, and good judgment in handling masses of observations in several important investigations. The first announcement of the result was made to the

Royal Astronomical Society in June, ten years after the observations were completed. For this apparently long delay the war has at most a minor responsibility. The main reason is the great extent and laboriousness of the calculations. The solar parallax as determined by Jones is between 8.793" and 8.787", and gives the mean distance of the sun as 93,010,000 miles.

Comets during 1941. Comet 1941 (a) Friend was discovered January 17 by Clarence L. Friend at Escondido, Calif., and reached maximum brightness on February 15. Comet 1941 (b) was periodic Encke. The return of this comet was first observed by Van Biesbroeck on January 19 on plates exposed on the 24-inch reflector at Yerkes Observatory. Its position was within 3 feet of that predicted by A. C. D. Crommelin. This is the 40th reappearance of this comet which was discovered by Mehan in 1786 in France. Comet 1941 (c) Paraskevopoulos was a new comet first observed by him at Bloemfontein, South Africa, on January 23. It was also independently discovered by several others. It was visible to the naked eye to observers in the southern hemisphere. Observers in the southern hemisphere could see two naked-eye comets simultaneously, Cunningham's and this one (For an account of Cunningham's comet see the 1940 YEAR BOOK.) Comet 1941 (d) was Comet Schwachmann-Wachmann 1925 II, and was first observed April 30 by Van Biesbroeck at McDonald Observatory at Fort Davis, Texas. Comet 1941 (e) Van Gent was first observed May 27 at the Johannesburg Observatory in South Africa. It reached naked eye visibility at the end of June. Comet 1941 (f) Du Toit-Neujmin was first observed July 18 at Bloemfontein, South Africa, by Du Toit, and was also noticed by Neujmin at Simeis, Crimea, as well as Van Biesbroeck at the Yerkes Observatory and the Belgian astronomer Delporte at Uccle near Brussels. Delporte's dispatch was relayed to Harvard through the international clearing house for astronomical information at Copenhagen, which continues to function despite the war. Comet 1941 (g) Neujmin was first observed by Neujmin at Simeis, Crimea on September 9. See CHEMISTRY, PURE.

ATLANTIC, Battle of the. See NAVAL PROGRESS; WORLD WAR.

ATLANTIC DECLARATION. The following statement, signed by the President of the United States and the Prime Minister of Great Britain during their conference in the North Atlantic off the coast of Newfoundland early in August, was released to the press by the White House on Aug. 14, 1941:

The President and the Prime Minister have had several conferences. They have considered the dangers to world civilization arising from the policies of military domination by conquest upon which the Hitlerite Government of Germany and other Governments associated therewith have embarked, and have made clear the stress which their countries are respectively taking for their safety in the face of these dangers.

They have agreed upon the following joint declaration: The President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world.

First, their countries seek no aggrandizement, territorial or other;

Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them;

Fourth, they will endeavor, with due respect for their existing obligations, to further the enjoyment by all States, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

Fifth, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing, for all, improved labor standards, economic advancement, and social security.

Sixth, after the final destruction of the Nazi tyranny, they hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want;

Seventh, such a peace should enable all men to traverse the high seas and oceans without hindrance;

Eighth, they believe that all of the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea, or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

AUSTRALIA. A self-governing dominion of the British Commonwealth of Nations Capital, Canberra.

Area and Population. The area of the six States and two Territories, the census population of June 30, 1933, and the estimated population on Dec. 31, 1940, exclusive of aboriginals, are shown in the accompanying table

AREA AND POPULATION OF AUSTRALIA

States and Territories	Area in sq miles	Population	
		June 30, 1933	Dec 31, 1940
New South Wales	309,433	2,600,847	2,789,123
Victoria	87,884	1,820,261	1,918,774
Queensland	670,500	947,534	1,029,613
South Australia	380,070	580,949	598,091
Western Australia	975,920	438,852	468,311
Tasmania	26,215	227,599	243,057
Northern Territory	523,620	4,850	8,852
Aust. Capital Terr	939	8,947	12,868
Totals ..	2,974,581	6,629,839	7,068,689

The estimated population increase for the year 1940 was 71,363, of 13,400 represented net immigration and 57,963 the excess of births over deaths. At a census of aboriginals, taken on June 30, 1939, it was disclosed that there were 51,557 full-blood and 25,712 half-caste aboriginals in Australia. Vital statistics (1940): 128,347 births, 68,384 deaths, and 77,887 marriages. Estimated populations of the chief cities, all of them State capitals, on Dec. 31, 1939, were: Sydney, N.S.W., 1,302,890; Melbourne, Victoria, 1,046,750; Brisbane, Queensland, 326,000; Adelaide, South Australia, 322,990; Perth, Western Australia, 224,800; Hobart, Tasmania, 65,450. Canberra, the Federal Capital, had 10,420 inhabitants. Newcastle, N.S.W., had 104,485 inhabitants at the 1933 census.

Overseas Territories. The overseas territories under the Commonwealth's political control are shown in the table at the top of next column.

Education and Religion. Elementary education is free and compulsory. Less than 4 per cent of the adult population is illiterate. In 1938 there were 10,029 State schools and 934,990 students enrolled; 1,867 private schools and 249,497 students enrolled; 6 State universities and 12,126 students attending lectures, exclusive of 495 students in music conservatoriums. The 72 free kindergartens

AUSTRALIAN OVERSEAS TERRITORIES *

Territory (Capital)	Sq. mi.	Population
Australian Antarctic Territory ^b		
New Guinea, Territory of * (Lae)	93,000	633,821 ^c
Papua, Territory of * (Port Moresby) ..	90,540	338,822 ^d
Nauru ^e	8	3,492 ^f
Norfolk Island ..	13	983 ^g

* The Territory of Ashmore and Cartier Islands, situated in the Indian Ocean off the northwest coast of Australia, was placed under the authority of the Commonwealth of Australia by Imperial Order in Council of July 23, 1931. ^bThe Australian Antarctic Territory includes all the islands and territory, except Adèle Land, situated south of 60° S latitude, and between 160° E longitude and 45° E longitude. ^cMandated to Australia by the League of Nations in 1920. The Territory of New Guinea includes the Bismarck Archipelago (19,200 sq. mi.), North East New Guinea, also called "The Mainland" (69,700 sq. mi.), and Solomon Islands (4,100 sq. mi.) ^dIncludes Europeans, Asiatics, and natives enumerated on June 30, 1939, but does not include natives in unexplored areas. ^eFormerly called British New Guinea. ^fJune 30, 1940. ^gMandated to the British Empire by the League of Nations and administered under a joint agreement made by Australia, Great Britain, and New Zealand. ^hApr. 1, 1939. ⁱJune 30, 1939.

had a total average attendance of 3,376 in 1939. Religious affiliations at the 1933 census were: Church of England, 2,565,118; Roman Catholic, 1,161,455; Presbyterian, 713,229; Methodist, 684,022; Catholic (undefined), 127,542.

Production. The total area under crops for 1938-39 was 23,509,034 acres and the yields therefrom were 155,368,621 bu of wheat, 15,554,735 bu. of oats, 3,321,161 tons of hay, 7,056,642 bu. of maize, and 823,086 tons of cane sugar (923,621 tons in 1939-40). Preliminary figures for 1940-41 place the output of wheat at 83,848,000 bu. from 12,338,200 acres (210,283,681 bu. from 13,283,425 acres in 1939-40). Livestock in 1939 included 119,305,190 sheep, 13,091,175 cattle, 1,697,845 horses, and 1,453,653 swine. The wool clip for 1940-41 was estimated at 1,090 million lb. greasy (1,128,140,867 lb greasy in 1939-40). Butter produced in 1939-40 amounted to 477,150,130 lb.; cheese, 69,692,505 lb.; bacon and ham, 74,453,963 lb. for 1938-39.

In 1940 the production of gold (1,643,999 fine oz.) was valued at £17,492,025. The value of all minerals produced in 1939 was £36,838,814, including gold £16,002,472, coal (black and brown) £9,019,540, other minerals £11,816,802. Pig-iron production for the year ended June 30, 1939, was 1,104,605 tons. Production figures of copper, lead, silver, tin, and zinc (later than 1938) and pig iron (later than 1938-39) are not available for publication because of wartime restrictions. Manufacturing statistics for 1939-40 (preliminary): 27,000 establishments, 588,000 employees (including working proprietors), £115,000,000 for wages, £550,000,000—the value of output, and £220,000,000—the value added during production. See table in YEAR BOOK for 1940, p. 48, for total value of Australian production, and by industries, for the years ended June 30, 1937, 1938, and 1939.

Foreign Trade. For the fiscal year ended June 30, 1941 (in British currency values), merchandise imports were valued at £108,780,000 (£115,675,505 for 1939-40) and merchandise exports at £107,445,000 (£118,762,122). The principal 1940-41 exports (in Australian currency values) were wool (£39,646,000), wheat and flour (£16,675,000), meats (£15,818,000), butter (£11,973,000), sugar (£4,692,000), skins and hides (£4,105,000), and dried fruits (£2,495,000). Statistics of mineral exports are not available.

Finance. For the 1940-41 fiscal year the receipts and expenditures of the Consolidated Revenue Fund were estimated to balance at approximately £A150,470,738. Defense expenditures for 1940-

41 totaled £A169,857,000, of which £A101,211,000 came from loan, £A65,074,000 from revenue, and £A3,572,000 from trust fund. Budget estimates (1941-42): £A324,965,000 for revenue (£A163,227,000 on basis of existing taxation, £A22,000,000 from new taxation, £A2,229,000 from cash balance on hand at July 31, 1941, £A137,509,000 to be raised from loans); £A324,965,000 for expenditure (including £A221,485,000 for war expenditure). The Commonwealth public debt on Mar. 31, 1941, totaled £485,790,137 (£435,327,180 on June 30, 1940); total public debt of the States, £916,910,215 (£905,027,064). The £A (Australian pound) averaged \$3.5338 for 1939; \$3.0516 (free) and \$3.2280 (official) for 1940; British pound averaged \$3.8300 (free) and \$4.0350 (official), 1940.

Transportation. Federal and State railways in operation, June 30, 1940, totaled 27,251 miles; private (general traffic) lines, 721 miles. Gross earnings of the government lines amounted to £46,588,136; operating expenses, £36,368,089. Highways extended over 488,749 miles. Registrations of motor vehicles, Mar. 31, 1941, totaled 905,271. In the Northern Territory a new highway (600 miles long, costing £500,000) was completed during December, 1940. This new road joins Birdum (the southern terminal of the railway from Port Darwin on the northern coast of Australia) with Alice Springs (the northern terminal of the railway from Port Augusta, South Australia). During the year ended June 30, 1940, civil air lines carried out 175,737 flights, covered 12,822,751 miles, and carried 142,797 passengers, 1,770,738 lb. of freight, and 416,996 lb. of mail. There were 1,282,787 radiobroadcast listeners' licenses in force on Mar. 31, 1941. Shipping (1938-39): 3,814 ships aggregating 13,545,712 tons entered and cleared the ports.

Government. Executive power is vested in the King, who acts through a governor-general and a ministry responsible to the Federal Parliament. There is a Senate of 36 members (6 from each State), elected for 6 years and renewed by half every 3 years, and a House of Representatives of 74 members apportioned among the States on a population basis and elected for 3 years. Governor-General, Brig. Gen. Alexander Gore Arkwright, Baron Gowrie, who assumed office Jan. 22, 1936. Prime Minister at the beginning of 1941, Robert Gordon Menzies (United Australia party), who headed a coalition government representing the United Australia and United Country parties, formed Oct. 27, 1940. For changes in 1941, see below.

HISTORY

War Effort. Further Allied setbacks in the Balkans, Crete and Libya, German successes against Russia, and Japanese intervention on the side of the Axis spurred Australia to an intensified war effort during 1941. The 17,236 Australian troops sent with British contingents to Greece and Crete suffered 5,951 casualties (2,275 in Greece and 3,676 in Crete.) Total Australian casualties in Libya, Greece, Crete, Syria, and Palestine up to Nov. 14, 1941, were 12,950 (1,571 killed or died of wounds, 4,663 wounded, 3,663 missing, and 3,035 prisoners). Activities of German, and later Japanese, raiders in the South Pacific also brought the war close to Australia.

Army Mechanized. In January the War Cabinet decided to mechanize both the Australian Imperial Force and the Home Defense Force, at a cost of several million pounds. Immediately after the arrival of a large Australian contingent at Singapore

in February for the defense of British Malaya, the War Cabinet extended the compulsory militia training period from 70 to 90 days. Modifying the original Empire air scheme, the Government in mid-May authorized the organization of Australian airmen serving with the R.A.F. overseas into separate units with their own ground staffs. At the end of July, one-quarter of the entire Home Defense Force was called up for full-time duty until the end of the war.

As of August 10, 600,000 Australians were reported under arms or ready for immediate mobilization. The Australian Imperial Force for service overseas numbered 200,000. Another 228,000 were in the militia and Home Defense Force. There were an additional 61,000 men in the Royal Australian Air Force and 20,000 in the Royal Australian Navy. In August it was decided to organize a women's army for home defense to release more men for the overseas force and for work in munitions factories. Enrollment of 15,600 youths between 16 and 18 years of age in the Air Cadet Training Corps was begun soon afterward. The Air Minister announced August 18 that by the middle of 1942 23 Australian Air Force squadrons would be serving overseas. When Japan entered the war in December, the entire defense program was expanded. Immediate effects were the mobilization of the home defense forces and militia for the duration and the inclusion of fathers of up to four children in the draft.

Munitions Production. Meanwhile some 170,000 workers in munitions industries were pouring forth an increasing flow of war equipment and supplies for Empire and Allied forces in Malaya and the Middle East. A huge naval graving dock in Sydney, larger than that at Singapore, was rushed toward completion. The warplane industry, starting from scratch in 1940, had produced 1,000 planes by mid-September, 1941, and output for 1942 was expected to be doubled. Early in September the first Australian-built bombing plane—a Beaufort—was tested. The first locally-built light cruiser tanks for the armored division were delivered in September. Mass production of Bren machine guns began in January and of anti-tank guns in June. Anti-aircraft guns, rifles and small arms, ammunition, bombs, mines, and field guns were also in production before the end of 1941. Australian shipyards in July were at work on 50 naval vessels and 60 freighters.

Besides outfitting its own forces, Australia was called upon by the Empire Supply Council at Delhi, India, for 1,000,000 pairs of army boots and 60,000,000 pieces of textiles and clothing. Danger of a Japanese blockade led the Government in March to begin storing emergency stocks of essential supplies sufficient for three months, and to reduce still further the basic gasoline ration.

The cost of the defense program (see FINANCE) soared to £20,000,000 monthly by August, 1941, exceeding the monthly average on which the £225,000,000 domestic war budget for 1941-42 was based. War expenditure for 1941 was greater than that for the whole of World War I.

Economic Trends. As in many other raw-material exporting countries, the war stimulated the development of local manufacturing industries while curtailing the normal foreign markets for agricultural and pastoral products. Industrial unemployment in May, 1941, fell to 5.3 per cent, the lowest since the trade unions began keeping records in 1911. Despite the shortage of workers and rising living costs, the Commonwealth arbitration court on February 7 unanimously refused to increase the

basic wage rate established in 1937. On June 18 Prime Minister Menzies forbade further strikes and lockouts in defense industries, but the enabling legislation was shelved at the insistence of the Labor Opposition. The problem of obtaining increased manpower for war production was transferred to the Labor party when it gained control of the Government in October.

In the first quarter of the year, a drought reduced the wheat crop and necessitated distribution of £1,000,000 for the relief of wheat farmers. But surpluses of foodstuffs continued to accumulate, due to the lack of shipping. The Government continued to support prices of wheat, and in July undertook to buy the entire export surplus of quality meat. It urged the domestic consumption of more lamb, apples, pears, dairy products, etc., and with British financial aid undertook to acquire and store reserve food stocks. In the same month imports from non-sterling countries were reduced to 50 per cent of the pre-war level.

Political Events. The narrow margin by which the Government coalition retained control of both houses of Parliament in the election of Sept. 21, 1940 (see YEAR BOOK for 1940, p. 49 f.) led to its downfall in 1941. Labor gains in the 1940 general election were followed by victories in two States early in 1941. The Labor Government of William Forgan Smith was returned to office for a fourth consecutive term in Queensland on March 30. In New South Wales a reunited Labor party regained control of the State government from the United Australia-Country party coalition on May 11, after nine years in opposition. The new Labor Premier, William John McKell, excluded his extremist rival, ex-Premier J. T. Lang, from his government and pledged full support of the Commonwealth's war effort. The Laborites were not so successful in South Australia's election of March 30. Premier Thomas Playford's Liberal-Country party coalition was returned to office with increased strength. Tasmania's Labor Government, in office since 1934, was reelected for another five-year term on December 13.

The reverses suffered by Australian troops in Greece during April and May shook Prime Minister Menzies' Commonwealth Government. Its collapse was averted by a Government victory in the Boothby (South Australia) by-election of May 24. Menzies then renewed his offer to Labor of half the Cabinet posts if the party would join in a national government like that in London. The Labor leader, John Curtin, again rejected the offer, holding that it would stifle essential criticism.

With the approval of Parliament, the Prime Minister on June 26 increased his Cabinet from 12 to 19 members to speed the war effort. But there was criticism of his leadership within as well as without the ranks of the Government parties. This came to a head in August over his proposal to return to London to represent Australia in Imperial war councils. The Cabinet unanimously supported the proposal, but Labor and some Government supporters held that if Menzies went to London it should be as a member of the Cabinet and not as Prime Minister.

Menzies Resigns. This issue and the unstable position of the Government led to Prime Minister Menzies' resignation on August 28. He was succeeded by Arthur William Fadden, Commonwealth Treasurer and leader of the Country party, who had served as Acting Prime Minister during Menzies' absence in London early in the year. Fadden retained the same Cabinet, with Menzies serving as Minister of Defense Coordination. It was decided

to send Sir Earle Page, Minister of Commerce, to London as Australia's special representative.

The new Prime Minister's term was short, however. When Parliament convened to debate the budget for 1941-42, the Labor leader, Curtin, objected to provisions for compulsory loans, taxation on incomes as low as £150, and "illiberal" treatment of soldiers' dependents. In the vote on his motion of censure, two Independent members of the House of Representatives switched to the Opposition and the Fadden Government was defeated by three votes (October 3).

The Labor Cabinet. The Governor-General then called upon Curtin to form a new Government. Although dependent for a majority in the House upon the two Independent votes that had defeated Fadden, Curtin accepted. A party caucus elected the members of the Cabinet, announced October 6 as follows: Prime Minister and Defense Coordination, John Curtin; Deputy Prime Minister and Army, Francis Michael Forde, Treasurer, Joseph Benedict Chifley; Attorney General and External Affairs, Herbert Vere Evatt; Supply and Development, John Albert Beasley; Interior, Joseph S. Collings, Navy and Munitions, Norman J. O. Makin, Social Services and Health, Edward J. Holloway; Trade and Customs and Vice President of the Executive Council, Richard V. Keane; Air and Civil Aviation, Arthur S. Drakeford; Commerce, William J. Scully; Postmaster General and Information, William P. Ashley; Labor and National Service, Edward J. Ward; Repatriation and War Service Homes, Charles W. Frost; War Organization and Industrial Research, John J. Dedman; Home Security, Hubert P. Lazzarini; External Territories, James M. Fraser; Transport, George Lawson; Aircraft Production, Donald Cameron. Prime Minister Curtin and Ministers Forde, Chifley, Evatt, Beasley, Makin and Drakeford were named members of the War Cabinet.

The composition of the Cabinet gave all of the key positions to men of moderate views. Prime Minister Curtin announced that he would follow a cautious policy internally, speed up Australia's organization for war, and give full support and cooperation to the Empire war effort. He retained Sir Earle Page as special representative in London and all other diplomatic appointments of the previous governments. Labor's conservative policy was indicated by the expulsion of Representative Maurice M. Blackburn from the party for speaking at a pro-Communist gathering in August. On September 21, the federal executive of the Labor party voted to expel all members who joined or associated with Communist-front organizations.

On October 1 a joint meeting of the United Australia and Country parties elected Fadden as leader of the Opposition. The Curtin Government successfully floated a £100,000,000 war conversion loan in November. On November 28 it pegged house rents at the rates in effect Aug. 31, 1939.

Empire Relations. Australia's growing insecurity, its immense contribution to the Empire's war effort, and the defeats suffered by Australian troops in Greece and Crete due to lack of effective air and other support all contributed to the Commonwealth's demand for a larger voice in the direction of Empire war policies. The British Government welcomed Prime Minister Menzies on his visit to London and to the Middle East war fronts during the first months of the year. It approved the decision of the Australian Cabinet to send one of its members to London as its permanent spokesman in Empire war councils. To mollify Australia over the reverses in Greece and North Africa, the British on

April 23 named Lieut. Gen. Sir Thomas Blamey, Australian commander in the Middle East, as second in command to the British commander in chief in that region. The Australian War Council, meeting on June 13, received formal assurance from the British Government that Australian troops in the Middle East henceforth would receive the strongest possible air support.

The dispatch of large Australian forces to defend Singapore and British Malaya against a threatened Japanese attack increased Australian political interest in that area. In August the Minister of Interior and Information, H. S. Foll, visited Singapore with a party of Australian editors. He discussed the question of political representation at Singapore by an Australian High Commissioner and expansion of the activities there of the Australian Department of Information. On August 20 Prime Minister Menzies told Parliament that "Australia regards Singapore and Malaya as outposts of her defenses."

Joint Australian and New Zealand war plans and preparations were carried beyond the coordination of war production, arranged in 1940. Staff talks between Australian and New Zealand military and naval chiefs were held in Melbourne in March. In June the Commonwealth Government agreed to provide war supplies and materials to New Zealand on the same basis as to the Australian States.

War with Japan. There was steady deterioration of Australian relations with Japan, despite the arrival in Canberra on March 19 of the first Japanese Minister to Australia. Official spokesmen issued repeated warnings to Tokyo that Australia would resist Japanese expansion to the south. On February 25 Acting Prime Minister Fadden declared that "the further south certain people move, the further north Australia will move." To hamper Japanese activities in Australian waters, the government on February 20 declared the Melville and Buchanan islands off the northwest coast of Northern Territory as aboriginal reserves from which all outsiders were barred.

With the Japanese advance in French Indo-China, Australia on July 28 blocked all bank credits belonging to Japanese subjects and joined in the British-Dutch-United States economic blockade of Japan. Severance of trade relations was followed by the evacuation of virtually all the Japanese in Australia. In mid-October Australia saw new cause for alarm in the extension of a Japanese airline from Palau Island to Portuguese Timor, only 450 miles from Darwin.

Following the surprise Japanese attacks of December 7-8 on Anglo-American bases in the Pacific and Malaya, the Governor General of Australia on December 9 declared the Commonwealth at war with Japan as from 5 p.m. of December 8. On December 16 Parliament approved the Government's war declarations on Japan, Finland, Hungary, and Rumania. The Government immediately redoubled preparations to resist a large-scale attack upon Australia, as well as raids by carrier-based aircraft. Plans were made for immediate expansion of war-plane and other military production.

With the Allied reverses in Malaya, the Australian Government asked Britain to strengthen its Far Eastern air forces. It sought a full alliance with Russia and turned toward still closer relations with the United States in search of military assistance. At the same time the press and the Government demanded that the British Government place greater emphasis upon the protection of Singapore and that the war in the Pacific should not be viewed as a side issue to the war in Europe. These

views were forcibly impressed upon Prime Minister Churchill and President Roosevelt during their conferences in Washington late in December. It was announced on December 30 that Prime Minister Curtin had received concrete assurances of military support from Churchill. Meanwhile an assertion by Curtin that Australia sought an agreement making the United States the keystone of a Pacific defense program aroused protests from ex-Prime Minister W. M. Hughes and others, who accused Curtin of seeking to weaken Australia's ties with Britain. This he emphatically denied.

Relations with America. On October 20 Prime Minister Curtin announced the completion of negotiations for a united front in the Pacific by Britain, the United States, China, the Netherlands Indies, Australia, and New Zealand. As early as January 14, an official New Zealand source stated that Australia and New Zealand had an understanding with the United States covering future Japanese efforts to expand in the South Pacific. The negotiations with Washington for still closer cooperation were continued by the Australian Minister, by Prime Minister Menzies during his visit to the United States in May, and by Sir Earle Page, who stopped in Washington en route to London in October. An Australian economic mission was sent to Washington to discuss tariff and shipping problems, the disposal of Australian surpluses, and lend-lease aid. Ratifications of a treaty for the peaceful settlement of American-Australian disputes were exchanged August 13. United States flotillas on training cruises visited Sydney in March and Brisbane in August. Opening a direct radiotelegraphic communications system between Australia and the United States on December 25, President Roosevelt declared that he and Prime Minister Churchill considered Australia's safety "as a definite essential in every plan of defense and in every plan of offensive action against our common foes." A few days later it was indicated that American naval and air units would use Australia as an operational base.

Aid to Russia. The Australian Government on May 14 announced that it would appoint a Minister to China "as further recognition of the fact that Australia possesses vital interests in the Pacific." Prime Minister Menzies strongly endorsed the British Government's declaration of support for Russia against Germany (June 24) and the Cabinet approved in advance the Anglo-Russian alliance of mid-July. To facilitate Allied and American shipments of supplies to Russia, the Canberra authorities in October ordered the shipment of locomotives and freight cars from Australia's overburdened railway system for use on the Trans-Iranian Railway.

AUSTRALIAN ANTARCTIC TERRITORY, AUSTRALIAN CAPITAL TERRITORY. See **AUSTRALIA**.

AUSTRIA. A former independent state of central Europe, annexed by Germany on Mar. 13, 1938, and divided on Apr. 1, 1940, into seven administrative units of the German Reich. Area, 34,055 square miles; population at census of May 17, 1939, 6,972,269, divided into administrative districts (gaue) as follows: Vienna, 1,929,976; Lower Danube, 1,697,976; Upper Danube, 1,034,871; Styria, 1,116,407; Carinthia, 449,713; Salzburg,

257,226; Tirol and Vorarlberg, 486,400. Vienna, the former capital, had 1,918,462 inhabitants at the 1939 census; Graz, 210,175; Linz, 131,423.

Roman Catholics comprised 90.57 per cent of the population at the 1934 census; Protestants, 4.38 per cent; Jews, 2.83 per cent (191,481). The 1939 census showed 94,270 racial Jews. There were 4,721 public schools with 657,000 pupils in 1940. In 1936 the three Austrian universities (Vienna, Graz, and Innsbruck) had 14,027 students, and two technical high schools 2,514. Agriculture, manufacturing, mining, and lumbering are the main occupations (see *YEAR BOOK* for 1939, p. 57 for pre-annexation statistics). Formerly a favorite haunt of tourists, Austria has suffered since 1938 through the virtual exclusion of non-German tourists. In 1939 there were 3,685 miles of railway line and 42,120 miles of automobile roads.

Government. Upon the annexation of Austria, Chancellor Hitler appointed Josef Buerckel as Procurator for the Liquidation of Austria and Reich Commissar for the Reunion of Austria with Germany. Austria was subdivided into seven districts (Gaue), each under a National Socialist responsible to Herr Buerckel in Vienna, who in turn was directly responsible to Chancellor Hitler. Effective Apr. 1, 1940, this system was reorganized. The Nazi leader in each district was given the title Gauleiter (district leader) and Procurator, combining party and state functions, and became directly responsible to Hitler. Herr Buerckel's powers were restricted to those of Gauleiter and Procurator for Vienna. On Aug. 7, 1940, Buerckel was succeeded in Vienna by Baldur von Schirach, former head of the Hitler Youth.

History. Strict censorship veiled developments in Austria during 1941 from the outside world. Berlin confirmed mass deportations of Jews from Vienna to Poland in January. The Vatican on January 31 reported the expulsion of Benedictine monks from their monastery at Bregenz on the ground of hostility to the Nazi regime. Refugees from all Austrian classes reaching Istanbul in March reported widespread poverty and discontent in Austria, with no effective outlet for anti-Nazi sentiment. With Adolf Hitler as the chief speaker, indoor and outdoor demonstrations were held in Vienna on March 13 to celebrate the third anniversary of the German annexation. Hitler promised important social and economic gains after the victorious conclusion of the war. Dr. Kurt Schuschnigg, Chancellor of Austria who was deposed and imprisoned upon the German occupation in 1938, was being held in a special prison in Munich, Germany, according to a first cousin of the Chancellor who arrived in New York late in May. This contrasted with a Berlin report of March 14 that Schuschnigg was living unmolested in a Bavarian retreat. Archduke Robert of Habsburg, second son of Emperor Charles of Austria, declared in London on November 13 that all former political parties in Austria had "united to fight the German oppressor" and that sabotage in Austrian munitions factories was increasing.

Formation of a Free Austrian National Council with headquarters in Toronto and a representative in Washington was announced September 27. It was headed by Dr. Hans Rott, who claimed to be the oldest free member of Schuschnigg's Cabinet and therefore entitled to act as "Federal President" until the Council could "take over the rights and duties of the legal Austrian constitutional institutions." Early in April Count Ferdinand Czernin organized an anti-Nazi "Austrian Action" movement in the United States through which Austrians in the Western Hemisphere could combat German

Nazi fifth column activities and work for the liberation of Austria.

AUTOGIRO. See ENTOMOLOGY, ECONOMIC.

AUTOMOBILE RACING. With international speeding confined to tanks and jeeps, the main automobile racing affair of the year was once again the annual 500-mile race at Indianapolis on Memorial Day, when for the second time in history two drivers split the winning purse. This came about when Floyd Davis's car, in the ruck at the 200-mile mark, was taken over by relief driver Mauri Rose, who had been forced out of the grind miles back. Rose drove magnificently and wound up in front, and he and Davis had their names enscribed on the trophy, carved the winning money, and the glory. For a time the race seemed to be Wilbur Shaw's for the third time in succession and the fourth in five years, but the little man from Indianapolis whistled into the wall on the 151st lap and, unhurt, was thrown out of the race with his car a wreck. Rose took over Davis's engine 323 miles from home and finished in front of Rex Mays, with third money going to Ted Horn and fourth to Ralph Hepburn. Of the thirty-three starters, twelve finished the grind, the last until the war is over, according to official announcement late in December.

Rex Mays, the heavy-footed Californian, won the National championship on points, mainly because of the division of honors at Indianapolis, and his 825 points there. Ralph Hepburn finished in second slot for points, with Cliff Bergere and Floyd Davis following.

AZERBAIJAN SOVIET SOCIALIST REPUBLIC. See UNION OF SOVIET SOCIALIST REPUBLICS under *Area and Population*.

AZORES. A group of nine islands in the Atlantic Ocean about 800 miles west of Portugal, of which the islands are administratively a part, and some 2,100 miles from New York. Area, 922 square miles; population (1930 census), 253,935. The largest island, São Miguel, measuring 41 miles long and 9 miles wide, contains more than one-half of the population. Capital and chief seaport, Ponta Delgada (pop. 18,022) on São Miguel. The other islands are Corvo, Fayal, Flores, Graciosa, Pico, Santa Maria, São Jorge, and Terceiro (second largest). Angra (pop. 10,642) on Terceiro and Horta (pop. 7,643) on Fayal are the other leading cities. Horta is a seaplane base on Pan American Airways' transatlantic route from New York to Lisbon, and is one of the world's principal cable stations. Agriculture, dairying, and needlework are the chief occupations. The principal crops are corn, hothouse pineapples, sugar beets, wheat, tobacco, and fruits. Imports come mainly from Portugal. In normal times, pineapples are exported to northern Europe and embroidery to the United States.

History. The strategic importance of the Azores in the expanding Allied-Axis struggle for control of the Atlantic was emphasized in 1941. President Roosevelt on May 27 stated that German control of the islands would threaten the security of the Western Hemisphere. The Portuguese Government sent successive contingents of troops to reinforce the islands' garrison. Early in August President

Carmona made an official visit. See PORTUGAL under *History*.

BACTERIOPHAGE. See BIOLOGICAL CHEMISTRY.

BADEN. See GERMANY under *Area and Population*.

BADMINTON. David Freeman of Pasadena, Calif., remained the nation's No. 1 badminton player in 1941, for the third successive year. He won the men's national singles, and shared in the doubles championship. Thelma Kingsbury of Oakland, Calif., three times holder of the English championship, took over the women's singles title, defeating last year's titleholder, Evelyn Boldrick, in the final.

Eastern singles champions were Carl W. Love-day of the Montclair A.C. in the men's and, retaining her title, Mary Hagen in the women's. Spencer Davis of Princeton University captured the Eastern intercollegiate title.

BAHAMAS. A British West Indian crown colony consisting of 20 inhabited and several uninhabited islands and rocks. Land area, 4,404 square miles; population (1939 estimate), 68,903. Chief islands: Abaco, Acklins, Andros, Bimini, Cat Island, Crooked Island, Eleuthera, Exuma, Grand Bahama, Inagua, Long Island, Mayaguana, New Providence, Rum Cay, and San Salvador (or Watlings). Capital, Nassau (on New Providence). Education (1939): primary and secondary schools had 16,502 students enrolled.

Production and Trade. Sponge, shell (tortoise and conch), cascarilla bark, pine timber, salt, tomatoes, sisal, and crawfish are the chief products. The tourist trade is important. Trade (1940): £1,284,417 for imports (£1,094,170 in 1939) and £229,140 for exports and reexports (£180,281 in 1939). Sponge exports declined to £13,986 in 1940 from £69,813 in 1939. Shipping (1939): 1,438 vessels aggregating 2,354,424 tons entered the ports.

Government. Finance (1940 estimates): £404,192 for revenue and £441,557 for expenditure. Public debt, Dec. 31, 1939, £195,923. Executive power rests with a governor, assisted by an executive council. The legislature consists of a legislative council (9 nominated members) and a house of assembly (29 elected members). Governor and Commander-in-Chief, Duke of Windsor (assumed office, Aug. 17, 1940).

History. Abraham Bay and an adjacent part of Mayaguana Island, leased to the United States for a seaplane base in 1940 (see YEAR BOOK for 1940, p. 57), was found to be unsuitable after further survey. The U.S. government then selected a new site near Georgetown on Exuma Island. A bill authorizing establishment of a U.S. naval-air base there was passed by the house of assembly at Nassau, Sept. 23, 1941. In the autumn of 1941 the government banned sponge fishing within the colony's territorial waters until the end of 1943.

BAHREIN ISLANDS. See under ARABIA.

BAKER ISLAND. An island in the mid-Pacific (0° 13' N. and 176° 31' W.), owned by the United States. It lies athwart the main steamship lanes and Pan American Airways' route from Honolulu to New Zealand and Australia. The island was unoccupied for a number of years until 1936 when the U.S. Department of the Interior established an aerological station (see YEAR BOOK for 1936, p. 79).

BALEARIC ISLANDS. See SPAIN under *Area and Population*.

BALI. See NETHERLANDS INDIES under *Area and Population*.

BALKAN ENTENTE. A bloc of Balkan states—Greece, Rumania, Turkey, and Yugoslavia—which by the treaty of Feb. 9, 1934, mutually guaranteed their frontiers against aggression by any other Balkan country. The alliance was nullified by the establishment of German control over Rumania, Yugoslavia, and Greece in 1940-41. For the history of the Balkan Entente, see YEAR BOOKS for 1934 to 1940 inclusive, under that title.

BALKAN STATES. The countries of the peninsula south of the Danube, and bounded by the Adriatic, Aegean, and Black Seas. See ALBANIA, BULGARIA, GREECE, RUMANIA, TURKEY, YUGOSLAVIA.

BANGKA. See NETHERLANDS INDIES under *Area and Population*.

BANG'S DISEASE. See VETERINARY MEDICINE.

BANK ROBBERIES. See FEDERAL BUREAU OF INVESTIGATION.

BANKRUPTCY AND RECEIVERSHIP. See BUSINESS REVIEW; RAILWAYS.

BANKS AND BANKING. The deposits of banks in the United States rose to new high record levels during 1941 as a result of large-scale purchases of new Government obligations and a considerable increase in commercial and industrial loans. As Government expenditures rose by leaps and bounds because of the ever-expanding national defense program and lease-lend requirements, the Treasury found it necessary to obtain an increasing proportion of these funds through the sale of new obligations. Because of limited purchases of these securities by ultimate investors, the banks were called upon to absorb a large percentage of the increase in the national debt. During the first half of the year, purchases occurred chiefly in New York City, but in the latter months, as the excess reserves of big city banks dwindled, most of the purchases occurred outside of the New York City banks. See also PUBLIC FINANCE.

Banking developments during 1941 differed from those of the preceding years because of the virtual cessation of the inflow of gold. The war in Europe checked gold shipments to the United States, so that shipments for the year aggregated only \$929,574,000 as compared with \$4,744,472,000 during 1940. As British gold reserves were rapidly exhausted, gold receipts here consisted chiefly of new Canadian production and modest receipts from Latin America.

Commercial banks favored intermediate and shorter-term issues in their purchases of Government securities, hesitating to incur the risk of a later rise in interest rates and consequent decline in long-term bond prices. The following table shows the distribution of maturities of Treasury securities held by 5,799 commercial banks which accounted for the bulk of commercial bank investments in Government bonds:

PUBLIC MARKETABLE TREASURY SECURITIES
HELD BY COMMERCIAL BANKS

	<i>Due or Callable</i>	<i>Amount Held</i>
Within 1 year	.. .	\$ 3,127,000,000
1 to 5 years	.. .	8,284,000,000
5 to 10 years	.. .	4,476,000,000
10 to 15 years	.. .	2,810,000,000
15 to 20 years	.. .	565,000,000
Over 20 years	.. .	478,000,000
F H A debentures	.. .	5,000,000
Total	.. .	\$19,744,000,000

The rise in bank loans was pronounced. Between June 29, 1940, and Sept. 24, 1941, total loans of all commercial banks in the United States increased

from \$17,400,000,000 to \$21,300,000,000, the sharpest increase in bank loans reported since the twenties. The rise reflected chiefly two separate influences. First, numerous industries receiving armament orders or sub-contracts borrowed money in order to finance large-scale operations. Secondly, a number of consumer goods industries incurred bank loans to finance a larger volume of sales and increased inventories reflecting the rush to buy before priority and other restrictions affected them. Heavy retail sales of automobiles financed by banks contributed to the rise in the loan total. Needless to say, with the outbreak of war, loans to consumer goods industries and to consumers were certain to decline, but a larger volume of defense lines loomed.

The principal assets and liabilities of insured commercial banks on June 30, 1941, and comparable earlier dates, were as follows:

PRINCIPAL ASSETS AND LIABILITIES OF INSURED COMMERCIAL BANKS
[In thousands of dollars]

	June 29, 1940	Dec 31, 1940	June 30, 1941
Reserve with Federal Reserve Banks	13,750,656	13,991,733	12,958,527
Other balances with banks	7,556,291	8,216,151	8,308,583
U.S. Govt. obligations, direct & fully guaranteed	15,900,885	17,063,870	19,370,714
Other securities	6,920,404	7,099,402	6,907,899
Loans, discounts, and overdrafts (incl redisc. accounts)	17,014,372	18,397,472	19,913,169
Demand deposits (of individuals, partnerships, and corporations)	28,899,054	32,400,488	34,330,943
Time deposits (of individuals, partnerships, and corporations)	14,779,568	15,002,076	15,207,488
Total deposits	58,425,391	63,469,170	65,616,648
Total liabilities and capital account	65,589,180	70,719,525	72,984,112

The changes in loans, investments, and deposits of reporting member banks of the Federal Reserve System, month by month during 1941, are shown in the following table:

LOANS, INVESTMENTS, AND DEPOSITS OF REPORTING MEMBER BANKS IN 101 LEADING CITIES
[Monthly data are averages of weekly figures. In millions of dollars]

Month	Commercial, industrial, and agricultural loans	Loans to brokers and dealers in securities	Other loans for purchase or carrying of securities	All other loans	U.S. Government obligations		Other securities	Demand deposits adjusted
					Direct	Guaranteed		
January	5,051	471	460	3,313	9,941	2,748	3,677	22,757
February	5,186	440	458	3,324	10,379	2,759	3,770	23,092
March	5,374	503	455	3,366	10,538	2,761	3,796	23,324
April	5,506	482	450	3,411	10,733	2,895	3,793	23,515
May	5,621	479	446	3,483	10,752	3,072	3,711	24,010
June	5,772	483	447	3,550	11,219	3,034	3,652	23,969
July	5,975	496	445	3,585	11,274	3,216	3,589	24,211
August	6,149	453	438	3,621	11,266	3,312	3,703	24,343
September	6,321	536	437	3,643	11,148	3,319	3,767	24,404
October	6,525	521	432	3,674	11,127	3,330	3,759	24,391
November	6,610	542	431	3,694	11,742	2,925	3,677	24,168
December 31	6,728	537	422	3,683	12,085	2,964	3,666	23,650

Credit Control Policy. Excess reserves of member banks of the Federal Reserve System dropped from more than \$6,800,000,000 in January to \$3,085,000,000 at the end of the year. Several factors combined to reduce surplus reserves to the lowest level reached since late in 1938. These included the expansion of required reserves due to the sharp rise in deposits, the rapid increase of currency in circulation, and the action of the Board of Governors of the Federal Reserve System in raising to the maximum levels allowed by law the legal reserve requirements of member banks, effective November 1. (See the diagram on page 54.)

The rise in bank deposits, the first factor raising legal reserve requirements, resulted from the heavy purchases of Government bonds by the banks and the increase in bank loans, already mentioned above. The rise of money in circulation reflected greatly increased employment, higher wages, hoarding by aliens fearful of registration requirements, and some domestic hoarding typical of all war periods. Federal Reserve notes in circulation at the end of the year aggregated \$8,192,000,000, which compared with \$5,930,000,000 a year before. The increase in legal reserve requirements was ordered by the Board of Governors after overcoming resistance from the Treasury, which saw no need for the action and feared it might interfere with the market for new issues of Government securities sold to finance the deficit. Soon after the higher reserve requirements went into effect, however, it became apparent that the action was very untimely. With the outbreak of the war, the Federal Reserve banks bought \$60,000,000 of Government bonds to steady the market, and halted further purchases only when it became clear that no panic liquidation would follow and Treasury obligations rallied from initial declines of 1 to 2 points. These purchases of Government bonds by the Reserve banks offset the November 1 rise in reserve requirements, neutralizing such action in part.

Since it was certain that the banks would be required to purchase billions of dollars of new Government securities annually during the period of the war, credit policies to further this end had to be formulated. The major features of a wartime credit policy were generally recognized as being: (1) Provision of a plentiful supply of excess reserves to the banks, through reduction in legal reserve requirements or open market purchases of Government bonds by the Federal Reserve banks if required, to assure a ready market for new issues of Treasury securities not taken by ultimate investors. (2) Offerings to the banks of relatively low rate obligations of short or intermediate term, to avoid adding greatly to holdings of long term securities involving a greater risk of price depreciation. (3) The taking of all measures necessary to keep the Government bond market on an even

keel, through open market purchases and otherwise, in order to facilitate Treasury financing.

Short-term interest rates firmed sharply late in the year as excess reserves declined. The Federal Reserve authorities favored this rise in Treasury bill and related short-term rates in the money market, on the ground that this would encourage the banks to build up holdings of such assets which they could dispose of whenever necessary in order to strengthen their reserve position. Such a cushion of short-term assets, it was felt, would make less likely sales of long-term Government bonds by the banks, if they wish to add to their cash position.

Federal Reserve Bulletin

EXCESS RESERVES OF FEDERAL RESERVE BANKS

Fluctuations in member bank excess reserves during 1941 were as follows:

EXCESS RESERVES OF MEMBER BANKS
[Million dollars]

January 31	6,832	July 31	...	5,193
February 29	..	6,422	August 31	5,017
March 30	...	6,304	September 30	5,116
April 30	5,883	October 31	5,001
May 31	5,831	November 30	...	3,611
June 29	..	5,351	December 31	...	3,085

Changes in open-market interest rates, which closely reflected the decline in excess reserves shown above, were as follows during the year:

	Prime commercial paper, 4 to 6 months	Prime bankers' acceptances 90 days	Stock exchange call loan renewals	U.S. treasury 5-month bills
1941—Jan.56	.44	1.00	
Feb.56	.44	1.00	.034
Mar.56	.44	1.00	.089
April56	.44	1.00	.092
May ..	.56	.44	1.00	.082
June ..	.56	.44	1.00	.089
July50	.44	1.00	.097
Aug.50	.44	1.00	.108
Sept.50	.44	1.00	.055
Oct.50	.44	1.00	.049
Nov. ..	.50	.44	1.00	.242
Dec. ..	.56	.44	1.00	.298

Federal Reserve Banks. The chief change in the condition statements of the Federal Reserve banks for the year was the rise in the volume of currency in circulation. Government security holdings showed a change only in the final weeks of the year, when bonds were bought following the outbreak of war, but there was a shift from short-term to long-term holdings based on the thesis that the chief objective of credit control under prevailing conditions must be the stabilization of prices of long-term Treasury obligations, and hence that more of these securities should be held.

PRINCIPAL ASSETS AND LIABILITIES OF ALL FEDERAL RESERVE BANKS

[In millions of dollars]

1941 End of Month	Gold certificates on hand and due from U S Treasury	Bills dis- counted	Government bonds	Government notes	Federal reserve notes	Member bank deposits	U S Treasury deposits

December 31	20,490	3	1,462	777	8,192	12,450	867

Changes in assets of the twelve Federal Reserve banks in 1941 appear in table at foot of page.

Gold Movements. Gold played a smaller role in domestic and international finance than at any time for a century or more. No country based its internal credit policies upon the inflow or outflow of yellow metal. Even in the United States, where credit conditions had been influenced during recent years by heavy gold imports which expanded excess reserves, other factors were far more important during 1941 in changing the total of reserve balances. In international finance, the enactment of the lease-lend law by the U.S. Congress in March made American supplies and war materials available to nations resisting aggression without cash payment. Thus, gold played only to a limited extent its major role in international finance of recent years—to provide dollars to pay for a surplus of purchases from the United States. Gold imports into the United States in November, 1941, the last month for which reports were published before the war ended the issuance of such statistics, were \$50,374,000 (\$330,107,000 in November, 1940). Total imports for the first eleven months of 1941 were \$929,574,000.

World Banking and Monetary Developments. The war gave rise to inflationary banking developments in most countries of the world. In the belligerent nations, heavy Government deficits compelled governments to borrow from the banks, while intensive economic activity and rising commodity prices expanded currency circulation. In the occupied countries of Europe, the huge costs of the armies of occupation were covered in large part by the issuance of new notes by the central banks, producing a currency inflation of the old fashioned type that made control over prices more and more difficult, despite drastic direct controls and rationing. France, paying an occupation bill of 400,000,000

francs daily, suffered a particularly severe currency inflation.

The volume of currency outstanding in a number of countries, at the latest date reported, with comparisons, was as follows:

CENTRAL BANK NOTE CIRCULATION

Country	Date	Note Circulation	Outstanding at end of 1940
Great Britain	Dec. 31, '41	£751,700,000	£616,900,000
France	Aug. 28, '41	244,099,000,000 francs	218,383,000,000 francs
Germany	Nov. 22, '41	16,645,000,000 reichsmarks	15,419,000,000 reichsmarks
Argentina	Nov. '41	1,281,000,000 pesos	1,224,000,000 pesos
Colombia	Nov. '41	68,009,000 pesos	62,327,000 pesos
Chile	Oct. '41	1,242,000,000 pesos	1,149,000,000 pesos
Australia	Oct. '41	£73,614,000	£68,119,000
Canada	Dec. '41	\$496,956,000	\$359,949,000

While Great Britain and other nations fighting Germany received aid under the lease-lend law, payments due on commitments incurred before this law was enacted in March, 1941, and remittances to South American and other neutral countries reduced their gold and foreign exchange resources

expected to enter Latin America, it was apparent, chiefly through governmental, rather than through private, channels.

Foreign Exchange. Abnormal world financial conditions produced a further drying up of foreign

exchange trading. Except for several Latin American countries, exchanges were under full official control, and dealings here were further hampered by the existence of foreign funds control. Changes reported in the major foreign exchange rates during 1941 were as follows:

FOREIGN EXCHANGE RATES, 1941

[Average of noon buying rates for cable transfers in New York. In cents per unit of foreign currency]

further. The Reconstruction Finance Corporation (q.v.) undertook in July, 1941, to advance \$425,000,000 to the British Government as needed on American securities owned by that Government having a market value of \$205,000,000 at the time, and on direct investments in this country with an estimated value of \$495,000,000. It was made clear that this loan did not preclude sales of British holdings from time to time as occasion warranted, however. The largest sale of British holdings in the United States occurred in March, when about 90 per cent of the stock of the American Viscose Company was distributed publicly at a price to net the British Treasury more than \$36,000,000.

Latin American countries were benefited financially by increased exports to the United States and by the higher prices received for these exports. In addition, financial aid was provided Mexico and several other nations through currency stabilization credits, highway loans, etc. The State Department adopted a more passive policy with regard to the protection of private American investments in Latin America, as shown by its agreement with Mexico for the appointment of appraisers to value the property of American oil companies expropriated in that country. Previously, the State Department had been insisting upon "prompt and adequate" compensation for these properties, originally seized by Mexico in March, 1938. American capital was

See EXPORT-IMPORT BANK; FINANCIAL REVIEW; PUBLIC FINANCE.

JULES I. BOGEN.

BAPTISTS. A religious group, probably evolved from the Anabaptist movement of the 16th century, which adopted the principle that immersion is essential to valid baptism. The first Baptist churches were established in Amsterdam in 1608, in London in 1611, and in America, probably at Providence, R.I., in 1639. There are 21 denominations in the United States which use the name *Baptist*, the largest of which are treated below.

Northern Baptist Convention. This body of the Baptist denomination, according to the *Year Book* of the Northern Baptist Convention, was composed in 1941 of 36 conventions in 33 States, the District of Columbia, and Puerto Rico. The thirty-fourth annual meeting of the Northern Baptist Convention was held in Wichita, Kan., May 20-25, 1941. Its general theme was "The Sufficient Christ for a Suffering World." The officers elected for 1941-42 were: President, the Rev. William A. Elliott, D.D., Ottawa, Kans.; First Vice-President, Gov. H. E. Stassen, St. Paul, Minn.; Second Vice-President, Mrs. Frank C. Wigginton, Carnegie, Pa.; Corresponding Secretary, the Rev. Joseph C. Hagen, D.D., Summit, N.J.; Recording Secretary, the Rev. Clarence M. Gallup, D.D., New York, N.Y.; and

Treasurer, Harold J. Manson, Brooklyn, N.Y. The leading denominational papers were: *Baptist Observer* (Indianapolis); *Baptist Record* (Pella, Ia.); *Missions* (New York); *Watchman-Examiner* (New York); and *U.S. Baptist* (Washington, D.C.).

The foreign mission field of the Northern Baptist Convention included Assam, Burma, South India, Bengal-Orissa, South China, East China, West China, Japan, Belgian Congo, and the Philippine Islands. The work of the Convention covers domestic, city, and foreign missions; higher education, social service, Sunday schools, and pensions for clergy.

The total membership of the Northern Baptist Convention for 1940-41 was 1,561,289, distributed among 7,503 churches, mostly above the Mason and Dixon Line. The total amount of funds received and expended by the churches and their agencies, as of Apr. 30, 1941, was \$15,513,609 for church operating expenses and \$3,422,227 for missions, education, and philanthropy.

Headquarters of the General Council, the executive body to which is entrusted the work of the Convention between annual meetings, are at 152 Madison Avenue, New York, N.Y. The next annual meeting of the Convention will be held in Cleveland, Ohio, May 26-31, 1942.

Southern Baptist Convention. This body of the Baptist denomination was formed in 1845, when Southern Baptists withdrew from the national organization on account of the slavery issue and also for the better administration of the work of the Convention. Since that time it has functioned, not as a new denomination, but as a separate organization for the purpose of directing missionary, educational, and general denominational work in the white Baptist churches of the Southern and Southwestern States. According to the official *Handbook* for 1941 the Southern Baptist Convention comprised 18 State conventions.

The annual session of the Southern Baptist Convention was held in Birmingham, Ala., May 14-18, 1941. The various boards and agencies of the Convention showed decided gains in receipts for the year. The director of the Work of Promotion in the Executive Committee, Dr. J. E. Dillard, led an "Every Member Canvass" during the week of November 23 to December 6, 1941, with the objective of securing weekly subscriptions totaling \$45,000,000.

The officers elected for 1941, 1942 were: The Rev. W. W. Hamilton, D.D., LL.D., of New Orleans, La., President; Rev. Edward Davis Solomon, D.D., of Florida and Rev. Charles Alfred Jones of South Carolina, Vice-Presidents; the Rev. Hight C. Moore, D.D., Litt.D., of Nashville, Tenn., and Mr. J. Henry Burnett of Macon, Ga., Recording Secretaries; and the Rev. Austin Crouch, D.D., of Nashville, Tenn., Executive Secretary, and the Rev. J. E. Dillard, D.D., of Nashville, Tenn., Secretary of Promotion. Headquarters are at 161 Eighth Avenue, North, Nashville, Tenn.

The statistics for 1941 were as follows:

Churches (congregations)	25,259
Ordained ministers	23,040
Church members	5,104,327
Sunday Schools	24,222
Enrolled in Sunday Schools	3,590,374
Enrolled in Baptist Training Unions	919,689
Enrolled in Missionary Unions	758,151
Value of church property	\$221,974,479
Gifts to local work of churches	\$33,571,412
Gifts to missions & benevolences	\$6,787,626
Total contributions	\$40,359,038
Schools and colleges fostered	65
Students enrolled—regular session	26,684
School property	\$46,279,717
Endowment funds	\$29,630,845
Property of 18 Children's Homes	\$6,808,361
Property of 20 hospitals	\$14,279,730

National Baptist Convention of America. With 32 States out of the 48 in the United States represented, the National Baptist Convention of America held its Sixty-First Annual Session with the Baptist churches of Shreveport, La., Sept. 10-14, 1941. The Theme of the Convention was "The Christians' Defense In A Changing World." Meeting jointly with the parent body was the Women's Auxiliary and the Laymen's League.

Emphasis was once more put upon Christian education as conducted in denominational schools under the auspices of the various State conventions who are a part of the National Baptist Convention of America. The four schools supported by the Convention are Lynchburg Theological Seminary and College at Lynchburg, Va.; Guadalupe College at Seguin, Tex.; Georgia Baptist College at Macon, Ga.; and the Florida Normal and Industrial College at St. Augustine, Fla. These schools were given increased financial support. Funds were raised for the membership of this Convention in the Baptist World's Alliance. The Convention also authorized a contribution of its quota of membership in the Committee on Army and Navy Chaplains, headquartered in the Woodward Building in Washington, D.C. The Evangelical Board and the Statistician of the National Baptist Convention of America, in their reports, showed an increase in membership of more than 56,000, which, according to the Statistician, brings the numerical strength to past the 2,007,000 mark. A committee of five was named to submit plans for the erecting of the buildings on the 160 acres of land donated to the Convention in Dexter, N.M., to be used as an orphanage, for a home for aged ministers, and a home for widows. Resolutions were adopted calling upon industry and the Federal Government to discontinue discrimination against the Negro in all lines of work and endeavor and urged that the Negro be given consideration and an opportunity in the various branches of Army, Navy, and in the Air Corps.

The Convention voted to accept the invitation of Boston, Mass., and adjourned to meet in that city Sept. 9-13, 1942. Rev. G. L. Prince, D.D., was elected President. Rev. C. P. Madison, D.D., Secretary, and Rev. A. A. Lucas, Treasurer. Denominational headquarters are at 523 Second Avenue, North, Nashville, Tennessee.

BARBADOS. An insular colony of the British West Indies. Area, 166 square miles; population (Jan. 1, 1940), 195,548. Vital statistics (1939): 5,497 births and 3,381 deaths. Education (1939): 138 schools of all kinds and 23,063 pupils (average attendance).

Production and Trade. Chief products—sugar (97,315 tons in 1940), cotton, rum, and molasses. The British government agreed to purchase all exportable sugar during 1940. Four rum distilleries and 108 sugar works were in operation on the island. Natural gas deposits have been found. The fishing industry employs about 300 boats and 1,600 people during the flying-fish season. Trade (1939): £2,445,753 for imports and £2,028,991 for exports (sugar £1,278,295, molasses £575,358). Shipping (1939): 2,871,577 tons entered and cleared the port of Bridgetown. Air services are operated by Royal Dutch Air Lines (Barbados-Trinidad-Curaçao) and British West Indies Airways (Barbados-Tobago-Trinidad). Roads (1940): 538 miles.

Government. Finance: (1940-41 estimates)—revenue £573,597, expenditure £653,967; (1939-40 actual)—revenue £611,831, expenditure £627,773. Public debt (Mar. 31, 1940), £449,170. The executive branch of the government is headed by a governor, aided by an executive council of 9 mem-

members. There is a house of assembly of 24 members elected every 2 years by the people. Governor and Commander-in-Chief, Sir Henry Grattan Bushe (appointed July 1, 1941; assumed office Oct. 23, 1941).

BARBUDA. See LEEWARD ISLANDS.

BARLEY. The barley crop of the United States in 1941 was estimated by the U.S. Department of Agriculture at 358,709,000 bu., nearly 16 per cent more than the 310,108,000 bu. grown in 1940 and about 59 per cent above the 1930-39 average and was harvested from 14,049,000 acres versus 13,496,000 acres in 1940. Increased acreages and better than average yields resulted in large production, which surpassed the previous record of 320,351,000 bu. in 1928. In 1941, the acre yield averaged 25.5 bu. and in 1940, 23 bu. The 1941 production of leading barley States was for Nebraska 48,832,000 bu., Minnesota 44,604,000 bu., North Dakota 43,675,000, South Dakota 38,610,000, Kansas 26,120,000, and California 25,529,000 bu. The seasonal average price per bu. (preliminary) received by farmers was 49.4¢ and the estimated value of production was \$177,070,000 in 1941 compared to 39.7¢ and \$122,974,000 in 1940. See *Crop Production Table* under AGRICULTURE.

BASEBALL. Brooklyn was baseball in 1941. Never in the history of the pastime had a team taken such a strangle-hold on the national fancy as the Brooklyn Dodgers, managed by loud Leo Durocher, with louder Larry McPhail as president, and sparked by such players as Whitlow Wyatt, Joe Medwick, Dolph Camilli, Peeewe Reese, Dixie Walker, Pete Reiser, Freddy Fitzsimmons, Hugh Casey, and Kirby Higbe. The nation watched with apathy as the New York Yankees, dethroned in 1940, romped home to the pennant early in September, but watched enthralled as the Dodgers tangled with the St. Louis Cardinals right down to the closing days of the race. The Yankees trampled on the Dodgers in the World Series, winning four games to one, but the fact that Brooklyn had won a pennant after twenty-one years of futility was the event of the year and the excellence of the Yankees was lost on the people.

Brooklyn started as co-favorite with the Cincinnati Reds, winners in 1939 and 1940, and world's champions in 1940, with St. Louis third choice. But the champions never hit the ball and Paul Derringer and Bucky Walters, their ace pitchers, had a dull year. Brooklyn's veterans, added to during mid-season by Billy Herman, great second baseman from Chicago, were always in the fight, and so were the youthful Cardinals. Brooklyn's experience finally won out, but had nothing left when it faced the Yankees in the World Series.

The Dodgers were tired and the Yankees had rested on their laurels for almost a month, and the Yanks won the first game, lost the second, won the third, and the fourth on a remarkable play, and then the fifth. The fourth game is historic, because the Yankees went into the ninth inning at Ebbets Field trailing 2 to 4, and won out 6 to 4, when Mickey Owen, Dodger catcher, dropped a third strike, which would have meant the third out, and let Tommy Henrich reach first base. Then Di Maggio and Keller and Dickey and the other Yankees pounded Hugh Casey and won the game, as the reason of Dodger rooters tottered. Owen was made the "goat" of the series, for if he had caught the ball the game would have been over and the Dodgers would have been even with the Yankees, two games each.

The Yankees, who bowed to the Detroit Tigers in 1940, started the campaign slowly and it wasn't until mid-June that they started to move. At that time they were seven games back of the highly favored Cleveland Indians, who were under the management of Roger Peckinpaugh and led by Bobby Feller, the world's best pitcher. Then Joe Di Maggio started to hit and he hit safely in fifty-six straight games, far exceeding the modern record of forty-one, set by George Sisler in 1922, and the ancient record of forty-four made by legendary Willie Keeler in 1897. While Di Maggio hit safely game after game, he received even more notice than the Dodgers, and when he was ultimately stifled in a night game in Cleveland, the Yankees were far in front and were never headed, as the entire squad took the hunt from the great center fielder.

Because of this remarkable successive hitting streak and his magnificent fielding through the season, Di Maggio was voted the most valuable player in the American League at the end of the campaign, although there were many votes for Ted Williams of the Boston Red Sox, who hit an incredible .406 for the 1941 season. This was the first time since Bill Terry batted .401 in 1930 that a major leaguer has bettered .400, and the first time in the American League since 1923 when Harry Heilmann of Detroit batted .403. Camilli won the most valuable award in the National League for his fine fielding at first base for the Dodgers and his timely hitting in the clutches Wyatt and Higbe, only twenty-game winners in the league, were close up in the balloting. Pete Reiser, rookie center fielder, won the National League batting crown with .343.

Bobby Feller, who was called to service in the Navy late in the year, won twenty-five games for the disappointing Indians, and Thornton Lee, of the Chicago White Sox, equalled the twenty-two victories chalked up by Wyatt and Higbe for the Dodgers. There were two important managerial changes after the World Series, when Bill Terry of the New York Giants was sent to a front office job and Mel Ott, the right fielder, signed as manager. And the Indians dismissed Peckinpaugh to the anonymity of a front office post and elevated twenty-four year old Lou Boudreau, crack infielder, to the badgered position as manager.

In the minor leagues, Columbus took the American Association pennant and beat out the Montreal club, International League winner, in the playoffs. Newark's Bears had won the International League regular race, but had been beaten by Montreal in the Governors Cup competition. Seattle won the Pacific Coast League play, and the Dixie Series fell to Nashville, Southern Association winner. Dallas won in the Texas League, while Wilkes-Barre won the Eastern League pennant. The Acipco team of Birmingham, Ala., won the National Amateur Federation title.

At the year's end league magnates were concerned over the future of the game, with many players being taken into the Army and the Navy, and the minor leagues in particular worried over their very existence. A majority of major leaguers were married, and thus further from being called to service. See RADIO PROGRAMS.

CASWELL ADAMS.

BASKETBALL. This court sport continued its merry way in 1941, breaking all records in the matter of attracting customers, and setting up two new champions—the teams of Long Island University and the University of Wisconsin.

L.I.U. concluded its brilliant campaign by coming from behind to whip Ohio University in the

final of the national invitation tournament at Madison Square Garden in New York City before a record crowd of 18,377 citizens. This tournament, in which Ohio U.'s Frank Baumholtz was voted outstanding player, attracted 70,826 persons and the regular Garden card drew 247,023 fanatics through the winter.

Wisconsin, having taken the Big Ten championship after finishing next to last the year previous, went on to beat Washington State, Pacific Coast champion, in the N.C.A.A. final at Kansas City, succeeding Indiana to the bauble. This N.C.A.A. tourney was best in history in point of crowds and gate receipts, drawing 45,000 and \$32,000 in five nights of play.

Other achievements of note were Dartmouth's fourth consecutive championship in the Eastern League; Duke's ascension to the Southern Conference tournament throne after eliminating North Carolina, the team with the best season record, in the first round; Tennessee's conquest of Kentucky in the Southeastern Conference playoff; the unbeaten surge of Arkansas in the Southwestern Conference; and Wyoming's dethroning of Colorado University in the Rocky Mountain Conference. The National A.A.U. title went to the Hollywood Twentieth Century quintet, while the Ohrbach A.A. won the Metropolitan honors for the third successive year. The Little Rock Flyers won women's honors, and among professional teams the Detroit Eagles were considered best.

BELGIAN CONGO. A Belgian colony in central Africa. Area, 902,082 square miles; population (Jan. 1, 1940), 10,328,400 natives (mainly of Bantu and Sudanese origin) and 27,791 whites (19,608 Belgians). Chief towns: Léopoldville (capital), Matadi, Elisabethville, Jadotville, Stanleyville, Coquilhatville, and Boma. Kiswahili is the language of the natives but Bengala and Kigwana are used commercially on the Upper Congo, and Kikongo is in use near the coast. Fetishism is the dominant religion of the natives but Christian mission work was being carried on. On Jan. 1, 1940, there were 518 mission centers and 3,831 missionaries (3,068 Catholic and 763 Protestant). Education (1940): 5,187 schools and 252,804 students.

Production and Trade. The chief agricultural products (with 1939 production, in metric tons) were palm oil (89,847), palm nuts (86,691), cotton (42,037), coffee (23,000 for 1939-40), copal (12,715), cacao, rubber, sugar, cottonseed (89,000, 1939-40), groundnuts, maize, bananas, fiber, timber, rice, and tobacco. Ivory produced in 1939 amounted to 64 tons. Mineral production included copper (122,649 met. tons, 1939), diamonds (10,900,000 met. carats, 1940), gold (494,642 fine oz., 1939), silver (2,085,000 fine oz., 1939), tin (7,600 long tons, 1940), cobalt, uranium, radium, and iron. Cattle raising is profitable in the districts free from tsetse flies. Trade (1940 estimated): U.S. \$40,000,000 for imports and U.S. \$60,000,000 for exports. In 1940, imports from the U.S.A. were valued at \$3,961,987 (\$2,481,584 in 1939); exports to the U.S.A., \$24,809,021 (\$1,582,073).

Communications. The river Congo and its tributaries form an important means of transportation to the interior. On Jan. 1, 1940, there were 47,641 miles of roadways, 3,106 miles of railway, 4,209 miles of telegraph line, 29 wireless stations, 4,000 miles of telephone line, and 1,381 river steamers and barges aggregating 219,490 tons. The interior airplane services extend over 4,757 route miles. Léopoldville is a terminus of Pan American Airways' commercial transport service (inaugurated during 1941) from New York and Baltimore, in the United States, to Africa by way of the northern coast of South America, a distance of 9,000 miles.

Government. Finance (1940 estimates): revenue 747,208,000 francs; expenditure 779,825,500 francs. The public debt on Dec. 31, 1939, totaled 5,841,941,679 francs. The administration is under the control of the Belgian minister for the colonies, aided by a colonial council of which he is the president. The Belgian government in exile at London is represented in the colony by a governor general (aided by a vice governor general, state inspectors, and six provincial commissioners). Governor General, Pierre Ryckmans (appointed September, 1934).

Ruanda-Urundi, Territory of. Two districts mandated to Belgium by the League of Nations. Area, 20,152 square miles; population (Jan. 1, 1940), 3,775,335, all natives except for 1,404 Europeans. Education (Jan. 1, 1940): 3,215 schools and 230,474 pupils. Capital, Usumbura. Cattle raising is an important industry. The chief products are maize, cotton, potatoes, groundnuts, tin, and gold. Trade (1939): 55,040,979 francs for imports and 83,854,738 francs for exports. Finance (1940 estimates): 51,052,500 francs for revenue and 49,514,600 francs for expenditure (Congolese franc equaled \$0.0226). Public debt (Dec. 31, 1939): 135,000,000 francs. The territory was united (Aug. 21, 1925), for administrative purposes, with the Belgian Congo and placed under the direction of a vice-governor.

History. Remaining loyal to the Belgian Government-in-Exile in London, the Belgian Congo during 1941 played an increasing part in the mobilization of African manpower and resources for the struggle with the Axis. Some 30,000 native troops under Belgian officers assisted the successful British drive into Ethiopia during the first half of the year (see WORLD WAR). At the end of the campaign, in which they lost 500 officers and men, the troops returned to the Belgian Congo. A force of 100,000 men was then trained to meet a prospective German drive into Africa. Modern arms and equipment for this army were sought in the United States. In October a U.S. military mission arrived in Léopoldville. The *Capetown Clipper* of Pan American Airways completed its first round trip between New York City and Léopoldville, Belgian Congo, on Dec. 17, 1941. The total mileage for the journey, which started at New York City on Dec. 6, 1941, was 18,290.

The Belgian and British Governments on January 21 signed important economic and financial agreements covering the Belgian Congo. The financial accord pegged the Congolese franc at about 176.625 francs to £1 sterling, and provided for the transfer of the Congo's gold production and foreign exchange to the Bank of England for payment in sterling, etc. Under the economic accord, the British Government undertook to purchase the following minimum quantities of Belgian Congo exports during the period Sept. 1, 1940, to Aug. 31, 1941: Copper, 126,000 metric tons; cotton, 20,000 long tons; copal, 7,000 long tons; peanuts, 2,500 long

tons; palm kernels, 15,000 long tons; palm oil, all supplies available for export of a certain standard. The Belgian Congo was to maintain existing import and export controls, the latter through a licensing system for blockade purposes.

See CUSTOMS, BUREAU OF.

BELGIAN LITERATURE. See DUTCH AND BELGIAN LITERATURE.

BELGIUM. A kingdom of Western Europe, occupied by German military forces in May, 1940. Capital, Brussels. King, Leopold III, who was crowned Feb. 23, 1934.

Area and Population. The districts of Eupen, Malmedy, and Moresnet, ceded to Belgium under the Versailles Treaty, were reannexed to Germany on May 19, 1940, leaving Belgium with an area of 11,393 square miles and a census population of 8,294,674 on Dec. 31, 1940 (8,386,553, estimated, on Dec. 31, 1938). The people are of two distinct races, the Flemings, of Germanic stock, and the Walloons, of Latin origin. Estimated populations of the chief cities on Dec. 31, 1938: Brussels and suburbs, 912,774; Antwerp, 273,317; Ghent, 162,858; Liège, 162,229. Births in 1940 numbered 110,323 (124,421 in 1939), deaths, 125,083 (109,365 in 1939).

Education and Religion. Primary, infant, and adult elementary schools on Dec. 31, 1938, numbered 13,438 with 1,222,164 pupils. There were 273 secondary schools of all kinds with 86,279 students, and four universities (at Brussels, Louvain, Ghent, and Liège) with 10,775 students. The majority of Belgians professing a religious faith are Roman Catholics. The official languages are French and Flemish.

Production. Manufacturing, mining, intensive agriculture, and commerce have enabled Belgium to support one of the densest populations of Europe (712 per square mile in 1938). Estimated production of the chief crops in 1939 was (in metric tons): Wheat, 349,000; barley, 51,100; rye, 349,400; oats, 724,200; potatoes, 3,323,200; beet sugar, 240,500 (1939-40); tobacco, 5,300; linseed, 25,100; flax, 46,700. Livestock as of Jan. 1, 1939: 1,689,680 cattle, 264,650 horses, 960,372 swine. Mineral and metallurgical production in 1940, with 1939 figures in parentheses, was (in metric tons): Coal, 25,596,000 (29,846,900); pig iron and ferroalloys, 1,788,000 (3,068,200); steel ingots and castings, 1,896,000 estimated (3,111,000). Output of briquets in 1939 was 1,525,190 metric tons; coke, 5,176,650; wrought steel, except semi-finished, 2,202,420. Among Belgium's principal manufacturing industries are glass, paper, cardboard, cement, cotton yarn, rayon, metal products, alcoholic beverages, furniture, etc. As a result of the German occupation and the cutting off of overseas trade, Belgium's productive system was extensively modified.

Foreign Trade. In 1939 imports of the Belgian-Luxemburg customs union totaled 19,690,000,000 Belgian paper francs; exports, 21,670,000,000. (One Belgian paper franc was equivalent to \$0.0337 in 1939.) Following the German conquest, trade was restricted to continental European countries, particularly those under German control. In the spring of 1941 Belgian clearing agreements were in effect as follows (dates of agreements in parentheses): Germany (July 10, 1940), Netherlands (Aug. 2, 1940), Italy and Albania (Sept. 24, 1940), Bohemia-Moravia (Oct. 1, 1940), Switzerland (Oct. 7, 1940), Sweden (Oct. 14, 1940), Yugoslavia (Nov. 13, 1940), Bulgaria (Dec. 9,

1940), Norway (Dec. 30, 1940), Hungary (Jan. 6, 1941), Denmark (Jan. 29, 1941), Government-General of Poland (Jan. 29, 1941), France (Feb. 4, 1941), and Rumania (Mar. 8, 1941). All these agreements provided for the clearing of trade payments through accounts, kept in reichsmarks, at the respective central banks and the German Clearing Office in Berlin. The various currencies were converted at the official rates of exchange in Berlin. Also see *History*.

Finance. The 1940 budget estimates anticipated total receipts of 12,350,000,000 francs and expenditures of 20,000,000,000, including 8,000,000,000 francs for defense. Following the German conquest, new taxes were imposed and new loans issued to offset dwindling income and the heavy cost of the German army of occupation (estimated at about \$302,000,000 annually). The public debt rose from 59,318,300,000 francs (domestic, 40,317,600,000; foreign, 19,000,700,000) on Dec. 31, 1939, to 74,393,000,000 francs on Dec. 31, 1940. During 1940 the internal short-term debt increased 11,296,000,000 francs and the internal funded debt 882,000,000 francs. The unit of currency for foreign exchange transactions was the belga, equal to five francs. After the German occupation the official exchange rate of the belga was fixed at 1 belga equals 0.40 reichsmarks (in U.S. currency, \$0.16).

Transportation. Previous to the German invasion, Belgium had 7,068 miles of railway line, 20,244 miles of highways, an extensive network of rivers and canals which carried about one-fourth of the total merchandise traffic, 8,313 miles of air routes in Europe and Africa (August, 1939), and a merchant fleet of 88 ships totaling 353,997 gross tons. In 1939, 9,524 vessels of 19,389,516 tons entered the port of Antwerp.

During the 18-day German blitzkrieg of May 10-28, 1940, all communications were disorganized, some 6,000 miles of highway and virtually the entire railway network were disrupted, and more than 100 railway stations and 1,425 bridges and tunnels were destroyed. It was indicated that much of this damage had been repaired by 1941. However the transportation system continued to suffer from British air attacks on communication centers.

Government. The Constitution of 1831, as amended in 1921, vested executive power in the King, acting through a Ministry responsible to Parliament. See YEAR BOOK for 1940, p. 63, for the governmental system existing at the time of the German invasion. When the Belgian army capitulated at the order of King Leopold III on May 27, 1940, the Belgian Government in Paris repudiated the King's action and assumed the right, granted by the Constitution, to exercise the King's powers while he remained a prisoner of war. The Belgian Government-in-Exile was transferred to London from Vichy, France, in October, 1940, after 10 of the 14 Ministers had resigned.

The composition of the Government at the beginning of 1941, was: Premier, Hubert Pierlot (Catholic); Foreign Affairs, Paul Spaak (Socialist); Finance and National Defense, Camille Gutt (non-party); Colonies and Justice, Albert de Vleeschouwer (Catholic). On May 20, 1940, Gen. Baron Alexander von Falkenhausen was named German military administrator of Belgium and the Netherlands. German military governors replaced the Belgian provincial governors, but the central administrative functions in Brussels were retained by the permanent chiefs of the Belgian governmental departments. For developments in 1941, see *History*.

HISTORY

Leopold Rejects New Order. The German military occupation of Belgium continued through 1941, intensifying the economic sufferings and political difficulties that followed the invasion of May, 1940 (see YEAR BOOK for 1940, p. 66-67). King Leopold III remained a prisoner of war in his castle at Laeken near Brussels. He was reported to have rejected repeated German offers to restore him to power if he would rule under German direction. Appeals by the former Socialist Cabinet Minister, Henri de Man, the pro-Nazi Rexist leader, Léon Degrelle, and others favoring collaboration with Berlin failed to budge the King.

There were unconfirmed reports that Leopold visited Hitler at Berchtesgaden early in the year to appeal for food for starving Belgians and for the release of Belgian war prisoners, also that he attempted to escape to England during the summer. At any rate the King's stubborn refusal to accept Hitler's New Order heartened the Belgian people in their struggle for independence and was reported to have caused a steady decline in the influence of the pro-German "collaborationists." The charges of treason, defeatism and fascism leveled against Leopold following his surrender to the Germans in 1940 were emphatically repudiated. Consult Emile Cammaerts, *The Prisoner at Laeken* (London, 1941). The German radio on December 6 announced that Leopold had married Mlle. Mary Lelia Baels, daughter of a former Belgian Cabinet Minister, on September 11. Leopold's first wife, Queen Astrid, was killed in an automobile accident in 1935.

Government-in-Exile. Meanwhile the Belgian Government-in-Exile at London on June 12, 1941, joined the other Allied Governments in a formal pledge to "continue the struggle against German or Italian aggression until victory has been won" and "mutually assist each other . . . to the utmost of their respective capacities." It also endorsed the inter-Allied resolutions of September 24 (see GREAT BRITAIN under *History*).

In December, 1940, all Belgian subjects between 19 and 38 years of age residing in free countries were called to the colors. Those responding were trained during 1941 in Canada, Great Britain, and the Belgian Congo. The Belgian Congo (q.v.) sent a military force to aid the British Imperial forces in the conquest of Italian East Africa and placed its great economic resources at the disposal of the Allied cause. In September the Belgian Information Bureau in New York reported that the free Belgian forces comprised an army of 100,000 in the Congo, another army in Britain, and nearly 200 pilots in the R.A.F. The Belgian merchant marine, reduced 40 per cent by enemy action, was helping to keep Britain supplied.

In April the Minister of War and Finance, Camille Gutt, went to the United States in connection with a suit brought by the Government-in-Exile against Vichy Government of France to recover \$280,000,000 in gold sent to Paris for safe keeping at the time of the German invasion. The gold was subsequently taken to Dakar, French West Africa, and then turned over by the French to the Germans. The new Minister of Colonies, M. C. Camus, was killed during an air raid on London in May. On August 7 Foreign Minister Paul-Henri Spaak of Belgium reached an agreement with the Soviet Ambassador in London for the resumption of diplomatic relations, which had been severed by the Soviet Government earlier in the year.

On September 11 the Government-in-Exile issued an official account of Belgium's involvement

and part in the war. The document revealed that German plans to attack Belgium and seize its air fields first became known on Jan. 10, 1940, through papers seized from two German staff officers whose plane crashed on Belgian soil. The Belgian Government, it was stated, informed the British, French, and Dutch authorities, but refused all suggestions that it compromise its neutrality by permitting British and French troops to occupy defense positions on Belgian soil. The Belgian leaders took the view that "preventive intervention by France and Britain was just what the Germans secretly were hoping for."

According to German-censored figures published in Brussels August 28, Belgian losses during the 18-day battle accompanying the German conquest in May, 1940, numbered 10,000 civilians and 7,500 soldiers killed; 18,583 soldiers were wounded and about 200,000 taken prisoner. Of the latter, 70,000 were said to be still in confinement. The report declared most of the 1,500,000 Belgian citizens who took refuge in France in May, 1940, had been repatriated. Another 25,000 remained in Great Britain and about 5,000 in French Morocco, Portugal, and the United States.

German Rule in Belgium. Unable to win the Belgian people over to collaboration with the Reich, the German administration resorted to increasingly harsh measures to curb their growing hostility, passive resistance, and active sabotage. Early in the year the Belgian provincial and municipal councils, described as "the last stronghold of the old politician spirit," were dissolved. A companion decree of March 7 provided for the removal of all burgomasters, aldermen, and officials over 60 years of age, effective June 30. This measure, according to the pro-Nazi *Journal de Charleroi*, "immobilized those men who are the strongest enemies of the New Order." Having dissolved all non-Nazi political parties, the Germans in June forced the pro-Nazi groups to merge in two official parties, the Rex for the Walloon districts and the so-called "Verdmassos" for Flanders.

Brussels Mayor Arrested. When Dr. G. J. Vandemeulebroeck, Burgomaster of Brussels, refused to resign under the 60-year-age-limit decree, and posted a proclamation attacking the illegality of the German administration, he was arrested along with the Brussels police commissioner and the proprietor of the printing office that published the manifesto. The City of Brussels also was punished by a fine of 5,000,000 Belgian francs (about \$200,000), levied on the individual citizens. A pro-Nazi Flemist nationalist, Dr. H. Elias, was appointed in Dr. Vandemeulebroeck's place. The same procedure was followed in many other cities. A German-appointed Minister of Interior was given broad powers of appointment and dismissal over the municipal schools, the police, the gendarmerie, aldermen, mayors, county commissioners, and governors of the provinces.

Economic Hardships. The economic consequences of the German occupation were equally galling to the Belgians. Throughout the year the average ration in Belgium was reported to be approximately one-third that prevailing in Germany or Great Britain. Reports from Belgium and from the Government-in-Exile in London all indicated serious effects upon the national health from persistent under-nourishment. Despite these starvation rations, Belgium was obliged to provide the occupying German army with rations equal to those in Germany, and in addition to pay costs of occupation. The shipment to the Reich of the country's raw materials and other stores, reduced industrial

operations to one-third the normal level. The food shortage and general unemployment enabled the Germans to obtain thousands of Belgian workers for German war industries. Many of those sent to the Ruhr and other industrial districts of Western and Northern Germany were killed or injured by British air raids. At the same time several hundreds of thousands of Germans and many commercial firms from the Rhineland were reported to have taken refuge in Belgium from the R.A.F. bombings.

Belgian Resistance. The systematic exploitation of all sources of wealth and materials by the Germans (see also FOREIGN TRADE above) was accompanied by further drastic measures against the Jews and all other anti-Nazi groups. The United Press reported from Brussels on January 20 that more than 40,000 Jews had been rounded up in Antwerp and Flanders, and that many of them were sent to concentration camps. All Masonic lodges and affiliated institutions were dissolved and their properties confiscated under a decree of August 26.

These developments contributed to the mounting violence of Belgian resistance to the occupation. A German soldier was shot to death in Laeken Park, Brussels, May 24. Hundreds of male residents of the suburb were arrested in reprisal. German military courts carried out a growing number of executions for espionage and sabotage. On July 21, Belgian's independence day, there were numerous anti-German demonstrations in Brussels and other cities, and Rexists and Flemish separatists were in some cases beaten. The Germans rounded up hundreds of demonstrators.

Arrests and executions increased during the latter part of the year. Several Belgian families were doomed for sheltering British fliers who crashed on Belgian soil. In Brussels alone, the Germans reported 12 death sentences for espionage and other anti-German activity up to September 19. Twenty-five inhabitants of the town of Tournai were seized as hostages following the assassination on September 17 of two German police officers and the Belgian Rexist leader of that district. The German military commander announced September 22 that a minimum of five Belgian political prisoners would be shot each time a member of the German police or army was killed by Belgians unless the killers were immediately discovered. Decrees of September 23 imposed the death penalty on any Belgian "committing political crimes of violence against individuals who cooperate in loyal fashion with the occupation authorities," and provided severe prison sentences for those boycotting or threatening harm to pro-Nazis or passive collaborators with the "new order."

These measures merely fanned the spirit of revolt. In mid-August Belgian labor conscripts, working on a German airdrome near Brussels, seized several hundred German rifles, half a dozen machine guns, many rounds of ammunition, and scores of hand grenades during a daring raid. Forty anti-Nazi newspapers were being published secretly in October, according to Belgian sources. Among them was a namesake of *La Libre Belgique*, famous underground patriot publication of the first World War. The German authorities on December 4 dissolved the Belgian National Legion of War Veterans and court-martialed 61 of its leaders for anti-German conspiracy.

Pursuing their efforts to create hostility between Walloons and Flemings, the Germans in July ordered the introduction of Flemish as a language of instruction in all faculties of the University of Brussels. Later 18 Flemish instructors were ap-

pointed to the staff, including three known for their pro-German activities during the first World War. When the university authorities objected to the three appointments, the university was forced to close early in December and ten of its officials were arrested. The Belgian Government in London on December 23 reported that sabotage had caused the temporary closing of coal mines in the Liège district, and that the jails were over-crowded with Belgians charged with anti-German activity.

See GREAT BRITAIN under *History*; LABOR CONDITIONS under *Employment*, etc.; LEND-LEASE ADMINISTRATION.

BENDIX STRIKE. See LABOR CONDITIONS under *Strikes*.

BENEFACTIONS, BEQUESTS. See PHILANTHROPY.

BERMUDA. An insular British colony, 677 miles southeast of New York. Included in its area are some 360 islands, of which 20 are inhabited. Area, 19.3 square miles, civil population (1939 estimate), 31,661 (12,172 white and 19,489 colored). Chief towns: Hamilton, the capital, 3,259 inhabitants; St. George. Vital statistics (1939): 23.02 per 1,000 for births and 10.1 per 1,000 for deaths. The islands form an important base for the British Navy. During 1940 sites for air and naval bases were leased to the United States (see below under *History*).

Production and Trade. Most of the 1,400 acres of land under cultivation bear from two to three crops a year. The chief products are onions, potatoes, lily bulbs, cut flowers, and green vegetables. Arrowroot and bananas are grown. A total of 25,521 tourists visited Bermuda during 1940. Trade (1939): £1,751,536 for imports and £115,656 for exports. The chief sources of 1940 imports were the United States (£599,626), Canada (£355,729), and Great Britain (£334,168). Bermuda is linked to New York by air service and is a port of call on the New York to Lisbon transatlantic air service. Shipping (1940): 3,128 vessels aggregating 13,304,639 tons entered and cleared the ports of St. George's and Hamilton (the large increase over former years was caused by the establishment of a convoy base in Bermuda during May of 1940).

Government. Budget estimates (1941): £419,965 for revenue and £372,349 for expenditure. Ordinary revenue and expenditure for 1940 amounted to £394,035 and £411,811, respectively. A £200,000 loan without interest was voted to Great Britain by the house of assembly. Bermuda has a representative form of government and laws are enacted by a legislature consisting of the governor (aided by an executive council of 4 official and 3 unofficial members), the legislative council (3 official and 6 nominated unofficial members), and an elected house of assembly of 36 members. Governor, Viscount Knollys (appointed Aug. 27, 1941).

History. The development of Bermuda into a major operations base for United States warships, seaplanes, and landplanes, with garrison protection, made rapid progress during 1941. The base sites announced in Washington Nov. 18, 1940 (see YEAR BOOK for 1940, p. 71), were modified somewhat. On January 22 the governor informed the house of assembly that Morgan's and Tucker's Islands in Great Sound would be leased to the United States as a flying-boat base. Subsequently about 74 acres of mainland in the King's Point sector across a narrow channel from Tucker's Island was obtained in exchange for the south shore of St. George's Island.

These areas in the Great Sound, or western, end of the islands were commissioned as a U.S. naval

base on March 1. The American flag was raised over Tucker's Island and construction work was begun with a ceremony attended by Bermudian and U.S. officials. The area of the naval base site totaled 112.78 acres, including Tucker's and Morgan's Islands (39.06 acres) and King's Point (73.72 acres). King's Point was set aside for marine barracks and equipment, while seaplane facilities were installed on the two islands. Facilities for servicing cruisers, destroyers, aircraft carriers, and submarines also were planned. The cost of all these naval installations was estimated at \$11,250,000. On July 1, 1941, the U.S. naval air base, called "Kindley Field," was formally commissioned.

Development of the U.S. army base in the Castle Harbor sector at the eastern end of the islands progressed at the same time. It included 266.24 acres on St. David's Island, designed for barracks, hospital, and general military facilities; 62 acres on Long Bird Island, providing airport facilities for both landplanes and seaplanes; and 60.24 acres on Cooper's, Nonsuch, and other small islands, for ammunition storage and other purposes.

The Anglo-American treaty covering the leasing of Bermuda and other bases was signed in London on Mar. 27, 1941, after negotiations in which a delegation representing the Bermuda government participated. The same day a secret session of the Bermuda assembly approved "the sacrifices involved" as a contribution to the Empire war effort. In a message to the British colonial secretary in London, the assembly recognized "that the terms of the agreement may bring grave changes in the economic and political and social life of this ancient and loyal colony."

Under special provisions of the Bermuda lease (see *The Department of State Bulletin*, Mar. 29, 1941, for text), the U.S. government: (1) agreed not to close the channels from Ferry Point Bridge to St. George's Harbor or from St. George's Harbor through Stocks Harbor to Tucker's Town without providing equally adequate navigation facilities; (2) acquired the right to install undersea and other defense devices in the entrance to Castle Harbor, but undertook not to close the channel through Castle Roads to the sea; (3) was authorized to build a causeway between Tucker's Island and King's Point without interfering with vessels navigating the channel; (4) obtained permission to fill in areas in the vicinity of Morgan's and Tucker's Islands and King's Point; (5) agreed not to interrupt highway communication between Hamilton Parish and St. George's Island, or to provide alternative facilities; (6) agreed not to use motor vehicles outside the leased areas without the permission of the Bermuda government, except in time of war or "other emergency." The house of assembly on April 30, passed a law authorizing the use of automobiles for work on the bases until the end of 1942, under conditions to be prescribed by the governor.

The heavy influx of American soldiers, sailors, marines, and construction workers into Bermuda caused an acute housing shortage, a rise in the cost of living, and some manifestations of discontent among the native laboring class. On June 6 the assembly unanimously agreed to the message from the governor recommending that up to 200 skilled and unskilled workers be brought into Bermuda from Barbados to fill urgent labor needs.

The resignation of Lieut. Gen. Sir Denis Bernard as governor was announced on Aug. 11, 1941. This was in accordance with the decision of the United Kingdom government that "in the present circumstances it is preferable that the governor of Bermuda should be a civilian." See ZOOLOGY.

BETATRON. See PHYSICS.

BILLIARDS. A really exciting chapter was added to the history of this ancient sport in 1941 by Willie Hoppe, fifty-three year old master who astounded his doctors as well as his foes by retaining the world's three-cushion championship in Chicago. A week before the tournament began in January, Hoppe was challenged by Jake Schaefer and while far ahead of Schaefer was stricken with pneumonia and great doubt was expressed about his playing again for months. Schaefer refused to accept the title by default, and after a sixteen-day postponement of his games Hoppe hopped from his hospital bed and appeared at the table.

Despite the loss of ten pounds, the magic in his cue was still there and he won thirteen straight games before veteran Welker Cochran stopped him. But no one else was equal to the task and Hoppe swept the table. In successive tournaments in 1940 and 1941 he had won thirty-three straight matches and thirty-six of thirty-seven.

Sharing the year's cue honors with Hoppe was Erwin Rudolph, of Cleveland, who captured the world's pocket billiard championship for the fourth time in his career in play at Philadelphia in November. Rudolph finished in a first place tie with Irving Crane and Willie Mosconi, but won the round-robin playoff in a decisive struggle against Crane.

BILL OF RIGHTS. See FAIRS, EXPOSITIONS, AND CELEBRATIONS.

BIOLOGICAL CHEMISTRY. The pace of publication of important experimental data in the field of biological chemistry has greatly slackened during the past year. Because of the war much of the time and effort of our best investigators has been spent on projects backed by the Federal Government, and for obvious reasons the results of these researches have not been published. Some very important developments, however, have been made and the results of these experiments have been released. Especially is this true in the field of therapeutics.

Sulfa-drugs. To the long list of sulfanilamide drugs two new ones have been added—sulfadiazine and sulfaguanidine. (See MEDICINE AND SURGERY.)

In the two preceding YEAR BOOKS, this writer reported on the discovery of two germ-killing chemicals of an entirely different nature, gramicidin and penicillin. Reports of the use of these two substances on human patients were not then available, but during 1941 many papers were published describing their remarkable properties. (See MEDICINE AND SURGERY.)

Other Germicides. An even more potent germicide, bacteriophage, has been reported. This substance has been known for years and last year this reviewer reported its isolation in crystalline form by Dr. Northrop. During 1941 clinical experiments indicate that it is especially effective in staphylococemia (blood poisoning). The death rate in this series of cases was reduced from the usual 100 per cent to 67 per cent. When blood poisoning is in its first stage 80 per cent success was achieved with injections of this potent germicide. Work at Columbia also indicates a success of at least 45 per cent. Another agent of this group of polypeptides, tyrocidine, has been reported. Its properties at the present time are less known, however.

Vitamins. Publication of data on the isolation of new vitamins greatly slackened during 1941. Experimental studies on their chemical and physiological properties, structure, and synthesis, however, continue at a rapid pace. Especially is this true of biotin. In the laboratory of Dr. du Vigneaud, Department of Biochemistry, Cornell University Medical College, investigators have made important observations on the structure of this vitamin. Oxidation studies reveal that this molecule is so constituted as to yield adipic acid. This fact indicates that biotin contains the side chain, $\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{COOH}$, attached to one of the ring carbon atoms. Eliminating consideration of four membered rings, on this basis, we are led to structures indicating a fused thiophene ring fastened to urea with the side chain at position "a." With this formula as a model Dr. du Vigneaud has already reported a resynthesis of biotin from one of its degradation products.

Many important physiological studies on pantothenic acid have been made. It has been reported that a deficiency of pantothenic acid in the diet causes a retardation of tumor growth in mammals suffering from this affliction. Unfortunately, however, such a deficient diet causes such severe interference in the host's nutrition that the procedure offers no practical application in adjunct tumor therapy. The distribution of pantothenic acid in products of natural origin has been more thoroughly investigated. Dr. Folkers of Merck and Company has reported on new methods for its synthesis, and also on methods of synthesis of closely allied compounds and derivatives.

Much work has been done on the physiological properties of the antigray-hair vitamin, para-amino benzoic acid. It has been definitely shown that this compound inhibits the antibacterial action of sulfa-drugs. It has no effect, however, on antibodies in fresh defibrinated blood. To explain this fact it has been suggested that p-aminobenzoic acid is a necessary factor in the metabolism of various organisms. Recent evidence shows that not only is this true for bacteria but that it also plays an important role in autotrophic and heterotrophic plants. Also worthy of note is the confirmed observation that p-aminobenzoic acid is present in yeast. This would suggest, as pointed out by Woods, that this compound is a substance which acts as a co-enzyme in a phase of bacterial metabolism and is therefore an essential growth-substance for bacteria. Woods also suggests that the sulfa-drugs because of their structural similarity are able to substitute for the latter in the enzyme action and thus interfere with normal metabolism. Difficulties have been encountered in repeating Ansbacher's experiments on the graying of hair in rats. Dr. Emerson reports that he has been unable to obtain any evidence that p-aminobenzoic acid will either cure, or prevent, graying of rats. In his experience animals deficient in pantothenic acid invariably show marked graying before the expiration of the time necessary for the p-aminobenzoic acid to take effect. This would seem to place the cause on a pantothenic acid deficiency.

Certain other interesting observations on the chemistry of the vitamins have been reported. If foxes are allowed to over-indulge in a diet of raw fish they develop a disease identical with the alcoholic disease (Wernickes disease) caused in man by lack of vitamin B_1 . This fact indicates that in raw fish there is a substance which destroys the thiamin. These results have also been confirmed in the chick. The additional observation has been made that this condition can be reproduced after recovery from a previous attack. It has also been

noted that the inactivation of B_1 can occur within the feed mixture itself. The level of inactivation depends upon the length of time that the fish is in contact with the feed mixture.

Interesting results in the field of experimental tuberculosis have been obtained. It has been found that daily injections of crystalline vitamin C into tuberculous guinea pigs raises the tissue levels of ascorbic acid. This treatment increases the tolerance to repeated large doses of tuberculin and to retard the progress of tuberculosis. Fibrosis is more prevalent and caseation less marked in animals that received the vitamin. Continued administration of tuberculin and ascorbic acid give better results than the use of either alone. More favorable results are obtained in the chronic form than in the acute modification of the diseases.

Vitamin B_1 is now being used to make insulin-shock treatment for mental disease safer and more effective. By far the most dangerous complication which may occur in giving insulin shock treatment is when the patient goes into a state of "protracted shock" and fails to come out until damage to the brain has occurred. Study of such cases reveals that this condition occurs only after the medulla oblongata has been involved. In cases of patients who show a special tendency to this kind of shock vitamin B_1 will prevent it, if given regularly. The period of unconsciousness is also shortened.

Dr. Scudi has developed a method of stabilizing vitamin B_6 . He has observed that it forms a stable boron complex which does not cause the vitamin to lose its activity. Dr. Patek and Dr. Post report that a diet of cheese and vitamins of the B complex will cure cirrhosis of the liver, a hitherto fatal condition once known as "drunkard's liver." Vitamin A has been found to be of importance in the cure of tuberculosis. Intensive B_1 and C therapy causes spectacular healing of multiple bed sores. It has been observed that prolonged deficiency in riboflavin leads to neurologic abnormalities. Riboflavin has also been found to substantially protect rats against liver cancers especially when fed with casein. Nicotinic acid decreases the peristaltic action of the stomach and intestines. This is counteracted by mositol. Thus these two factors of the B complex are directly concerned with gastro-intestinal mobility and a proper balance is essential. The latest addition to the long list of substances that can cause trouble for patients with allergies is synthetic vitamin C. A new process has been developed by Merck and Co. of Rahway, N.J. for the preparation of vitamin B_6 . It has also been reported that the amount of this vitamin can be determined accurately by a new colorimetric method.

Steroids. Activity in the field of the steroids still continues. Many results, however, because of their bearing on national defense are not available for publication at this time. Of those researches results of which have been released the following may be noted. In the research laboratories of Squibb & Co. a new phytosterol, campesterol, has been isolated from rapeseed oil, soya-bean oil, and wheat-germ oil. The analysis indicates a $\text{C}_{28}\text{H}_{48}\text{O}$ molecule. It has not been found in cottonseed oil nor in tall oil. From the chromic acid oxidation products it can be inferred that campesterol is an isomer of 22, 23 dihydrobrassicasterol, which differs only in the optical configuration on C_{22} . It forms a characteristic i-methyl ether.

The year witnessed the publication of results from the Frick Chemical laboratories of Princeton University which show that when modern theories of optical activity are applied to steroids a relationship between optical rotatory power and constitu-

tion can be established. Thus a novel method of calculating the optical rotatory power of steroids has been developed and has proved to be a powerful tool and aid in structure determination.

Much work has been published on oestrogenic activity and molecular structure. Experiments show that in the field of synthetic substitutes hexoestrol and diethyl stilboesterol are very important drugs. They are highly active oestrogens when administered either orally or hypodermically. They promise to be a true innovation in therapy. Hundreds of cases with menopausal symptoms have been treated and results seem entirely comparable with natural oestrogenic hormones. Nausea and vomiting can be relieved when given orally by an enteric coating. Stilboesterol in the form of a cream has been found to be markedly effective in the treatment of pruritus vulvae. It has also greatly aided patients suffering with engorgements of the breasts, gonorrhoeal vulvovaginitis in children, chronic arthritis, lack of mammary development, etc. Certain harmful effects with stilboesterol, however, have been reported. When continually injected into mammals, hyperphasia of the adrenal and pituitary glands results. No effect is found however on the pancreas or liver. It also tends to cause scrous or milk excretion. Records show also that in some cases especially in mice continued use elicits mammary carcinoma. In dogs continual use also produces neutrophilia and anaemia.

Cancer Research. Certain results in the field of cancer research should be noted. Dr. Lawrence at the University of California has used with success artificially radioactive compounds in the treatment of various forms of cancer. Striking results have been reported in cases of lymphosarcoma. Also from the same laboratories there comes most encouraging results on the use of the cyclotron. Many startling cures have been produced by neutron bombardment. Dr. Rhoads from the Memorial Hospital in New York City has found that a dye called butter yellow produces cancer in the livers of rats. If, however, these animals be fed a diet of casein and riboflavin a protection follows, and cancer does not develop. From Mt. Sinai Hospital Dr. Lewisohn reports that the very malignant growth of transplanted breast cancers in mice can be stopped by pantothenic acid, yeast extract, and riboflavin.

Further work on the carcinogenic activity of certain organic compounds has been reported. It is now known that both dibenzanthracene and methyl cholanthrene will produce intestinal carcinoma following oral administration. New compounds have been found which will produce cancer. Thus, Dr. Lewisohn and W. E. Bachmann report that 5-n-propyl-9-10-dimethyl-1, 2-benzanthracene, 4-methyl cholanthrene and 5-methyl cholanthrene are carcinogenic. Two glycine compounds 3-methyl cholanthrene-meso- α , β -endo-succinoylglycine and the corresponding 1, 2, 5, 6-dibenzanthracene derivatives have been reported by these workers as carcinogenic agents with latent periods approximately the same as their respective hydrocarbons.

Miscellaneous Discoveries. In concluding this review, certain special discoveries should be mentioned: Dr. Northrop of the Rockefeller Institute has purified diphtheria antitoxin and obtained it in crystalline form. Diphtheria toxin forms a precipitate when mixed in certain proportions with serum from a horse which has been immunized against the toxin. This precipitate is a compound of the toxin and antitoxin. Separation of the antitoxin from this complex has been achieved and the crys-

talline product is strictly homogeneous in every test.

In the field of the amino acids Dr. Lucas has found that a method can be developed for the quantitative removal of cystine from keratin hydrolyzates. Cuprous oxide is the specific reagent used. The synthesis of polypeptides bearing long aliphatic chains has been announced. Surface film studies have been carried out. The stearyl and palmitoyl derivatives of diglycylglycine have been prepared.

Starch has been separated into its two constituents α -amylose and β -amylose. In this work the preferential adsorption of β -amylose on cotton was taken advantage of. Preliminary experiments in Dr. Pacsu's laboratory show that both α and β -amyloses possess identical specific rotations. So far the only chemical difference exists in the complete absence of phosphorus in β -amylose and the presence of the element in α -amylose. By means of a solution in pyridine, Dr. Pacsu and his coworkers have been able to prepare certain starch derivatives. These compounds so obtained are thermoplastic, yielding clear, glass-like substances which promise to be of importance to those interested in plastics, resins, etc.

Upsetting previous ideas of how the body uses iodine, an element known to be essential to health, Dr. Asher S. Chapman, of the Mayo Clinic, has discovered that the body can use this element even when the thyroid gland has been removed. Thyroxine, the powerful hormone produced by the thyroid gland, contains iodine and it has generally been thought that the effects of iodine on the body and the body's need for it were determined by this gland. Animals whose thyroid glands had been removed, Dr. Chapman found, lost more weight, utilized their food more poorly, drank more water and had a significantly lower basal metabolic rate when kept on diets very low in iodine than when given adequate amounts of iodine. The body, it appears, from these studies, not only can use iodine when there is no thyroid gland to turn it into thyroxine for stimulating various body processes, but even may make a compound like thyroxine in tissues other than the thyroid gland.

A cure for athlete's foot of great promise has been announced by Dr. Francis, medical director retired of the U.S. Public Health Service. It consists of three parts phenol to one part camphor.

Prevention of influenza epidemics may be possible by spraying propylene glycol into the air of schools, barracks, etc. Dr. Zellah of the University of Pennsylvania has found that such a mist protects mice.

The introduction of the pellet method by Dr. Parkes has made possible a much more efficient administration of many of the crystalline hormones. Studies have been made of the rates of absorption of these compounds. The rate decreases rapidly with time. The pellets become invested with a thin non-adherent tissue capsule. Oestrone and oestradiol show relatively very slow absorption. Their esters and testosterone propionate are absorbed even more slowly.

BIRTH CONTROL. Birth control centers and services continued to show a steady growth in the United States in 1941. At the close of the year there were 746 centers in the country as opposed to 606 in 1940, all medically directed; with 176 in hospitals,

252 in public health departments, and 318 extramural. Of the total number, 331 were supported wholly or in part by public funds, which included those under health departments or in hospitals.

The number of physicians listed with the Birth Control Federation as willing to advise patients referred to them for contraceptive advice grew to almost 3,000. In both centers and referral services, the majority of patients are indigent or in very low-income brackets. A new pamphlet by Drs. Robert L. Dickinson and Woodbridge E. Morris, "Techniques of Conception Control," was mailed to 53,900 physicians, public health officers, and medical students during the year. Alabama announced in January, 1941, that contraceptive advice had been included in the services of its State Health Department, joining North Carolina and South Carolina in providing child-spacing information under Health Department direction.

New State groups were organized in two more States, bringing the total number of State Leagues affiliated with the Birth Control Federation to 34 at the close of 1941. During the year a number of State organizations adopted the name "Planned Parenthood." This followed the precedent of the British organization which, in 1939, changed its name from "National Birth Control Association" to "Family Planning Association," as more indicative of its objectives. The Federation took part, as a sponsoring organization, in the Conference on Tomorrow's Children held at Nashville, Tenn., and at Harvard Summer School, Boston, Mass. As a kindred group it participated in the National Conference of Social Work. Nineteen affiliated State Leagues were members of and took part in State Conferences of Social Work during the year.

In only two States, Connecticut and Massachusetts, have court decisions halted clinic service to the under-privileged. A bill which would have made it legal for physicians to advise patients on contraceptive methods where medical indications existed was introduced in the Legislature of the State of Connecticut, and passed the House by a vote of 164 to 64, but was defeated in the Senate by 23 to 9. Dr. Wilder Tileston, Clinical Professor of Medicine at Yale University Medical School, applied to the Superior Court of New Haven County for a declaratory judgment as to his right to advise contraceptives in the cases of three women whose physical condition would make pregnancy hazardous or fatal. The case was referred to the State Supreme Court, where it was pending at the close of the year. Dr. Tileston's action was taken in an attempt to secure from the courts of the State a measure of medical freedom.

In Massachusetts a special poll of a large number of voters, sponsored by the Massachusetts Mothers' Health Council in 1940, had shown that 82 per cent of those voting were in favor of giving physicians the right to prescribe contraceptives when pregnancy was contraindicated. An initiative petition of 45,000 names was sent to the Legislature in 1941, presented in the form of a bill which proposed to amend the existing prohibitive statutes, (H. 2,035). The question as to whether a religious issue was involved in the bill was referred by the Legislature to the State Supreme Court, which ruled on May 19, by unanimous vote, that no religious issue was involved. The Legislature voted on the bill on June 4th. It was defeated by 133 to 77 in the House, and 18 to 16 in the Senate. An additional 5,000 signatures on the initiative petition were secured and it will go to the voters in 1942.

The Federal Trade Commission continued to

prosecute manufacturers of contraceptives who were using the mails to sell their products by making false therapeutic claims in regard to their effectiveness or lack of possible injury to users.

The Federation in 1941 raised \$274,538 in gifts. Contributions to the organization are deductible from Federal Income taxes. The program for 1941 had, as its major objectives, the inclusion of contraception in public health services in six States, expanding and broadening of medical education, building up the referral list of doctors to whom women in rural areas or those without clinical services can be sent, and general public information and education.

Australia. Birth control clinics continued their work. Vital statistics showed a sharp increase in the number of marriages with a slight consequent rise in the birth rate.

England. Centers continued to operate, some in the provinces having had extraordinary escapes from bombing attacks. The headquarters of the Family Planning Association were moved from London to Bournemouth.

France. The drastic regulations against birth control and abortion were reinforced in 1941, but the birth rate was further reduced, in part due to the retention by Germany of over 1,500,000 prisoners of war.

Germany. Efforts to raise birth and marriage rates continued and illegitimate births were stimulated and encouraged. Legal restriction of the distribution of contraceptives failed to prevent their sales, which were said to be in large volume.

India. Progress in organization of birth control work and centers went on under an organizer of the British Family Planning Association. It was announced that such work was most necessary in view of the fact that India's population in 1940 had risen to 400 million, an increase of 18 per cent in 10 years.

Japan. Rigorous suppression of all birth control activities was ordered as part of the government policy to force a higher birth rate by official decree. Though the birth rate did not increase materially, infant mortality rates rose and malnutrition was prevalent.

New Zealand. The Family Planning Association continued work, and resolutions asking for a course in contraceptive technique at the only medical school in New Zealand were passed at many meetings.

Norway. All birth control centers were closed by the Germans following their occupation of the country.

Sweden. The Society for Sexual Enlightenment continued work through the year and the Stockholm clinic advised many women. Owing to the war, the work of the Royal Population Commission was temporarily suspended.

Puerto Rico. There was a steady increase in contraceptive services under direction of the *Asociacion pro Salud Maternal e Infantil* and other health agencies. The Interdepartmental Committee appointed by President Roosevelt to survey the island reported that over-population was its greatest problem and that "birth control should be a major function of the Insular Department of Health as the key to the entire health situation in Puerto Rico."

Europe. Because of war conditions and of Germany's occupation of so much of the continent little news on birth control work was obtainable during the year, but constant and relentless pressure on the conquered areas, food-rationing, and requisition of supplies by Germany resulted in

lowered birth rates—a form of birth control which is dysgenic in the extreme.

D. KENNETH ROSE.

BISMARCK ARCHIPELAGO. See AUSTRALIA.

BITUMINOUS COAL DIVISION. This Division of the Department of the Interior administers the Bituminous Coal Act of 1937, which became effective on Apr. 26, 1937. Under this law, the Division has established minimum prices at the mine and marketing rules and regulations for the sale of bituminous coal by producers and their sales representatives as a means of stabilizing coal markets. This regulatory structure was designed to prevent further continuation of the destructive price cutting which had existed within the industry for more than a decade and to restore interstate commerce in coal to a fair competitive basis.

Participation in the market regulatory program is voluntary under the Coal Act. A producer may choose whether or not he becomes a member of the Bituminous Coal Code promulgated under this law. As a Code Member, he is subject to minimum and maximum prices and marketing regulations established by the Division. If a producer does not join the Code, he may continue to sell his coal at any prices he chooses, but his sales are subject to a 19½ per cent tax imposed by the law. Approximately 15,500 producers, or about 96 per cent of the nation's total, have become Code Members. These Code Members produce practically all of the commercial coal mined in the United States.

Minimum prices became effective on Oct. 1, 1940, and the Division is authorized by the Coal Act to establish maximum prices when necessary to protect the coal consuming public. In September, 1941, it opened a proceeding to ascertain whether maximum prices are necessary, and if so, what the rates should be. The proceeding had not been completed by the end of the year.

The minimum price schedules were established after extensive public hearings, in which consumers and consuming interests as well as producers and producing and other interests were given an opportunity to participate. The schedules show the minimum price for the shipment to particular freight destinations of each kind, quality, and size of coal produced by each of the 15,500 Code Members' mines. A single mine often produces numerous different sizes and grades of coal, and the schedules cover minimum prices for shipments of these to the approximately 30,000 freight destinations in the United States and Canada which receive bituminous coal. The minima for the first year of market regulation averaged \$2.01 per ton at the mine for the nation. However, the actual market prices at which producers sold their coal during this period averaged \$2.13 per ton at the mine.

The Division is constantly adjusting its schedules so that they will appropriately reflect changes in the coal producing industry and its markets and maintain a sound regulatory structure. Compliance matters also present a Division function no less significant than the original job of establishing minimum prices. Hearings are held on complaints alleging violations, and where it is found appropriate, penalties are imposed as provided by law. Penalties include the issuance of cease and desist orders; the revocation of Code Memberships which subject producers' sales to the 19½ per cent tax; the suspension or revocation of distributors' registrations.

The coal industry itself bears a large share of the

responsibility for administering the Coal Act. The industry acts through the Bituminous Coal Producers' Boards for each of the 22 districts throughout the country which represent the industry in matters arising before the Division and otherwise aid in carrying out the purposes of the Coal Act. All of the members of each board, except the one representing mine employees, are elected by the producers.

Consumers' interests are represented in proceedings before the Division by the Office of the Bituminous Coal Consumers' Counsel, an agency entirely independent from the Division.

The Bituminous Coal Act originally was administered by the National Bituminous Coal Commission, an independent agency comprised of seven commissioners. Under the Reorganization Act of 1939, the Commission was abolished and its powers and functions were transferred to Secretary of the Interior Harold L. Ickes for administration by such agency as he might determine. See CONSUMERS' COOPERATIVES.

BOBSLEDDING. The combination of Paul Dupree and Tuffield Latour dominated the bobsledding game in 1941, when this Saranac Lake, N.Y., duo made successful defenses of the National A.A.U. and North American two-man titles and also added the Adirondack Association crown for good measure. Francis Tyler's sled, with E. H. Varno, Pat Martin, and William D'Amico riding with him, won the National A.A.U. four-man title, while the Republic Miners, composed of William Linney, John Kerr, William Stacovich, and Angus Clain, won the North American. The National junior four-man went to Charles Keough, Patrick Buckley, Harold Murphy, and Bob McKillip, while the junior two-man honors were taken by Wightman Washbond and Adrian Aubin.

BOHEMIA AND MORAVIA. Two former provinces of Czechoslovakia, which after being shorn of their Sudeten districts by the Munich Accord of Sept. 29, 1938, were occupied by German troops on Mar. 15, 1939, and proclaimed a Protectorate of the Reich the following day. Capital, Prague.

Area and Population. The Protectorate has an area of 19,058 square miles (Bohemia, 12,525; Moravia, 6,533) and a population estimated at 6,804,875 on Jan. 1, 1939 (Bohemia, 4,472,353; Moravia, 2,332,522). The inhabitants are Czechs except for a small German minority. The chief cities, with their 1937 populations, are: Praha (Prague), 962,200; Brno (Brunn), 291,800; Moravská Ostrava, 178,099 in 1935; Plzeň (Pilsen), 124,353 in 1935.

Production, etc. See YEAR BOOK for 1939, p. 181-182 for statistical data on Czechoslovakia before the partition. Little statistical information on Bohemia and Moravia has since become available. Agriculture, manufacturing, forestry, and commerce are the principal occupations. Cereals, corn, potatoes, beet sugar, tobacco, and flax are the chief crops. Leading industrial products: Arms, rayon and other textiles, wood pulp, cement, shoes, glass, leather goods, iron and steel products, and innumerable others. Western Bohemia is one of the leading industrial areas of Europe. The Protectorate is an important source of coal, iron ore, salt, zinc, and antimony.

Finance. The budget for the autonomous administration of the Protectorate in 1939 was: Receipts, 4,638,000,000 crowns; expenditures, 4,902,000,000 crowns (1 reichsmark equalled 10 crowns). An annual assessment of 2,000,000,000 crowns was levied on the Protectorate by the Reich in 1939; according to a Berlin dispatch of Jan. 2, 1941, this sum was virtually doubled in a new German-Czech agreement concluded at that time.

Government. The Berlin Cabinet's decree of Mar. 16, 1939, establishing the Protectorate, stated that Bohemia and Moravia "belonged henceforth to the territory of the Great German Reich." Germany assumed direct control of defense, foreign affairs, communications, transportation, customs, and currency, but declared the Protectorate autonomous in other matters, with its own organs and officials. However the decree provided that the Protectorate's prerogatives were to be exercised "in accordance with the political, military and economic importance of the Reich." The head of the Czech Government was required "to have the confidence of the Fuehrer and Reich Chancellor for the discharge of his duties." The German Chancellor appoints a "Reich Protector in Bohemia and Moravia," who as Hitler's representative and as delegate of the Reich Government "has the task of seeing that the lines of policy laid down by the Fuehrer . . . are observed." The Protector was empowered to dismiss all members of the Protectorate's government, reject its measures, and prevent the promulgation of its laws, decrees and orders as well as the execution of administrative measures and judicial decisions. The decree gave the Reich Government blanket authority to "promulgate orders applicable to the Protectorate in so far as the common interest demands it."

All German inhabitants of the Protectorate are German nationals and Reich citizens, subject to German jurisdiction and to "the regulations for the protection of German blood and German honor." Other inhabitants were declared "nationals of the Protectorate." Chancellor Hitler on Mar. 18, 1939, appointed Baron Constantin von Neurath, former German Foreign Minister, as Reich Protector, with headquarters at Prague. Karl Hermann Frank, a leader of the Sudeten German agitation against the Czechoslovak Republic before the Munich Accord, was appointed State Secretary of the Protectorate, with control over both German and Czech police. Dr. Emil Hacha, elected President of the Czechoslovak Republic by the National Assembly Nov. 30, 1938, and signer of the capitulation agreement of Mar. 15, 1939, remained in office as President of the Protectorate. The government of the Protectorate, as reconstructed Apr. 27, 1939, was headed by Gen. Ing. Alois Eliáš. Over and above the rule of the Reich Protector and the puppet government of the Protectorate was the rule of the German secret police and military commanders.

Measures placed in effect during 1939 and 1940 under the decree of Mar. 16, 1939, completed the transformation of Bohemia and Moravia into an authoritarian state completely subservient to Berlin and serving as a political and economic appendage of the Reich. A customs and monetary union with Germany was established Oct. 1, 1940, with the reichsmark replacing the Czech crown as legal currency. The National Unity party (Czech), a rival Czech Fascist party known as the Vlájka, and the National Socialist party (a branch of the German Nazi party) were the only legal political groups permitted. All were under close German supervision. See below for developments in 1941.

HISTORY

The German attack upon Russia on June 22 and the revived hope for an Allied victory that grew out of the stubborn Russian resistance caused the smoldering hatred of the Czechs in Bohemia and Moravia to break out in intensified sabotage and sporadic revolts. The Germans responded with wholesale executions and other savage reprisals that ended Berlin's last hope of winning Czech collaboration with Hitler's "new order" in Europe.

Nazi Policy Fails. Czech collaboration became increasingly important to the Germans as the strain of the war increased. British bombing of Western Germany forced the Reich to depend increasingly upon the war industries and electric power of Bohemia and Moravia. Some hundreds of thousands of women and children were evacuated to the Czech districts from the bombed areas of Western Germany. Grain stores were similarly transferred. Due to Bohemia-Moravia's strategic position, its railways and other communications were of vital importance to the movement and supply of German armies in Eastern Europe. Moreover the 150,000 or more German troops in occupation of the country were needed on the Reich's expanding battle fronts. The Nazis also made use of the alleged "normal conditions in the Protectorate" in their propaganda among other nations on behalf of the "new order" in Europe.

For these reasons the Germans during the first half of 1941 continued their use of combined persuasion and force to win Czech acquiescence to permanent German rule (see YEAR BOOK for 1940, p. 77 f.). They sought to impress the Czechs with the economic and other advantages of the "new order." At the same time the Czechs were warned that their collaboration would no longer be welcome if it was withheld until after the final German victory over Britain.

Meanwhile the Nazis waged ruthless warfare against all individuals and groups seeking to preserve Czech nationalism. On Jan. 9, 1941, ex-President Eduard Beneš of Czechoslovakia, Jan Masaryk, son of the founder of the republic, and 47 other Czech patriots were deprived of their citizenship and estates. Most of these men were in exile in London and elsewhere. About the same time all Jews living in Czechoslovakia were required to turn in their jewels and security holdings to a public purchasing agency. The persecution of Catholic priests, intellectuals, and of government officials of the Protectorate suspected of loyalty to the republic was increased.

Nazi methods of force and persuasion, coupled with growing economic hardship, only served to deepen Czech hostility. A steady stream of Czechs fled to the Allied countries to enter the Czech military forces. Mass boycotting of German-sponsored events continued. The illegal Czech patriot newspaper *V Boj* circulated secretly and the BBC

broadcasts were widely listened to despite hundreds of arrests. Sabotage and the slowdown were practised regularly in factories. There was widespread violation of rationing and other decrees.

Spread of Disorders. After Hitler's attack upon Russia, the Czechs' underground warfare against their German rulers became much more violent. Explosions and fires of mysterious origin occurred in many munitions factories, oil refineries, and other vital war industries. Late in September an explosion wrecked the Lutín (Moravia) chemical plant, killing 95 persons, mostly Germans. The Skoda arms factory was badly damaged by fire. Strikes spread notwithstanding the arrest and execution of some of the leaders. Railway tracks were torn up, and telegraph and telephone lines and electric cables cut.

To check this spreading revolt, Berlin on September 27 announced the "temporary" replacement of Baron von Neurath as Reich Protector for Bohemia and Moravia by Reinhard Heydrich, right-hand man of Heinrich Himmler, chief of the German secret police (Gestapo). Heydrich immediately declared a state of emergency over six important districts of the Protectorate including Prague. On the same day Gen Alois Eláš, Premier of the puppet Czech Government in the Protectorate, and many other Czech officials and leaders were arrested for "preparation to commit treason." A German court-martial on September 29 ordered the immediate execution of 24 Czech leaders, including three former generals, accused of plotting an early revolt.

For weeks thereafter the German police continued to round up Czech patriots and other suspects, including many influential members of the Protectorate Government, while summary courts working at top speed condemned scores to death. Berlin announced the execution of 58 Czechs on September 30, 39 (including 2 more generals and 11 other officers of the former Czechoslovak army) on October 1, 18 on October 2 (including Otakar Klapka, Mayor of Prague). Day after day German firing squads added new names to the long list of Czech martyrs. By December 1, 414 executions had been announced by official German sources. Anti-German sources placed the number of Czechs slain during Heydrich's brief rule at between 2,000 and 4,000. As of December 1 Heydrich ended the state of civil emergency in four of the six affected districts. Restrictions imposed in Prague and Brunn remained in effect.

General Eláš was among those condemned to death, but won a reprieve through confessing his partial guilt, according to official German dispatches. These sources announced that the Germans had uncovered a widespread secret society engaged in "liquidating" German sympathizers and helping Czech patriots escape abroad. The society was said to have had the assistance of many Czech officials of the Protectorate Government who ostensibly were cooperating with the Germans. It included many former army officers, civil servants, municipal officials, and others from all ranks of life.

The blood purge was accompanied by an extension of the state of emergency to new districts, the confiscation of all radios in certain towns and districts, the closing of more Czech schools and the arrest of teachers, and on October 13 the dissolution of the historic Czech Sokols (athletic societies) and their affiliated organizations.

See CZECHOSLOVAKIA and GERMANY under *History*; LABOR CONDITIONS under *Union Movements and Wages*; SLOVAKIA.

BOLIVIA. A republic of South America. Sucre is the seat of the Supreme Court and nominally the capital, but La Paz, the largest city, is the actual seat of the government.

Area and Population. Taking into account the Chaco boundary settlement of 1938 (see *YEAR BOOK*, 1938, p. 131 f.), Bolivia has an area estimated at 537,792 square miles. The population on Dec. 31, 1939, was estimated at 3,457,000, divided racially as follows: White, 13.08 per cent; mestizo (mixed), 27.51; Indian, 52.34; others, 7.07. Foreigners in Bolivia in 1940 included about 5,000 Germans and German-Bolivians, 475 citizens of the United States, and about 500 British. Estimated 1936 populations of the chief cities were: La Paz, 200,000 (250,000 in 1940); Cochabamba, 52,323; Oruro, 44,826; Potosí, 35,900; Santa Cruz, 31,300; Sucre, 27,508. Spanish is the language of the educated classes. The Indians speak mainly Quechua and Aymara.

Education and Religion. The illiteracy rate, which was 83.5 per cent for that part of the population seven years and over in 1900, remains high. The school enrollment in 1936 was: Elementary, 73,854; secondary, 5,522; special schools, 4,615; universities, 1,482. New schools opened during 1940-41 included 97 rural schools, a national vocational school at La Paz, a rural normal school at Portachuela, the School Center of Rural Cooperation at Sapocó, the Indian Education Center at Huachacalla, and experimental schools in La Paz and the departmental capitals. Roman Catholicism is recognized as the State religion. Public exercise of other forms of worship is guaranteed.

Defense. Military training is compulsory. As of Jan. 1, 1941, the active army numbered 9,600; trained reserves, 82,187, active air force, 160. The 1941 defense appropriations totaled 145,000,000 bolivianos. Also see *History* below.

Production. Mining is the most important industry, although agriculture and stock raising support the bulk of the population. Mineral products accounted for over 95 per cent of all exports in 1940, with tin of outstanding importance. Mineral exports in 1940 in fine metric tons, with the value in pounds sterling in parentheses, were: Tin, 38,531 (£9,934,905); wolfram, 2,510 (£692,512), antimony, 11,753 (£488,183), silver, 175 (£441,130); copper, 6,660 (£348,829); zinc, 12,197 (£352,360), lead, 11,663 (£284,134); gold, 366 fine kilograms (£87,108). Crude petroleum production in 1940 was approximately 110,000 bbl., while imports were 38,867 metric tons (see *History*). The principal crops are wheat, quinoa, corn, rice, barley, sugarcane, cotton, coca leaves, tobacco, and coffee. Alcohol and beverages, food-stuffs, textiles, and clothing are the chief manufactures.

Foreign Trade. Imports in 1940 were valued at £5,700,000 (in pounds sterling) of 13.33 bolivianos of 18 pence per pound) against £4,848,358 in 1939; exports, £12,877,211 (£8,687,008 in 1939). See *Production* for chief export items. In 1940 tin exports were 39.4 per cent greater in volume than in 1939, while in value they exceeded by 12.8 per cent the value of all 1939 exports. Textiles, wheat, flour, sugar, live animals, and machinery were the leading imports. In 1939 the United States supplied 22.7 per cent of all imports by value, Peru 21.8 per cent, Argentina and Germany 12.4 per cent each. Great Britain took 64.4 per cent of the exports (mostly tin ore for refining), Belgium 16.8 per cent, the United States 9.1 per cent.

Finance. Budget receipts in 1940 totaled 599,-

787,515 bolivianos (516,496,067 in 1939). Expenditures were estimated at 505,000,000 bolivianos (about 455,266,000 in 1939). The 1941 budget estimates balanced at 727,000,000 bolivianos. The public debt on June 30, 1941, was divided as follows: Foreign, 60,816,923 bolivianos and £2,979; internal, 447,046,545 bolivianos and £785,048; floating, 2,913,244 bolivianos. Service payments on the debt were 32,105,887 bolivianos for the year ended June 30, 1941.

The boliviano was linked to the pound sterling at the rate of 140 per pound from June 1938 until May 10, 1940, when it was pegged to the dollar at 40 to 1. This "controlled" rate was changed to 46 bolivianos to the dollar on June 21, 1941. Average exchange rates of the boliviano in 1940 were: Controlled market, \$0.0256 (\$0.0309 in 1939); compensation market, \$0.0186 (Mar. 15–Dec 31); curb market, \$0.0176 (\$0.0220 for July–Dec., 1939). The note issue increased from 37,856,000 bolivianos in December, 1931, to 863,095,000 in December, 1940.

Transportation. Bolivia in 1941 had 1,402 miles of railway line in operation, about 10,200 miles of highways, and air lines connecting the principal cities with the inter-American airways network. Early in 1941 some 4,600 soldiers were detailed to help in road construction and repair. In 1940 the two air systems (Lloyd Aereo Boliviano and Pan American–Grace Airways) carried 17,275 passengers and 2,509 metric tons of freight, mail and express on 3,451 separate flights. For the progress made in developing the railway network of eastern Bolivia and the expropriation of the Lloyd Aereo Boliviano, see below under *History*.

Government. The 1938 Constitution (see *YEAR BOOK* for 1938, p. 96) vested executive power jointly in the President and his cabinet and legislative power in a Congress of two Chambers. The President is elected for four years by direct suffrage and may not succeed himself. The Senate has 27 members (3 from each department), one-third elected every two years for six-year terms. The Chamber of Deputies has 103 members elected directly for four years and renewed by halves every two years. The suffrage is restricted to male Bolivians of 20 years or over who can read and write and who are inscribed in the Civic Register. President in 1941, Gen Enrique Peñaranda del Castillo, who assumed office Apr. 15, 1940. For results of the 1940 Congressional elections, see *YEAR BOOK* for 1940, p. 79.

HISTORY

Nazi Influence Curbed. The year 1941 brought what appeared to be decisive victory to the democratic forces struggling against totalitarian influences in Bolivia. The battle between the United States and Germany for Bolivia's support had gained in intensity during 1940 (see preceding *YEAR BOOK*). In 1941 it moved rapidly toward a climax. German victories in the Balkans in April and May powerfully reinforced Nazi propaganda. The United States countered with its blacklist of individuals and firms in Bolivia aiding the Axis, and with the withdrawal of agencies for United States goods from Germans and pro-Nazis. On May 21 the government-owned Metals Reserve Company of the United States followed up its 1940 contract for the purchase of Bolivian tin by contracting to buy the entire Bolivian production of tungsten for three years at the price of \$21 per short ton. A higher Japanese bid was rejected by the Bolivian Government.

Oil Issue Reconsidered. Harassed by extreme in-

flation and other acute economic difficulties, the Peñaranda Government applied to the U.S. Export-Import Bank for a large credit to finance railway construction and other public works. It also sought to interest private United States capital in the development of Bolivian agriculture and industries. However the State Department at Washington indicated that no substantial financial aid would be forthcoming until the Bolivian Government compensated the Standard Oil Company of New Jersey for oil properties expropriated by Bolivia in 1937 (see *YEAR BOOK* for 1937).

The Peñaranda Government then sought Congressional approval for a financial settlement with Standard Oil that would not involve repudiation of the decree nationalizing the oil properties. The Senate on March 27 approved the Government's policy. In the subsequent debate in the Chamber, Deputies hostile to the United States revived old charges of tax evasion and treasonable activities during the Chaco War against Bolivian representatives of Standard Oil. A popular agitation against compensating the oil company, in part German inspired, led the Government in April to call out troops in La Paz. On April 29 criminal indictments were issued against oil company representatives to determine the truth of the charges against them.

German Air Network Seized. Without awaiting the result of this investigation, the Government proceeded with its program of United States–Bolivian collaboration. On May 15 it decreed the expropriation of the German-controlled Lloyd Aereo Boliviano, with its 3,200-mile network of air lines and an exclusive franchise for air services within Bolivia. The L.A.B. routes were turned over to Pan American–Grace Airways for operation.

Nazi Plot Foiled. Following press warnings that Nazi-Fascist elements were preparing a revolt, the Minister of Interior reported that Nazi agents were engaged in subversive activities in the provinces. On the evening of June 11 the Cabinet unexpectedly resigned to permit the President to select new aides to deal with the crisis. On June 14 the German Minister in La Paz, Ernst Wendler, asked the Bolivian Foreign Minister to define his Government's attitude with regard to President Roosevelt's warning of May 27 that the Axis planned military aggression against the Western Hemisphere. The Bolivian reply was not made public. But Bolivia's alignment with the United States was made clear on July 4 when the Government approved Uruguay's suggestion that any American nation becoming involved in the European War should not be treated as a belligerent.

The Government on July 19 frustrated a plot for a military coup designed to align Bolivia with the Axis. That night a nation-wide state of siege was proclaimed. The German Minister was declared *persona non grata* for allegedly directing the subversive activities. A round-up of German agents and pro-Nazi conspirators was begun and four newspapers, including two on the United States blacklist, were temporarily suspended. Several high-ranking officers of the Cochabamba and Santa Cruz garrisons were arrested. A revolt of 4,000 Indians in the Department of Cochabamba, apparently instigated by pro-Nazi elements as a mass protest against the Government's action, was quickly suppressed.

On July 24 the President ordered the discharge and dismissal of Major Elias Belmonte, Bolivian military attaché in Berlin, on a charge of treason. Simultaneously the Government made public a letter, dated Berlin, June 9, from Major Belmonte to the German Minister in La Paz, which ended:

My friends in the Wilhelmstrasse informed me that from your reports the situation is ripe for revolt. I think, however, July is the most favorable for action. I will fly to Brazil upon your advice and take Cochabamba and Santa Cruz, where I have good friends. I expect, however, your last advice to fly to Bolivia ready to commence our work, first in Bolivia and then in every Latin-American country now under Yankee influence.

This letter, the Government stated, was intercepted and submitted to it by the "intelligence service of a power fighting against Germany." The letter was branded a forgery by Major Belmonte and the German Government. When the Bolivian Congress convened August 6, the Government submitted documentary and other evidence of the Nazi plot in secret sessions. As a result the Senate on August 16 voted unanimous support of the Government's policy in expelling the German Minister. The Chamber of Deputies on August 12 appointed a committee of eight to conduct an investigation of the Government's charges. Votes on related issues taken during September showed about 65 per cent of the Deputies in favor of the Government's foreign policy.

The Cabinet was reorganized on October 1, the most important change being the appointment of a civilian as Minister of Interior for the first time since the 1936 coup d'état. The new Minister immediately announced the termination of the state of siege declared July 19. Congress had rejected a Government request for its extension.

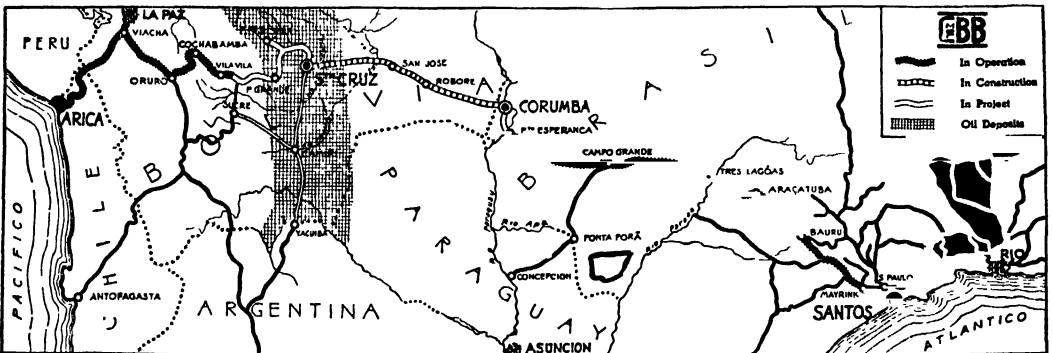

Friction with Reich. Germany retaliated against the ousting of its Minister in La Paz and the arrest of several German consular and other agents by detaining the Bolivian chargé d'affaires in Berlin and arresting a number of Bolivians in German-occupied countries. This aroused much resentment in Bolivia. There were threats of retaliatory action against some 5,000 German residents and their properties. The United States and Bolivia's neighbor republics gave prompt assurances of their firm support in the event of complications with Germany over the incident. Berlin then dropped the issue by releasing the Bolivians held in Europe.

Closer U.S.-Bolivian Ties. These developments helped to speed Bolivian-United States collaboration. The Bolivian Government on September 4 engaged a U.S. military aviation mission for three years. It reached La Paz November 26. The contract of the Italian military mission was cancelled, effective December 31. On August 1 the State Department at Washington undertook to send economic experts to Bolivia to assist in framing a comprehensive program for the development of highways, agriculture, and mining. This economic mission, headed by Merwin L. Bohan, began its duties in La Paz on December 17.

Meanwhile on December 6 the United States signed a lease-lend agreement with Bolivia under which the La Paz Government obtained funds for highway construction and for the development of agriculture, mining, and livestock raising. The amount was not made public, but was unofficially reported at from \$10,000,000 to \$15,000,000. This disappointed many Bolivians who hoped that the United States would finance the construction of the long-desired Cochabamba-Santa Cruz railway, the cost of which was placed at \$33,000,000 to \$40,000,000. Earlier in 1941 U.S. Army engineers completed a survey of the railway project and reported that a modern highway roughly paralleling the route could be constructed for \$8,000,000. It was indicated that this alternative would be adopted.

On December 8, the day after Japan attacked the United States, the Bolivian Foreign Minister condemned the Japanese aggression and gave Washington assurances that Bolivia would fulfill its obligations of continental solidarity. On December 10 President Peñaranda issued a decree signed by the entire Cabinet declaring Bolivian solidarity with the United States and with all American countries at war with Japan. The decree stated that Bolivia would not consider as belligerent any American country at war in defense of its rights. It froze Japanese credits in Bolivia and placed Axis nationals under strict supervision. On December 11 German and Italian funds in Bolivia were frozen.

Other Foreign Relations. Bolivia made additional political, economic and cultural accords with the neighboring republics during 1941. The provisional Argentine-Bolivian agreement of Apr. 2, 1940 (see YEAR BOOK for 1940, p. 80) was confirmed in a final accord signed Feb. 10, 1941. In it Argentina undertook to lend Bolivia funds for construction of the first 65 miles (Yacuba to Villa Montes) of the projected railway line from the Argentine frontier to Santa Cruz. The Argentine Government also agreed to lend Bolivia not more than 2,000,000 pesos for the exploitation of new wells in the Sandrita oil zone, and to construct an oil pipeline from the Bolivian wells at Bermejo to Oran or some other point on the North Central Argentine Railway. Two other Argentine-Bolivian agreements signed the same date facilitated mutual tourist travel and fixed their common boundary along part of the Pilcomayo River. An Argentine-Bolivian-Paraguayan accord covered joint utilization of the Pilcomayo. Five Bolivian-Uruguayan agreements on closer economic and cultural collaboration were signed February 7 as an immediate result of the

METHODS OF DEALING WITH INCENDIARY BOMBS

Regional Conference of the Rio de la Plata (q.v.) at Montevideo.

Economic ties with Brazil were tightened with the opening at the end of July of the first section of the Corumbá-Santa Cruz Railway, constructed with Brazilian funds under the convention of Feb. 25, 1938. Construction of other sections of the line progressed. On Jan. 3, 1941, the Bolivian-Brazilian Mixed Commission provided for in the 1938 convention commenced its study of the industrial possibilities of petroleum deposits in the eastern foothills of the Bolivian Andes between the Parapetí and Grande rivers.

The Chilean Foreign Minister visited La Paz during January and on January 16 signed a Bolivian-Chilean nonaggression pact. Other accords concluded at the same time called for establishment of a mixed commission to draw up a new economic convention, and for the exchange of students and professors with each government providing 10 scholarships annually.

Economic Developments. Higher prices and expanded markets for Bolivia's mineral exports in 1941 encouraged the Government to make a new effort to stabilize the currency and check rampant inflation. A decree of June 21 established a single exchange rate of 46 bolivianos to the U.S. dollar (185.15 to the pound sterling), as against the rate of 120 bolivianos to the pound fixed Sept. 8, 1939, and the preceding rate of 80 to the pound. The Central Bank and commercial banks were subsequently required to revalue their gold and foreign exchange holdings at the official exchange rate. The "profit" of 183,583,000 bolivianos accruing to the Central Bank was used in part to redeem two short-term foreign loans (119,501,000 bolivianos) and 25,486,000 bolivianos of internal loans, and in part for exchange stabilization (38,000,000) and for administrative expenses.

The rapid rise in the cost of living continued, creating further political difficulties. The prices of domestic wheat, cotton and barley were raised 40 to 45 per cent in June to keep farm prices in line with other costs. Further price fixing and control regulations were issued July 24. A decree of August 22 authorized salary increases for industrial and commercial employees ranging 5 to 30 per cent higher than those in effect July 1, 1940. To prevent further dislocation of the economic system, all exports except those especially authorized by the Minister of Finance were banned on August 19.

A bill to increase wages of all public and private employees 20 to 40 per cent was held up in the Senate in October after passing the Chamber. When railway workers threatened a nation-wide strike to force passage of the measure, the Government on October 17 called them to the colors and ordered the army to operate the lines if necessary. Declaring this measure unconstitutional, street-car, bus and printing trades workers in La Paz struck to enforce the wage demands. The walkout was ended October 26 when the Government agreed to a 20 per cent wage increase for those groups on strike. The sympathy strikes were ended soon afterward. On October 31 the Chamber approved the Government's handling of the strike, 55 to 22. The next day a new Cabinet was sworn in which included the first civilian Minister of Interior since 1936.

The Bolivian oil monopoly was declared in February to require a loan of at least 30,000,000 bolivianos to place it on a stable financial basis. On March 31 it was authorized to borrow 25,000,000. However the board of directors resigned because of criticism of the gasoline shortage and higher

gasoline prices in the plateau region. A new board was appointed by the Government.

BOMBARDMENT. Compare AIR RAIDS. For **BOMBARDMENT INSURANCE**, see INSURANCE.

BOMBS. There are three types: high explosive, incendiary, and gas bombs.

High explosives are projected from a gun by a propellant of cellulose tri-nitrate (nitrocellulose). Cordite, used extensively by the English, contains a mixture of nitrocellulose and nitroglycerine. In the shell itself there are three compartments. In the nose of the shell is a readily explosive material, a detonator, such as mercury fulminate, lead azid or, lately, pentaerythritol tetranitrate. This use of mercury in detonators places it on the strategic list. The preparation of pentaerythritol tetranitrate requires formaldehyde; in fact, the chief chemical bottleneck this year came from a lack of high pressure equipment for preparing formaldehyde and ammonia for these explosives. The detonator is carefully protected against accidental explosion: there is a pin to be pulled out before the shell is fired, and some shells have a slug which is swung to one side by the centrifugal force of the shell as it twists its way out of the gun. Next, in the shell, is a booster usually trinitro-methyl nitramine (tetryl). Any timing device such as a slow-burning fuse, is located here. The remainder, and bulk of the shell contains a high explosive (H.E.) charge, commonly picric acid, TNT (tri-nitro-toluene), or a mixture of one of these with ammonium nitrate. A 50:50 or 20:80 mixture of TNT: ammonium nitrate called amitol is widely used since it is much cheaper than TNT alone. The high explosive bombs are of two sorts. (1) *Fragmentation shells*, weighing about 30 lb. each and containing 4.5 lb. of TNT shatter into more than a thousand pieces the instant they strike the ground. (2) *Demolition and armor piercing bombs*, weighing 100 to 4,000 lb., are equipped with a time fuse so that they explode about $\frac{1}{40,000}$ th of a second after they hit the ground, giving time to penetrate before exploding.

Incendiaries have been used to dislodge the enemy since ancient times. The Assyrians were acquainted with liquid fire. Greek fire, probably a mixture of petroleum and quicklime, kept the invader from Constantinople for a thousand years, and thereby preserved Greek culture. The high explosives invented at the end of the past century were so superior, that the use of liquid fire ceased, but today the airplane has brought back incendiaries as a major weapon. The following chemicals are used in incendiary bombs.

(1) **Oil bombs**, often containing *sodium*. These are large 250 lb. bombs for shipyards and docks. The oil is often mixed with aluminum stearate soap, to form a jelly, called solid oil. The sodium reacts with water to evolve hydrogen, and the whole catches fire spontaneously.

(2) **Phosphorus**. These may contain solidified phosphorus or white phosphorus dissolved in a solvent and confined between sheets of pyroxylin (cellulose nitrate); the phosphorus ignites upon contact with the air. Phosphorus bombs were reported to be successful in setting fire to the paper-straw houses in Chungking; but since the flame is relatively cool, it does not normally ignite wood. However, ten thousand such "visiting cards" scattered from a

CHEMICAL WARFARE GASES

Physiological Classification	Chemical Warfare Service Symbol	Common or Chemical Name and Formula	Odor in Air	Physical Properties
Lacrymators (Tear gas)	CN	Chloracetophenone $C_6H_5-CO-CH_2Cl$	ripe fruit or floor polish	non-persistent solid
	CNS	CN+PS+ Chloroform	fly paper; sweetish	moderately persistent liquid
	CA	Brombenzyl cyanide $C_6H_5-CH-BrCN$	sour fruit	persistent liquid
Sternutators (Sneeze gases) . . .	DA	Diphenyl chlorarsine $(C_6H_5)_2AsCl$	shoe polish	non-persistent solid
	DM	Adamate; diphenyl- amine chlorarsine	odorless	ditto
	CDA	Diphenyl cyanarsine $(C_6H_5)_2AsCN$	bitter almonds	ditto
Lung Irritants (Choking gases)	Cl	Chlorine, Cl_2	pungent	non-persistent gas
	CG	Phosgene; $COCl_2$	musty-hay	ditto
	PS	Chloroacetin, CCl_2NO_2	sweetish, fly paper	moderately persistent liquid
Vesicants (Blister gases)	HS	Mustard $(C_2H_4Cl)_2S$	garlic; horse-radish	persistent liquid
	M-1	Lewisite $CHCl=CH AsCl_2$	geraniums	ditto
	ED	Ethylchlorarsine	fruit; biting	moderately persistent liquid
Other gases.		Hydrogen sulfide, H_2S Arsine, AsH_3	rotten eggs odorless	non-persistent gas ditto

single airplane over wheat fields and forests could start many fires.

(3) *Thermit*, used chiefly in 1917-18. The thermit bomb is a steel shell filled with black iron hammer scale, from the ingots hammered in the forges, and granulated aluminum. The reaction $3Fe_3O_4 + 8Al \rightarrow 9Fe + 4Al_2O_3$ is highly exothermic; the temperature rises to 3,000° C., at which temperature the molten iron melts through brick and cement. Since the mixture furnishes its own oxygen, it cannot be extinguished by smothering. In fact the entire bomb burns in about one minute, so it is handled like an ordinary fire.

(4) *Magnesium, with a thermit core*. The shell is of Dowmetal (German, *electron*) containing 86 per cent Mg, 13 per cent Al, and the remainder Cu. A detonator ignites black powder; this ignites the thermit core, which in turn ignites the Dowmetal shell. Since magnesium catches fire at its melting point, 651° C., and since the temperature of the burning alloy is 1,300°, the ordinary 2.2 lb. (1 kilogram) bomb melts to a pool of alloy within two minutes. Some of the molten magnesium also vaporizes (B P. 1,100° C) and burns as a gas. These magnesium bombs were used in the devastating raids on London in December, 1940. The Italians used them effectively in 1936 against Ethiopia, throwing them like hand grenades. Russia used them in Finland, mounting them in a rack of 36 bombs, which were scattered upon landing. They were dubbed "Molotov breadbaskets."

Unlike thermit, magnesium burns with oxygen in the air. But it reacts so vigorously with water, $Mg + H_2O \rightarrow MgO + H_2$, liberating hydrogen which in turn explodes, that a stream of water cannot safely be directed against it. It also reacts with CO_2 and N_2 , so that it cannot be "smothered" with a snuffer. The snuffers are used, in England, to hide the light from the burning bomb. Wet sand, asbestos, talc, and other materials containing water physically or chemically bound are similarly dangerous. Dry sand is useful in confining the burning, but does not extinguish the bomb. G-1, a graphite-hydrocarbon mixture marketed by Dow-Pyrene this spring is the only truly effective extinguisher for these bombs; it is sold in kegs of 40 and 250 lb. for factories working with magnesium, sodium, and similarly dangerous materials. Common household protection against a magnesium bomb is to direct a

fine spray, not a stream, of water against the burning pool of magnesium; by this device the bomb is made to burn more fiercely, and is consumed in two minutes; undisturbed it would continue to burn for fifteen minutes. Stirrup pumps, used extensively in England, require three operators: one to refill the bucket from which the pump draws its water, another to work the pump, and a third to creep up to the burning metal and spray it. It is dangerous to approach the bomb during the first minute and a half after it ignites, since the Germans put an explosive charge in some of their magnesium bombs. See FIRE PROTECTION

Gas bombs contain one or more dangerous gases. Some of the more commonly used gases and their characteristics are tabulated above. *The common civilian gas mask gives complete and total protection against all of these poisonous gases, with the exception of the vesicants.*

BOTANY. Polyploidy in Plants. There are various methods for inducing polyploidy—heat, X-rays, colchicine, and other substances. Blakeslee (*Amer. Nat.*) has described the effect of induced polyploidy in plants. In his work, colchicine was the principal reagent employed. The polyploid plants showed increase in the size of the flower, increase in the size of the pollen grains, changes in the shape of the

capsule of *Datura*, and in the forms of the fruits of various Cucurbits. One of the most striking effects is changing sterile hybrids into fertile ones. Emsweller and Ruttle (*Amer. Nat.*) have discussed the value of induced polyploidy in floriculture. Two principal advantages are great increase in the size of flowers and increased fertility, resulting in abundant seed production. Many distinct types of new varieties of ornamental plants have originated in this way. Clausen (*Amer. Nat.*) has reviewed the occurrence of polyploidy in the genus *Nicotiana*, pointing out its value in connection with the tobacco crop. Newcomer (*Jour. Hered.*) induced tetraploids in *Cosmos*, studying the various types of new plants which originated. Naphthalene-acetic acid was effective in producing polyploids in the bean (Derman, *Jour. Hered.*). Irradiation with doses of X-rays induced many types of mutations in field beans (Genter and Brown, *Jour. Hered.*). The application of sulfanilamide to the bean and the onion resulted in the production of polyploid cells, as well as various types of nuclear changes (Traub, *Jour. Hered.*).

Genetics. A study of earliness of flowering in the sweet pea was made by Little and Kanto (*Jour. Hered.*). The early flowering type suddenly appeared several decades ago and made possible new varieties of this plant of horticultural value. These authors found that the lateness of flowering of the original type was dominant to earliness of flowering. Bamford (*Jour. Hered.*) has reported on the complex chromosome number of *Gladiolus* and pointed out the relation of the chromosomes to the successful hybridization of different types. Several species of *Gladiolus* are involved in the origin of horticultural varieties. A detailed analysis of the inheritance of seed-coat colors in the common bean (*Phaseolus vulgaris*) was made by Prakken (*Genetica*).

Prakken found that seven different factors were involved in the production of the various types of seed-coat color. Singleton (*Amer. Nat.*) relates the history of hybrid vigor and its utilization in sweet-corn breeding. Various factors are evidently involved in bringing about the increased yield when distinct strains are crossed. However, no final explanation of the cause of hybrid vigor has been found. Hatcher (*Ann. Bot.*) studied the effect of the removal of flowers on the manifestation of hybrid vigor in tomatoes, and concluded that some specific

effect of hybridity leads to the greater vigor of growth in the hybrids.

The inheritance of disease resistance has been further investigated. Reed (*Amer. Jour. Bot.*) has reported results in the inheritance of resistance to smut in oat hybrids. In some of the hybrids a single factor for resistance was found, while in other crosses two, or even three, distinct factors were involved. The factors for resistance to different physiologic races of the parasite were inherited independently. Stanford and Briggs (*Jour. Agr. Res.*) have made further studies on the resistance to powdery mildew in barley crosses. They record the occurrence of two additional factors, a total of seven now being recognized for mildew resistance in various varieties of barley. Zaumeyer and Harter (*Jour. Agr. Res.*) have investigated the inheritance of resistance to six physiologic races of rust in bean hybrids. In some of the races resistance seems to be due to a single factor. In some of the hybrids resistance appears to be dominant and in others, incompletely so.

Mycology and Plant Pathology. In recent years sexuality in the higher fungi has attracted the attention of a large number of investigators. The diploid condition arises at various points in the life history of the different fungi. Nuclear fusion may follow soon after cell fusion, or be delayed for a long period in development. Buller (*Bot. Rev.*) has reviewed very fully the literature on the diploid cell and diploidization process in plants and animals, with special reference to the higher fungi. The value of the fungi for genetic analysis has been emphasized by Lindegren (*Iowa State Col. Jour. Sci.*). Many of the fungi can be grown in culture and mature progeny obtained in two to three weeks. The cultures may be kept for many months and studied in every stage of development. They can be replanted and grown under different environmental conditions. Further, in the fungi it is usually the haploid generation that is studied, and genetic data may be obtained in which there is no obscuring effect of dominance and recessiveness such as may be found in the diploid generation. The extensive data obtained by a large number of workers is an indication of the value of this type of material for genetic experiments. Keitt and Langford (*Amer. Jour. Bot.*) have investigated the causal organism of apple scab (*Venturia inaequalis*) from the point

of view of genetics. They have studied the cultural characteristics of different strains and isolated cultures from the perfect stage and followed out, in part, the genetic behavior. The authors emphasize that many investigators of genetic problems relating to plant disease resistance have placed the major emphasis on the host. However, the parasite and host are of coordinate importance in determining the disease reaction. Kunkel (*Amer. Jour. Bot.*) has found that the yellows disease of periwinkle plants, due to a virus, could be cured by treatment at 38° to 42° C. for 2 weeks. If the diseased plants were placed in a water bath, a temperature of 40 to 45° for a few hours was sufficient. The cured plants were reinoculated and cured repeatedly.

An excellent summary of the history of plant pathology has been written by E. C. Large (Henry Holt & Co.). The story of the discovery of copper compounds and their modern application, the killing of parasites with heat, and other procedures, are presented. Interesting comments are made on the background of political, economic, and social effects, as well as on the men who made the discoveries. See ENTOMOLOGY, ECONOMIC.

Taxonomy. Goodspeed has written an interesting account of his exploration in South America, *Plant Hunters in the Andes* (Farrar & Rinehart, Inc.). Several expeditions were made, the primary purpose of which was the collection of species of Nicotiana in order to trace out the history of this genus, to which the tobacco belongs. Fernald (*Contrib. Gray Herbarium, Harvard Univ.*) has continued his survey of the flora of Virginia. In his recent publication he has described his explorations, and emphasizes the great additions to a knowledge of Virginia plants due to a century of botanical work. Cutler and Anderson (*Ann. Mo. Bot. Gard.*) have reviewed the genus *Tripsacum*, describing seven species. This genus is important since some species, at least, can be hybridized with maize.

Physiology. Studies continue to be made on the role of various chemical elements in the growth of plants. Many of the maladies of plants may be traced to the absence of traces of boron, copper, and other elements. A very good summary of the effects of these deficiencies, illustrated by colored plates, has been prepared by a group of authors under the title of "Hunger Signs in Crops" (*Amer. Soc. Agron.*). Allard and Garner (*Jour. Agr. Res.*) have studied the reaction of plants to variable ratios of light and darkness. The phenomenon of photoperiodism shows increased complexity as a result of further investigation of the factors involved. Arthur and Harvill (*Contrib. Boyce Thompson Inst.*) determined the influence of low temperature and light on the flowering in *Digitalis purpurea*. A preliminary period of cold treatment brought about a rapid flowering when the plants were returned to a long day and higher temperature. Guthrie (*Contrib. Boyce Thompson Inst.*) found that the rest period of peach buds could be broken by sprays of various compounds, including a-nitronaphthalene. He also found that yeast extracts were effective in breaking the rest period of the buds of the pear. Van Overbeek, Conklin, and Blakeslee (*Amer. Jour. Bot.*) attempted to bring about parthenogenesis by the chemical stimulation of the young ovule, using a large number of chemicals on polyploid strains of *Melandrium dioicum* and *Datura stramonium*, with no specific results in the production of haploids. However, interesting data on the mechanism of the development of fruit, seed, and embryo, were secured. The same authors (*Science*) report on a preliminary study on the growth and development of very young embryos of *Datura* and discovered that

some materials in coconut milk were essential. Hitherto, no one has been successful in growing very young embryos of plants, although mature or nearly mature embryos may readily be grown in culture.

Botanical History. A short history of botany has been written by H. S. Reed (*Chronica Botanica Co.*). While the history of taxonomic botany is presented, great emphasis is placed upon other aspects, such as physiology (including photosynthesis, plant nutrition, the role of mineral elements), geography, cytology, mycology, and plant pathology.

BOWLING. This sport continued to grow in 1941 and casual bowlers were unable to get an alley upon which to perform, despite the Federal report that there was \$729,000,000 worth of bowling equipment—in alleys, balls, etc.—at the end of the year. During the period the receipts of bowling and billiard establishments ran to \$87,450,000, mostly from bowling, and three and a half times as much as the baseball total take. Alleys all over the country were on a twenty-four hour basis, with bowlers using them every chance they got.

The forty-first American Bowling Congress, at St. Paul, Minn., ran for fifty-five days and nights and was witnessed by more than 150,000 spectators, a record. There were twenty-five single totals of better than 700, and 1,952 of better than 600. And there were outstanding achievements when William Haar of Chicago rolled 300, the ninth perfect game in A.B.C. history and William Caskey of Canton, O., rolled 299, the tenth such ever bowled in an A.B.C. event and the second in five-man competition.

Fred Ruff, of Belleville, Ill., won the singles title with 745, and was ninth in the all-events. Harry Kelly, of South Bend, Ind., won the all-events with 2,013 and team honors were taken by the Vogel Brothers five of Forest Park, Ill., with a total of 3,065 pins toppled. The doubles fell to Ray Farness and William Lee of Madison, Wis., when Farness hit 767, highest of the tournament and fifth highest in history. The doubles total was 1,346.

Mrs. Nancy Huff won the singles at the Women's International Bowling Congress at Milwaukee when the Los Angeles kegger rolled 662. The all-events went to Mrs. Sally Twyford of Aurora, Ill., with 1,799, and the doubles to Miss Mary Jane Hogan and Mrs. Jo Pittenger of Los Angeles with 1,155. The Rovick team of Chicago took five-woman honors with 2,662.

BOXING. Joe Louis once again completely dominated the fistic scene in 1941, defending the heavyweight championship, acquired in June 1937 from Jimmy Braddock, seven times, as many as Jack Dempsey and Jack Johnson defended in seven years of clutching the bauble. The great Negro, who late in the year was classified in I-A but was not called to Army duty before the end of the year, first put away Red Burman in New York in January and the next month pulverized Gus Dorazio in Philadelphia. March was devoted to letting ponderous Abe Simon go into the thirteenth round in Detroit, and April saw Louis in St. Louis finally stopping awkward Tony Musto. In May he went to Washington, D.C., where he stopped Buddy Baer, younger brother of the former champion, in seven

rounds, after Buddy had knocked Louis out of the ring in the first, and lost on a technicality. Although thoroughly unconscious on his feet, the official ruling was that Baer had lost by disqualification when his manager, Ancil Hoffman, refused to leave the ring, yelling that Louis had hit Baer after the bell to end the seventh.

In June Louis was put against stylish Billy Conn, who abdicated his light-heavyweight championship to get the lucrative bout, which drew \$451,753, and who was greatly outweighed, 174 to 199½. Conn almost had the Negro out in the twelfth, only to succumb to body blows from earlier rounds and thunderous head punches in the thirteenth. Conn's showing prompted the belief that Louis was slipping, and that the next man to face him, given adequate poundage, would whip him and end an era. The next man was Lou Nova, late in September, after the tired champion had had a deserved rest. Nova was stopped in the final second of the sixth round, and the experts recorded that Louis was better than ever. The chance that Louis might finally be beaten in this nineteenth defense of the title drew 56,549 customers to New York's Polo Grounds, and a gross gate of \$583,771, but the challenger never was in the running.

The light-heavyweight division was finally cleared and the year 1941 ended with Gus Lesnevich, a plodding, unexciting veteran from New Jersey, in command of the purple. Agreement between the warring New York State Athletic Commission and the National Boxing Association came about in May. The N.B.A. had voted Lesnevich champion when he defeated Anton Christoforidis, but New York still called the spot vacated by Conn vacant. Then Lesnevich and New York's challenger, Tami Mauriello, met in New York and Mauriello was beaten on a split decision. Then even the New York commissioners declared Lesnevich champion. Late in the year Lesnevich again trounced the youngster.

The middleweight class was thoroughly muddled through the year by weight—the habit of young men of adding to their avoirdupois as they grow older. Billy Soose, a Penn. State graduate, conquered Ken Overlin for the title, as recognized in New York, early in the year on a highly disputed decision. Meanwhile Tony Zale, a Chicagoan, had taken the N.B.A. version from Al Hostak, the Seattle puncher. Soose then was beaten in an over-the-weight match by Georgie Abrams, stable mate of Overlin, and immediately decided to abandon the throne because of weight difficulty and campaign as a light-heavyweight in the future. Overlin also reported into the heavier ranks, as did Hostak, and late in November Zale and Abrams fought in New York for the undisputed title, with Zale a stylish winner over the Virginian.

Two amazing upsets occurred in the welterweight ranks. The first came in January when Fritzie Zivic knocked out the great Henry Armstrong, once holder of three titles, to cement the title taken on points late in 1940. Zivic was considered a fine fighter and after he belabored Al Davis, and fought a thrilling draw with Lew Jenkins he was surprisingly outpointed in fifteen rounds in Newark in August by Freddie (Red) Cochrane, who had been beaten twenty-two times in other bouts. Cochrane later whipped Jenkins when that Texan was ill, and Zivic was later beaten by young Ray Robinson, a Negro boy who came flashing out of Harlem inside the year to take his place as one of the best fighters in the business. Cochrane meanwhile enlisted in the Navy. Zivic was held to a draw at the close of the year by

Young Kid McCoy, another newcomer, but had a date to meet Robinson again early in the new year, with the winner to get a shot at Cochrane.

Sammy Angott wound up the year undisputed lightweight champion when this N.B.A. champion whipped Jenkins, New York choice, a few days before Christmas. Angott won easily in one of the dullest fights on record. In the featherweight ranks, Pittsburgh Jackie Wilson was recognized in N.B.A. ranks because of two triumphs over Richie Lemos, while the New York solons called Chalky Wright purple wearer. Lou Salca was universally recognized bantamweight boss, although beaten twice in the Philippines by Kui Kong Young and Rush Dalma. Little Dado held sway in the unpopular flyweight division despite late defeats at the hands of Young, a clever Chinese. See NEGROES.

Amateur. Amateur boxing fell off in interest among the participants and among the spectators. The lack of Olympic or International competition was mainly responsible for this as well as the apparent decline of amateur sports since the start of the war, and the rise of professional sports. Sports analysts were at a loss to explain this phenomenon, which also existed during the first World War, when paid performers were much more attended than the amateurs. The University of Idaho took the National Collegiate A.A. team title, with three individual winners, and Syracuse dominated in the East with five individual winners in the Eastern Inter-Collegiate competition. The surprise of the National A.A.U. championships came when three Massachusetts boxers, two from Lowell, accounted for titles.

CASWELL ADAMS.

BRAZIL. A republic of South America, comprising 20 States, the Federal District, and one Territory. Capital, Rio de Janeiro.

Area and Population. Area, 3,285,318 square miles; population, estimated at 45,002,176 in 1940 (30,635,605 at 1920 census). Immigrants in 1940 numbered 33,285 (Portuguese, 13,123; North Americans, 4,937; Argentinians, 3,516; Germans, 1,783; Japanese, 1,471). United States citizens residing in Brazil Jan. 1, 1941, numbered 4,240. There are strong infusions of Negro and Indian blood in the northern States. Estimated populations of the chief cities: Rio de Janeiro, 1,896,998; São Paulo, 1,322,643; Recife (Pernambuco), 529,863; São Salvador (Bahia), 510,102; Porto Alegre, 368,352; Belem (Para), 309,238. Portuguese is the official and principal language, but Italian and German are widely used.

Defense. Military training is compulsory for all males from 21 to 45 years of age, the first year in the ranks and the rest in the reserve. The active army on Jan. 1, 1941, numbered 81,111 officers and men. Trained reserves totaled 290,818, including 32,500 State troops. The army and navy air arms were merged early in 1941 to form an air force of over 100 planes and 3,500 officers and men. The navy consists of 2 battleships and 3 cruisers, all laid down in 1907 but extensively refitted; 16 destroyers and torpedo boats, 3 river monitors, 4 submarines, and 6 minelayers. Brazil has the only yards in Latin America capable of building warships (at Rio de Janeiro). A United States naval mission instructs the navy. In 1938 Brazil contracted for a U.S. military mission; under a new agreement signed Jan. 17, 1941, its personnel was expanded to provide both military and military aviation instructors.

Education and Religion. About 70 per cent of the adult population are illiterate. There are approxi-

mately 2,670,000 pupils enrolled in 36,661 primary schools. In 1936 there were about 450 high schools, 383 domestic schools, 328 normal schools, 874 special schools and 248 superior schools. There is a national university in Rio de Janeiro and three private universities in Porto Alegre, Belo Horizonte and Curitiba. Roman Catholicism is the predominant religion.

Production. Agriculture, stock-raising, and manufacturing are the principal occupations. Brazil ranks first in coffee production, second in cacao, third in sugar and tobacco, and fourth in cotton. Coffee accounted for 32.1 per cent of the value of all exports in 1940 and raw cotton for 16.9 per cent (39.8 and 20.7, respectively, in 1939). Coffee production in 1940 was estimated at 20,850,000 bags (132 lb. each), of which 12,097,584 bags were shipped overseas and 2,816,063 bags were destroyed. Brazil's 1940-41 export quota under the inter-American coffee agreement was 9,300,000 bags. Yields of other leading crops were: Cotton, 2,199,000 bales in 1940-41; sugar, 1,272,405 short tons (estimated) in 1940-41.

Livestock in 1941: 41,872,874 cattle, 23,521,666 swine, 5,850,801 goats, 6,709,310 horses, 4,118,073 asses and mules. In 1940 99,993 metric tons of fresh meats and 47,908 metric tons of canned meats were exported.

Mineral production for 1940 (in metric tons) was: Pig iron, 185,300; steel ingots and castings, 141,000; rolled steel, 135,300; coal, 1,336,300; cement, 743,634, manganese, 217,342 (exports). The 1940 gold output was 140,000 oz.; diamonds, about 20,000 carats. Salt, chrome, monazite and various other minerals are produced. The forests yield rubber (exports, 11,835 metric tons in 1940); carnauba wax (exports, 8,653 metric tons in 1940), oil seeds, and hardwoods. The leading manufacturing industries are cotton weaving, sugar refining, flour milling, meat packing and the fabrication of machinery, paper, textile products, tobacco products. There were more than 60,000 industrial establishments in 1941, powered from 1,200 electric plants with a capacity of more than 1,100,000 kw.

Foreign Trade. Imports in 1940 totaled 4,966,518,000 milreis (5,615,519,000 in 1939); exports, 4,964,149,000 (4,983,632,000). Leading exports in 1940 were (in milreis): Coffee, 1,595,229,000; raw cotton, 837,955,000; fresh meats, 244,336,000; hides and skins, 221,759,000, canned meats, 220,768,000; cacao, 191,759,000; carnauba wax, 169,411,000, castor oil seed, 119,745,000. Imports, in order of value, were machinery and apparatus, wheat, iron and steel products, automobiles, coal and coke, chemicals, other vehicles, gasoline, raw iron and steel. The United States supplied 51.9 per cent of the 1940 imports (33.6 in 1939); Argentina, 10.8 (8.4); Great Britain, 9.4 (9.3). Of the exports, the United States took 42.3 per cent in 1940 (36.2 in 1939); Great Britain, 17.3 (9.6); Argentina, 7.2 (5.5).

Finance. The original budget estimates for 1941 placed receipts at 4,124,546,000 milreis (ordinary, 3,637,043,000; extraordinary, 451,503,000) and expenditures at 4,881,197,000 milreis.

Service on the foreign debt was partially resumed Apr. 1, 1940. This debt was substantially reduced during 1940 to the following totals as of Jan. 1, 1941: 334,185,845 U.S. dollars, 152,816,724 pounds sterling, 229,185,500 gold francs, 518,217,337 French paper francs, and 6,493,100 Dutch florins. The internal funded debt on Jan. 1, 1940, was 5,081,189,000 milreis; floating debt, 2,541,095,000 milreis. U.S. Export-Import Bank loans to Brazil outstanding Mar. 31, 1941, totaled \$13,545,-

000. Commitments for additional credits of \$51,392,000 were outstanding. Average exchange rates of the milreis in 1940 were (in U.S. currency): Official, \$0.06061 (\$0.05942 in 1939); free market, \$0.05053, special free market, \$0.04831; curb, \$0.04668 (\$0.04802 in 1939).

Transportation. Brazil in 1940 had 21,242 miles of railway line, 129,057 miles of highways, and domestic and foreign air services connecting most of the principal cities. New air routes were established during 1940 and 1941, while some old routes were extended. The Italian LATI system continued the weekly service from Rome to Natal, Brazil, begun in 1940. In 1941 the German-controlled Condor Syndicate opened the Terezina-Fortaleza and other new lines over relatively uninhabited regions (see *History*). The 1940 traffic statistics for all commercial air lines in Brazil were: Flights, 7,900, passengers, 70,734; mileage, 4,337,300. A total of 5,244 ships of 16,431,469 registered tons entered Brazilian ports in 1940 as against 6,782 ships of 27,993,941 tons in 1939.

Government. The Constitution of Nov. 10, 1937, provided for the reorganization of Brazil along the lines of a corporative state (see *YEAR BOOK*, 1937, p. 102). Actually President Getulio Vargas continued to rule as a personal dictator. He became provisional President Nov. 3, 1930, after leading a successful military revolt. Under the Constitution of July 16, 1934, he was elected constitutional President the following day for a four-year term. The 1937 Constitution extended his term for six years from 1938. The principal members of his cabinet in 1941 were: Foreign Affairs, Oswaldo Aranha, Interior and Justice, Francisco Campos; Navy, Adm. Aristides Guilhem; War, Gen. Enrico G. Dutra; Finance, Arthur de Souza Costa.

HISTORY

The eleventh year of the Vargas regime passed without any marked change in the President's personal dictatorship. Again no step was taken toward establishing the governmental organs provided for in the 1937 constitution. Nevertheless Vargas's rule appeared to be willingly accepted by most Brazilians. There was little evidence of anti-government political agitation, except for such minor incidents as the arrest of 30 alleged Communists in São Paulo on March 31. Meanwhile the President pressed forward with his nationalistically inspired economic and social reform program. In the international field, his Government moved into closer political, military and economic alignment with the United States.

Collaboration with United States. The spread of the European War made Brazil increasingly dependent upon the United States for defense against a possible German attack from Africa, for armaments and other manufactures not available in Brazil, for markets for Brazil's surplus products, and for capital for the development of Brazilian industries. The United States filled all of these needs, in varying degrees, and in return obtained the use of Brazilian air and naval bases and Brazilian aid short of war when the United States entered the world conflict.

The Brazilian Government's shift from the strict neutrality of preceding years was reflected in January in a curb placed on anti-United States gibes in pro-Axis press organs. The United States in February supported a Brazilian protest to Great Britain over the British seizure of the French ship *Mendoza* on January 18 off the Brazilian coast within the 300-mile inter-American safety zone. In April President Vargas's favorite daughter, Alzira, and

her husband, Commander Ernani do Amaral Peixoto, Governor of the State of Rio de Janeiro, arrived in the United States on a goodwill mission. On June 28 Foreign Minister Aranha announced Brazil's acceptance of Uruguay's proposal not to regard as a belligerent any American nation at war with a non-American nation.

Brazil went beyond Pan American obligations to support the foreign policy of the United States on July 28 when the Foreign Minister stated that his Government would approve U.S. action to prevent the Azores and other Atlantic islands of Portugal from falling into Axis hands. (The visit of an important Portuguese mission to Brazil in August was followed by reports of a Portuguese-United States-Brazilian agreement under which Portugal would place her Atlantic islands under Brazil's protection, with United States support, in the event of an Axis attack upon Portugal.) President Vargas pledged his country to a policy of firm defense of Pan American solidarity against "any aggression from whatever source" in a speech on the 119th anniversary of Brazil's independence (September 7). The tone of this speech contrasted notably with the President's address of June 11, 1940, in which he denounced the "sterile demagoguery of political democracy" and tacitly approved Axis aggressions.

Economic and Military Accords. In line with the foregoing diplomatic trend, Brazil and the United States concluded a series of significant economic and military agreements. On February 8 a Brazilian decree made the export of all strategic raw materials to non-American countries subject to government license. The United States obtained the exclusive right to purchase Brazil's surplus strategic raw materials up to specified maximum amounts for two years through notes exchanged May 14, 1941. The agreement, which went into effect June 13, applied to bauxite, beryl ore, chromite, ferro-nickel, industrial diamonds, manganese ore, mica, quartz crystals, rubber, titanium, and zirconium. These moves cut off valuable shipments of Brazilian materials going directly to the Axis powers or through Japan to Germany.

The United States reciprocated on July 9 when the Office of Production Management gave priority ratings to contracts placed in the United States for the construction of the \$45,000,000 steel mill under construction at Velta Redonda, State of Rio de Janeiro. The mill was to be partly financed by a \$20,000,000 loan granted by the Export-Import Bank in 1940 (see preceding YEAR BOOK).

Early in the year Brazil sent a military mission to the United States to seek other aid in Brazilian rearmament. In May Vice Adm. José Machado de Castro e Silva, Chief of the Naval General Staff, joined other Latin American naval chiefs in a tour of U.S. naval establishments. The Brazilian Navy Dept. announced May 21 that construction of a new naval base at Natal would begin as soon as possible, and on June 15 a Brazilian Embassy official in Washington stated that U.S. credits for the construction of air bases in eastern Brazil were under negotiation. Both the naval and air bases were provided for in an agreement signed in Washington October 1 making large U.S. lend-lease credits of unspecified amount available to Brazil. The United States was to receive Brazilian raw materials in exchange for the loan. It was understood that these bases were to be under Brazilian control but available for the use of United States forces in the event of a war emergency. The lend-lease loan followed credits totaling \$88,397,000 advanced to Brazil by the Export-Import Bank of Washington

during the period from 1938 until June 1, 1941.

Early in July Washington announced that U.S. airmen were using Brazilian airports in flying military planes from the United States to British forces in Africa. On July 26 President Vargas authorized Pan American Airways to construct or improve airfields at eight cities strategically situated along the Brazilian coast from the Amazon River to São Salvador. At the same time Pan American Airways was authorized to operate airlines from Rio de Janeiro to Asunción, Paraguay, and from Rio to Goiania via Bello Horizonte and Patos.

In a speech to army officers on November 10, President Vargas more openly espoused "frank continental solidarity" and declared that Brazil was aligned both politically and militarily with the American democracies. Carrying this policy into effect, Brazil cooperated with the United States in the military measures taken November 24 to protect Surinam (q.v.) against Axis infiltration and sabotage. Immediately afterward it strengthened its garrisons along the Atlantic coast from Surinam to below the hump of eastern Brazil.

Following the Japanese attack upon the United States, President Vargas called his Cabinet in session December 8. It unanimously declared Brazil's "solidarity with the United States, in line with . . . continental obligations." Axis funds in Brazil were frozen December 9. This meant that United States warships and aircraft were permitted to use Brazilian ports and airfields. Axis funds were frozen on December 9, and on December 13 pro-Axis newspapers and news agencies were placed under a special censorship or suspended.

Policy Toward Axis. Earlier in the year, Brazil took other steps designed to curb Axis activities and influence. A decree of January 7 suppressing all foreign-language publications in Brazil, effective in six months, affected mainly pro-Axis publishing enterprises. Forced to close, or change to the Portuguese language, were 37 publications in German, 9 in Italian, 8 in Japanese, and 5 in English. The drive against Nazi propaganda among the Germans of southern Brazil continued. In October a pro-Nazi newspaper was closed and a sports group broken up for violating the nationalization laws. The Government in May refused permission to Air France, now under German control, to resume its air services between Rio de Janeiro and Santiago, Chile, via Buenos Aires. In June the Navy contracted to buy the Air France seaplane base at Natal.

For making an unsanctioned 7-hour flight from Pernambuco on March 27, the Italian Aviation Co. (Ala Litoria) was fined \$1,000 and warned that repetition of the offense would mean expulsion of the company from Brazil. The Government refused a request by the same company for maps of the Brazilian coast and airports over which its transatlantic planes flew, and also turned down the company's petition for the stationing of a mother ship near Fernando Noronha Island on the transatlantic route. With a view to forestalling a possible Axis move, the Government on March 3 ordered Brazilian troops to occupy the barren island of Trinidad, a potentially important mid-ocean air base over 500 miles east of the city of Victoria.

Charges that the German Nazi organization in the State of Rio Grande do Sul was plotting to annex that area to the Reich were made by the State's Secretary of Education, Dr. Coelho de Souza, in Rio de Janeiro on November 12. When the United States entered the war, Brazilian forces in the German-populated districts of the southern States were strengthened. On December 30 it was an-

nounced that a number of persons were killed in a clash between Rio Grande do Sul police and organized Nazis. The clash accompanied raids in numerous towns upon headquarters of underground German organizations, many of which were found to have secreted arms.

In December, also, the Brazilian Government took over 25 Axis merchant ships in Brazilian ports, agreeing to pay compensation after the war. It also permitted North American oil companies to withhold gasoline from the German-controlled Condor air system in Brazil and the Italian transatlantic Lati line. This forced both systems to suspend operations.

Relations with Neighbors. Brazil continued its policy of developing closer political and economic relations with the adjoining republics of South America. Two important commercial conventions were signed with Argentina on April 9. In June President Vargas approved another \$1,500,000 appropriation for construction of the Corumbá-Santa Cruz railway in Bolivia that will link Santos, Brazil, with Santa Cruz and eventually with La Paz and Arica, Chile. The President entered Bolivian territory in July to inspect this joint Bolivian-Brazilian enterprise, while making an extensive tour of Brazil's interior and frontier regions.

From Corumbá, the President flew on July 31 to Asunción, Paraguay. There he signed a treaty providing for the construction at Brazil's expense of a branch railway connecting Campo Grande (on the Brazilian trunk line from Santos to Puerta Esperanza on the Upper Paraguay River) with Concepción in Paraguay (see map on p. 70). The railway treaty was one of 10 conventions for closer commercial and cultural relations drawn up during a visit of the Paraguayan Foreign Minister to Rio de Janeiro in June. The other conventions provided for a free port for Paraguayan imports and exports at Santos, the exemption of local trade between border towns from import duties, regulation and development of navigation on the Upper Paraguay River, establishment of a mixed commission to prepare a treaty of commerce and navigation, the granting of reciprocal credits by the Brazilian and Paraguayan Central Banks to foster trade, the exchange of economic and administrative experts, etc.

Beginning in mid-November, Foreign Minister Aranha made a tour of three South American capitals—Buenos Aires, Santiago, and Montevideo—for conferences believed related to the problem of continental defense. For further details, see ARGENTINA, BOLIVIA, PARAGUAY, and URUGUAY under *History*. Exchange of the first Ministers between Brazil and Canada occurred early in 1941.

Internal Legislation. Among internal measures of a nationalistic character placed in operation during 1941 was the decree-law of April 19 regulating the organization and protection of the family. It contained many new provisions encouraging marriage and large families. A decree of April 14 established a National Sports Council to encourage and control sports. Another decree of April 9 provided that only banks of deposit whose entire capital was owned by Brazilian citizens might operate in Brazil, effective July 1, 1941. This was modified in September to permit banks of deposit owned by nationals of any American country to continue in operation. The local labor courts provided for in the decree of Dec. 12, 1940, went into operation May 1, 1941. Further regulations for the encouragement of agricultural resettlement were issued Feb. 9, 1941. An autonomous Merchant Marine Commission to supervise and control all river, lake, and maritime navigation in Brazil was authorized March

7. On March 19 the Government suspended the granting of temporary visas to foreigners wishing to enter Brazil, except for citizens of American countries and others with adequate means of support.

Economic Conditions. Due largely to increased trade with the United States and other American countries, Brazil remained fairly prosperous in 1941 despite the loss of important export markets in Europe. The Government on February 15 announced that it would finance coffee surpluses for 1941, 1942 and 1943. During the year it placed in operation an experimental plant for the manufacture of plastics and various by-products from surplus coffee. It was hoped this would avert the necessity of burning the annual surplus to maintain prices.

Price rises in foodstuffs and other materials led the President on May 5 to prohibit further increases under pain of heavy jail sentences. A gasoline and fuel oil shortage led in July and August to conservation measures. The worst floods ever recorded in the State of Rio Grande do Sul inflicted great damage to crops and property. The entire business district in Porto Alegre was inundated.

See ARGENTINA, BOLIVIA, CANADA, PARAGUAY, and SPAIN under *History*; CHEMISTRY, INDUSTRIAL; COFFEE; LEND-LEASE ADMINISTRATION; MUSIC, NEWSPAPERS AND MAGAZINES; UNITED STATES under *Latin America*.

BREMEN, State of. See GERMANY under *Area and Population*.

BRETHREN, German Baptist (Dunkers or Dunkards). A religious organization founded in Schwarzenau, Germany, in 1708 by a group of Pietists and established in Germantown, Pa., in 1719 under the leadership of Peter Becker. There are four denominations of Brethren in the United States, the largest and oldest group being the Church of the Brethren, or Conservative Dunkers, with headquarters at Elgin, Ill. For statistics, see RELIGIOUS ORGANIZATIONS.

BRIDGES. Awards in 1941 for "the most beautiful steel bridges" built in 1940 included: (1) for bridges costing more than \$1,000,000, the Susquehanna River highway bridge at Havre de Grace, Md., with two 456-ft. arch spans and several deck truss spans, 7,618 ft. in all; (2) for bridges over \$250,000, the Pennsylvania Turnpike bridge over Dunning Creek, with plate girder spans of 96 and 48 ft.; (3) for bridges less than \$250,000, the suspension span of 360 ft. over Klamath River, California; (4) for movable bridges, the double-leaf bascule of 98 ft. over Navesink River, New Jersey.

Tolls on the Ohio River bridge at Ashland, Ky., having retired the \$904,000 bonds, it was made a free bridge in August. A proposed Mississippi River bridge at Memphis was deferred by the steel priority situation. Two interesting projects combine bridges with long embankments or causeways: (1) to connect Corpus Christi, Texas, with Padre Island, in the bay; (2) to complete and extend the Davis and Gandy concrete trestles and causeways in the Tampa Bay area, Florida, and to build 10 miles farther south a new 10½-mile combination of causeway, bridge, and tunnel.

In the highway system of the United States, about 2,500 bridges are reported inadequate for modern loads and traffic. Some of these were disclosed by failure under army equipment during maneuvers. Since bridge destruction in war seriously hampers advancing troops, military engineers have to provide for rapid restoration of passage, either by independent structures or utilizing the

wreckage. For such work the U.S. Engineer Corps has developed portable pontoon and girder bridges and also a portable cableway span, with trolleys for transporting heavy equipment across streams.

Steel Bridges. An event of 1941 was the opening, in November, of the new 950-ft. steel arch "Rainbow Bridge" at Niagara Falls, replacing the 840-ft. steel arch wrecked by ice in 1938. Two arch ribs carry columns supporting the deck or floor, which is level with the crown of the arch. This floor has two 21-ft. roadways, with 4-ft. separating strip, and a 10-ft. walk on the side facing the Falls. With concrete arch approaches the total length of bridge is 1,450 ft.

A steel arch of 540 ft span carries a four-lane road across the Chesapeake and Delaware Canal at St. Georges, Del., at 135 ft. above the water. It is a high-level bridge, 4,140 ft long, and takes the place of a low-level vertical-lift drawbridge which was wrecked by a ship in 1939. Next to this ranks a 264-ft. steel arch highway bridge over the Meramec River near St. Louis, Mo. The arch trusses extend beyond the piers to form two flanking spans of 192 ft. In both these bridges, the floor is level with the ends of the arches. A smaller arch bridge carries a road over the Eagle River, near Red Cliff, Colo.

The Pit River double-deck cantilever bridge, in California, to be completed in 1942, carries the double-track line of the Southern Pacific Railway on the lower deck, and a 40-ft. concrete roadway on the upper deck. As parts of the railway and road will be submerged in the reservoir behind the great Shasta Dam, it was necessary to rebuild them outside the limits of the reservoir. The main cantilever span of 630 ft. extends beyond its piers to form two anchor-arm spans of 497 ft., and at each end there are three truss spans of 282 ft., making a total length of 3,500 ft. The two main piers, 360 ft. high, will be submerged to within 25 ft from the top. Similar conditions at the Grand Coulee Dam, on the Columbia River, led the Great Northern Ry to build a bridge having a center span of 608 ft. and two side spans of 266 ft., each composed of a 114-ft. cantilever arm from the main span and a 152-ft. truss extending to the abutment.

The Kentucky River highway bridge being built at Clay's Ferry, Ky., will be the highest in the State, 240 ft. above the water. Its main feature is a truss 1,100 ft long, continuous over three spans of 320, 448, and 320 ft. The longest plate-girder span ever built is a 271-ft. span in the east viaduct approach to the Mam Ave. bridge at Cleveland, Ohio. These long girders are 12 ft. deep at the ends and 16 ft. at the middle.

In a 4-mile high-speed highway approach to the east end of the Brooklyn-Battery tunnel, at New York, is the Gowanus Viaduct, carrying two 34-ft. three-lane roadways, with a 4-ft. separating strip. Steel two-post towers or bents support girders continuous over three spans, but the towers are only 34 ft. wide at top, the 72-ft. cross girders for the deck being cantilevered out on each side. A steel viaduct on the New York, Chicago & St. Louis Railroad at Conneaut, Ohio, built in 1901, was strengthened for heavier engines and train loads by placing new riveted girders and welding additional vertical members on the columns, with additional bracing between the columns. The viaduct is 1,320 ft. long, with alternate spans of 60 and 30 ft.

Suspension Bridges. The wrecking of the 2,800-ft. span of the Tacoma Narrows bridge by a windstorm on Nov. 7, 1940, has led to extended studies of suspension bridge design in relation to aerial forces. In turn, these studies have led to the development

of two new types of suspension bridges, in both of which the cable and stiffening truss on each side of the bridge form the chords of a truss, with the suspenders as the web members.

That the Tacoma Bridge was well designed and well built, but that the influence of aerodynamic forces on so large a bridge was not realized, was the decision of the official investigation. As the bridge was exceptionally narrow and flexible, it was unstable aerodynamically at relatively low wind velocities. The floor was blown away, and the cables and steel towers were too badly damaged to be used in any reconstruction. After considering several tentative designs for a new bridge (including a cantilever bridge with 1,600-ft. main span), the decision was for a suspension bridge of the original span, 2,800 ft., but with towers 498 ft. high, instead of 443 ft., and with its heavy four-lane roadway 180 ft. above the water, instead of 198 ft. in the original bridge.

Strengthening the Ohio River suspension bridge at Steubenville, Ohio (built in 1904), to carry heavier modern loading, was accomplished in 1941 without interrupting traffic. This work included new cable anchorages, suspender cables, stiffening trusses, and floor framing, as well as reinforcement of the steel towers. Special cable anchorages were required for a 550-ft. suspension bridge in Australia, as they were in a soft clay stratum. At one end the anchorages were concrete boxes 46 x 30 ft and 18 ft. deep, buried in the clay; at the other end, the cables were anchored to the end of the steel viaduct approach and to a pier sunk in the clay. A suspension bridge over the Rio Grande River at Mercedes, Texas, was wrecked by a flood on October 27.

Movable Bridges. A bascule bridge of exceptional size and weight is the 245-ft. double-leaf structure now being built at Chicago to cross the Chicago River at State St. Its width will include two four-lane 41-ft. separated roadways and two 13-ft. sidewalks. Special foundations were required, as the State Street rapid-transit subway is directly under the bridge. Concrete piers on each side of the tunnel were sunk to rock at 110 ft. below water level, and upon these were placed massive steel trusses which span above the tunnel and carry the trunnion bearings of the movable leaves.

A cable-operated vertical-lift drawbridge of 350 ft. span, riding between towers 200 ft. high, carries the new Main Street bridge over the St. John's River at Jacksonville, Florida, giving 135 ft. clearance for navigation. The total length of bridge is 2,060 ft. A single-track vertical-lift drawbridge 245 ft. long, carrying the Kansas City Southern Railway over the Neches River at Beaumont, Texas, was opened to traffic in November. A double-deck vertical-lift span of 224 ft. carries a new bridge over the navigation channel of the Piscataqua River at Portsmouth, N.H. On its steel towers, 208 ft. high, are the cable drums, with electric motors of 100 h.p. The upper deck has a 30-ft. concrete roadway, while the lower deck carries a single-track line of the Boston & Maine Railroad. The bridge in all is 2,800 ft. long. In the highway bridge being built across Sinepuxent Bay at Ocean City, Md., the 70-ft. navigation channel is crossed by a double-leaf bascule span of the rolling-lift type, 94 ft. long. Concrete spans for the approaches give a total length of 2,295 ft. to this bridge, which is to be completed by the summer of 1942. The replacement of a low-level bridge with draw span, over the Chesapeake and Delaware Canal, by a high-level bridge which requires no such span, has been mentioned already.

The longest double-leaf bascule bridge ever built, 336 ft., crossing the canal approach to the locks at Sault Sainte Marie, Mich., met with an accident on October 7. When the two leaves or halves are lowered for railway traffic they are locked together mechanically to form a single truss span. But in some unexplained way this connection failed, so that as the locomotive of a southbound train reached the middle of the bridge the north leaf dropped, hinging on its bearings. The engine went down and two men were drowned. After the train had been removed, both leaves were raised October 8, and the canal was reopened for navigation on October 10. A little later the bridge was repaired and put in service so that railway traffic was resumed.

Concrete Bridges. Of the numerous concrete bridges built in 1941, most were for highways and many for grade separation projects, the latter including separation of intersecting highways as well as intersections of highways with railways. Architectural treatment is usually a feature of these concrete highway bridges, since attractive appearance is highly desirable in bridges which are continually in view of the traveling public. Many grade-separation bridges are of complicated design in providing connections between the highways at the upper and lower levels. A striking example (completed in 1940) is the east approach to the George Washington Bridge over the Hudson River at New York. As shown in the accompanying view, it consists of a series of concrete arch viaducts connecting with streets at different levels and in different directions.

An outstanding concrete bridge of 1941 is that carrying the Missouri Pacific Railway across the Morganza floodway, near Lottie, La. Its length of 3½ miles is composed of 600 spans of T-beam type, 31 ft. 3 in. between centers of piers, which are of open design and 27 ft high. A concrete arch bridge of 492 ft. span has been built at Berne, Switzerland, to carry a four-track railway in the reconstructed approach to the main passenger station.

Timber Bridges. Timber is used extensively for bridges and trestles of the smaller class, both highway and railway, but occasionally for larger structures. An example of the latter is a high trestle on a forest railway in Washington, having a length of 1,130 ft., with its track 235 ft. above the water. The stream is spanned by a timber arch of 120 ft. span and 60 ft. height, supporting the trestle above it. All the timbers were creosoted, and were cut and bored in advance, so as to be put together with a minimum of carpenter work. For timber highway bridges and trestles, extensive use is being made of a floor construction in which a concrete slab is bonded to or made an integral part of the solid timber deck upon which it is laid.

Foreign Bridges. A few foreign bridges have been noted above, but in Europe the war has involved the damage and destruction of innumerable bridges. This in turn has led to much ingenious work to restore communications rapidly by emergency methods. A report, contrary to rumor, is that little damage has been done to the numerous Thames River bridges at London. A combined highway and railway bridge is proposed to cross the Danube at Harsova, Rumania, about midway between the bridge at Chernavoda and Galatz, near the mouth of the river. Obviously, this must be a post-war project. War destruction of many railway bridges over large rivers in Europe suggests the temporary use of car ferries when traffic can be resumed.

BRIDGES CASE. See COMMUNISM; LAW under *Other Causes Célebres*; UNITED STATES.

BRITISH CAMEROONS. See CAMEROONS, BRITISH.

BRITISH COLUMBIA. A Canadian province on the Pacific coast. Area, 366,255 square miles, including 6,976 square miles of fresh water. Population (1941 census), 809,203, compared with (1931 census) 694,263. Chief cities (1941 census figures): Victoria, capital (42,907), Vancouver (271,597), New Westminster (21,602), Trail (9,132), North Vancouver (8,844), Prince Rupert (6,656), Nanaimo (6,583), Kamloops (5,847), Nelson (5,758), Vernon (5,099), Kelowna (5,047), Port Alberni (4,547). Vital statistics (1940): 13,763 living births, 8,291 deaths, 9,624 marriages. Education (1938-39): 173,981 students enrolled in schools and colleges.

Production. The 1940 gross value of agricultural production was \$47,019,000 (field crops \$14,421,000, dairy products \$11,245,000, fruit and vegetables \$10,045,000, farm animals \$5,553,000, poultry products \$5,031,000). Wheat (1,999,000 bu.), oats (5,912,000 bu.), potatoes (122,000 tons), turnips, etc. (61,600 tons), hay (490,000 tons), fodder corn (71,000 tons), gram hay (116,000 tons) were the main field crops. Apple crop (1940): 1,790,000 hbl. worth \$4,296,000. Livestock (1940): 327,200 cattle, 174,000 sheep, 85,100 swine, 4,819,600 poultry. Fur output (1938-39): 251,258 pelts valued at \$1,116,968. Value of forestry products (1939): \$56,140,000. Fisheries catch (1940): 295,345 tons worth (as marketed) \$21,710,000 (salmon \$13,757,100, herring \$4,426,400, halibut \$1,571,000, pilchards \$632,400). In 1941 approximately 2,245,700 cases of salmon were packed. Mineral output (1940) was valued at \$75,352,750 (gold, 617,011 fine oz. valued at \$23,250,019, coal, 1,620,894 tons). Manufacturing (1939). 1,710 factories, 42,554 employees, \$103,263,293 net value of products.

Government. Finance (year ended Mar. 31, 1940): \$36,417,312 for revenue and \$33,037,276 for expenditure, net funded debt, \$150,991,508. The executive power is vested in a lieutenant governor who is advised by a ministry of the legislative assembly, the latter consisting of 48 members elected for a five-year term by adult suffrage (21 Liberals, 14 Cooperative Commonwealth Federationists, 12 Conservatives, and 1 Laborite were elected at the provincial general election of Oct. 21, 1941). Six senators (appointed for life) and 16 elected commoners represent British Columbia in the Federal parliament at Ottawa. Lieutenant Governor, W. C. Woodward; Premier, John Hart (Liberal) who succeeded T. D. Pattullo as leader of the Liberal party on Dec. 2, 1941.

History. Premier John Hart announced on Dec. 10, 1941, that a coalition government of Liberals and Conservatives had been formed. The cabinet consisting of 5 Liberals and 3 Conservatives was sworn in the same day. In the absence of the Premier from the capital, R. L. Maitland, the Conservative leader, would be acting Premier. Harold Winch, the leader of the Cooperative Commonwealth Federation, stated on Dec. 5, 1941, that his party would not join a coalition. See CANADA.

BRITISH EAST AFRICA. See KENYA, NYASALAND, TANGANYIKA TERRITORY, UGANDA, ZANZIBAR.

BRITISH EMPIRE. The world's largest empire, comprising an area of 13,353,952 square miles and a population of about 500,775,000. It consists of:

5. Self-governing colonies—CEYLON and SOUTHERN RHODESIA.

6. Crown colonies and protectorates—ADEN, BAHAMAS, BARBADOS, BASUTOLAND, BECHUANALAND, BERMUDA, BRITISH GUIANA, BRITISH HONDURAS, BRITISH SOLOMON ISLANDS, BRITISH SOMALILAND, CYPRUS, DOMINICA, FALKLAND ISLANDS, FIJI, GAMBIA, GILBERT AND ELLICE ISLANDS, GIBRALTAR, GOLD COAST, GRENADA, HONG KONG, JAMAICA, KENYA, LEEWARD ISLANDS, MALTA, MAURITIUS, NIGERIA, NORTHERN RHODESIA, NYASALAND, ST. HELENA, ST. LUCIA, ST. VINCENT, SEYCHELLES, SIERRA LEONE, STRAITS SETTLEMENTS, SWAZILAND, TRINIDAD AND TOBAGO, UGANDA, ZANZIBAR.

7. Protectorates of a special nature—BRITISH NORTH BORNEO, BRUNEI, FEDERATED MALAY STATES, SARAWAK, UNFEDERATED MALAY STATES.

8. Mandates held by the United Kingdom—BRITISH CAMEROONS, PALESTINE, TANGANYIKA TERRITORY, TRANS-JORDAN, TOGOLAND (British sphere).

9. Mandates held by Dominions—NAURU (Australia), NEW GUINEA (Australia), SOUTH-WEST AFRICA (Union of South Africa), WESTERN SAMOA (New Zealand)

10. Dependencies of Dominions—LABRADOR (Newfoundland); ASHMORE AND CARTIER ISLANDS, PAPUA, NORFOLK ISLAND, AUSTRALIAN ANTARCTIC TERRITORY (Australia), UNION ISLANDS OF TOKELAU and ROSS DEPENDENCY (New Zealand).

11. Territories held under condominium—ANGLO-EGYPTIAN SUDAN (United Kingdom and Egypt), NEW HEBRIDES (United Kingdom and France), CANTON and ENDERBURY ISLANDS (United Kingdom and United States).

See the separate articles covering most of the above territories except those included in the accompanying table. New Guinea, Papua, Nauru and Norfolk Island are dealt with under AUSTRALIA; British North Borneo, Brunei, Federated Malay States, Sarawak, Straits Settlements and Unfederated Malay States under BRITISH MALAYA, Union Islands under NEW ZEALAND; and Dominica, Grenada, St. Lucia, and St. Vincent under WINDWARD ISLANDS.

Country (Capital)	Sq. mi.	Population	Location
Basutoland (Maseru)	11,716	562,311 ^a	S. Africa
Bechuanaland (Mafeking ^b)	275,000	265,756 ^a	S. Africa
Gilbert & Ellice Is. (Ocean Is.)	216	35,000 ^c	Oceania
Mauritius ^d (Port Louis)	807	415,492 ^c	Indian Oc.
St. Helena ^e (Jamestown)	81	4,633 ^c	S. Atlantic
Seychelles (Victoria)	156	31,486 ^c	Indian Oc.
Solomon Islands (Tulagi)	11,458	94,066 ^c	Oceania
Swaziland (Mbabane)	6,704	156,715 ^c	S. Africa
Tonga ^f (Nukualofa)	385	33,785 ^c	Oceania

^a 1936 census. The total for Basutoland is exclusive of 101,273 absentee natives working in the Union of South Africa at the time of the census. ^b In Cape Province. ^c 1938 estimate. ^d Includes dependent islands (87 sq. mi.; pop., 11,744). ^e Includes the dependent island of Ascension (34 sq. mi., pop., 159); the islands of Tristan da Cunha, Gough, Nightingale, and inaccessible became dependencies of St. Helena on Jan. 12, 1938 / 1938 census. ^f Also known as Friendly Islands.

BRITISH GUIANA. A British colony in northern South America. Area, 89,480 square miles; population (1939 estimate), 341,237, of whom 144,350 were East Indian immigrants. Vital statistics (1939): 9,599 births and 6,728 deaths. Capital, Georgetown, 68,818 inhabitants.

Production and Trade. The area under cultivation in 1939 totaled 172,410 acres, the principal crops being sugar (189,245 tons), rice (40,388 tons), coconuts, coffee, cacao, rubber, citrus fruits, plantains, fibers, and maize. Extending over an area of 78,000 sq. miles, the forests produce such timbers as the greenheart, mora, wallaba, morabukea, kakeralli, and purple heart. Minerals (with 1939 export figures): diamonds (33,351 carats), gold (38,473 oz.), bauxite (the ore of aluminum, 476,013 tons). Livestock (1939): 133,351 cattle, 31,895 sheep, 27,248 swine, 11,346 goats, 7,628 donkeys, and 2,808 horses. Trade (1940) \$14,337,242 (\$10,724,671 in 1939) for imports, owing to the need for keeping certain mineral exports secret, export figures for 1940 are not available (exports were valued at \$14,505,552 in 1939). Chief imports—flour, cotton goods, clothing, and sulphate of iron. Sugar (\$8,134,239), bauxite (\$2,889,368), and gold (\$1,060,616) were the main exports in 1939. Shipping (1939): 3,317 ships totaling 1,901,636 tons entered and cleared.

Communications. In 1940 there were 79 miles of railway, 450 miles of river navigation, 39 miles of canals, 571 miles of roads suitable for motor transport, and 514 miles of trails. Georgetown was a port of call in Pan American Airways' weekly service from Miami, Fla., to Paramaribo, Cayenne, and Para.

Government. Finance (1941 estimates). \$6,670,000 for revenue and \$7,101,000 for expenditure. In 1940 revenue exceeded expenditure by \$200,000. The funded public debt on Dec. 31, 1939, was £4,438,430. The British Guiana (Constitution) Orders in Council of 1938 and 1935 provide for the government of the colony, and for a legislative council of 30 members (the governor as president, 2 ex-officio, 8 nominated official, 5 nominated unofficial, and 14 elected) which is to be dissolved every five years, unless previously dissolved, and a general election held. A governor, aided by an executive council, heads the executive and administrative branch of the government. Governor, Sir Gordon Lethem (succeeded Sir Wilfrid Jackson, August, 1941).

History. The arrangements made in 1940 for the establishment of United States reconnaissance air bases in British Guiana (see YEAR BOOK for 1940, p. 89) were formalized in the Anglo-American treaty signed in London Mar. 27, 1941 (see GREAT BRITAIN under History). Under a lease incorporated in the treaty, the colonial government set aside 2½ square miles of land on the east bank of the Demerara River 25 miles from its mouth for development as a U.S. landplane base. Another tract of 1,400 acres at the mouth of the Essequibo River was leased for 99 years as a seaplane base. The U.S. government undertook not to obstruct navigation on the Demerara and Essequibo Rivers, and to allow the colonial government to quarry stone for public works from the leased areas. Work was begun immediately on the seaplane base, estimated to cost \$1,800,000.

Proposals for constitutional reform, approved by the British Secretary of State for the Colonies, were laid before the legislative council during July, 1941, by the governor. Under the new proposals the legislative council would consist of 21 unofficial members and 3 ex-officio members of the

government; another proposal was that membership in the executive council be not restricted to members of the legislative council. Additional reserve powers for the governor were specified. Recommendations for a wider extension of the franchise were referred for examination to a franchise commission.

United States troops arrived, on July 21, 1941, to garrison the two bases leased from Great Britain. The U.S. air base was named Atkinson Field.

BRITISH HONDURAS. A British colony in Central America. Area, 8,508 square miles; population (Jan. 1, 1940 estimate), 58,759. Vital statistics for 1939 (rate per 1,000): 35.4 births, 18.5 deaths. Capital, Belize, 16,687 inhabitants in 1931. Education (1939): 11,597 students enrolled in primary and secondary schools.

Production and Trade. Mahogany, chicle, bananas, grapefruit, cedar logs, coconuts, and copra were the main products. Forest products represent about 80 per cent of the exports by value Trade (1940): \$2,760,940 for imports and \$3,039,505 for exports (mahogany, chicle, and bananas were the principal items of export. Shipping (1940): 13,659 tons of freight brought in and 50,466 tons taken out. A twice-weekly air service for mails, passengers, and express was in operation to and from San Pedro Sula, Honduras

Government. Finance (1939): \$1,967,662 for revenue and \$1,967,842 for expenditure; public debt (Dec. 31, 1939), \$3,109,364 The control of the government is in the hands of a governor, aided by an executive council. There is a legislative council consisting of the governor as president, 5 official and 8 unofficial members (2 nominated and 6 elected) Governor and Commander-in-Chief, J. A. Hunter (appointed Nov. 18, 1939)

BRITISH MALAYA. The British possessions and dependencies in Malaya, with their areas, latest populations, and capitals, are shown in the accompanying table.

<i>Division (Capital)</i>	<i>Sq mi</i>	<i>Population</i>
British North Borneo (Sandakan)	29,500	299,000 ^a
Brunei (Brunei)	2,226	37,868 ^a
Federated Malay States (Kuala Lumpur)	27,540	1,169,313 ^b
Negeri Sembilan (Seremban)	2,580	290,569
Pahang (Pekan)	13,820	217,121
Perak (Taiping)	7,980	978,638
Selangor (Kuala Lumpur)	3,160	688,185
Sarawak (Kuching)	50,000	600,000 ^c
Straits Settlements (Singapore)	1,356	1,406,120 ^b
Labuan (Victoria)	35	8,872
Malacca (Malacca)	640	232,169
Penang (George Town)	390	411,836
Singapore (Singapore)	291	765,255
Unfederated Malay States	22,276	1,918,831 ^f
Johore (Johore Bahru)	7,500	778,990
Kedah (Alor Star)	3,680	484,933
Kelantan (Kota Bharu)	5,750	593,983
Perlis (Kangar)	316	56,382
Trengganu (Kuala Trengganu)	5,050	204,543

^a Estimate of 1938 ^b Estimate of June 30, 1940 ^c Includes the Dindings ^d Includes Province Wellesley (280 sq mi; pop 168,318; chief town Butterworth) ^e Includes Christmas Island (60 sq mi; pop 1,300) and Cocos (Keeling) Islands (9 sq mi, pop 1,142). ^f Estimate of June 30, 1939

The combined population of the Federated Malay States, Straits Settlements, and the Unfederated Malay States at the end of 1939 was 5,444,833, including 2,332,058 Chinese, 2,259,331 Malays, 744,283 Indians, 30,319 Europeans (including the military which was later increased), and 19,046 Eurasians. Chief cities: Singapore, 750,805 inhabitants in 1939; George Town, 149,408 (1936); Kuala Lumpur, 138,425; Johore Bahru, 97,634; Ipoh, 64,343 (1937); Malacca, 44,180

(1939); Taiping, 38,719; Seremban, 27,839; Klang, 27,948; Alor Star, 25,000; Kuching, 25,000; Kuala Trengganu, 14,000; Sandakan, 13,826; Brunei, 12,000.

Production. The chief products in 1940 were rubber (603,600 long tons, including that of Brunei, Sarawak, and British North Borneo), tin (domestically mined, 84,750 long tons shipped), copra, rice, palm oil, iron, tea, and pineapples. Other products—sugar, areca nuts, timber, resin, phosphate, manganese, bauxite, scheelite, wolframite, and amang ore. During December, 1940, the area of tapped rubber trees was 1,632,136 acres; the area under rice, the main food crop, 793,340 acres

Trade. Federated Malay States, Straits Settlements, and Unfederated Malay States (1940): \$830,255,000 for imports and \$81,128,169,000 for exports. During 1939 some 766,000 tons of liquid fuel and 488,852 tons of gasoline and benzene were imported. Of these amounts, 224,754 tons of liquid fuel and 356,736 tons of gasoline and benzene were reexported. Exports of Malayan produce to the United States during 1940 were valued at \$591,931,000, an increase of 84 per cent over 1939. Imports from the United States in 1940 totaled \$38,037,000, an increase of 107.8 per cent over 1939. Gross exports of rubber in 1940, including reexports of 234,319 long tons from near-by countries, amounted to 772,767 long tons valued at \$629,598,000 (an advance of 68 per cent by value over 1939). Total exports (1940) of tin, including reexports, amounted to 130,935 long tons. Figures of trade not included in the above totals were: British North Borneo (1940, imports \$9,978,419 and exports \$20,270,502), Brunei (1939, imports \$3,256,768 and exports \$7,858,878), Sarawak (1939, imports \$26,173,420 and exports \$34,379,748).

Communications. An air service between Singapore and San Francisco, by way of Manila, was inaugurated by Pan American Airways on May 10, 1941. Air services to African destinations ending at Durban were resumed during 1941 on the basis of one trip per week in each direction. There are air services between Singapore and the Near East, Singapore and Sydney, Australia, and air-mail facilities to Manila, Philippine Islands, on alternate weeks to connect with Pan American Airways. Roads (1940): 7,873 miles.

Finance. Federated Malay States (1941 estimates, excluding war taxation and expenditure): \$77,500,000 (\$97,000,000 in 1940) for revenue and \$72,000,000 (\$82,000,000) for expenditure. Straits Settlements budget (1941): \$46,294,000 for revenue and \$57,292,000 for expenditure. Unfederated Malay States (actual 1939-40 for Kedah, and Perlis; actual 1939 for Johore, Kelantan, and Trengganu): \$32,741,564 for revenue and \$36,273,936 for expenditure. British North Borneo, Brunei, and Sarawak (actual 1939 figures): \$9,608,752 for revenue and \$7,324,443 for expenditure. The average annual exchange value for the Straits dollar (\$) was \$0.5174 for 1939; \$0.4698, 1940.

Government. The Governor of the Straits Settlements also serves as High Commissioner for the Federated and Unfederated Malay States and Brunei and as Agent for British North Borneo and Sarawak. The Straits Settlements constitute a crown colony; it is administered by the Governor with the aid of executive and legislative councils. The other Malay States are all protectorates with different degrees of British control. British Residents advise the rulers of each of the Federated and Unfederated Malay States. The Federated Malay States have, in

addition, a Federal Council and their policy in Federal matters is coordinated by the High Commissioner through the Federal Secretary. British North Borneo is administered by the British North Borneo Company under a royal charter. The Sultan of Brunei in 1906 agreed to place the administration in the hands of a British Resident. Sarawak has a British hereditary ruler or rajah, Sir Charles Vyner Brooke, but a Special Commissioner represents the Governor of the Straits Settlements. Governor at Singapore in 1941, Sir Shenton Thomas (appointed in 1934).

History. Fevish preparations for the defense of British Malaya against a threatened Japanese attack were carried forward throughout 1941. The Governor and High Commissioner at Singapore repeatedly issued warnings that the war might soon spread to Malaya. Reinforcements were sent to the Malay Peninsula from Australia, India and Great Britain along with military planes and equipment from the United States. Recruiting of Malays was speeded up. Training for civilian defense proceeded simultaneously with the strengthening of military defenses. Extensive mine fields were laid to guard the sea approaches to the Peninsula. Large sections of the eastern coastline, particularly the entrances to the chief Malay rivers emptying into the China Sea, were placed under military control. The progressive restriction of Japanese commercial and economic activities resulted in the virtual elimination of mining, trading, and banking interests worth millions of dollars.

The Japanese threat led to the coordination of British, Dutch, and United States defense preparations in the East Indies. Early in April conferences were held in Manila between Air Chief Marshal Sir Robert Brooke-Popham, commander-in-chief of British forces throughout eastern Asia; Admiral Thomas C Hart, commander of the U.S. Asiatic fleet; Major Gen. Douglas MacArthur, the Philippine Commonwealth's military adviser; Major Gen. George Grunert, commander of the American forces in the Philippines; and Foreign Minister E. N. van Kleffens of the Netherlands. Military and naval chiefs of the Dutch East Indies and Australia participated in later conferences. Plans for joint British-Dutch defense of their East Indian possessions were completed although no formal mutual defense accord was announced.

Under the stress of the war, Singapore, long the commercial center of Southeastern Asia, assumed growing importance as the chief defense bastion and political center of British colonies and Dominions throughout that region. The British Government established its Far Eastern military headquarters there in 1940, and in 1941 established branches of the Ministry of Information and the Ministry of Economic Warfare. Australia during 1941 sent permanent diplomatic and commercial representatives to Singapore. Conferences of British and Dominion diplomats and officials throughout the Far East were held there. Recognition of the development of Singapore as the British sub-capital for the Far East was seen in the dispatch of Alfred Duff Cooper to that city by the British Government in October. He was sent to devise new machinery for the coordination of Empire defense.

In line with this trend toward modernization of British Malaya's political machinery was the decree issued by the White Rajah of Sarawak, Sir Charles Vyner Brooke, on September 24, establishing what was described as a constitutional monarchy for Sarawak. On April 7 Sir Charles had announced the establishment of a legislative council and pronounced his brother, Bertram, heir to the throne.

Imposition of an income tax in the Straits Settlements for the duration of the war, the issuance of new war loans by the Straits Settlements and the Federated Malay States, and the spread of labor difficulties on rubber estates and tin mines were other developments of the year.

Precautionary defense measures were undertaken on Nov. 29, 1941, when troops throughout Malaya were ordered to their stations and guards and patrols with full war equipment were assigned at important points. On Dec. 1, 1941, Sir Shenton Thomas declared a state of emergency and issued a proclamation ordering up military, naval, and air force volunteers for active duty throughout Malaya. War with Japan commenced on Dec. 8, 1941, a brief official announcement from Singapore stating that the Japanese had landed in North Malaya and that "the enemy are being engaged." A report of Dec. 17, 1941, said that a Japanese force had invaded the rich Miri oil fields of Sarawak on the northwest coast of Sarawak, but had found that the oil refinery as well as the installations of both the Miri and Seria oil fields had been completely destroyed by British troops. A report from Singapore, dated Jan. 1, 1942, announced that British troops had withdrawn from Sarawak and had joined the Netherlands forces in Western Borneo. See AUSTRALIA, GREAT BRITAIN, and JAPAN under *History*; TIN; WORLD WAR.

BRITISH NEW GUINEA. Same as Papua. See AUSTRALIA under *Overseas Territories*.

BRITISH NORTH BORNEO. See BRITISH MALAYA.

BRITISH SOLOMON ISLANDS PROTECTORATE. See BRITISH EMPIRE.

BRITISH SOMALILAND. A British protectorate in East Africa, bounded north by the Gulf of Aden and south by Ethiopia and Italian Somaliland. It was captured by the Italians during August of 1940 and recaptured by British Imperial Forces during March of 1941. Area, 68,000 square miles; population (1938 estimate), 350,000, including 2,700 nonnatives. Chief towns: Bebera (capital), Hargeisa, Buraao, Zeila, Erigavo.

Production and Trade. Livestock raising was the main occupation of the people. In 1936 the protectorate had 2,500,000 sheep, 2,000,000 goats, 1,500,000 camels, 30,000 cattle, 2,000 donkeys, and 1,000 horses. The agricultural crops include maize, barley, sorghum, and wheat. Trade (1938): £728,050 for imports and £207,548 for exports. Cotton piece goods, rice, dates, and sugar were the main imports. The chief exports were sheep, goats, skins, myrrh, and frankincense. Shipping (1938): 158,673 tons cleared.

Government. Finance (1938): £206,074 for revenue and £227,341 for expenditure. Free grant-in-aid from British government (1938), £30,000. Previous to the Italian occupation in August of 1940 the protectorate was administered by a governor (with headquarters at Sheikh). Governor and Commander-in-Chief, V. G. Glenday (appointed Mar. 2, 1939).

For the military campaign by which the British recaptured the protectorate in 1941, see WORLD WAR; ITALIAN EAST AFRICA under *History*.

BRITISH SOUTH AFRICA. See SOUTH AFRICA, UNION OF. **BRITISH WEST AFRICA.** See CAMEROONS, BRITISH; *Gambia* under BRITISH EMPIRE, GOLD COAST; NIGERIA; SIERRA LEONE

BRITISH WEST INDIES. The colonial possessions of Great Britain in the West Indies, consisting of

three main groups of islands: (1) Bahamas, (2) Jamaica and adjacent islands, and (3) other islands scattered throughout the Lesser Antilles (Leeward Islands, Windward Islands, Barbados, Trinidad, and Tobago). Bermuda, British Guiana, and British Honduras (q.v.) are excluded. The area and population of the British West Indies, by main island groups, are shown in the accompanying table. The inhabitants are for the most part Negroes.

Island group (Capital)	Sq. mi.	Pop. (1939)
Bahamas (Nassau)	4,404	69,608
Barbados (Bridgetown)	166	195,548
Jamaica & dependencies (Kingston)	4,720	1,185,920
Jamaica (Kingston)	4,450	1,173,646*
Turks & Caicos Is. (Grand Turk)	166	5,300
Cayman Islands (Georgetown)	104	6,976
Leeward Islands ^b (St. John)	423	93,130
Trinidad & Tobago (Port of Spain)	1,980	473,455
Windward Islands ^b (St. George's)	820	208,162
Totals	12,513	2,286,118

* 1938 estimate ^b The island of Dominica (304 sq. mi.; 51,959 inhabitants in 1939) was transferred from the Leeward Islands to the Windward Islands, Jan. 1, 1940.

Agriculture is the main occupation in virtually all of the islands, the chief crops being sugar (exports estimated at 502,086 tons for 1939-40), cacao, coconuts, cotton, citrus fruit, vegetables, and (in Jamaica) bananas. The tourist business, manufacturing for local consumption, and (in Trinidad) the production of petroleum and asphalt are the other leading sources of income. There is no unified governmental system, the island groups listed above constitute separate colonies, each with a governor appointed by the Crown and with varying degrees of popular representation in their legislative bodies. See the separate article on each colony and its main subdivisions.

History. It was announced in the British parliament in London, on Apr. 2, 1941, that the schemes already approved under the Colonial Development and Welfare Act in respect of the British West Indies included road construction and the development of the fishing industry in Antigua, a tick eradication campaign in the Virgin Islands, an expedition to Indo-China to investigate banana diseases on behalf of Jamaica, and witchbroom disease investigation in Trinidad. As a result of a conference of the representatives of the British West Indian governments, held in Kingston, Jamaica, during August, lists were published prohibiting the importation of luxury goods, and setting up quotas for necessities.

BROADCASTING STATIONS. See RADIO, RADIO PROGRAMS.

BROOKINGS INSTITUTION. An organization devoted to public service through research and training in the social sciences. Established in Washington, D.C., in 1927, it maintains as operating units the Institute of Economics, the Institute for Government Research, and a division of training in which only those who have had at least two years of graduate work are accepted as research fellows.

In carrying out its purpose to aid constructively in the development of sound national policies without regard to the special interests of any group, the Institution conducted during 1940 several investigations, some of which dealt with problems of the defense emergency. The resulting studies were published under the following titles: *Nazi Europe and World Trade*, by Cleona Lewis; *Congressional Apportionment*, by Laurence E. Schmeckebier; *Government of Montgomery County, Maryland*; *Air Mail Payment and the Government*, by F. A.

Spencer; *The Presidents and Civil Disorder*, by Bennett M. Rich; *Government in Relation to Agriculture*, by Edwin G. Nourse; *Fundamental Economic Issues in National Defense*, by Harold G. Moulton; *Effects of the Defense Program on Prices, Wages and Profits*, by Jacobstem and Moulton; *A Short War Through American Industrial Superiority*, by Louis Marlio.

The Institution is supported from endowment funds and annual grants from philanthropic foundations. The officers of the board of trustees for 1941-42 were: Chairman, Dwight F. Davis; vice chairman, Dean C. Acheson; president, Harold G. Moulton; treasurer, Henry P. Seidemann; and secretary, Elizabeth H. Wilson. Headquarters are at 722 Jackson Place, Washington, D.C.

BROOKLYN-BATTERY TUNNEL. See TUNNELS.

BROOKLYN INSTITUTE OF ARTS AND SCIENCES. One of America's oldest and largest institutions for informal education, located in Brooklyn, N.Y. Its public activities are conducted at four centers: The Institute at the Academy of Music, the Central Museum, the Children's Museum, and the Botanic Garden. Founded in 1824, the Institute was incorporated in its present form in 1890. Total membership is about 6,000 and is open to everyone.

The Institute at the Academy of Music presents an adult education program annually of concerts, lectures, forums in every major field of the arts and sciences. Approximate attendance at these events for the season 1940-41 was 210,000. The Institute's Museums possess collections in art, ethnology, and natural science. On June 25, 1941, the Art and Photography Classes formerly conducted at the Institute at the Academy of Music were transferred to the Brooklyn Museum to form the new Art School of the Brooklyn Museum. Attendance at both Museums for the year 1941 totaled 820,243. The Institute's Botanic Garden comprises more than 50 acres and plant houses containing tropical and sub-tropical species. Botanic Garden attendance for the year 1941 totaled 1,753,381.

In 1941 the permanent funds of the Institute amounted to \$4,324,206.01 and the funds to meet current expenses, to \$845,845.93. Under a general reorganization plan adopted in April, 1938, James G. McDonald was named president of the Institute, and Edward C. Blum became Chairman of the Board of Trustees. Julius Bloom is associate director of the Institute at the Academy of Music; Laurance P. Roberts, director of the Museums; Mrs. William Lloyd Garrison, 3d, curator-in-chief of the Children's Museum; C. Stuart Gager, director of the Botanic Garden. Executive offices are located in the Academy of Music, 30 Lafayette Avenue, Brooklyn.

BUDGET. See PUBLIC FINANCE, the countries under *Finance*. For **BUDGET MESSAGE**, see UNITED STATES under *Foreign Affairs*.

BUILDING. The building industry in 1941 according to the Supply Priorities and Allocations Board, (SPAB), a Federal agency, reached \$11,000,000,000 exclusive of repairs and remodeling. In a drastic move to conserve critical defense materials the SPAB on October 9th ruled that no new public or private construction projects can be started unless they are essential for defense or the health and

safety of the people. This ruling gave Priority Division of the Office of Production Management practically veto power over public projects voted by Congress, as rivers and harbors, ship canals, highway construction, and power developments. Construction workers in many communities will be effected; an estimate for 1941 indicates that defense construction will account for 44 per cent of all buildings, whereas in 1942 it is estimated to rise to more than 75 per cent. In some defense districts, standardized manufacturing and assembling procedures were followed on dwelling units. Wood was largely used, but occasionally welded steel and concrete were employed. To save defense materials, substitutes were considered; as, for instance, instead of glass, a plastic film. Such a film was used in London to replace glass broken in air raids.

The number of new houses reported by the Federal Housing Administration (q.v.), started in the first ten months of 1941, substantially exceeded the total number constructed under FHA inspection in all of 1940. For the first nine months of 1941 construction of industrial type buildings, as reported by *Engineering News-Record*, reached the record total of \$1,517,645,000 with government owned privately operated plants accounting for \$1,117,483,000 of the volume, and privately owned privately operated plants making up the balance, \$400,162,000. Seven-eighths of the privately operated industrial expansion during the first nine months of 1941 was concentrated in three key defense industries—process (chemical) industries, machine and machined part plants, and aircraft and aircraft engine factories.

Military airports, air bases, hangars, and airport facilities, from figures compiled by *Engineering News-Record* totaled \$254,210,000 for ten months of 1941; shipyard, shipway and dry dock construction under the Naval and Lend-Lease programs amounted to \$199,629,000, and other military construction, such as docks, piers, underground magazines, recreational facilities, etc., reached \$78,213,000. These three classes of Federal work brought direct defense expenditures in the unclassified construction field to \$532,052,000 for the year to November 1st.

The Statistical and Research Division of the F. W. Dodge Corp., New York, prepared the following table on value of total construction contracts in 37 eastern cities. Actual values are given for 1940, and estimated for 1941 and 1942. The figures in the estimates are based on the regular factual construction contract coverage of the F. W. Dodge Corp.; they are in conformity with but not directly comparable to the large over-all estimates

of the U.S. Dept. of Commerce, the Office of Production Management, and other governmental agencies.

Restrictions placed upon non-defense and private construction were reflected in a smaller volume of building permits during November. The total declined sharply from October to the lowest level since February, 1940, while falling below the corresponding 1940 figure for the second successive month. November permit valuations for 215 cities of the United States amounted to \$92,339,054, according to Dun & Bradstreet, Inc., New York. This was 26.0 per cent under October with \$124,745,508, and 9.9 per cent below November, 1940, with \$102,539,657.

Geographical Divisions	Eleven Months		Change P. Ct.
	1941	1940	
New England	\$95,727,249	\$79,660,330	+20.2
Middle At'ic	264,176,343	314,517,337	-16.0
South At'ic	151,807,678	158,434,893	-4.2
East Central	319,614,949	275,635,713	+16.0
South Central	146,709,057	124,112,215	+18.2
West Central	74,085,254	65,353,592	+13.4
Mountain	33,743,441	30,358,155	+11.2
Pacific	283,609,138	201,042,459	+41.1
Total U.S.	\$1,369,473,109	\$1,249,114,694	+9.6
New Y'k City	\$146,451,627	\$207,516,720	-29.4
O'side N.Y.C.	\$1,223,021,482	\$1,041,597,974	+17.4

The cumulative turnover of building permits for the 215 cities for the eleven months of the year continued at a peak for eleven years, totaling \$1,369,473,109. This represented an increase of 9.6 per cent over the \$1,249,114,694 for the corresponding 1940 period. New York dropped 29.4 per cent under 1940 with the sum of \$146,451,627, while the balance of the country, with \$1,223,021,482, for the eleven months, showed a year-to-year gain of 17.4 per cent. (See table above.)

	Eleven Months	
	1941	1940

* Based on 10 months data.

A regional tabulation for the first eleven months of 1941 and 1940 shows all divisions with larger totals than last year, with the exception of the Middle Atlantic and South Atlantic.

Of the twenty leading cities, permit valuations of which are given above, only New York and Houston failed to show improvement over a year ago for the eleven months. San Diego and New Orleans reported a more than three fold rise for the period.

CHAS. H. HUGHES.

BULGARIA. A Balkan monarchy. Capital, Sofia. King in 1941, Boris III, who succeeded to the throne Oct. 3, 1918.

Area and Population. Excluding areas annexed from Greece and Yugoslavia in 1941, but including 2,982 square miles of Southern Dobruja, with a population of 378,344, annexed from Rumania on Sept. 7, 1940, Bulgaria has an area of 42,797 square miles and a population estimated at 6,720,000. Estimated population of Sofia (with suburbs) in 1937: 350,000; of other cities in 1936: Plovdiv (Philippopolis), 125,000; Varna, 75,000; Ruse (Ruschuk), 51,000; Burgas, 30,000.

National Defense. The military restrictions imposed upon Bulgaria by the Treaty of Neuilly in 1919 were removed July 31, 1938. As of November, 1940, there were an estimated 350,000 men under arms, not including the air force of 3,200 men, and 320,000 trained reserves. The defense force was relatively weak in modern armaments, but this deficiency was being made up rapidly with German aid.

Education and Religion. At the 1934 census 20.4 per cent of the males and 42.8 per cent of the females were illiterate. Schools of all classes numbered 7,782, with 1,086,849 students, in 1937-38 (including 5,335 elementary schools with 659,633 pupils). The American College of Sofia was the only one of the six American colleges in the Near East that remained open throughout 1941. It had about 500 students. The 1934 census showed 5,128,890 members of the Orthodox Church of Bulgaria, 821,298 Moslems, 48,398 Jews, 45,704 Roman Catholics, 23,476 Armenian-Gregorians, and 8,371 Protestants.

Production. About four-fifths of the population live by agriculture and fishing. Production of cereals in 1940 was estimated at 3,400,000 metric tons (3,560,000 in 1939); leaf tobacco, 40,000 tons; rose oil, 1,600 kilograms, cotton, about 14,000 tons; beet sugar, 30,000 tons; raw silk, 19,200 tons (1939). Other production was (in metric tons): Lignite, 2,004,000 in 1940, coal, 145,000 in 1938; cement, 194,000 in 1938; salt, 77,000 in 1938.

Foreign Trade. A law of June 1, 1940, established a Foreign Trade Administration to organize and control imports and exports. Including bullion, specie and the exchange premium, imports in 1940 totaled 7,028,400,000 leva (5,197,200,000 in 1939); exports, 7,018,800,000 leva (6,064,800,000). Germany supplied 69.6 per cent of the 1940 imports (65.5 in 1939) and purchased 59.2 per cent of the exports (67.8 in 1939). The leading exports in 1939 were (in 1,000 leva): Tobacco, 2,486,411; fruit, 1,114,103; eggs, 512,062; wheat, 442,505; hides, 168,588; wine, 125,514.

Finance. In 1940 budget receipts and expenditures, including the separate railways budget but exclud-

ing extraordinary credits, amounted to 11,821,612,000 and 11,422,064,000 leva, respectively, compared with 10,216,921,000 and 9,868,715,000 leva in 1939. Budget estimates for 1941, excluding the railways budget, were: Receipts, 10,160,600,000 leva; expenditures, 10,095,922,000. The internal public debt rose from 8,805,000,000 leva on June 30, 1939, to 14,335,000,000 leva on May 31, 1940, while the external debt declined from 12,946,000,000 to 12,612,000,000 leva during the same period. The official exchange rate was 84 leva to \$1.00 in U.S. currency or 1 lev equals \$0.0119.

Transportation. In 1940 Bulgaria had about 2,130 miles of railway lines, all state-owned; 19,605 miles of roads; and airlines connecting with the principal European cities. Railway traffic statistics for 1940 were: Passengers, 12,500,000, freight, 6,400,000 metric tons; receipts, 1,875,000,000 leva. New railway lines of considerable strategic value were under construction in 1941, notably the last link in a new direct route between Sofia and the Black Sea port of Burgas. Freight handled at the Danube and Black Sea ports of Bulgaria in 1939 was estimated at 990,000 metric tons.

Government. The Constitution of 1879 remained suspended from the Georgiev coup d'état of May 19, 1934, through 1941. All political parties were dissolved in 1934 and the formation of new ones was prohibited. King Boris ruled as virtual dictator after overthrowing Premier Georgiev's dictatorship on Jan. 22, 1935. The parliaments elected in March, 1938, and in December, 1939-January, 1940, were deprived of practically all legislative powers. The former political parties were not permitted to present candidates or otherwise participate in the electoral campaigns. Deputies were elected on a personal basis and government manipulation of the electoral machinery produced pro-government majorities (of 140 out of 160 members of the Sobranie in the latter elections). Premier in 1941, Bogdan Philov (appointed Feb. 15, 1940), heading a cabinet composed mostly of independents.

HISTORY

Bulgaria Joins the Axis. The many-sided diplomatic and economic struggle to determine Bulgaria's alignment in the World War ended with a complete German victory on Mar. 1, 1941. Ignoring British, Soviet, Turkish, and Greek efforts to keep Bulgaria neutral, Premier Philov signed the Axis pact of Sept. 27, 1940, at a ceremony in Vienna attended by Reichsfuehrer Hitler. Earlier the same day, German troops crossed the Rumanian frontier and commenced the military occupation of Bulgaria with the assent of the Sofia authorities. On March 2 the government majority in the Sobranie ratified the government's signature of the Axis pact over the vigorous protests of the pro-Soviet opposition minority.

Bulgaria thus formally accepted its role as a German satellite, yielding to mingled threats of invasion, promises of territorial compensation, and economic pressure. It undertook to give any Axis country military and economic assistance if attacked by a previously nonbelligerent power. It placed its territory, airfields, communications systems, and other facilities at the disposal of the German war machine for the subsequent successful attack upon Yugoslavia and Greece. Finally the Bulgarian Government accepted German guidance in reorganizing the Bulgarian economic system as part of Hitler's "new order" in Europe.

Preparations for Occupation. King Boris's decision to take Bulgaria into the Axis apparently was reached during the latter part of 1940. But his

course was not revealed until Germany had completed the necessary military and diplomatic preparations to prevent a violent reaction within Bulgaria or on the part of neighboring anti-Nazi countries. Accompanied by the German Minister in Sofia, Premier Philov visited Vienna "for his health" immediately after issuing a New Year's Day reminder to the Bulgarian people that "God helps him who helps himself." On January 2 government officials in Sofia announced that Bulgaria would be forced to permit German forces to cross its territory if such a demand were made by Berlin.

Following his return to Sofia, Premier Philov on January 12 said that Bulgaria might be forced into the war if German pressure grew stronger, but that in the meantime it would remain strictly neutral, rejecting Communist, Nazi, and Fascist doctrines alike. Moscow on the same day took occasion to deny that it had been asked for or given its consent to German troop movements into Bulgaria. Members of the Philov Cabinet subsequently intensified their indirect campaign to prepare the nation for an alliance with Germany. The Agrarian and Communist minority, on the other hand, waged an active propaganda struggle to align Bulgaria with the Soviet Union through a mutual assistance pact.

The resignation of the pro-Nazi Minister of Agriculture, Ivan Bagrianov, on February 4 was mistakenly construed as a setback to German policy. But in a radio broadcast of February 9, the British Prime Minister announced that "a considerable German army and air force is being built up in Rumania and its forward tentacles have already penetrated Bulgaria with, we must suppose, the acquiescence of the Bulgarian Government." Asserting that German ground personnel "numbering thousands" were occupying Bulgarian airfields, he reminded Bulgaria of the dismemberment that followed its disregard of British warnings not to enter the first World War.

Sofia authorities formally denied Prime Minister Churchill's charges. They asserted that the only Germans in Bulgaria were a few officers and men who had long been training the Bulgarian army to use equipment obtained from the Reich. However foreign correspondents in Sofia and other parts of the country testified to the steady infiltration of German military technicians and soldiers disguised as tourists and business men. On February 13 the Bulgarian Foreign Office admitted that Germany was ready to march an army through Bulgaria to the Greek frontier in order to end the war between Greece and Italy. The Government began to arrest some of the anti-Nazi opposition leaders.

Treaty with Turkey. Another bar to Bulgaria's military collaboration with the Reich was removed on February 17 when Bulgaria and Turkey signed a declaration of friendship and nonaggression. The two governments also agreed "to maintain and further develop mutual confidence in their friendly relations," to develop mutual commerce, and to discourage recriminations by the Bulgarian and Turkish press. This declaration temporarily relieved Bulgarian fears that Turkey would carry out its 1940 threat to enter the war if German troops crossed Bulgaria to attack Greece.

The Turkish Foreign Minister on February 23 repudiated this interpretation of the Turkish-Bulgarian accord. But on February 20 the Sofia Government mobilized workers in the railway and other essential services, and the same day German engineers started to erect pontoon bridges across the Danube from Rumania. Two days later German General Staff officers began to arrive in Sofia in civilian attire. The British Legation on February 24

destroyed its confidential records, while the Bulgarian Government ordered nation-wide blackouts. Three days later the British Minister, George Rendel, threatened that Bulgaria would become "a theater of war" if he was forced to withdraw from Sofia.

German Troops Enter. However Bulgaria's decision was made. At dawn on March 1 German bombers roared over Sofia and landed troops at various airports, while armored columns crossed the Danube pontoon bridges from Rumania and sped southward to take up positions along the Greek and Turkish frontiers. By March 3 the German forces had taken over control of all strategic points throughout the country, while Bulgarian troops were being mobilized to cope with a possible Turkish attack. A wildly cheering government majority in the Sobranie on March 2 authorized a "temporary" German military occupation of Bulgarian military bases. Premier Philov declared that the presence of German troops had not changed Bulgaria's policy of peace, and that her friendship treaties with neighboring states remained unaffected. Repeated acts of sabotage and of hostility toward the Germans indicated that the country was by no means unanimous in approving the occupation.

The Foreign Reaction. The Turkish Government did not carry out its threat to break with Bulgaria and enter the conflict on the British side. The Soviet Government expressed its disapproval of Bulgaria's course in a note of March 3. The note asserted that Bulgaria's policy would extend the sphere of the war and involve Bulgaria in the conflict, and that consequently Moscow could not support Sofia in the application of its pro-Nazi policy.

President Roosevelt on March 3 "froze" Bulgarian credits in the United States. On March 4 Bulgaria broke off diplomatic relations with the exiled governments of Poland, Belgium, and the Netherlands, whose diplomatic representatives had remained at their posts in Sofia. The British Government on March 5 severed diplomatic relations with Bulgaria, pointing out that Bulgaria's agreement with Germany facilitated "the German aim . . . to menace and, if necessary, attack Great Britain's ally, Greece." The British Minister left Sofia with a warning that Bulgaria might suffer like Italy for its capitulation to the Reich. He narrowly escaped death when time bombs exploded in luggage accompanying the British mission upon its arrival in Istanbul on March 11. Two members of the legation staff were mortally wounded and others seriously injured. The Turkish police expressed the conviction that the bombs were planted in the luggage in Sofia by the IMRO, Macedonian terrorist organization, whose members were said to be in German pay.

Bulgaria's Role in War. Following the launching of the German attack upon Yugoslavia and Greece from Bulgarian soil, the British and Yugoslav air forces carried out several raids on Bulgarian centers. Sofia was bombed by the R.A.F. on the nights of April 6 and 13. Bulgarian forces took no part in the fighting in Yugoslavia and Greece, according to a statement by Premier Philov on April 8. However on April 15 Bulgaria broke off diplomatic relations with Yugoslavia in view of "unprovoked" Serb air attacks upon Bulgarian soil. On April 19 Sofia announced that Bulgarian troops were completing the occupation of Greek and Yugoslav Macedonia, conquered by the German armed forces. Later it was announced that Bulgarian forces had replaced German troops in occupation of the Greek territories of Western Thrace, the districts of Florina and Kastoria, and the islands of Samothrace and Thasos.

In all these territories a policy of denationalization and Bulgarianization was introduced, which provoked bloody revolts and deep hatred among Greeks and Macedonian Serbs. There were charges of large-scale Bulgarian atrocities (see GREECE and YUGOSLAVIA under *History*), which were denied in Sofia.

Dispute with Italy. The Bulgarians resented the Italian occupation of the Macedonian towns of Tetovo, Gostivar, and Krushevo in territory promised to Bulgaria by Germany. After King Boris visited Berchtesgaden to discuss this issue with Hitler, the Italians were reported to have withdrawn from the three towns. Delimitation of the new Albanian-Bulgarian frontier was agreed upon by Premier Philov and Foreign Minister Popov during conferences in Rome with Mussolini and other Italian officials on July 21-23. The Bulgarian representatives failed to win Italian consent to Bulgaria's annexation of Salonika, and this issue was put off until the end of the war.

Nonbelligerency Versus Russia. As a result of territorial gains achieved through German military triumphs, Bulgaria gained access to the Aegean Sea, controlled the mouth of the Danube, and acquired substantial new economic resources. Hitler demanded payment for these services in the form of Bulgarian participation in the German attack upon Russia, beginning June 22. King Boris and his Government, knowing the strongly pro-Russian sympathies of the mass of Bulgarians, refused to take the risk.

The pressure from Berlin for Bulgarian assistance in Russia grew severe in September. Bulgaria gave way to the extent of mobilizing its forces and cooperating with the Reich in far-reaching military preparations. On September 11 Moscow accused Bulgaria of serving as a base for German-Italian land, sea, and air attacks upon the Soviet Union. Sofia not only rejected the Soviet protest, but proceeded to ask Turkey for permission to move 13 small "Bulgarian" warships from the Aegean into the Black Sea. The Turks rejected the request. These vessels were reported to have been transferred to the Bulgarian flag by Italy.

Toward the end of September Soviet-Bulgarian relations neared the breaking point, while Germany threatened complete occupation of the kingdom unless Bulgaria entered the war with Russia. Yet the Bulgarian Minister of Interior declared September 24 that the Government did not intend to enter the war. This assurance was repeated by the President of the National Assembly on October 26. Meanwhile Premier Philov on October 15-18 visited Budapest, where plans were laid for further Bulgarian and Hungarian territorial gains at Rumania's expense and for joint resistance to Rumania's revisionist ambitions. At the same time the Sofia authorities joined willingly in German preparations for future invasion of Turkey from bases in Bulgaria.

War with Britain and United States. The Bulgarian Government on November 25 renewed its adherence to the Axis Tripartite Pact for another five years. In accordance with the pact, it followed Germany, Italy, and Japan into war with the United States and Great Britain (December 13). According to the American Minister in Sofia, this action was forced upon Bulgaria by Germany and was popular with neither the people nor Government officials.

Internal Unrest. The Government's stubborn avoidance of war with Russia was attributed to successful anti-Axis risings in Serbia and to widespread disorders provoked by pro-Soviet elements in Bulgaria. The internal disorders developed soon after

the onset of the Russo-German conflict. Despite numerous executions and harsh prison sentences, anti-Government propaganda, espionage, sabotage, and terrorism gained rapid momentum. On October 3 King Boris arrested 300 political prisoners in an effort to check the disorders, but without success.

The growing food shortage and other economic suffering contributed to the mounting discontent and violence. The export of grain was forbidden August 30. On October 10 bread rationing was introduced in Sofia and Philippopolis.

See GERMANY, GREAT BRITAIN, UNION OF SOVIET SOCIALIST REPUBLICS, and YUGOSLAVIA under *History*; FASCISM; WORLD WAR.

BUND, German-American. See FASCISM

BUREAUS, Federal. See under the descriptive word of each title, as CUSTOMS, BUREAU OF.

BURMA. A British dependency. Total area, 261,610 square miles comprising Burma proper, with Chin Hills and Kachin Hills Tracts (192,158 sq. mi.), Shan States (62,335 sq. mi.), and unadministered territory (7,117 sq. mi.). Total population (Dec. 31, 1937, estimate), 15,797,000 compared with (1931 census) 14,667,146 (84.3 per cent Buddhists). Chief cities (1931 populations): Rangoon (capital), 400,415, Mandalay, 147,932, Moulmein, 65,506. Education (1938-39). 8,039 recognized schools and colleges (611,938 students) and 19,020 unrecognized schools (213,295 students)

Production and Trade. The main agricultural products are rice (405,490,000 bu of rough rice in 1940-41), sesamum, maize, jowar (Indian millet), cotton (17,300 met. tons, 1940-41), beans, groundnuts (182,900 met. tons, 1938-39), and rubber (9,600 met. tons, 1940). Teak output from the forest reserves in 1937-38 totaled 283,857 tons. Mineral production (in metric tons)—petroleum (1,116,000 for 1940), tin (4,500, 1938), lead (78,600, 1939), zinc (55,800, 1938), tungsten (3,529, 1938), silver (192 1, 1939), gold, antimony, copper, rubies, and jadeite. Trade (1940): Rs270,350,000 for imports and Rs531,120,000 for exports (rupee averaged \$0 3328 for 1939, \$0.3016, 1940)

Communications. Railways (1939-40): 2,266 route miles (meter gauge); 4,001,000 tons of freight and 18,920,308 passengers were carried. The Burma Road, from the railhead at Lashio to the Chinese border, was China's chief avenue for foreign supplies. As a means of supplementing this important route, a railway (financed by the British government) was under construction in Burma from Lashio to the Chinese frontier where it would link up with the Chinese railway being built from Kunming, capital of Yunnan. Roads (1940). 12,138 miles. Burma's great river, the Irrawaddy, and its navigable tributaries provide an important means of transport for commerce.

Government. Finance (1940-41 estimates): Rs160,306,000 for revenue and Rs164,660,000 for expenditure. Burma was separated from India on Apr. 1, 1937, and has its own constitution and government. Executive power is vested in a governor (appointed by the Crown) who is advised by a council of ministers of not more than 10 members. The governor has control over foreign affairs. Under the constitution the domestic affairs of Burma are administered by a Burman ministry, responsible to a Burman legislature consisting of a senate of 36 members (18 elected by the house of representatives and 18 appointed by the governor) and a house of representatives of 132 members elected on a wide franchise, including women. Large areas

in the northern and eastern hill districts were excluded from the legislature's control and placed under the jurisdiction of the governor. On Mar. 31, 1941, Burma's new national flag—a blue ensign bearing Burma's emblem, a peacock on a golden ground—was hoisted. Governor, Sir Reginald Dorman-Smith (succeeded Sir Archibald Cochrane during May of 1941); Premier, U Maung Saw.

History. Sir Archibald Cochrane, the governor, on Feb. 19, 1941, told both houses of the legislature that Burma was an integral and active part of the British Empire's Far Eastern defense organization under the command of Air Chief Marshal Sir Robert Brooke-Popham, the commander-in-chief in the Far East with headquarters in Singapore. The British government provided funds for the extension of the Burma Railway to the Chinese frontier (see above under *Communications*). On June 18, 1941, notes between the British and Chinese governments on the delimitation of the Burmese-Chinese border were exchanged at Chungking, China. One note defines in detail the frontier line between Burma and the Chinese province of Yunnan, the other defines the area on the Burmese side in which Burma agrees to permit Chinese participation up to 49 per cent in mining enterprises that may be undertaken by British concerns. On June 28, 1941, the draft Indo-Burmese Immigration Agreement was initiated in Rangoon (see *Indian Information*, Sept. 1, 1941; p. 212).

Japan's occupation of southern French Indo-China and the consequent threat to Burma and the Burma Road caused the authorities to increase military equipment of all kinds, to build airfields, bring in Royal Air Force contingents, and to arrange for reinforcements from Malaya, India, and the Near East. The military authorities announced on Aug. 2, 1941, that Burma was prepared for both offensive and defensive action based on the chain of airdromes that were completed along Burma's borders with Thailand, French Indo-China, and China. The transit duty of 1 per cent on United States lease-lend goods sent through Burma to China was abolished on Sept. 3, 1941. Great Britain's offer of compensation for loss of the transit-duty revenue was rejected by the Burmese government. Four prominent Burmese political leaders were arrested on Oct. 14, 1941, charged with violating war and defense regulations.

The Burmese Premier, U Maung Saw, who heads a coalition government representative of all political parties, left for London by airplane on Sept. 22, 1941, to discuss with British officials Burma's part in the war effort of the Empire. A pledge that the British government would help Burma attain dominion status after the war, was announced by L. S. Amery, the British Secretary for Burma, on Nov. 4, 1941. In New York City on Nov. 13, 1941, U Maung Saw expressed disappointment at his failure to achieve dominion status for his country in the British Commonwealth of Nations. He said he would visit Canada, New Zealand, and Australia before returning home.

The war was brought to the territory of Burma when Japan declared war against the United States and Great Britain on Dec. 7, 1941. Japanese aircraft engaged in bombing the airports in various parts of Burma. In the first Japanese air raid on Rangoon, the capital, on Dec. 23, 1941, the number of casualties was 600. Of 80 Japanese bombers and pursuit aircraft which appeared over Rangoon on Dec. 26, 1941, and bombed the Aladon Airfield, 26 were shot down by a squadron of the American Volunteer Group of airmen attached to the Chinese Army. It was reported on Dec. 27, 1941, that Gen.

T. J. Hutton, chief of staff of Britain's India command, had been appointed to head the military forces in Burma, with responsibility for the defense of Burma resting with Gen. Sir Archibald P. Wavell, the commander-in-chief for India. See *WORLD WAR*.

BUSES. See *MOTOR VEHICLES; RAPID TRANSIT*.

BUSINESS REVIEW. The national defense and lease-lend programs dominated business conditions in the United States during 1941. While the year witnessed the establishment of a new high record in the volume of production and trade, more and more restrictions were imposed to divert productive capacity from civilian to war needs. However, many consumer goods industries sold more goods than they ever did before, for the restrictions did not become truly effective until very late in the year.

The index of industrial production of the Board of Governors of the Federal Reserve System rose almost without interruption through the year, from 140 in January to 168 in December. The abnormal conditions in industry produced by the war were illustrated by the fact that the Federal Reserve Board found it necessary to revise its index during the year because automobile and other manufacturing plants were no longer turning out the products for which they were built. Man-hours worked were substituted, therefore, for units of product turned out. Through such revision, the index was made more truly representative of the economy of a nation at war.

The year largely marked a period of transition from a peacetime to a war economy. The most drastic restrictions on civilian goods production were imposed only after the outbreak of war in December, except in such industries as silk manufacturing where supplies of raw materials had been cut off earlier due to the breaking off of economic relations with Japan. It then became apparent that consumer goods plants would have to be converted wholesale to the production of war materials as contractors and sub-contractors. The course of business activity during 1941, and comparisons with previous years, was reflected in the adjusted index of industrial production of the Federal Reserve Board as follows:

INDEX OF INDUSTRIAL PRODUCTION FEDERAL RESERVE BOARD *							
<i>Adjusted for seasonal variations, monthly average 1935-39 = 100</i>

* Revised

National defense expenditures, which amounted to \$569,000,000 in January, rose above \$1,800,000,000 for December. It was not surprising, therefore, that durable goods industries, the chief recipients of armament orders, gained much more rapidly

than non-durable goods manufactures. This may be seen from the following comparison of durable and non-durable goods manufactures, as reflected in indices compiled by the Board of Governors of the Federal Reserve System:

DURABLE AND NON-DURABLE MANUFACTURES

The course of industrial activity may be traced in the table at foot of page, including railroad car loadings and other basic indices:

Restrictions Under the Defense Program. Business was conducted to an increasing extent under restrictions imposed in the interests of the defense program and economic stability during the emergency. Virtually every industry was affected directly or indirectly by these restrictions. The most important of them were concerned with priorities and price controls.

The Division of Priorities of the Office of Production Management (q.v.) issued general regulations requiring all sellers to recognize preference ratings accorded holders of defense contracts and others. These preference ratings varied from AA and A-1a, the highest ratings, to A-10. M-orders were issued at various times during the year, beginning with M-1 relating to aluminum, issued on March 22. These M-orders regulated the distribution of individual commodities into defense and essential civilian channels. P or blanket preference orders were given particular industries to enable the companies in the industry to obtain supplies of strategic materials in preference to other buyers. In addition, individual preference certificates were given holders of defense contracts. L-orders limited production of specified types of consumer goods, such as automobiles, electrical refrigerators, and vacuum cleaners. E-orders covered the distribution of scarce equipment, namely machine and cutting tools.

It was found that so many preference ratings and certificates were issued that they called for larger supplies of some scarce materials than were available. Late in the year, therefore, it was decided to shift the control system gradually from a preference

to an allocations or rationing basis. An important step in that direction was the inauguration of the Production Requirement Plan in December. Under this plan, manufacturers of defense and strategic civilian goods filled out Form PD-25A, estimating their scarce materials requirements for the coming quarter and stating the inventories on hand. Knowing total demands for various purposes, the Priorities Division of OPM could compare them with available supplies and thus assign preference ratings to each manufacturer. At the same time, a revised list of scarce materials subject to this plan was issued as Materials List No. 1. Steel and other individual strategic materials were placed under separate full-fledged allocation plans.

With the outbreak of war, resort to rationing was accelerated. The sale of rubber tires and tubes was halted entirely, since it became doubtful that crude rubber could be imported from the Indies. Limited supplies on hand were rationed very strictly to essential civilian users. Passenger automobile sales at retail also were subjected to very strict rationing immediately after the war began.

Business men were also made subject to a lengthening list of price regulations issued by the Office of Price Administration (q.v.). These orders set ceilings, or maximum prices at which sales could be made. Where they were found unsatisfactory, ceilings were revised. Thus, following a rise in the market quotation of raw cotton due to legislation requiring Government loans of 85 per cent of parity to farmers on basic crops, the ceiling on cotton goods prices was made dependent upon the quotation of the raw material, goods quotations rising or falling by a stated amount for each fluctuation of one-half cent a pound in raw cotton up or down.

Most business concerns found it necessary to appoint one or more employes to specialize in the adjustment of their operations to priority and price rulings.

New Construction. Rapidly expanding employment, rising wages, and record industrial activities stimulated both residential and industrial construction. Private building activity was supplemented by a defense housing program launched by several Government agencies concerned with residential construction, as well as by extensive building of military installations and cantonments. A total of about 650,000 new nonfarm housing units were constructed during the year, which compared with 540,000 units in 1940 and 509,000 in 1929.

Full Government control over building activity was established by the order of the Supply Priorities and Allocations Board (q.v.) of Oct. 9, 1941, restricting nondefense construction to projects essential for the health and safety of the civilian population. With the nation at war, this restriction was

being interpreted more and more strictly at the end of the year. Military and naval construction in 1941 was four times the 1940 level, and fifteen times that of 1939. See CONSTRUCTION INDUSTRY.

Iron and Steel. The iron and steel industry, despite strenuous efforts, did not quite attain full capacity production. Output aggregated approximately 83,000,000 tons, out of total capacity of about 84,000,000 tons. Minor coke and scrap shortages had much to do with preventing the industry from operating at or somewhat above its full rated capacity. With armaments taking, directly and indirectly, at least 35,000,000 tons of steel, the industry had large backlogs of unfilled orders at all times. With the outbreak of war, furthermore, the controversy over whether or not large increases in its productive capacity should be constructed ended. It was apparent that the steel, machinery, and skilled labor required could not be spared from other requirements.

An 11 per cent wage increase went into effect in the spring, to prevent a threatened strike. While the OPA barred price increases, the high level of production kept profits at a relatively high level. See IRON AND STEEL.

Automobiles. The automobile manufacturing industry was the subject of bitter debate early in the year. The manufacturers, OPM officials, and many persons in the Government favored keeping up production of cars as long as possible, on the ground that it was futile to halt operations and throw hundreds of thousands of people out of work at a time when facilities were not on hand to produce armaments. A number of labor leaders agreed with this viewpoint. Some heads of the C.I.O., however, sponsored the "Reuther plan" for converting automobile factories wholesale to armament production, under joint management with labor unions. When the war broke out, advocates of the Reuther plan charged that their earlier contentions had been upheld, and revived demands that organized labor be given full participation in the conduct of the automobile industry.

Motor vehicles were turned out in near-record volume, despite OPM action placing limitations on the number produced in the last half of the year. Automobile and truck production in the United States aggregated 4,820,000 units during 1941, as compared with 4,469,354 vehicles in 1940. Prices were advanced moderately. The majority of the companies in the industry took on contracts for

the manufacture of armaments. General Motors alone was actively engaged, by the end of the year, in the manufacture of aircraft engines, parts for bombers, shells, machine guns, Diesel engines, and naval gun housings, and had completed plans for the manufacture of heavy tanks, its contracts exceeding \$1,500,000,000. With the complete cessation of automobile production ordered for the end of January, 1942, however, the defense contracts held by the corporation were almost tripled within a few weeks after the turn of the year. In common with other automobile manufacturers, General Motors then found it necessary to convert all plants to war orders as far as possible (see MOTOR VEHICLES). Machinery output lagged behind demand (see diagram).

Other Industries. Textile industries operated at virtual capacity throughout the year. Like other industries producing both for the armed forces and consumers, output was limited only by the equipment on hand. Production in a number of consumer goods industries compared with the previous year as follows (see also separate articles on various industries):

PRODUCTION IN LEADING INDUSTRIES

Minerals. Metals were in urgent demand throughout the year, as a result of the war. Virtually all metals were placed under drastic priority restrictions, and supplies were steadily curtailed for non-essential civilian uses. While price ceilings were in effect, arrangements were made to stimulate production by granting higher prices to marginal producers. A plan to pay high premiums for increases in output went into effect shortly after the turn of the year. With the outbreak of war in the Far East, tin supplies were endangered. Imports of strategic metals were increased by heavy government purchases abroad. (For list, see STRATEGIC AND CRITICAL MATERIALS.)

Demand for petroleum advanced steadily through 1941 to new high record levels. Industrial consumption of fuel oil was greatly expanded by the armament program. The Government financed a program to triple the output of 100 octane gasoline to assure adequate supplies of this fuel for the Army and Navy air forces. A shortage of gasoline was feared in the Northeastern states when a number of tankers were turned over to Great Britain in the middle of the year, but many of these vessels were turned back as British shipping losses declined sharply during the latter half year.

Indices of domestic minerals production computed by the Board of Governors of the Federal Reserve System are compared in the above table with those of 1940

Wholesale and Retail Trade. The volume of trade reflected the rise in the national income to record levels under the stimulus given by the defense program. Unemployment dwindled rapidly through the year, wages rose, and farm income and profits also expanded. Monthly income payments as compiled by the Department of Commerce compared as follows month by month in 1940 and 1941.

MONTHLY INCOME PAYMENTS
[Million Dollars]

Months	1940	1941	Months	1940	1941
January	6,093	6,895	July	6,103	7,474

March	5,987	6,977	September	6,467	8,064
April	5,965	6,952	October	6,812	8,255
May	5,689	6,848	November	6,362	7,860
June	6,288	7,690	December	7,534	8,966
			Year	74,690	89,428

The dollar volume of trade was also affected by the rise in the price level. Department store sales for the year were 16 per cent higher than in 1940. The Federal Reserve Board's indices of department store sales and inventories compared as follows, with those of the previous year:

INDICES OF MONTHLY DEPARTMENT STORE SALES AND STOCKS

[1925-26 = 100, adjusted for seasonal variation]

Months	1940		1941	
	Sales	Stocks	Sales	Stocks

December	101	71	111	92
Year . .	94	69	110	83

A wave of forward buying developed in retail trade in the late summer, which produced a sharp bulge in sales at that time. The cutting off of silk imports from Japan, which served to remind consumers that imported products might become unavailable for the period of the war, precipitated stocking of goods by consumers. The effect was especially pronounced in sugar and other imported products. Towards the end of the year, priorities began to affect the course of retail sales to an increasing extent, various goods becoming available only in limited supply. Restrictions on supplies, as well as rising taxes which curtailed buying power of the higher income groups of the population, clouded the outlook for trade at the close of the year, particularly in luxury lines and in communities where there was little defense industry.

Commodity Prices. Commodity prices advanced during 1941 as a result of the record volume of demand and restrictions upon supply produced by the war. The Office of Price Administration set ceilings upon an expanding list of commodity prices, and doubtless succeeded in slowing up the rise in the price level to a large extent. However, political pressure from the farm bloc in Congress accelerated the rise in agricultural prices, Congress passing a law requiring that the Commodity Credit Corporation lend growers 85 per cent of parity on basic crops. Opposition from farmers was also chiefly responsible for the failure of Congress to enact the Emergency Price Control bill, which was pending in the national legislature during the latter months of the year.

Wide differences of opinion over price control policy developed during the year. There was general agreement about the need for some price legislation, since it was apparent that wartime conditions would prevent a free price system from performing its normal function of distributing supplies of goods economically. The Government was going to purchase whatever it needed for national defense and lease-lend, and if it competed with private buyers prices would be bid up sharply, leading to a spiral of inflation and raising the cost of armament correspondingly. Bernard M. Baruch, on the basis of the first World War experience, urged upon Congress an over-all freezing of commodity prices, rents, and wages as of a fixed date, with provision for modifications as required by circumstances. Late in the year, Canada undertook an over-all price and wage freezing with at least initial success. On the other hand, organized labor

Year . .	78.6	87.3	67.7	82.4

was very hostile to any suggestion to freeze wage levels, while other groups favored special treatment for their own prices. Price Administrator Leon Henderson favored a policy of selective and flexible price control, in the belief that the advance in the general price level could thus be retarded and made more gradual, while certain prices would be allowed to rise because of increased costs, the need for stimulating production for war needs, etc. The Secretary of Agriculture wanted higher prices for many farm products to increase output.

The index of wholesale prices of the Bureau of Labor Statistics fluctuated during 1941 as shown in the table at the foot of page 92.

Prices of major commodities at wholesale compared as follows at the end of December with quotations a year earlier:

MAJOR WHOLESALE COMMODITY PRICES
(End of December)

Commodity	1940	1941
Wheat #2, K C, bu	\$0 86½	\$1 27¼
Corn #3, yellow, Chi, bu	04	80
Flour, bbl	5 05	6 70
Pork loins, lb	.15	20
Butter, extra, lb	33¼	34¼
Eggs, frsts, doz.	25	34
Potatoes, white, bag	1 10	2 10
Canned peaches, doz, factory	1.30	1 87½
Sugar, Cuban raw, lb*	.0291	.035
Coffee, Santos, lb.*	075	13¼
Cocoa, Acera, lb*	0532	095
Cotton, Galveston, lb.	097	1700
Print cloths, yard*	05½	083½
Wool, territory, Boston, lb*	1 08	1 17
Silk, raw, lb*	2 57	3 08
Ravon, viscose, lb	53	55
Pig iron, Valley, ton*	24 00	24 00
Steel bars, Pittsburgh, 100 lb*	2.15	2 15
Copper, lb*	.12	.12
Zinc, E St Louis, lb	.07¼	08¼
Lead, lb*	.0555	.059

* Voluntary and OPA ceilings imposed during 1941.

Retail prices, as usual, followed the course of wholesale prices, but lagged behind them. Whereas the wholesale price index of the Bureau of Labor Statistics rose by over 16 per cent during the year, the Bureau's cost of living index advanced by 10 per cent. Far wider advances were registered in prices of many luxury and semi-luxury goods than in the staples included in the index.

Retail price indices compiled by the National Industrial Conference Board fluctuated as follows during 1941, with comparisons with the year before:

INDICES OF RETAIL PRICES

Industrial Earnings. Expansion of sales volume increased profits sharply in most industries early in the year. Despite the imposition of many price ceilings by the Office of Price Administration, the larger volume of business reduced unit costs and so expanded total profits. Sharp tax increases, however, began to take their toll. By and large, profits for the first quarter of the year represented the peak, and higher taxes thereafter flattened out the profits curve. The accompanying chart illustrates how higher taxes became the limiting factor on profits during the year. However, corporate earnings as a whole did register a material rise over the 1940 level.

Board of Governors, Federal Reserve System

INDUSTRIAL EARNINGS AND TAX RESERVES
(122 large corporations)

Industries whose sales were not expanded substantially by the defense program, directly or indirectly, were adversely affected by the rise in taxes. The public utilities were conspicuous in this group, and leading companies in this industry suffered declines in income. A number of consumer goods industries were affected similarly, several of the tobacco companies reporting smaller net earnings after taxes than in the preceding year. The railroads, on the other hand, were in an especially favorable position because they were not as hard hit by higher taxes as other groups, and showed sharply increased earnings despite the substantial wage increase that went into effect during the last four months of the year (see RAILWAYS).

Commercial Failures. The high level of business and rising prices tended to keep the number of commercial failures at moderate levels. The number of failures and the liabilities involved compared as follows with the preceding year:

COMMERCIAL FAILURES • BY DIVISIONS OF INDUSTRY

Industry	Number		Current Liabilities (thousands of dollars)	
	1940	1941	1940	1941
Manuf and Mining	2,455	1,974	66,799	51,243
Wholesale Trade	1,316	1,045	20,405	18,581
Retail Trade	8,495	7,589	58,115	48,934
Construction	760	701	13,311	10,671

Total.....	13,619	11,848	166,684	136,104

* Dun & Bradstreet.

Litigation retarded progress on the reorganization of the many railroad systems that are in bankruptcy and equity receivership. (See RAILWAYS.) Integration and simplification of public utility holding company systems was hampered by the severe decline in market quotations of public utility stocks, which made it progressively more difficult for holding companies to dispose of their holdings of operating company securities in order to raise the cash

required to redeem their own senior securities, bonds, and preferred stocks. With the outbreak of war, it was believed more likely that the Securities & Exchange Commission would refrain from pressing for immediate action to dissolve holding company system which failed to meet its standards for geographical integration and for simplification of intercorporate and capital structures.

World Business Trends. War and preparations for war dominated business conditions on every continent. Throughout occupied Europe and in the Axis countries, living standards deteriorated as productive facilities were turned to producing armaments and synthetic substitutes for strategic materials formerly imported, regardless of cost or operating efficiency. Wholesale malnutrition and starvation were reported in particular from the countries which had resisted Germany, and were looted in consequence. The "New Order" failed to include a plan for the economic rehabilitation of occupied territory. The war in Russia produced property damage on an unexampled stage, in view of the "scorched earth" policy that was applied before retreat.

The British dominions and colonies accelerated the shift in their economies to a war basis, including the establishment of new armament plants and the training of large numbers of men for the armed forces. In Latin America, the production of materials required by the United States and the British empire was expanded, and higher prices were realized for such exports. On the other hand, difficulty was encountered in disposing of many commodities normally sold to continental Europe. The extent to which increased exports to the United States offset the loss of continental European markets may be seen from the fact that Latin American exports to this country were about \$400,000,000 greater in 1941 than in 1939. This was equal to almost 80 per cent of all Latin American exports to continental European countries in the latter year. Furthermore, all exports to the United States were paid for in cash, whereas exports to Germany and several other European countries had been subject to clearing agreements that compelled exporting countries to take in return a limited variety of German goods.

Wartime restrictions on supplies and expansion of currency in circulation raised commodity prices in most countries. This in turn led to increasingly drastic restrictions upon prices and rationing of goods, not only in belligerent nations but also in many neutral countries as well. As in the first World War period, a gradual world-wide inflation of commodity prices was in evidence.

The war also tended to stimulate industrialization in a number of more backward regions. Armament industries were established in Australia, India, and other outlying parts of the British empire. New manufacturing industries were set up in Argentina, Brazil, and other Latin American countries to provide manufactured goods formerly obtained in Europe, and even to take the place of supplies previously purchased in the United States but not available because of defense priorities. In fact, the question of whether Latin American requirements should be given a position of priority along with war and essential civilian needs, to retain Latin American goodwill, received a good deal of attention from United States Government officials and those concerned with foreign trade.

CADMIUM. Cadmium, a by-product of the zinc smelting industry, is used for electroplating and glass manufacture, for plating bearings, as a rust-resisting plating on iron, as an alloy in copper wire, and in plates for locomotive fireboxes and fire extinguishers. There was a huge increase in the demand for cadmium in 1941 to fill defense and military orders. War requirements call for cadmium for submarine batteries, for plating bolts and nuts for aircraft, and plating wire cloth and shoe nails. It was put under export-license control by the Proclamation of March 4, 1941.

Production of primary metallic cadmium increased about 15 per cent in 1941 to 6,840,000 lb. as compared with 5,921,488 lb. in 1940. Total imports were 147,378 lb. up to September, 1941, of which 136,280 lb. came from Canada and 11,098 from the United Kingdom. The only cadmium imports in 1940 were 27,491 lb., which came from Belgium before the German invasion. The price rose from 80¢ to 90¢ a lb. in March, 1941, and remained there throughout the year.

CAFELITE. See **CHEMISTRY, INDUSTRIAL** under **Plastics.**

CALIFORNIA. A Pacific State. Area: 158,693 sq. mi., including 1,890 sq. mi. of inland water, but excluding Pacific coastal waters, 69 sq. mi. Population: (1940 census) 6,907,387. The urban population comprises 71.0 per cent of the total (U.S. average 56.5 per cent); non-white population, 4.5 per cent (U.S. average, 10.2); elderly (65 years and over) 7.9 per cent. California ranks second among the States in area, fifth in population, and 27th in density, with an average of 44.1 persons per sq. mi. The capital is Sacramento with 105,958 inhabitants; largest city, Los Angeles, 1,504,277. There are 58 counties and 59 cities of more than 10,000 inhabitants (see article on **POPULATION** in 1940 **YEAR BOOK**). For statistics on births, deaths, accidents, et cetera, see **VITAL STATISTICS**.

Education. According to Walter E. Morgan, Assistant Superintendent of Public Instruction, there were 1,765,998 pupils (includes junior college grades) enrolled in the public schools of California during the school year 1939-40, 768,156 in elementary schools and 846,393 in secondary schools. Teachers numbered (1937-38) 46,959 and received an annual average salary of \$1,783 (elementary school); \$2,360 (high school). Total expenditures for the year (1939-40) were \$196,537,467. For higher education, see **California** under **UNIVERSITIES.**

Transportation. State highway mileage in 1939, including streets under State control, totaled 13,653, of which 13,273 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 2,810,566; 2,453,958 were

private and commercial automobiles, and 319,701 trucks and tractor trucks. Gross motor-fuel consumption was 1,948,880,000. Net motor-fuel tax receipts were \$51,978,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$27,914,000.

Railways of all classes extended 7,975 miles (Dec. 31, 1939) 2.961 per cent of the total mileage in the United States. Class I steam railways (2,961 miles) reported 25,399,647 tons of revenue freight originating in California in 1940 and 23,157,315 tons terminating in California. There are 182 airports and landing fields in the State (52 lighted fields) and nine seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 2,262 civil aircraft in the State and 9,965 airline transport, commercial, and private pilots (7,857 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 5,832,000, as compared with 5,934,000 acres in 1940. According to the latest census, there are 132,658 farms, valued at \$2,166,452,648, averaging 230 1/2 acres each. Farm population numbered 670,516 or 9.7 per cent of the total. Leading crops with production were: Commercial truck crops, \$98,862,000, oranges, \$87,546,000, 49,284,000 boxes (estimated); hay, \$55,667,000, 4,846,000 tons, grapes, \$53,411,000, 2,411,000 tons, cotton lint, \$35,234,000, 446,000 bales, dry beans, \$26,119,000, 5,139,000 bags, lemons, \$24,057,000, 14,580,000 boxes, peaches, \$23,642,000, 22,252,000 bu; barley, \$18,381,000, 25,529,000 bu; potatoes, \$14,247,000, 20,951,000 bu, walnuts, \$13,409,000, 53,000 tons, dried prunes, \$12,558,000, 182,000 tons, wheat, \$12,006,000, 11,656,000 bu., cottonseed, \$10,408,000, 199,000 tons; rice, \$9,639,000, 9,180,000 bu, apricots, \$9,430,000, 205,000 tons; pears, \$9,043,000, 9,292,000 bu; olives, \$6,622,000, 43,000 tons, flaxseed, \$6,338,000, 3,267,000 bu, gram sorghums, \$6,107,000, 7,020,000 bu.

Manufacturing. According to the latest census (for the year 1939) the total value of manufactured products was \$2,985,028,494. For details, see 1940 YEAR BOOK.

Mineral Production. California ranks third among the States in value of mineral production. Leading products are: Petroleum, 223,881,000 barrels (preliminary figure for 1940) as compared with 224,354,000 barrels valued at \$229,000,000 in 1939; natural gas, 348,361,000 M cubic feet valued at \$91,572,000 (1939); gold, 1,411,800 fine ounces valued at \$49,413,000 in 1941 (1,455,671 fine ounces, \$50,948,485 in 1940); natural gasoline, 607,237,000 gallons, \$35,454,000 (1939); cement, 13,813,362 barrels, \$17,296,522 in 1940 (11,293,989 barrels, \$15,889,395, in 1939); clay products other than pottery and refractories, \$8,304,038 (1939); sand and gravel, 18,913,301 short tons, \$8,988,894 (1940). The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$467,612,196 or 11.04 per cent of the total United States value. See GEOLOGICAL SURVEY.

Trade. According to the 1940 census there were 14,414 wholesale establishments in California, employing 138,278 persons, reporting net sales for 1939 of \$3,840,129,000 and annual pay roll of \$226,304,000. There were 112,428 retail stores with 327,627 employees, reporting sales of \$3,187,809,000 and pay roll of \$383,155,000. Service establishments numbered 51,223 employing 94,602 persons for \$107,247,000 per year, and reporting a business volume amounting to \$328,141,000. The leading business center of the State is Los Angeles

which reported wholesale sales of \$1,285,265,000, retail sales of \$782,842,000, and \$112,999,000 receipts for its service establishments. San Francisco reported sales of \$1,377,614,000 wholesale and \$383,554,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in California was \$193,982,000. Under the Social Security program, financed by Federal funds matching State grants, 156,329 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$37.80 (U.S. average pension, \$21.08); 37,815 dependent children in 15,864 families received average monthly payments of \$47.78 per family (U.S. average, \$32.73); and 7,290 blind persons received \$48.13 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 33,340 and received \$21.61 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 4,761 (\$315,000); NYA student work program, 19,137 (\$187,000); NYA out-of-school work program, 12,370 (\$318,000); WPA, 56,867 (\$4,284,000), other Federal emergency projects, 165 (\$26,000); regular Federal construction projects, 63,231 (\$10,349,000). The Farm Security Administration certified subsistence payments totaling \$85,000 for the month to 5,008 cases.

Legislation. The Legislature convenes in regular session on the first Monday after January first in odd years. It is composed of 40 Senators (16 Democrats and 24 Republicans in 1941) and 80 Representatives (42 Democrats and 38 Republicans). The 54th session adjourned, June 16, without appropriating a cent for unemployment relief for the next two years. It was the longest session in history, except for that of 1939, and more than 4,000 bills were introduced. The following summary of its activities is condensed from *The Sacramento Bee*, June 17, 1941:

The bitter deadlock over demands for abolition of the State Relief Administration continued unbroken when sine die adjournment finally was reached at midnight, sixty hours after the specified time for winding up the session's business. The relief load will fall back on the county governments, without any state money to ease the burden. The anti-SRA contingent, headed by Sen. John Phillips, Republican leader of the movement to shift relief management to the 58 counties, made good on their ultimatum that no dole money would be voted unless liquidation of the SRA was assured. Democratic Governor Olson, who contends some central State agency should supervise relief, was just as adamant in declaring that, if state direction of the dole program were eliminated, he would refuse to sign any bill turning over large appropriations to the counties for relief payments to employable unemployed. His minorities in both houses supported him. Neither side could win and the session ended in a round of recrimination in which each camp blamed the other for the result.

One of the final acts of the assembly was to sustain Governor Olson's veto of the Crittenden proposal which would have permitted distressed building and loan concerns to reorganize under court-approved plans without the consent of the state building and loan commissioner. The national defense drive affected the course of 1941 legislation and produced, directly or indirectly, many of the more significant enactments. Reorganization of the state council of defense falls in that category as do various measures to augment state military facilities and protection of governmental and private preparedness operations from sabotage, espionage, and the activities of subversive groups. The Dillworth anti-spy bill is a case in point. Its avowed purpose is the protection of U.S. Navy operations and secrets from possible foreign espionage agents in the California fishing fleet. The Slater Anti-sabotage Act undertakes to safeguard defense production industrial plants. The Tenney bill calls for the registration of subversive organizations. The Gordon-Rich-Hays hot cargo bill, on which the governor's veto was overridden, prohibits secondary boycotts on services, factories, and commodities during the period of the national emergency.

Aside from the relief issue and the labor-capital squabble over the hot cargo bill, Governor Olson appears to have come out of the session in better shape than he had any reason to anticipate with majorities against him in both houses. Senate-Assembly disagreements over appropriations finally gave him a budget which, exclusive of the unemployment dole question, was cut only \$1,700,000 below his January recommendations. Governor Olson's recommendation that the State tax structure be left unchanged until the treasury general fund deficit has been wiped out also was accepted. The senate sustained his veto of the Ward bill, attempting to cut personal income tax rates in the high brackets. Many of Olson's pet proposals on other subjects failed, however.

Outstanding among other proposals passed this year are Applying the 1939 anti-loan shark regulations and overall limitations on charges to the field of industrial loan companies, reapportionment of California's assembly and congressional districts in line with the 1940 census, the proposed constitutional amendment reorganizing the State board of forestry as a policy agency with fixed terms, the constitutional amendment proposal for annual, sixty-day legislative sessions and annual budgets, a merger of the State immigration and housing division with the State public health department, strengthening the power of law enforcement authorities in the destruction of seized gambling paraphernalia, creating a new State authority charged with the handling of juvenile delinquency problems; prohibiting the sending of uninstruced delegates from California to the political party national conventions; legislation to bring California's laws on old age pensions and the other categorical aids, as well as the employment service, in line with national government regulations to prevent threatened loss of \$45,000,000 in Federal aid money; millions of dollars in special appropriations, including funds for beach erosion control and increases in the State home guard.

Blocked or beaten outright during the session were many important proposals in the mass of legislation offered last January. Public ownership revenue bond legislation to finance local communities and districts in distributing cheap electric power from the Central Valleys Project's Shasta Dam was battled by the Power Trust from start to finish and defeated. So was legislation to regulate professional lobbyists and require public statements of money they spend in Sacramento in connection with lawmaking matters.

At the end of the year, a special war session of the Legislature was still in progress, though in recess until January 12, 1942. Pending were two important measures already passed by the Senate, the California Defense Equipment Act (so-called "little lend-lease" act) and a measure to provide \$1,000,000 for the fire-fighting forces of the State Division of Forestry. The former was designed to provide a fund from which any city, county, district, or other public agency might borrow to finance needed equipment for protection of lives and property; as voted by the Senate, it carried an appropriation of \$5,000,000. Passed and already signed was a law permitting cities and counties to make emergency expenditures of their own for defense purposes.

Finances. Total tax collections in California for the fiscal year ending in June, 1941, were \$368,687,000 (1940: \$330,848,000). Total sales taxes amounted to \$175,984,000, including general sales, \$110,372,000, motor fuel, \$54,365,000, alcoholic beverage, \$11,247,000. Taxes on specific businesses ran to \$23,715,000, general and selective property, \$16,030,000, inheritance, estate, and gift, \$11,939,000, betting, \$3,844,000, and unemployment compensation, \$80,199,000. The net income taxes were \$43,275,000. Cost payments for the operation of general government totaled \$293,753,000 in 1939, the latest year available. (Revenues for the general government for that year were \$372,070,000.) Cost of operation per capita was \$43.53. Total gross debt outstanding in 1941 was \$319,818,000, as compared with \$147,179,000 in 1932.

Officers and Judiciary. The Governor is Culbert L. Olson (Dem.), inaugurated in January, 1939, for a four-year term; Lieutenant Governor, Ellis E. Patterson; Secretary of State, Paul Peek; Attorney General, Earl Warren; State Treasurer, Charles G. Johnson; State Controller, Harry B. Riley; Director of Finance, George Killion. Chief Justice of the

California Supreme Court is Phil S. Gibson; there are six associate members elected by popular vote for 12-year terms.

CAMBODIA. See **FRENCH INDO-CHINA.**

CAMEROONS, British. A territory in West Africa, mandated to Great Britain by the League of Nations. Area, 34,081 square miles. Population (1939), 838,637. Chief products—palm oil, cacao, rubber, bananas. Trade (1939): £225,907 for imports and £424,871 for exports. Finance (1939): £109,264 for revenue and £183,912 for expenditure. Shipping (1939): 510,690 tons entered and cleared the ports of Victoria and Tiko. The territory is attached to various provinces of Nigeria. Administrator, the Governor of Nigeria.

CAMEROUN, French. A territory in western Africa, part of the former German protectorate of Kamerun, mandated to France by the League of Nations in 1922. Area, 162,934 square miles. Population (Jan. 1, 1939), 2,609,000. Capital, Yaounde (20,000 inhabitants). Chief products—groundnuts, maize, palm oil, cacao, gold, diamonds, hides, timber, and ivory. Livestock (1939): 900,000 oxen, 25,000 asses. Communications: 3,105 miles of roads, 314 miles of railways. Trade (1938): 215,212,000 francs for imports and 251,959,000 francs for exports. Budget (1938): 139,439,747 francs for revenue and 118,328,574 francs for expenditure (franc averaged \$0.0288 for 1938).

History. The territory aligned itself with the "Free French" movement late in August of 1940. It was announced on Jan. 21, 1941, that the British government had concluded an economic agreement with General de Gaulle's Council of Defense in which Great Britain undertook to purchase most of the coffee and bananas, and all the cacao, palm kernels and oil, groundnuts, and beniseed from the French Cameroun.

CAMPS, U.S. Army. See **MILITARY PROGRESS** and the topics there referred to.

CANADA. A Dominion of the British Commonwealth of Nations, comprising nine provinces and two territories. (See separate articles on the provinces and territories.) Capital, Ottawa.

Area and Population. The land area, and the census populations of June 1, 1931, and June 1, 1941, are shown by provinces and territories in the accompanying table.

AREA AND POPULATION OF CANADA				
Provinces and territories	Land area, sq miles	Population		
		1931	1941*	
Prince Edward Island	2,184	88,038	93,919	
Nova Scotia	20,743	512,846	573,190

Total	3,466,556	10,376,786	11,419,896	

* Preliminary.

Of the white population in 1931, 5,381,071 were of British origin (English, 2,741,419; Scottish, 1,346,350; Irish, 1,230,808; other, 62,494) and 2,927,990 of French origin.

In 1931, 4,804,728 inhabitants resided in rural districts and 5,572,058 in urban communities. Populations of the chief cities in 1941 (preliminary), with final 1931 figures in parentheses, were: Montreal, without suburbs, 882,398 (818,577); Toronto, 656,930 (631,207); Vancouver, 271,597 (246,593); Winnipeg, 217,994 (218,785); Hamilton, 163,768 (155,547); Ottawa, 149,881 (126,872); Quebec, 147,002 (130,594); Windsor, 103,961 (98,179); Edmonton, 92,404 (79,197); Calgary, 87,264 (83,761); London, 77,043 (71,148), Halifax, 69,326 (59,275); Verdun, 65,927 (60,745); Regina, 57,389 (53,209); Saint John, 50,084 (47,514); Saskatoon, 42,320 (43,291); Victoria, 41,787 (39,082).

Immigration declined from 16,994 arrivals in 1939 to 11,324 in 1940. In the latter total were 4,990 Canadians returned from permanent residence in the United States. During the year ended June 30, 1940, 8,948 persons moved permanently from the United States to Canada and 15,183 from Canada to the United States. Living births in Canada in 1940 numbered 243,835 (21.4 per 1,000); deaths, 110,648 (9.7 per 1,000), marriages, 123,282 (10.8 per 1,000). The birth rate ranged from an average of 25.8 per 1,000 in Quebec to 17.7 in British Columbia.

Education and Religion At the 1931 census, 95.7 per cent of all persons over 10 years could read and write. Of 2,519,114 pupils enrolled in educational institutions in 1938-39, 2,265,061 were in provincially controlled schools, 111,281 in privately controlled schools, 18,752 in Dominion Indian schools, and 124,020 in universities and colleges (48,205 in courses of university standard).

The principal religious groups in Canada at the 1931 census were Roman Catholics, including 186,654 Greek Catholics, 4,285,388, United Church (Methodists, Congregationalists, and Presbyterians), 2,017,375, Anglicans, 1,635,615, Presbyterians (not included in United Church), 870,728, Baptists, 443,341, Lutherans, 394,194; Jewish, 115,614. Of the 2,927,990 Canadians of French origin in 1931, 2,849,096 were Roman Catholics.

Production The estimated gross value of production in 1939 was \$5,821,781,248 and the estimated net value \$3,223,956,573. Of the net value, manufactures accounted for 47.49 per cent, agricultural products 26.24 per cent, mining 12.2, forestry 8.43, construction 5.7, and electric power 4.65. Of the working population, more than 30 per cent were engaged in agriculture, nearly 15 per cent in manufacturing, 8.9 per cent in the chief service industries, and 8.7 per cent in retail trade. The estimated money national income was \$4,784,000,000 (preliminary) for 1940 compared with \$4,409,000,000 for 1939 and \$2,795,000,000 for 1933.

Agriculture. The gross value of agricultural production in 1940 was \$1,235,714,000, of which field crops accounted for \$651,228,000; dairy products, \$240,940,000; farm animals, \$194,913,000; poultry products, \$61,816,000; fruits and vegetables, \$57,358,000; and tobacco, \$10,373,000. Net value of agricultural production was \$886,094,000. The acreage and production of the principal field crops in 1940 and 1941 (estimated) are shown in the accompanying table.

The estimated 1941 production of root and fodder crops, with final 1940 figures in parentheses, was: Potatoes 39,124,000 cwt. (42,300,000); turnips, etc., 34,482,000 cwt. (39,016,000); hay and clover 12,245,000 tons (14,070,000); alfalfa 2,487,000 tons (2,588,000); fodder corn 4,659,000 tons (4,155,000); grain hay 1,416,000 tons (1,916,

^a Preliminary^b Gross farm value.

000), sugar beets 711,700 tons (825,100). The value of all field crops in Canada in 1941 was estimated on Jan. 21, 1942, at \$647,850,000 (\$676,682,000 in 1940). Livestock estimates for June 1, 1941, were: Swine, 5,994,000, sheep, 3,550,000; cattle, 8,907,000; horses, 2,881,000. The wool clip in 1940 was 18,127,000 lb.; butter production, 363,341,000 lb.; cheese, 143,123,400 lb.

Manufacturing. The gross value of industrial production in 1939 was \$3,474,783,528 and the net value \$1,531,051,901. Of the gross value, nonferrous metal smelting and refining accounted for \$262,602,495; primary textiles, \$209,369,551; pulp and paper, \$208,152,295; slaughtering and meat packing, \$185,196,133, butter and cheese, \$122,561,771, automobiles, \$107,463,351, petroleum products, \$104,578,517; flour and feed products, \$101,776,429, sawmill products, \$100,132,597. In 1938 manufacturing establishments numbered 25,200 with 642,016 employees earning salaries and wages of \$705,668,589. The output of central electric stations increased from 14,968 million kilowatt-hours in the first half of 1940 to 15,732 million in the first half of 1941. Production of steel ingots and castings in 1941 was 2,411,887 tons (2,014,172 in 1940), pig iron, 1,365,334 tons (1,168,894 in 1940).

Mining. The value of mineral production rose from \$474,602,059 in 1939 to the record level of \$529,179,434 in 1940. The gold output was 5,322,857 fine oz. valued at \$204,929,995; copper, nickel, lead, and zinc, \$155,839,877; coal, 17,551,326 tons valued at \$54,638,476, asbestos, fluorspar, graphite, magnesitic-dolomite, mica, sulphur, \$18,204,176; natural gas, 35,954,000 M cu. ft., worth \$12,877,515, cement, 7,559,648 bbl., \$11,775,345, sand and gravel, 30,758,961 tons, \$11,664,614; silver, 23,815,715 fine oz., \$9,109,273. The Government withheld details of production and trade in minerals of vital importance in war industries.

The estimated value of production in 1941 was \$533,941,000, divided as follows: Metals, \$393,269,000; fuels, \$83,363,000; nonmetallic minerals, other than fuels, \$31,616,000; structural materials, \$45,693,000. Gold production was 5,322,247 fine oz. valued at \$204,906,000; silver, 20,437,196 fine oz. valued at \$7,813,000.

Forest Products. The capital investment in forest operations in 1939 was estimated at \$198,000,000; employees, 277,240; payroll, \$79,000,000; value of manufactured material cut in Canadian forests, \$157,747,000 (including pulpwood, \$58,303,000; logs and bolts, \$55,685,000; firewood, \$33,058,000).

Fisheries. The value of the 1940 fish catch was \$45,118,000, of which British Columbia contributed \$21,710,000. In order of value, the principal fish caught were salmon, lobster, herring, cod, sardines, and halibut.

Furs. Production of raw furs for the season ended

in June, 1940, was valued at \$16,456,000 (\$14,287,000 in 1938-39). About 35 per cent of the total production came from animals on fur farms. Pelts taken numbered 9,536,000 in 1939-40 and 6,492,000 in 1938-39.

Foreign Trade. Canada's total foreign trade increased from Canadian \$1,686,977,247 in 1939 to \$2,275,168,311 in 1940. Excluding gold, imports in 1940 were \$1,081,950,719 and exports \$1,193,217,592. Exports by leading groups were: Wood, wood products and paper, \$348,006,396; agricultural and vegetable products, \$218,263,811; non-ferrous metals and products, \$194,711,984; animals and animal products, \$164,723,794; iron and its products, \$127,666,846. The United States supplied about 68.8 per cent of all 1940 imports (66.2 in 1939) and took 38 per cent of the exports (41 in 1939); the United Kingdom supplied 14.9 per cent in 1940 (15.2 in 1939) and took 43 per cent (36 in 1939). See TRADE, FOREIGN.

Finance. Budget operations of the Dominion Government for the years 1937-38 to 1941-42 are shown in the accompanying table.

DOMINION FINANCES
(Thousands of Canadian dollars)

Years ended March 31	Total revenues	Ordinary expenditures	Total expenditures	Surplus or deficit (-)
1937-38	\$516,693	\$414,891	\$534,408	-\$17,715
1938-39	502,171	413,032	553,063	-50,892
1939-40	562,093	398,323	680,794	-118,700
1940-41	871,571	393,061	1,266,627*	-395,056*
1941-42 ^b	1,400,000	417,103*	1,768,000*	-368,000*

* Excluding about \$300,000,000 required to finance war trade.
^b Estimates. * Minimum, excluding additional income from unemployment insurance and trust funds and expenditures needed to finance war trade.

Total expenditures of \$1,266,627,000 in 1940-41 accounted for 28 per cent of the estimated national income of \$4,784,000,000 in the calendar year 1940; war expenditures were \$792,000,000 or 17 per cent of the national income. The estimated minimum total expenditures of \$1,768,000,000 in 1941-42 represented 32 per cent of the estimated national income of \$5,400,000,000 in 1941, with war costs absorbing 25 per cent. The Finance Minister estimated the cost of Provincial and municipal governments during 1941-42 at \$575,000,000. The combined Dominion, Provincial, and municipal expenditures were estimated at 40 to 50 per cent of the total 1941 national income.

The gross public debt of the Dominion on Dec. 31, 1940, was \$3,959,236,382 and the net debt \$3,271,259,647 (\$3,152,559,314 on Dec. 31, 1939). Average free market exchange rate of the Canadian dollar was \$0.8514 in 1940 (\$0.9602 in 1939); official rate, \$0.9091 in 1940.

Shipping. The merchant marine in 1940 numbered 8,396 vessels of 1,292,692 tons. During the year the tonnage of sea-going vessels entering Canadian ports was 33,523,965; of vessels in coast-wise trade, 44,361,232; of vessels in inland (Great Lakes, etc.) international trade, 13,142,431. The leading ports, with the registered tonnages of all shipping entered during the fiscal year 1940 were: Vancouver, 11,016,512; Halifax, 8,186,598; Montreal, 8,001,024; Victoria, 6,516,243; Quebec, 3,522,236; Port Arthur, 3,453,778; Toronto, 3,053,020. During 1940, 23,646 Canadian ships of 18,513,994 registered tons and 3,194 American ships of 4,056,089 tons passed through Canadian canals.

Railways, etc. Steam railways in 1940 operated 42,637 miles of line. Carloadings of revenue-earning freight were 2,812,587 in 1940, the highest since 1930. In 1939 the steam railways carried

20,482,296 passengers and 84,631,122 tons of freight; earnings were \$367,179,095 and expenditures \$304,373,285. The highway mileage on Jan. 1, 1940, was 497,707. The last link of the Trans-Canada Highway was completed in 1941. Air traffic statistics for 1940 were: Mileage flown, 11,966,790, revenue passengers, 137,690; freight, 16,686,214 lb.; mail, 2,737,122 lb.

Government. Executive power is exercised in the King's name by the Governor-General of Canada, acting through a responsible ministry. Legislative power rests in a parliament of two houses—a Senate of 96 members appointed for life by the Governor-General on advice of the Cabinet and a House of Commons of 245 members elected for five years (unless the government is sooner dissolved) by popular male and female suffrage. The nine Provinces enjoy a large measure of local autonomy, there being a separate parliament and administration for each. A lieutenant-governor appointed by the Governor-General-in-Council heads each provincial executive. Governor-General in 1941, the Earl of Athlone (installed June 21, 1940).

The Liberal Government sworn in Oct. 23, 1935, was constituted as follows on Jan. 1, 1941: Prime Minister, President of the Privy Council, Secretary of State for External Affairs, William Lyon Mackenzie King; Minister without Portfolio, Raoul Dandurand; Mines and Resources, Thomas Alexander Crerar; Justice and Attorney General, Ernest Lapointe; Public Works and Transport, Pierre J. A. Cardin; National Defense, James L. Ralston; Pensions and National Health, Ian Alistair Mackenzie; Associate Minister of National Defense and Air Minister, Charles Gavan Power; Finance, James L. Ilsley; Fisheries, Joseph Enoil Michaud; Munitions and Supply, Clarence Decatur Howe, Agriculture and National War Service, James Garfield Gardiner; Labor, Norman A. McLarty; Trade and Commerce, James Angus MacKinnon, Secretary of State, Pierre François Casgrain; Postmaster General, William P. Mulock; National Revenue, Colin W. G. Gibson, Minister of National Defense for Navy, Angus Lewis Macdonald.

HISTORY

War Contribution. Canada made a steadily increasing contribution to the Empire's war effort during 1941, as training camps and war industries established during 1939 and 1940 began to produce trained military, naval, and air personnel and equipment for their use in growing numbers and quantities. A succession of convoys took heavy reinforcements to the Canadian forces already in Britain as well as large contingents of Empire airmen and units of Allied troops trained in Canada. The greatest loss sustained by these convoys from enemy action at sea was the sinking of a ship with 75 members of a Canadian military unit, announced May 5. A Canadian force arrived at Hong Kong November 15 and formed part of the garrison that surrendered to the Japanese in December.

As of November 5, more than 110,000 Canadian troops, including a tank brigade, were serving overseas, in addition to about 25 air squadrons trained in Canada under the Empire air scheme. Overseas and home units of the Canadian Air Force totaled 90,000 men. The Canadian Navy increased from 13 ships and a personnel of 1,774 in 1939 to 250 ships with 22,000 officers and men in the middle of 1941. As of Jan. 1, 1941, it comprised 12 destroyers, 39 minesweepers, 54 corvettes, and various auxiliary craft. Over 20,000 workers at 60 shipyards were engaged in the production of naval and merchant ships. The first Dominion-made heavy in-

fantry tank rolled out of shops in Montreal on May 22. Production of cruiser tanks got under way late in June. By the beginning of August 25,000 workers in newly constructed airplane factories were turning out 40 planes per week. In October it was reported that the Canadian war industries were producing complete equipment for an infantry division every six weeks, and output was steadily rising.

The cost of this program (see *Finance*) was met by the assumption of taxes three times greater than before the war, and by loans and war savings certificates aggregating over \$1,500,000,000 up to October 31. Canada was paying her own war costs, including maintenance of Canadian troops (but not air units) overseas. In addition, large amounts of munitions and supplies were being "lease lent" to Britain. Of supplies valued at \$1,155,000,000 sent to the mother country up to Aug 31, 1941, Canada advanced \$905,000,000.

Conscription Issue. Despite the extent of the burden assumed, public opinion during the year reflected the growing conviction that a much greater war contribution was necessary if the Allied cause was to triumph. On February 2 the Prime Minister announced plans for doubling the army overseas, the Empire Air Training Plan, and the Canadian Navy. The campaign for volunteers for overseas service was pushed with vigor. It brought 105,773 voluntary enlistments during the six months ended Oct. 31, 1941 (army, 59,502; air force, 35,108; navy, 11,163). In September a further great expansion of the Commonwealth Air Training Plan was announced.

These measures failed to check the growing demand for compulsory conscription for overseas service. The Government temporized by improving the system of compulsory military service for home defense, introduced Oct 9, 1940. Under this system men between 21 and 23 years of age were called up for 30 days training in the Non-Permanent Active Militia. In March, 1941, the system was revised to provide for four months' training for every able-bodied man reaching the age of 21. On April 26 the Minister of National Defense announced that the first group of four-month draftees would be retained "indefinitely" in service upon completion of their training. An order of August 5 required all men called up for training under the compulsory conscription act to remain in service for the duration of the war. Early in July the Dominion Government barred men eligible for military duty from the civil service.

Critics of the Government were not satisfied with this, however, and when Parliament reassembled early in November Opposition leaders joined in demanding "all-out" participation in the world struggle through imposition of compulsory overseas as well as home service. Prime Minister Mackenzie King on November 12 stated that he would not support conscription for overseas service without consulting the voters. A plebiscite on the issue was forecast for 1942.

French Canada's Attitude. The Government's reluctance to extend conscription to include overseas service was based upon the demonstrated success of its voluntary-service policy in enlisting full French Canadian support for the war, whereas the imposition of overseas conscription in 1917 had provoked large-scale rioting in Quebec Province. Neither the policy of the Vichy Government in France nor the German attack upon Russia swerved French Canada from its official and unofficial support of the Allied cause during 1941. Provincial and Roman Catholic authorities in Quebec partici-

pated in a gesture of loyalty to the British Crown on February 9 when prayers for victory were said in all churches. Cardinal Villeneuve, Archbishop of Quebec, repeatedly urged support of the Dominion's war effort, and in the campaign for overseas volunteers Quebec contributed one-seventh of the total recruits—a showing better than that of some English-speaking provinces. But an unofficial poll of public opinion late in December showed majority sentiment in Quebec still opposed conscription.

Other Political Issues. The Government was also under attack from the Opposition groups for the alleged inadequacy of the output of war industries, for its leniency in dealing with some labor obstruction of the war effort, and for half-way rationing and other economic control measures. Formation of a National Union Government to spur the war effort was urged by the Opposition and a substantial section of the press early in the year.

The Government flatly rejected this proposal, and effectively disposed of the major criticisms launched against it by new legislation and measures. At the opening of the Parliamentary session on February 14, the Prime Minister moved to restrict business in the House of Commons to consideration of war problems. On June 11 a new Minister was added to the Cabinet to take over the National War Services portfolio from James Gardiner, who retained the Ministry of Agriculture. The new Minister of National War Services, Joseph T. Thorson, was charged with the reorganization and supervision of the Dominion information, radio broadcasting, moving picture, and tourist services.

The death at the end of November of Minister of Justice Lapointe was a distinct loss both to the nation and to the Government. As recognized leader of the French Canadians, he had wholeheartedly supported Canada's war policy and thus contributed to the unity of the French- and English-speaking sections. His post as Minister of Justice and Attorney General was filled on December 10 by Louis S. St. Laurent, former president of the Canadian Bar Association. A further reshuffling of the Cabinet took place December 15. Pierre F. Casgrain resigned as Secretary of State to become a judge of the Quebec Supreme Court. Labor Minister McLarty became Secretary of State and Humphrey Mitchell, head of the National War Labor Board, succeeded to the Labor portfolio.

Anti-Strike Measures. Stricter government control was established over many phases of the national economy to speed war production. Increasing pressure was brought upon both labor and management to accept the decisions of the federal conciliation boards in labor disputes. The National Steel Car Corporation's plant in Hamilton, Ont., was taken over by the Government on April 29 when the company refused to follow a conciliation board's order to reinstate a discharged employee who was president of the local unit of the Steel Workers Organizing Committee. On May 2 the Minister of Labor stated that the Government would permit neither employers nor employees to clog the stream of war materials flowing from the factories.

Several strikes in munitions plants in July were ended when the Government threatened to prosecute the strikers. A slow-down movement among coal miners in Nova Scotia and New Brunswick led the Government to declare coal mines "essential services" under the Defense of Canada Regulations. This made leaders of the slow-down agitation liable to prosecution. At the same time the Government undertook to prevent wage and other labor disputes by raising minimum wage rates for employees work-

ing on Government contracts to offset the rising cost of living, and by amending the Industrial Disputes Investigation Act to make conciliation boards more impartial. The compulsory unemployment insurance scheme, adopted in 1940, went into effect July 1, 1941.

An Order in Council of September 16 outlawed all strikes in war industries, including defense construction jobs, except when a majority of the employees voted in favor of a walk-out after a conciliation board had submitted its findings. Due to these and other measures, the Government was able to announce October 2 that there was not a single strike in any Canadian war industry.

Priorities and Price-Wage Control. The economic controls introduced in 1940 (see preceding YEAR BOOK) were rapidly extended during 1941 until at the end of August two Orders in Council were issued making "all goods and services" subject to government regulation. One order made the War-time Prices and Trade Board the supreme authority in the field of price control. The other placed the War-time Industries Control Board in complete charge of the supply and allocation of commodities and materials essential to the war effort.

Acting through these two coordinated boards, the Government rapidly expanded the production of war supplies at the expense of normal consumers' goods, while taking steps to curb inflationary tendencies set in motion by the war boom. Passenger automobile output for 1942 was restricted to less than half the 1940 production. On October 11 installment buying and borrowing was severely restricted. On October 18 Prime Minister Mackenzie King announced that effective November 17—later changed to December 1—"no person may sell any goods or supply any services at a price or rate higher than the maximum price or rate charged by him for such goods or services during the four weeks from September 15 to October 11 of the present year." The Government thus took the revolutionary step of stabilizing both prices and wages (with the exception of a few industries) at the existing rates.

The cost of living had up to that time risen approximately 13.8 per cent over the level prevailing at the outbreak of the war. To compensate for further possible rises in living costs, the Government on October 25 granted a compulsory "cost of living" bonus to wage-earners earning \$25 or more per week at the rate of 25 cents per week for every 1 per cent rise in the cost of living. Labor leaders criticized this program as nullifying their collective bargaining rights, but the Government took the position that there was no other way to avoid the evils of inflation.

New Farm Subsidies. Farmers and fishermen were exempted from the wage-stabilization order. The Government in October decided that additional heavy farm subsidies were required to stimulate production of bacon, butter, etc., for shipment to Britain. Wheat production of the Western provinces was curtailed through a new wheat subsidy policy announced March 12. Calling for a reduction of about 35 per cent in wheat acreage, the Dominion Government established a limit of 230,000,000 bu. on the quantity of wheat it would purchase under the wheat price stabilization program. It undertook to pay farmers for converting wheat acreage into coarse grains, grass, or clover. The Government then had a 575,000,000 bu. carry-over from the large 1940 crop, representing a financial obligation of some \$400,000,000. This situation was relieved by a purchase of 120,000,000 bu. of wheat futures in May by the British Food Ministry from the Canadian

Wheat Board, and by a short 1941 crop. In August Britain contracted for 600,000,000 lb. of bacon and ham for the year beginning Nov. 1, 1941.

Constitutional Reform. Representatives of the Dominion and Provincial Governments met in Ottawa on January 14 to consider the recommendations for reorganization of Dominion-Provincial financial relationships submitted in May, 1940, by the Commission on Dominion-Provincial Relations (see YEAR BOOK for 1940, p. 111 f.) The Premiers of Ontario, British Columbia, and Alberta flatly opposed these recommendations, while the Premiers of Manitoba, Saskatchewan, and Prince Edward Island favored them. The heads of the other three Provinces—Quebec, New Brunswick, and Nova Scotia—were willing to discuss the issue but were otherwise noncommittal. As a result, Prime Minister Mackenzie King on January 15 postponed further discussion of the question until the Provinces could achieve closer unity of opinion.

An important contribution to this issue was made by the Supreme Court of Canada in ruling on December 2 that the Alberta Debt Adjustment Act of 1937 exceeded the constitutional powers of the Provincial Legislature.

Empire Relations. The importance attached to Canadian-British relations was indicated by Prime Minister Churchill's appointment on February 8 of one of his Cabinet Ministers, Malcolm MacDonald, as the new British High Commissioner to Canada. Prime Minister Mackenzie King flew to England on August 20 for personal conferences with Prime Minister Churchill on war problems. In London he expressed opposition to the formation of an Imperial War Cabinet, holding that "important decisions should be made by the government as a whole." He declared that "a perfect, continuous conference of Cabinets (British and Dominion) now exists and there has never been a time when relations were closer between the (Empire) governments." Reviewing Canadian troops in England on August 24, the Prime Minister was booed by many soldiers, who were said to hold him responsible for their non-participation in the Middle Eastern campaigns and for the lack of conscription in Canada for overseas service. He returned to Ottawa by air on September 7.

Within a few hours after the surprise Japanese attack upon British and United States bases in the Pacific and Far East, the Cabinet declared that a state of war existed between Canada and Japan. Measures were taken immediately to strengthen the defenses of the western coast. When Prime Minister Churchill and his staff arrived in Washington later in December, Prime Minister Mackenzie King was invited to the White House to join in the planning of the United Nations' war effort. Arriving there December 26, he was reported to have insisted on separate representation for Canada on any agency created to direct and coordinate war activities. The British, on the other hand, wanted the British Empire to act as a unit.

Notwithstanding this reported difference of opinion, Prime Minister Churchill received an unrestrained welcome and assurances of full support when he arrived in Ottawa December 29 to confer with the War Cabinet and thank the Dominion for its "magnificent aid" to the mother country. On December 30 he spurred Canada to greater effort by a fighting speech before Parliament. Early in 1942 he returned to the United States. One reported result of his visit was the writing off by Canada of loans of \$1,500,000,000 advanced to Britain during the preceding two years.

Collaboration with United States. In his Ottawa

speech, Prime Minister Churchill emphasized Canada's role in forging closer links between Britain and the United States. The successive measures through which the United States moved toward closer collaboration with Britain in the war against the Axis (see GREAT BRITAIN under *History*) were paralleled by the rapid extension of Canadian-American cooperation.

Joint Defense Board. The Permanent Joint Board on Defense established in 1940 (see preceding YEAR BOOK, p. 112) continued its work. On April 17 it announced completion of plans for joint Canadian-American military and naval defense of both the Eastern and Western coasts of Canada and the United States. As part of this program, the Canadian Government during the summer of 1941 constructed a chain of seven airports between Edmonton (Alberta) and White Horse (Yukon Territory). Made available to U.S. military and commercial planes, they provided an interior route between United States and Alaskan air bases. With respect to the United States leases on defense bases in Newfoundland (q.v.), Prime Minister Mackenzie King informed the House of Commons at Ottawa on March 27 that a supplementary protocol to the Anglo-American lease agreement, signed by Canada, provided that Canadian interests in the defense of Newfoundland would be fully respected.

St. Lawrence Waterway. A new agreement on the long projected joint Canadian-American St. Lawrence ship canal and water power project was signed in Ottawa March 19. In an exchange of notes, President Roosevelt and Prime Minister Mackenzie King declared the project essential for the long-range defense needs of both countries, especially through the development of the Great Lakes shipbuilding industry and of the industrial regions adjoining the Great Lakes-St. Lawrence system. The treaty was submitted to the U.S. Senate, where it was still awaiting ratification at the year's end. On March 24 Washington announced that Canada and the United States had agreed to reinterpret the Rush-Bagot Agreement of 1817 in order to permit the construction of warships and facilitate the training of U.S. naval crews on the Great Lakes.

Defense Production Accords. An agreement of far-reaching significance was concluded by President Roosevelt and Prime Minister Mackenzie King at Hyde Park, N. Y., on April 20. The pact embodied the principle that "each country should provide the other with the defense articles that it is best able to produce, and above all, produce quickly, and that production programs should be coordinated to this end." The United States agreed to purchase during the ensuing year between \$200,000,000 and \$300,000,000 worth of Canadian defense products, including "certain kinds of munitions, strategic materials, aluminum, and ships, which are urgently required by the United States for its own purposes." This had the effect of permitting Canada to continue its large defense purchases in the United States without further endangering its financial structure. The United States also agreed that Britain might obtain lend-lease products in the United States to be used by Canada in the manufacture of equipment and munitions for British aid.

This agreement extended into the economic field the work of the Joint Defense Board in the military field. It was carried into effect through the Joint Materials Coordinating Committee appointed May 14 (coordinating the utilization of primary materials) and the Joint Economic Committees established June 17 (covering the field of general economic relations). These Committees met repeatedly dur-

ing the remainder of the year. They studied not only the more efficient and coordinated utilization of the combined resources of the two countries, but also the problem of reducing "postwar economic dislocation consequent upon the changes which the economy in each country is presently undergoing."

On recommendation of the Joint Economic Committees, the appointment of still other agencies—the Joint War Production Committees—was announced by President Roosevelt and Prime Minister Mackenzie King after another conference at Hyde Park on November 1-2. These committees were established for the specific purpose of "most effectively coordinating capacities of the two countries for the production of defense matériel." While arranging for each country to provide the defense articles which it was best able to produce "for the common defense effort," the new committees sought to minimize maladjustments in the post-defense period.

A statement of war production policy for the United States and Canada, drawn up by the Joint War Production Committees, was published December 23. It called for maximum war production in both countries in the shortest possible time, emphasis on speed and volume of output rather than monetary cost, maximum use of labor, raw materials, and facilities in each country, integration of Canadian-American production and resources in a common program; production by each country of those articles that would result in maximum joint output of war goods in the minimum time, allocation of scarce raw materials and goods, on the same basis, to carry out the joint program of war production, and the suspension or elimination during the war of all legislative and administrative barriers impeding the free flow of necessary munitions and war supplies between the two countries. This policy received the full approval of President Roosevelt and of the Canadian War Cabinet.

St. Pierre-Miquelon Issue. A minor difference arose between the State Department at Washington and the Canadian Government as a result of the occupation of St. Pierre and Miquelon (q.v.) by Free French naval forces in December. Apparently on the presumption that Canadian officials had some previous knowledge or part in the Free French coup, the U.S. Government asked the Canadian authorities what steps they were prepared to take to restore the status quo of the islands (see FRANCE under *History*). Negotiations for a settlement of the issue were in progress at the year's end.

Trail Smelter Decision. The Trail Smelter Arbitral Tribunal on Mar. 11, 1941, rendered its final decision in the controversy arising from damage caused in northern Stevens County, State of Washington, by fumes discharged from the smelter at Trail, British Columbia. The tribunal allowed no further damages or costs, holding that the record failed to establish injury to crops, trees, etc., between Oct. 1, 1937, and Oct. 1, 1940. However it prescribed measures for the control of the smelter fumes to avoid possible future damage.

Latin American Relations. The year witnessed a notable extension of Canadian contacts with the Latin American republics. Ottawa's decision of December, 1940, to exchange diplomatic representatives with Argentina and Brazil was carried into effect early in 1941. In September it was announced that diplomatic and commercial relations would be established between Canada and Chile. Beginning in August, a Canadian trade mission headed by Minister of Trade and Commerce J. A. MacKinnon made a good-will tour through Ecuador, Peru, Chile, Argentina, Brazil, Trinidad, and Puerto Rico

ing on Government contracts to offset the rising cost of living, and by amending the Industrial Disputes Investigation Act to make conciliation boards more impartial. The compulsory unemployment insurance scheme, adopted in 1940, went into effect July 1, 1941.

An Order in Council of September 16 outlawed all strikes in war industries, including defense construction jobs, except when a majority of the employees voted in favor of a walk-out after a conciliation board had submitted its findings. Due to these and other measures, the Government was able to announce October 2 that there was not a single strike in any Canadian war industry.

Priorities and Price-Wage Control. The economic controls introduced in 1940 (see preceding YEAR BOOK) were rapidly extended during 1941 until at the end of August two Orders in Council were issued making "all goods and services" subject to government regulation. One order made the War-time Prices and Trade Board the supreme authority in the field of price control. The other placed the War-time Industries Control Board in complete charge of the supply and allocation of commodities and materials essential to the war effort.

Acting through these two coordinated boards, the Government rapidly expanded the production of war supplies at the expense of normal consumers' goods, while taking steps to curb inflationary tendencies set in motion by the war boom. Passenger automobile output for 1942 was restricted to less than half the 1940 production. On October 11 installment buying and borrowing was severely restricted. On October 18 Prime Minister Mackenzie King announced that effective November 17—later changed to December 1—"no person may sell any goods or supply any services at a price or rate higher than the maximum price or rate charged by him for such goods or services during the four weeks from September 15 to October 11 of the present year." The Government thus took the revolutionary step of stabilizing both prices and wages (with the exception of a few industries) at the existing rates.

The cost of living had up to that time risen approximately 13.8 per cent over the level prevailing at the outbreak of the war. To compensate for further possible rises in living costs, the Government on October 25 granted a compulsory "cost of living" bonus to wage-earners earning \$25 or more per week at the rate of 25 cents per week for every 1 per cent rise in the cost of living. Labor leaders criticized this program as nullifying their collective bargaining rights, but the Government took the position that there was no other way to avoid the evils of inflation.

New Farm Subsidies. Farmers and fishermen were exempted from the wage-stabilization order. The Government in October decided that additional heavy farm subsidies were required to stimulate production of bacon, butter, etc., for shipment to Britain. Wheat production of the Western provinces was curtailed through a new wheat subsidy policy announced March 12. Calling for a reduction of about 35 per cent in wheat acreage, the Dominion Government established a limit of 230,000,000 bu on the quantity of wheat it would purchase under the wheat price stabilization program. It undertook to pay farmers for converting wheat acreage into coarse grains, grass, or clover. The Government then had a 575,000,000 bu. carry-over from the large 1940 crop, representing a financial obligation of some \$400,000,000. This situation was relieved by a purchase of 120,000,000 bu. of wheat futures in May by the British Food Ministry from the Canadian

Wheat Board, and by a short 1941 crop. In August Britain contracted for 600,000,000 lb. of bacon and ham for the year beginning Nov. 1, 1941.

Constitutional Reform. Representatives of the Dominion and Provincial Governments met in Ottawa on January 14 to consider the recommendations for reorganization of Dominion-Provincial financial relationships submitted in May, 1940, by the Commission on Dominion-Provincial Relations (see YEAR BOOK for 1940, p. 111 f.) The Premiers of Ontario, British Columbia, and Alberta flatly opposed these recommendations, while the Premiers of Manitoba, Saskatchewan, and Prince Edward Island favored them. The heads of the other three Provinces—Quebec, New Brunswick, and Nova Scotia—were willing to discuss the issue but were otherwise noncommittal. As a result, Prime Minister Mackenzie King on January 15 postponed further discussion of the question until the Provinces could achieve closer unity of opinion.

An important contribution to this issue was made by the Supreme Court of Canada in ruling on December 2 that the Alberta Debt Adjustment Act of 1937 exceeded the constitutional powers of the Provincial Legislature.

Empire Relations. The importance attached to Canadian-British relations was indicated by Prime Minister Churchill's appointment on February 8 of one of his Cabinet Ministers, Malcolm MacDonald, as the new British High Commissioner to Canada. Prime Minister Mackenzie King flew to England on August 20 for personal conferences with Prime Minister Churchill on war problems. In London he expressed opposition to the formation of an Imperial War Cabinet, holding that "important decisions should be made by the government as a whole." He declared that "a perfect, continuous conference of Cabinets (British and Dominion) now exists and there has never been a time when relations were closer between the (Empire) governments." Reviewing Canadian troops in England on August 24, the Prime Minister was booed by many soldiers, who were said to hold him responsible for their non-participation in the Middle Eastern campaigns and for the lack of conscription in Canada for overseas service. He returned to Ottawa by air on September 7.

Within a few hours after the surprise Japanese attack upon British and United States bases in the Pacific and Far East, the Cabinet declared that a state of war existed between Canada and Japan. Measures were taken immediately to strengthen the defenses of the western coast. When Prime Minister Churchill and his staff arrived in Washington later in December, Prime Minister Mackenzie King was invited to the White House to join in the planning of the United Nations' war effort. Arriving there December 26, he was reported to have insisted on separate representation for Canada on any agency created to direct and coordinate war activities. The British, on the other hand, wanted the British Empire to act as a unit.

Notwithstanding this reported difference of opinion, Prime Minister Churchill received an unrestrained welcome and assurances of full support when he arrived in Ottawa December 29 to confer with the War Cabinet and thank the Dominion for its "magnificent aid" to the mother country. On December 30 he spurred Canada to greater effort by a fighting speech before Parliament. Early in 1942 he returned to the United States. One reported result of his visit was the writing off by Canada of loans of \$1,500,000,000 advanced to Britain during the preceding two years.

Collaboration with United States. In his Ottawa

speech, Prime Minister Churchill emphasized Canada's role in forging closer links between Britain and the United States. The successive measures through which the United States moved toward closer collaboration with Britain in the war against the Axis (see GREAT BRITAIN under *History*) were paralleled by the rapid extension of Canadian-American cooperation.

Joint Defense Board. The Permanent Joint Board on Defense established in 1940 (see preceding YEAR BOOK, p. 112) continued its work. On April 17 it announced completion of plans for joint Canadian-American military and naval defense of both the Eastern and Western coasts of Canada and the United States. As part of this program, the Canadian Government during the summer of 1941 constructed a chain of seven airports between Edmonton (Alberta) and White Horse (Yukon Territory). Made available to U.S. military and commercial planes, they provided an interior route between United States and Alaskan air bases. With respect to the United States leases on defense bases in Newfoundland (q.v.), Prime Minister Mackenzie King informed the House of Commons at Ottawa on March 27 that a supplementary protocol to the Anglo-American lease agreement, signed by Canada, provided that Canadian interests in the defense of Newfoundland would be fully respected.

St. Lawrence Waterway. A new agreement on the long projected joint Canadian-American St. Lawrence ship canal and water power project was signed in Ottawa March 19. In an exchange of notes, President Roosevelt and Prime Minister Mackenzie King declared the project essential for the long-range defense needs of both countries, especially through the development of the Great Lakes shipbuilding industry and of the industrial regions adjoining the Great Lakes-St. Lawrence system. The treaty was submitted to the U.S. Senate, where it was still awaiting ratification at the year's end. On March 24 Washington announced that Canada and the United States had agreed to reinterpret the Rush-Bagot Agreement of 1817 in order to permit the construction of warships and facilitate the training of U.S. naval crews on the Great Lakes.

Defense Production Accords. An agreement of far-reaching significance was concluded by President Roosevelt and Prime Minister Mackenzie King at Hyde Park, N. Y., on April 20. The pact embodied the principle that "each country should provide the other with the defense articles that it is best able to produce, and above all, produce quickly, and that production programs should be coordinated to this end." The United States agreed to purchase during the ensuing year between \$200,000,000 and \$300,000,000 worth of Canadian defense products, including "certain kinds of munitions, strategic materials, aluminum, and ships, which are urgently required by the United States for its own purposes." This had the effect of permitting Canada to continue its large defense purchases in the United States without further endangering its financial structure. The United States also agreed that Britain might obtain lend-lease products in the United States to be used by Canada in the manufacture of equipment and munitions for British aid.

This agreement extended into the economic field the work of the Joint Defense Board in the military field. It was carried into effect through the Joint Materials Coordinating Committee appointed May 14 (coordinating the utilization of primary materials) and the Joint Economic Committees established June 17 (covering the field of general economic relations). These Committees met repeatedly dur-

ing the remainder of the year. They studied not only the more efficient and coordinated utilization of the combined resources of the two countries, but also the problem of reducing "postwar economic dislocation consequent upon the changes which the economy in each country is presently undergoing."

On recommendation of the Joint Economic Committees, the appointment of still other agencies—the Joint War Production Committees—was announced by President Roosevelt and Prime Minister Mackenzie King after another conference at Hyde Park on November 1-2. CANADA, The United Church of. The designation applied to the single body formed by the union in 1925 of the Congregational, Methodist, and Presbyterian churches in Canada; the Methodist churches of Newfoundland and Bermuda are also included. Foreign mission work is carried on in Japan, Korea, China, India, Trinidad, and Angola (West Central Africa). In 1940 there were in Canada, Newfoundland, and Bermuda 7,239 preaching places (including home missions) in 2,785 pastoral charges, 716,064 communicant members, and 1,756,634 persons under pastoral care. A total amount of \$11,547,037 was raised for all purposes. At the Ninth General Council held in Winnipeg, Man., in September, 1940, the Rev. Aubrey S. Tuttle, M.A., D.D., was chosen moderator for the ensuing biennium. Rev. Gordon A. Sisco, M.A., D.D., is general secretary. Headquarters: 421 Wesley Building, Toronto, Ont.

CANALS. See AQUEDUCTS, PANAMA CANAL ZONE; PANAMA CANAL; SUEZ CANAL; WATERWAYS, INLAND.

CANARY ISLANDS. An archipelago off the coast of Rio de Oro in northwest Africa. Administratively they form two provinces of Spain, and are named after their respective capitals: (1) Las Palmas (comprising the islands of Gran Canaria, Lanzarote, Fuerteventura, and the islets of Alegranza, Roque del Este, Roque del Oeste, Graciosa, Montaña Clara, and Lobos), area, 1,279 square miles; population (1939), 286,154; capital, Las Palmas (83,553 inhabitants) on Gran Canaria. (2) Santa Cruz de Tenerife (comprising the islands of Tenerife, Palma, Gomera, and Hierro), area, 1,528 square miles; population (1939), 350,647; capital, Santa Cruz de Tenerife (66,429 inhabitants). Las Palmas is an important shipping and tourist center. Coffee-growing is the principal industry. Corn, millet, sugar cane, manioc, fruits, vegetables, tobacco, cotton, indigo, and castor oil are other products.

Construction of a large military base at Las Palmas was initiated late in 1940. In his address of May 27, 1941, President Roosevelt mentioned the Canary Islands as one of the Atlantic island groups which, under German control, would provide "springboards" for aggression upon the Western Hemisphere. An air line connected Grand Canary with Madrid, Spain.

CANCER. See BIOLOGICAL CHEMISTRY; MEDICINE AND SURGERY under *Advances in Surgery*; PUBLIC HEALTH SERVICE; SOCIETIES under *Control of Cancer*.

CANTON ISLAND. An atoll of the Phoenix group in the central Pacific which with Enderbury Island of the same group is under the joint control of Great Britain and the United States (Anglo-U.S.A. Pact of Aug. 10, 1938 and Notes of Apr. 6, 1939). Canton is 29 miles in circumference and has a land mass of from 50 to 600 yards wide which encloses a lagoon of 9 miles in diameter. Enderbury is 2.5 miles long and 1 mile wide. Canton is a port of call

on Pan American Airways' transpacific air service from Honolulu to Auckland, New Zealand, which commenced on July 12, 1940. Besides a complete seaplane base, the facilities installed at Canton after it was occupied in 1938 included a 24-room hotel and other conveniences for passengers. A land-plane runway was under construction in 1941. These facilities were shelled by Japanese warships in December, 1941, but damage was reported to be slight. See WORLD WAR.

CAPE MATAPAN, Battle of. See NAVAL PROGRESS; WORLD WAR.

CAPE OF GOOD HOPE. See SOUTH AFRICA, UNION OF under *Area and Population*.

CAPE VERDE ISLANDS. A dependency of Portugal, 320 miles west of Cape Verde, French West Africa. The islands comprise the Barlavento (windward) group (São Vicente, Santo Antão, São Nicolau, Santa Luzia, Sal, Boavista, Branco, and Raso) and the Sotavento (leeward) group (Santiago, Maio, Fogo, Brava, Rei, and Rombo). Total area, 1,557 square miles; population (Jan. 1, 1938, est.), 165,000 including 6,318 Europeans. Capital, Praia (on Santiago), 6,188 inhabitants. Porte Giande, in São Vicente, is an important fueling station on shipping lines from Europe to South America and Africa. In 1938, 4,433 vessels of 4,240,115 tons entered the ports of the islands. The chief products are sisal, castor oil, mustard, coffee, oranges, maize, tobacco, salt, brandy, and hides. Trade (1938): imports, 107,089,584 escudos; exports, 117,754,489 escudos. Budget (1939): 19,452,000 escudos (escudo averaged \$0.0404 for 1939; \$0.443 for 1938). During 1938 some 4,488 ships aggregating 4,246,395 tons cleared the ports Governor, Maj. A. G. de Figueiredo.

History. In his speech of May 27, 1941, President Roosevelt mentioned the Cape Verde Islands as one of the strategic Atlantic bases which, under German control, might be used as a "springboard" for aggression upon the Western Hemisphere.

CARNEGIE ENDOWMENTS. Carnegie Corporation of New York. Established by Andrew Carnegie in 1911, this corporation was formed for the advancement and diffusion of knowledge and understanding among the people of the United States and the British Dominions and Colonies. Its total endowment is approximately \$135,000,000, of which \$10,000,000 is applicable in the British Dominions and Colonies. The annual report of the president, Frederick P. Keppel, showed that during the fiscal year 1940-41 the sum of \$2,706,834 was appropriated.

The trustees of the corporation as of Dec. 1, 1941, were: Thomas S. Arbuthnot, W. Randolph Burgess, Vannevar Bush, Nicholas Murray Butler, Samuel Harden Church, Henry James, Walter A. Jessup, Nicholas Kelley, Russell Leffingwell, Margaret Carnegie Miller, Frederick Osborn, Arthur W. Page, and Elihu Root, Jr. Officers of administration were: Walter A. Jessup, president; Robert M. Lester, secretary; and Robertson D. Ward, treasurer. Office: 522 Fifth Avenue, New York City.

Carnegie Endowment for International Peace. Founded by Andrew Carnegie in 1910 and operated as an unincorporated association until 1929 when it

was chartered under the laws of the State of New York. The endowment consists of a trust fund of \$10,000,000, "the revenue of which," in the words of the donor to his original Trustees, "is to be administered by you to hasten the abolition of international war, the foulest blot upon our civilization." The work of the Endowment is carried on in three Divisions: (1) Division of Intercourse and Education; (2) Division of International Law; (3) Division of Economics and History. For the current work of the Divisions, see YEAR BOOK for 1940.

A special library containing 65,000 volumes on all aspects of public international relations is maintained in Washington. During the fiscal year ended June 30, 1941, the Endowment's income amounted to \$573,296, which included a grant of \$100,000 from the Carnegie Corporation of New York. During this period, the Endowment expended \$549,370. The officers are: President, Nicholas Murray Butler; Vice-President, John W. Davis; Secretary, George A. Finch, Treasurer, Leon Fraser; Assistant Treasurer, Roland S. Morris. Administrative offices are at 700 Jackson Place, Washington, D.C. Divisional offices are at 405 W. 117 St., New York City.

Carnegie Foundation for the Advancement of Teaching, The. A foundation established in 1905 by Andrew Carnegie, who gave an endowment of \$10,000,000 for paying retiring allowances and widows pensions in the United States, Canada, and Newfoundland and for various other purposes in the field of higher education. Incorporated by Act of Congress in 1906, the Foundation received a further gift of \$5,000,000 from Mr. Carnegie and appropriations totaling \$13,250,000 for endowment and reserves from Carnegie Corporation of New York. On June 30, 1941, its resources amounted to \$21,056,682. In 1940-41, it disbursed \$1,929,443 for allowances and pensions. It awards no scholarships or aids of any kind. The Foundation's Annual Reports deal with many phases of higher education. In 1941 its principal studies concerned education at the graduate level. Dr. Walter A. Jessup is president, and Howard J. Savage, secretary and treasurer, with offices at 522 Fifth Avenue, New York City.

Carnegie Hero Fund. A Fund established in 1904 by Andrew Carnegie to help those who have risked their lives to an extraordinary degree to save human life or to aid dependents of rescuers who have lost their lives in the performance of their acts. The original endowment was \$5,000,000; the amount expended to Oct 31, 1941, was \$6,153,373 11. Dr. Thomas S. Arbuthnot is President and Mr. C. B. Ebersol is Assistant Secretary and Manager of the Fund, the address of which is 2307 Oliver Building, Pittsburgh, Pa.

Carnegie Institute, located in Schenley Park, Pittsburgh, Pa., founded and endowed by Andrew Carnegie in 1896, comprises the Department of Fine Arts, the Carnegie Museum, and the Carnegie Music Hall. For activities, see YEAR BOOK for 1940. See also ARTS. Thirty-six prominent citizens of Pittsburgh constitute the Board of Trustees. The officers are as follows: Samuel Harden Church, President; William Frew, Vice-President; Augustus K. Oliver, Secretary; Richard K. Mellon, Treasurer. See CHEMISTRY, PURE under *Substances*.

Carnegie Institution of Washington. An organization founded in 1902 by Andrew Carnegie "to encourage in the broadest and most liberal manner investigation, research, and discovery, and the application of knowledge to the improvement of mankind." Income on investments for the year 1941 amounted approximately to \$1,300,000. For activities, see YEAR BOOK for 1940.

W. Cameron Forbes is Chairman of the Board of Trustees of the Institution, and Vannevar Bush is President. Other Trustees are: Thomas Barbour, James F. Bell, Robert Woods Bliss, Lindsay Bradford, Frederic A. Delano, Homer L. Ferguson, Walter S. Gifford, Herbert Hoover, Walter A. Jessup, Frank B. Jewett, Alfred L. Loomis, Roswell Miller, Henry S. Morgan, Seelye G. Mudd, Stewart Paton, John J. Pershing, Elihu Root, Jr., Henry R. Shepley, Richard P. Strong, Charles P. Taft, James W. Wadsworth, Frederic C. Walcott, and Lewis H. Weed. Headquarters: Sixteenth and P Streets, N.W., Washington, D.C.

CENSORSHIP. See COMMUNICATIONS; DANISH LITERATURE; DUTCH AND BELGIAN LITERATURE; FRENCH LITERATURE; NEWSPAPERS AND MAGAZINES; NORWEGIAN LITERATURE; RADIO; RADIO PROGRAMS; ROMAN CATHOLIC CHURCH; TELEGRAPHY; also the article which follows.

CENSORSHIP, Office of. The Office of Censorship was established by President Roosevelt on Dec. 19, 1941, to prevent vital information from reaching the enemy throughout the War. The President ordered immediate censorship of communications by mail, cable, radio, and any other means of transmission between the United States and any foreign country.

Byron Price, Executive News Editor of the Associated Press, was appointed Director of Censorship. In announcing his selection, President Roosevelt said: "All Americans abhor censorship, just as they abhor war. But the experience of this and of all other nations has demonstrated that some degree of censorship is essential in war time, and we are at war. The important thing now is that such forms of censorship as are necessary shall be administered effectively and in harmony with the best interests of our free institutions."

In addition to the censorship of communications passing across the borders of the United States, the President asked newspapers and radio stations to "abstain voluntarily from the dissemination of detailed information of certain kinds, such as reports of the movements of vessels and troops." From both press and radio there came immediate expressions of willingness to cooperate in this voluntary program.

Censorship of mail to and from the United States was placed in immediate charge of Lt. Col. W. P. Corderman with the expectation that as many as 10,000 civilian employees might be needed for that purpose before the end of the war. Censorship of cables was put under the supervision of Capt. H. K. Fenn, U.S. Navy. John H. Sorrells, Executive Editor of the Scripps-Howard Newspapers, was appointed Assistant Director in charge of the voluntary press censorship. John H. Ryan, of Toledo, Ohio, Vice-President and General Manager of the Fort Industry Company, owners of a group of radio stations, became Assistant Director in charge of radio.

To advise the Director on policy and the coordination of censorship, the President established a Censorship Policy Board, headed by the Postmaster General and including the Vice-President and five other high Government officials. See NEWSPAPERS AND MAGAZINES

BYRON PRICE.

CENTRAL AMERICA. See BRITISH HONDURAS, COSTA RICA, GUATEMALA, HONDURAS, NICARAGUA, PANAMA, and SALVADOR, EL.

CEREALS. See AGRICULTURE; CORN, WHEAT, OATS, ETC.

CEYLON. A British self-governing colony, south of India. Area, 25,332 square miles, population (1939 estimate), 5,922,000. Vital statistics (1939): 212,112 births, 128,611 deaths, and 28,947 (exclusive of Muslim) marriages. Buddhism and Hinduism are the chief religions. Chief cities: Colombo, the capital, 310,000 inhabitants (1936), Jaffna, 47,700; Kandy, 40,100; Galle, 38,000. Education (1939). 5,733 schools and 820,160 students in attendance.

Production and Trade. The chief agricultural products (figures in metric tons) are tea (103,400 exported in 1939), rubber (90,000, 1940), copra (155,000, 1939), rice (300,000, 1938-39), coir, cinnamon, cacao, tobacco, and citronella. Livestock (1939): 1,665,282 cattle, 246,650 goats, 55,936 sheep, 35,744 swine, and 1,252 horses. Mineral production: plumbago (22,396 tons, exported, in 1939), ilmenite, and monazite. In the many small-gem quarries, sapphires, rubies, moonstones, and cat's-eyes are found. Trade (1940): Rs282,500,000 for imports (rice, cottons, coal and coke, refined sugar, and manures were the chief items); Rs387,000,000 for exports, of which coconut products accounted for Rs23,050,701 (rupee averaged \$0.3016 for 1940).

Communications. In 1939 there were 951 route miles of railway open to traffic. Shipping (1939) 11,073,522 tons entered and 10,944,819 tons cleared the ports. At the end of 1940 Ceylon had 18,660 miles of roads.

Government. Budget estimates (year ended Sept. 30, 1941): Rs117,900,000 for revenue and Rs127,364,895 for expenditure. Net public debt (Sept. 30, 1939), Rs224,151,625. The administration is headed by a governor who is assisted by a state council of 61 members (50 elected on a territorial basis, 8 nominated unofficial, and 3 officers of state). This state council, which deals with administrative as well as legislative matters, is divided into 7 executive committees in charge of various subjects, and the chairmen of these committees are ministers for the subject concerned. Governor, Sir Andrew Caldecott (appointed Jan. 19, 1937).

Maldivé Archipelago. A dependency of Ceylon Area, 115 square miles; population (1931 census), over 79,000 Moslems. Capital, Malé.

History. A rural development scheme was in operation in nine Ceylon villages which were selected as Rural Service Centers of the Dept. of Commerce and Industries. In these centers investigations were made into literacy, indebtedness, ownership of land, employment, income, number of livestock, poultry, etc., in order to furnish the information required for the work of rural development (*Crown Colonist*, Apr., 1941, p. 185; London).

An Indo-Ceylon Conference, arranged with a view to the regulation of Indian immigration and the political rights of Indians in Ceylon, failed to come to a successful solution. During August of 1941 over 1,200 men were employed on Ceylon's hydroelectric power scheme near Watawala. A dam

at Norton Bridge and a 5 $\frac{1}{2}$ -mile transmission line to Colombo were under construction (*ibid.*, Aug., 1941; p. 368-371).

CHEMICAL WARFARE. See BOMBS.

CHEMISTRY. See articles on BIOLOGICAL CHEMISTRY; CHEMISTRY, INDUSTRIAL; CHEMISTRY, PURE.

CHEMISTRY, Industrial. This is a war report, devoted exclusively to the incredible expansion of a chemical industry meeting the demands of a nation at war.

Alcohol. Twenty million bushels of corn have been set aside by the Government for conversion into alcohol for smokeless powders. Beverage plants have been diverted to industrial alcohol.

Carbon. During the war of 1914-18, gas-mask carbon was manufactured from coconut shells. This year a million-dollar plant was erected at Fostoria, Ohio, by National Carbon, and ten million dollars was appropriated by the Government to make activated charcoal from sawdust by a new American process.

Chlorine. Production increased in 1940 to 605,000 tons contrasted with 120,000 in 1939. Chlorine in war time is required to make neoprene, ethylene glycol (prestone), ammonium picrate explosives, methacrylate plastics, antimagnetic cable insulation, medicinals, and war gases. A million cubic feet of chlorine per day, now consumed in the manufacture of tetraethyl-lead, will be made available to war-time industries from the \$2,500,000 hydrochloric acid plant of the Ethyl Gasoline Corporation, at Baton Rouge, in the spring of 1942. Two other new sources of chlorine were claimed: treatment of waste-gas nitrosyl chloride from the manufacture of nitrates, using sulfurful monochloride as catalyst, and a process by Hixon and Tenney involving reaction between sulfur trioxide and salt to give sodium sulfate and chlorine.

Explosives and Intermediates. The Government has increased appropriations to the *synthetic ammonia* plants reported in the 1940 YEAR BOOK; also it authorized an eleven million dollar plant by Dow-DPC at Freeport, Texas, near their magnesium plant. Seventy million dollars has been assigned for the manufacture of a secret explosive.

Synthetic *glycerol* prepared by the hydrogenolytic process (1938 YEAR BOOK, p. 142) is impure, and its isolation difficult. A new method, crystallization from solvents, yields glycerol of high purity. The Battelle Memorial Institute obtained glycerol from petroleum gases, without high temperature chlorination.

The production of *toluene* from petroleum by either (1) extraction from cracked gasoline or (2) cyclization of hydrocarbons, at Houston, or in the new \$13,000,000 Baytown toluene plant, or at other refineries being planned, can boost production of TNT to above 500,000 tons. Seventy per cent of our toluene is now made this way, and only 30 per cent from coal tar. The hydroforming process for toluene is discussed under fuels. The TNT plants at Joliet, Ill., and at Weldon Springs, Mo., are now in operation. Extraction using the Edeleanu process was employed, during the last war, on Rumanian

crudes, which may contain as high as 35 per cent toluene. The extraction is accomplished with liquid sulfur dioxide at -20° C. The extract contains about 60 per cent toluene, which can be mononitrated and subsequently separated from the residual hydrocarbons by distillation.

A forty-seven-million dollar smokeless-powder plant is being built by duPont in Alabama; it can utilize cut staple cotton as well as linters.

Under-water explosives proving most successful in the present war are not TNT (trityl) but a mixture of high brisance pentaerythritol tetranitrate (pentrit) or trimethylene trimtramme (hexagen) with 30–40 per cent TNT.

Fats and Oils. The Government is embarking on a farm program to produce ten billion pounds of fats and oils during 1942–43. Armour's neofat for coatings expanded an additional thirty million pounds. Deodorized fat production is above one and a half billion pounds. The soybean crop in 1941 was 111,000,000 bushels.

New processes include the hulling of cottonseed by steam explosion; hexane extraction of rolled and cooked cottonseed meats, yielding oils comparable with pressing methods, a continuous solvent extraction of soybean oil, capacity 440 tons daily, by the Hansa-Muhle process; and a Government process for extracting 99 per cent tung oil without regrinding. There is a possibility of recovering seven million pounds of wax from sugar-cane "mud": a ton of cane yields two pounds of a hard wax, M.P. 174° F., for polishes, coatings, and mold products.

Fuels. Lowry described valuable calculations for predicting the coke and by-products from blast furnaces and coke ovens. In Birmingham, England, success was reported on treating coal with coal-tar oils at their boiling points (up to 400° C.). The products were useful as binding agents in briquets, for colloidal fuels, and to modify the properties of coals and coal tar.

Petroleum production throughout the world was estimated at 2,149,000,000 barrels, of this, 63 per cent came from the United States. A commentary on the rapid pace of this industry is reflected in the fact that nearly one-third of the refining equipment in the United States is less than four years old.

Aviation fuel, 100-octane, is being produced in about twenty plants. A \$7,750,000 expansion program for 100-octane fuel was begun at Point Breeze near Philadelphia, by Atlantic Refining. Airplane ceilings, steadily being elevated, are now working on the 40,000 foot level. Di-isopropyl formal blended with aviation fuel aids vaporization at high altitudes.

The **Diesel** business doubled in 1941. In England, the admixture of up to 20 per cent high-temperature creosote Diesel fuel with gasoline for automobiles was found suitable for all but starting conditions.

Standard Oil of New Jersey announced that the **fluid cracking process** would hereafter be used in all of its New Jersey refineries. Three large plants at Bayway (Standard of New Jersey), at Baton Rouge (Standard of Louisiana), and at Baytown, Texas (Humble Oil) are built. The fluid catalyst process differs from the intermittent catalytic cracking which had to stop periodically to burn out accumulated carbon from the catalyst. In the fluid process the catalyst flows, like a liquid, to a cracking zone and then into a separate cleansing zone.

Most recent addition to petroleum catalysis is the **hydro-forming process** placed in operation at Texas City by Pan American. It reforms 7,500 barrels of 45 octane with a 80 per cent yield of 80 ASTM octane. Although it involves the use of hydrogen, the process is actually a dehydrogenation

and cyclization. The pre-heated 40–45 octane and heavy naphtha is mixed with hydrogen and sent into catalytic chambers at high pressure. The hydro-forming catalyst causes a ring closure to occur along with dehydrogenation, so that the product contains only a small quantity of aliphatic unsaturates, and is unusually stable. Either straight run or cracked gasoline may be reformed. Changing operations produces aviation fuel, or upwards of 80 per cent aromatics, it is another source of military **toluene**. The Texas City hydroforming plant could produce 5,000,000 gallons of toluene, one-quarter of the country's total 1939 toluene production. Construction was carried out by the M. W. Kellogg Company.

It was found that soybean lecithin used in 0.1 to 10 pounds per 42,000 gallons of gasoline inhibits the sludging of leaded gasoline and the corrosion of tanks during the storage. DuPont developed a metal deactivator, N,N'-disilycylidene-1,2-diaminopropane, to increase the storage stability of petroleum distillates.

Metals. The use of metal powders for bearings and gears expanded to 5,000 tons this year. Westinghouse spent two million dollars on Hipersil, an improved magnetic material for transformer cores.

Aluminum is available to Axis and Allied powers alike, but production is limited by enormous consumption of electrical energy. Most important announcement this year is the new Kalumite process which claims to produce aluminum at 11.865¢ a lb., as against the market price of 15¢ (September, 1941). Alunite, a potassium-aluminum ore, is used; there are fourteen million tons of ore available, four million in Utah where the process is to produce over two hundred tons of aluminum oxide daily. The alunite is treated with dilute sulfuric acid, to form potash alum. This is autoclaved to form a basic alum, which upon further calcining breaks into alumina and potassium sulfate. After removing the latter by leaching, the alumina is treated by the usual electrolytic process.

Aluminum production includes an additional 170,000 tons by ALCOA and 130,000 tons by other companies at Massena, N.Y. (75,000 tons), at Tacoma, Wash. (15,000 tons), and at Malvern, Ark. (80,000 tons). The latter will have special facilities for washing out the silica in the low-grade bauxite, never before considered commercially workable.

Magnesium production will swell to 200,000 tons in plants now under construction. German production in 1940 was about 20,000 tons. Magnesium will be prepared by three processes: (1) electrolysis of the molten chloride by the Dow process; (2) electrolysis by a special European process; (3) the Hansgig process. Raw material for the Dow process is (a) Midland brines (9,000 tons of magnesium); (b) MgCl₂ in potash mines at Austin, Tex. (12,000 tons); (c) Louisiana dolomites, by Mathieson Alkali (18,000 tons), and (d) Ohio dolomites and magnesites (18,000 tons). The European electrolytic process will be applied to Nevada magnesite (56,000 tons). The Hansgig process is expected to produce 33,000 tons.

This **Hansgig process**, which has aroused considerable interest because of the troubles encountered in perfecting the process abroad, got off to a bad start. Three serious explosions, resulting in casualties, occurred during its installation by the Permanente Corporation in California in the fall of 1941. The process operating in Austria for some years forces the reaction $MgO + C \rightarrow Mg + CO$ to the right in a three-phase electric oven at $2,000^{\circ}$ C. Sudden chilling to 200° with fifty times its volume

of H_2 , precipitates the Mg as a dust containing some MgO and C. Distillation *in vacuo* yields a metal powder which is collected under a hydrocarbon oil, where it is melted and cast into ingots. Improvements were made in recent plants in Germany, Wales, and Chosen. At Palo Alto, a 9,000 kilovolt-ampere furnace will have a 15,000 ton capacity, which will be expanded to 33,000 tons if successful. In place of hydrogen, natural gas will be used; this will later be passed to the adjacent Permanente cement mill as fuel. Chief difficulties are in handling the hydrogen and highly inflammable magnesium vapor; and in heat transfer problems in the vacuum distillation of the magnesium powder. A ton of metal requires 22,000 kilowatt-hours of electricity.

Despite the low content of *magnesium in sea-water*, there are 4,500,000 tons of it in each cubic mile. The Dow Company, sole producer in the United States until 1940, commenced production in 1927. The engineering problems are considerable, when it is recalled that 800 tons of sea-water must be treated for each ton of metal produced. In the process, oyster shells are calcined to give the oxide, which is dissolved to give milk of lime. The lime, as a sludge, is fed into launders where it settles through incoming sea-water, and precipitates the magnesium as hydroxide. The magnesium hydroxide slurry is caked out on vacuum filters and mixed with crude hydrochloric acid to form a magnesium chloride solution. The salt is dried in ovens 50 feet in diameter and 50 feet high. The crystals formed in the oven are fed to electrolytic cells where dehydration is completed, and during electrolysis the metal floats, is skimmed off, and poured into 24" x 4" x 4" ingot molds. A pound of magnesium requires nine kw-hr. The chlorine which is given off is blown to the hydrochloric acid plant where it reacts with natural gas to form HCl and CO. The chlorine from the magnesium cells is supplemented by chlorine from neighboring caustic soda units. The sea-water, with 80 per cent of its magnesium extracted, is sent to the bromine-from-sea-water plant.

Carlo Adamoli, of Italy has patented a method in which common magnesium ores, (talc, dolomite, magnesite) are treated with HF; the magnesium fluoride is heated with a reducing agent, which distills off magnesium. The HF is regenerated.

Electrolytic *manganese* may become a reality following successful Government operation of a 25-ton test muffled hearth type furnace at Boulder City. After roasting low-grade domestic ores, 98 per cent of the manganese can be extracted.

Points for Blackouts. There was an intensified research for new luminous paints for war-time purposes. Luminous screens for hospitals and telephone switchboards; luminous valves and switches for chemical plants; fluorescent pigments on aeroplane dials illuminated by a small argon lamp invisible to the enemy, tapes to illuminate cars; luminous clothing and hose for pedestrians; fluorescent wall-papers and plastics; fluorescent carpets for theaters; all of these are war-time uses for this material.

In 1897, Lenard paved the way for luminescent paints. Luminescence is caused by the presence of a definite coordinated group of atoms, called *phosphores*, within the crystal lattice, in much the same way that color is associated with chromophors. Foreign bodies, called *activators*, are loosely embedded in the crystal centers of the lattice; this causes distortion of the lattice and results in luminescence. The structure of these centers is not understood, although it is known that grinding the powders destroys their luminescence.

Luminescent pigments are classified according to their purity. (1) Pure luminescent pigments are salts of the rare earths, uranium salts, molybdates, tungstates, and platinum. These fluoresce (glow during excitation), but do not phosphoresce (after-glow). (2) Impure luminous paints contain traces of metallic activators added to zinc sulfide or to sulfides of the alkaline earths. Other materials used are the oxides and carbonates of the alkaline earths; halides of aluminum and of the alkaline earths; and calcium tungstate. Extreme purity is imperative: 0.000006 gram of copper in a gram of zinc sulfide causes the latter to have an intense green after-glow. On the other hand, 0.000006 g of iron in one g. of CaB_2S lumino-phore diminishes its glow to one-third.

Balmann's lumino-phore is produced by melting 0.0002 g. of B_2 with 1 g. of calcium sulfide in a flux of sodium sulfate, calcium fluoride, and sodium tetraborate at 950° C for 16 minutes. Fluorides give long after-glow but are difficult to powder since the grinding destroys the luminescence. Conditions of cooling the melt affect color and intensity of luminescence.

The principal paint *vehicle* is dammar gum; plastics, plasticized with butyl phthalate, have also been employed. Chlorinated rubber is a good vehicle for weathering paints. Oil vehicles are unsatisfactory, particularly for strontium sulfide, although zinc sulfide lumino-phores may be used with zinc naphthenate as drier and dispersing agent. Nitro-cellulose lacquers tend to gel.

The *pigment* must be dispersed without grinding. Suspending agents such as zinc or aluminum organic salts are useful, e.g. zinc naphthenate has been used up to 8 per cent. The pH must be kept well above seven since weathering moves it into the acid zone where the alkaline earths tend to react with the acid vehicle. Accordingly, borate and phosphate buffers are often added. A priming coat of lacquers, or nonchalking titanium dioxide paint, is used, but a top coat is unfavorable, since it confines sulfur compounds released from the lumino-phore.

Due to the high purity required, costs of typical grades are \$2 an ounce.

Phosphorus. A fourth electric furnace is planned at Monsanto, Tenn., and a new phosphate plant, at Trenton, Michigan. International Minerals and Chemicals Corporation is building phosphate rock plants in Florida and in Tennessee.

Plastics. More than 123,000 tons of plastics in 1941 indicates the rapid expansion of this industry. Three-quarters of all the plastics duPont produces came from its laboratories in the past four years.

Plant expansions included a Plexiglas sheet plant, by Rohm and Haas on the west coast; a \$400,000 expansion to 10,000 tons capacity of the Durex plant at North Tonawanda, N.Y.; the first exclusively cellophane film plant west of the Mississippi, in Iowa; Hercules entering the plastics field with the purchase of the John D. Lewis phenolic gum and alkyl resin plant at Taunton, Mass; a million dollar synthetic phenol plant by General Electric at Pittsfield being planned, and a new phenol-formaldehyde Monsanto Resinox Plant at Springfield, Mass. The most exciting new plastic news is that production will shortly begin on Cafelite, the plastic from coffee, at Sao Paulo, Brazil. The plant is equipped to handle 5,000,000 bags of coffee. Another plastic is being made from cottonseed hulls by Leahy at the University of Tennessee; southern spinning mills are already using 350,000 sheaves made of this highly elastic plastic.

Elastometers such as Vinylite became increasingly important. Urea-melamine plastics appeared as insulators of heat and sound. Uses for the methacrylates continued to expand: portable fluorescent lights, molded electric plugs, transparent pumps for acids, safetyguards for coilwinding machines; seventy applications in automobiles, including 500,000 protective reflectors on automobiles in California. War-time uses include plastic bomber noses of laminated mahogany or methacrylate, radios, nonterrifying gas masks, ventilators, aileron pulleys, instrument panels, knobs, self-sealing gas tanks, the bodies of bomb fuses, mortar tail-fins, and incendiaries made of cellulose nitrates containing phosphorus. The British spray cellulose acetate over glass to keep parts from flying during an air-raid. Methacrylic resins are used for navigators hatches, gun-turrets, plastic girders, airplane dope coatings, and coatings to prevent sea-water corrosion of planes in the tropics. Polished styrene glasses are being pressed for servicemen. Henry Ford completed the first all-plastic automobile in August. Still only in the experimental stage, it weighs two thousand pounds compared with three thousand pounds for steel.

Improved techniques appeared for injection molding of low temperature thermosetting plastics.

Investigations of plastics by Baker at the Bell Telephone Laboratories showed that rapid cooling gives a disorderly state, making the plastic soft and flexible; whereas slow cooling gives parallel fibers making it hard, but brittle. The plastics in the future may be tempered, like steel, to impart the desired properties from proper orientation of the fibers.

Plastic Ion-exchangers. Meyers of the Resinous Products Company described the use of Amberlite resins as ion-exchangers. They may be used in softening water; for partial or complete removal of salts from water, and from biological media; for the recovery of traces of copper, gold, and other metals from dilute solutions; and for removing iron and objectionable acids from industrial waters. Unlike the zeolite process, the resinous ion-exchangers may be used in strongly acidic or basic solutions, and in hot solutions. They can produce high quality water comparing favorably with distilled water. Kyrta, an active resin suspended in diatomaceous earth, appeared for purifying sugar.

Plastic Wearing Apparel. Celluloid shirt collars made their appearance in 1868; and in 1890 Spitteler discovered casein for making buttons and buckles. Next came Bakelite. Today there are four major types of plastics used in wearing apparel. (1) Thermosetting plastics include casein, molded and cast phenolics, and urea-formaldehyde. These are for buttons, costume jewelry, and transparent and colored shoe-heels. (2) Rigid thermoplastics are featured in color, such as cellulose esters, methacrylates, polystyrene, vinyl compounds, and rubber hydrochloride. These include cellulose acetate necklaces and bracelets, cellulose acetobutyrate football helmets, and polymerized methacrylate and styrene for crystal-clear jewelry, brush handles, and so forth. (3) Flexible thermoplastics, colorful and elastic are of greatest importance in apparel. This includes regenerated cellulose in raincoats; rubber hydrochloride in raincoats and bags; vinylidene chloride extruded for belts, suspenders, and hats; and polyvinyl ester resins for fabrics. (4) Synthetic fibers include synthetic wool, lanital, or aroclac from casein; soybean fiber as an aldehyde condensation; vinyon, and nylon. Vinyon ester plastics are flexible for water-proofing. They consist of copolymers of vinyl acetate and chloride in the proportions 1:8 by

weight. Vinyl polymers with molecular weight of about 15,000 become semi-rigid; they are suitable for packagings and stiff-front shirts. Molecular weight polymers of 22,000 are flexible and resilient, and the fabrics made from them can be cut and sewed like any textile; also they can be heat-sealed. It is used for making transparent slippers, water-proof aprons, trimmings for handbags, suspenders, shoes with a permanent shine, shower curtains, and so forth. Vinyon fibers and yarn extruded from an acetone solution are being made into ladies hose and bathing suits.

Refractories from Sea-water. Refractories from Pennsylvania dolomites are being manufactured by a new plant at Cape May Point, New Jersey; capacity 40,000 tons. The Chesny process which made England self-sufficient in magnesite refractories, is employed. By this reaction, dolomite limes are replaced by the magnesium in sea-water. The difficulty encountered is to produce crystalline, readily filterable magnesium hydroxide.

Rubber. By the close of the year, the synthetic rubber production was greatly stimulated through the acquisition, by Japan, of approximately one-third of the Far East rubber supply. Production of neoprene, butadiene, and polysulfide rubbers have been as follows: in 1939, 1,750, none, and 500 tons respectively; in 1941, 9,000, 4,000, and 1,400 tons; in 1942, estimated, 20,000, 80,000, and 6,000 tons respectively.

Six American companies are in production of copolymers of butadiene with styrene or acrylic acid derivatives. New plants include a 5,000-ton Shell Oil Plant at Houston; a DPC-Carbon and Carbide \$3,500,000 plant at Charleston, W.Va.; a \$2,200,000 Monsanto Plant at Galveston, Texas; four plants of \$1,250,000 each, capable of expansion to 30,000 tons a year at Goodyear, Goodrich, and Firestone at Akron, and U.S. Rubber at Naugatuck, Conn.; a \$15,000,000 Standard Oil plant at Baton Rouge; and a plant to produce Ameripol at Baton Rouge. The government intends to expand synthetic rubber capacity to 400,000 tons, with an appropriation of nearly half a billion dollars.

Ameripol is a typical butadiene rubber: like natural rubber in hardness, workability, elongation resistance to acids and alkalis, resistance to benzene and carbon tetrachloride, although swelling in acetone; better than natural rubber in resistance to oxidation by driers and to abrasion in the presence of oils, resistant to heat and to aging; but not as satisfactory as natural rubber as regards elasticity, tear resistance, and stiffening in sub-freezing weather. Ameripol production expanded to 18 tons a day.

The Government approved a \$25,000,000 project to plant guayule, a natural shrub containing 23 per cent rubber, in the southwest.

A million pounds of *neoprene* was allocated to 250 companies. A 10,000-ton neoprene plant at Louisville for military heavy-duty neoprene-tread tires will shortly be completed, as the Deepwater facilities will rise 9,000 tons. Hercules is expanding its Parlin chlorinated-rubber for tents, tarpaulins, flamed-proofed military fabrics and insulation. Neoprene is used in flexible bearings, gaskets, sealing tape for gasketing marine seams, Par-grip boots, hot-water washers, etc. Because of its gas-retaining and sunlight-resisting properties it has completely replaced rubber-balloon fabrics. Neoprene FR was announced as resistant to oil and sub-zero temperatures, down to 70° below zero; this is a property not possessed by other synthetic rubbers.

Thiokol, first manufactured in 1930, boosted output to 3,000 tons at Midland, Mich.; and double this is planned for 1942.

Miscellaneous rubber news includes the use of chlorinated rubber as paint film, rubber hydrochloride films for food packages and raincoats; Koroseal anodes for hydrogen peroxide manufacture; rubber electrodepositions for tread to army tanks and supports, latex-foamed mattresses for air-raided shelters; a rubber compound by Firestone which eliminates cracking of tread and side walls; an injection molding machine for rubber articles which vulcanize only after injection into the die, and powders for inner tubes to cut auto static from 7,000 volts to below 1,200 volts. Acetylene black used in place of carbon black increases the conductivity of rubber a million times and discharges static, such rubber is suitable for aviation suits to keep pilots warm at high altitudes by passing electricity through the suit. (See also RUBBER.)

Strategic Materials. In the Pacific the United States has much strategic material at stake. Tin came from Singapore and the Netherlands Indies. Manganese from Brazil, Cuba, and South Africa will have to be stepped up. Two-thirds of the chromium supply came from the Philippine Islands and New Caledonia; Africa, Turkey, and Cuba will have to be called in. The closing of the Burma Road will cut off our tungsten supply; South America is now increasing its output, and domestic molybdenum can partly be substituted. From Madagascar and Ceylon come high-grade graphite. It can be replaced, however, by deposits in Alabama, Texas, and Pennsylvania. Ninety per cent of our mica comes from India, and the splitting of it requires trained labor. It will be a herculean task to find a substitute for Manila fibers. Ninety-eight per cent of our rubber supply, 600,000 tons, came from the Orient. Reclaiming, which normally accounts for 30 per cent of our yearly supply, will have to be stepped up, as will also the cultivation of natural rubber plants and synthetic production. Palm oil comes from the Indies for tin plating, tanning agents from the Far East. These and many more of our chemical materials will be cut off, and substitutes for them must be provided. The Bureau of Mines (q.v.) in 1941 carried out a careful exploration for strategic materials.

Textiles. Self antiseptic clothing, described by James of the University of Maryland, has been used in all-leather hat bands, 15,000,000 mattresses, 2,000,000 pairs of canvas shoes, and 4,000,000,000 sheets and pillow cases.

Fire retardants for textiles, using ammonium sulfamates, will be expanded by the sulfamic acid plant commenced in May, 1941, by the duPont Company at Grasselli, N.J. Sulfamic acid was a laboratory curiosity until three years ago when duPont began tonnage production. It is also a tanning and dyestuff intermediate.

Latex by the U.S. Rubber Company has been used in its new Kolok process for riveting fibers together without decreasing their flexibility. Several million ladies silk hosiery have already been treated. The process, which adds as much as 18 per cent latex to the fabric, doubles the life of the hosiery.

Nylon, a laboratory curiosity in 1938, today nurtures a full-scale industry employing several thousand workers. Nylon is a generic name which refers not only to textile fibers but also to a large group of chemicals. For instance, nylon monofil is used in brush bristles, racket strings and fishing leaders, for insulation on wire, for molding powders for self lubricating bearings, and for leather-like materials. No limit to its versatility is yet in sight. The basic materials for nylon are manufactured at Belle, W.Va. Yarn and nylon flake are produced at Seaford, Del., and Martinsville, Va. The latter be-

gan production in November and will be in full operation by the summer of 1942. Nylon monofil is produced at Arlington, N.J. Nylon capacity will have expanded 25 per cent to 10,000 tons by the end of 1942. In addition to hosiery, 400 mills use nylon yarn for purposes ranging from wrist-watch straps to parachutes. A parachute consumes 75 square yards of nylon or silk. Nylon magnetic wire insulation reduces the size of motors 15 per cent. Nylon and rayon is being substituted for the special silk paper for money and Government bonds.

More than 70,000,000 yards of *proxilin-coated* textiles are produced annually in this country. In London, to replace glass windows smashed during air raids, cotton mesh is drawn through a cellulose acetate solution containing 20-30 per cent plasticizer.

Rayon is being standardized by the British textile industry. The United States Government exhibited moderately sheer mesh cotton stockings. During the war, manufacturers will be knitting rayon and cotton into tops and feet of nylon hosiery to affect a saving of the latter.

Saran, a thermoplastic made by Firestone from Dow materials, was exhibited in the fall of 1941. It may be extruded in strands woven like cloth in any weave or color, chiefly for upholstery but also for table tops, airplane partitions, and room interiors. It is water-proof, chemically resistant, and resembles rattan or reed. It does not crack or split.

A British firm is making a textile fabric from *sea-weed*. Formerly 400,000 tons of sea-weed each year was gathered in the Hebrides, and it abounds on the west coasts of Ireland and Scotland. Non-metallic alginates made from the alginate acid in the sea-weed can be extruded as in the viscose process. The fiber is nonflammable, if soaked in gasoline and the gasoline burned away, the fabric is unaltered. It has high luster, good strength, and dyes well, but large scale production is not yet perfected.

Ford described a *soy protein fiber* sprayed with rubber for automobile upholstery padding. A panel of the resin-impregnated fiber weighs half that of steel and does not dent.

Vinyl impregnations of fabric, as in the latex process, have been applied in aqueous dispersions up to 50 per cent for oil-resisting artificial leather, automobile hoods, and bookcloth.

Artificial *wool* from milk has reached the United States (1938 YEAR BOOK). Marvlo, a milk casein fabric woven from Aralac fiber was exhibited in October. A million pounds of Aralac has been used to replace rabbit's hair in the hat industry. The fiber blends with rayon and wool, and dresses of it will appear in the spring of 1942, according to the National Dairy Products Corporation which has a factory operating at Taftsville, Conn., with a 5,000,000-pound production capacity. Aralac is more expensive than rayon and cotton, but less expensive than wool.

Wool consists of long fibrous molecules linked occasionally by cysteine S-S linkages. If these linkages are broken by reduction and alkylation with alkyl monohalides, its solubility in alkalies is much higher. Upon replacing the S-S cross-linkages with alkyl groups by reduction followed by alkalation of dihalides, the solubility in alkalies is considerably reduced. This process offers great promise in improving the properties of wool.

The use of molecular models has become an instrument of research. Hirschfelder-Fischer atomic models, united with ordinary dress snap-fasteners were used by Taylor and Becker to construct models of long fibers. Models of alpha-keratin, the natural wool protein, is of a folded molecule; this may

be set in the stretched beta-keratin form by steaming. This is the process involved in the "permanent wave" and the "trousers crease", as is common observation, this gradually reverts to its normal folded alpha-keratin structure. Muscle fiber, or myosin, is capable of similar extension and contraction. By construction of other models Taylor and Rosenblum were able to predict the covering power of certain detergents.

Fuoss of the General Electric predicts that the high polymer plastics and textiles of the future will be designed with predetermined electrical and mechanical properties, just as the metallurgist now designs specific alloys. The motion of the molecules under an applied electrical field can be controlled by altering the size and length of the side-chains along the long fiber molecule. Plasticizers or heat reduce the resistance of the molecules to motion.

Clark in England reported treating linen gill net twine with chlorinated pale crepe rubber. Also, the British Government issued instructions for rot-proofing various textiles and for increasing their resistance to fire, water, and mildew.

X-Rays in Defense. There is an interesting tabulation of the uses of X-ray analysis in English defense industries in the News Edition, *Industrial and Engineering Chemistry*, page 1150.

Africa exported 904,942 pounds of pyrethrum for insect sprays to the United States. French West Africa is using native phosphate rock as fertilizer. Tanganyika and Nyasaland will establish tung-oil stations.

The **Argentine** Chemical Society, membership 950, held its fifth meeting this year. New plants were started to manufacture precipitated chalk, acetic acid, tartaric acid, caustic soda, carbon disulfide, copper sulfate, zinc, and hydrogen peroxide by the electrolysis of ammonium sulfate.

Brazilian chemical industry is rapidly expanding. linseed oil, cellulose, and steel in Rio Grande do Sul, ethanol, dry ice, perfumes, cosmetics, matches, natural asphalt, and soap in Sao Paulo, macauba oil, aluminum, and cement in Minas Gerais; coconut oil in Bia; rubber and timbo insecticide powder (1,200,000 pounds in 1941) in Para; and cellulose industries in Santa Catarina. The Klabin and Imaos Company which already controls the production of nitric and sulfuric acid, ceramics, cardboard, and rayon, is constructing a \$5,000,000 plant to produce 70 per cent of Brazil's pulp needs from native pine. The Government is sponsoring the blending of 15-20 per cent ethanol in motor fuels, a \$5,000,000 Solvay plant, and development of the aluminum, iron, manganese, tungsten, and nickel deposits. Statistics for the 23,437,674 pounds of oil exports are given in the Dec. 10, 1941, News Edition of *Industrial and Engineering Chemistry*. Oticica oil is regarded as the latest of Brazil's important export products. Cottonseed production in 1940 was 60 per cent of world production. For the important coffee plastic, see above under *Plastics*.

British Isles Hundreds of firms registered under the Essential Works Order to unify the chemical war effort. The dyestuffs industry is well situated. The essential drugs have been formulated. New symbols for use on diagrams of chemical plants were publicized by the British Standards Institution. Unification of the plastics industry has not yet been enforced. Substances formerly obtained from the continent but now supplied domestically or from the United States include pyrites, phosphates, calcium carbide, and potash. Scarce items include chlorates, dichromates, yellow prussiate, and potassium compounds. Coal tar derivatives and salts for alkali products have always been plentiful.

The **Canadian** chemical industry has expanded to meet war needs. By August, Government appropriations of \$120,000,000 had placed in production 23 war-time chemical plants employing 11,000 workers and producing 12 war-time chemicals and 8 explosives. New war-time industries are manufacturing optical glass, toluene, xylene and other light oils in Nova Scotia, carbon disulfide for rayon and cellophane in Ontario, zinc chloride, cerium at Shawinigan Falls, sulfuric acid from pyrites in Quebec, ammonium chloride and sodium sulfite in Hamilton, and nylon from intermediates. Canada still depends on the United States for formaldehyde (2,351,000 pounds, in 1940), for ethylene glycol for explosives and antifreeze, and for dyestuffs; also, \$100,000 each of acetone and glycerol for explosives since the beginning of the war. Sixteen new plants manufactured crude cod liver oil in the marine provinces where five refining plants produced 266,427 imperial gallons in 1940. Previously, Canada had imported 80 per cent of its 300,000 gallon oil requirement.

Central America is now buying from the United States. Cuban ore shipments doubled in value to \$4,325,582 for the first half of 1941; of this, manganese ore doubled to \$2,801,133. Imports in 1940 included \$11,600 in dyes to Costa Rica; \$20,000 in insecticides and boiler compounds, for sugar centrals, to the Dominican Republic, \$23,468 in explosives to Guatemala, also hydrochloric acid as a banana-wash, and \$90,000 in toilet preparations to the Honduras and \$305,000 to Panama. Mexico has agreed not to ship strategic war materials outside of the western hemisphere. New plants in Central America include perfumes in Panama, sodium and magnesium compounds, pharmaceuticals, and bone-fertilizer in Mexico, molasses fermentation products in Jamaica, sulfur in Costa Rica, and a rubber fabrication plant in Guatemala.

Chile reported a number of government sponsored plants, coke ovens, a glass factory in the south, nickel and chromium plating, development of iron ore deposits and an electric furnace plant at Mariposa, iron mines at Primvne of Coule, a sulfur mine (3,600 tons yearly) in Arica, zinc oxide from imported ores, a button factory, a fruit-drying plant because of the lack of tin, several projects for aluminum from aluminum sulfate in North Chile, and potassium nitrate and sulfate plants, near Pinta-dos. A forty million Chilean dollar loan provides water power at Huilo-Huilo for a special rotating steel furnace, 86 per cent of the iron is imported. Fertilizers are plentiful, excepting potash, a plant at Tarapaca is to produce 30,000 tons yearly. A joint Chilean combine purchased fifteen million pesos worth of pharmaceuticals this year from the United States. To offset the huge quantities of copper, iodine (622 tons in 1940), and nitrates shipped each year to the United States, Chile passed a law requiring an importation of 20 per cent of the value of the exports.

North **China** has only an alkali products industry; Central China, controlled by Japanese, is supplying ammonium sulfate fertilizer, Shanghai and elsewhere have over 30 biological laboratories; and at Hong Kong alkali and hydrochloric acid factories were started.

Danish plans call for a combined new gas works and nitrogen plant in Northern Jutland to furnish calcium nitrate fertilizer.

Eire was unable to secure superphosphates from North America, and pyrites from Spain, for fertilizers. Production of industrial alcohol is only one-tenth normal as a growing use of potatoes for food and fodder has closed four of the five Irish plants.

Germany now regulates the Alsatian potash mines. Iodine restrictions were removed in December, 1940, so apparently an adequate supply is again available. Germany's new order would make Continental Europe chemically self-sufficient, and regulated by syndicates. Electric current would be located in Scandinavia to provide fertilizers for France, Spain, and the Balkans. France would produce aluminum from its bauxite deposits. Spain would supply pyrites. Yugoslavia would develop an electrochemical industry based on water power. Switzerland would retain its chemical industry, and supply water power. Rumania would develop petroleum by-products. Italy would contribute mercury, sulfur, electrochemicals, and inorganic and organic industries.

Hungary has substituted sunflower oil for imported cocoa butter, and sheep tallow for imported fats, in therapeutics. The Magyarovar viscose factory has enlarged to 40,000 tons of hose annually; a second textile mill is planned. Bauxite output was up five-fold above 1938.

India expanded its chemical industry to meet shrinkage of imports. New plants include: two in Kathiawar to manufacture alkali and chlorine products, imported formerly from Japan and now from Great Britain; half a dozen paper plants; two sulfuric acid plants, in Potlad and Baroda, capacity 1½ tons of sulfur per day respectively; formaldehyde to replace a 50 ton annual import; a 180 ton ammonium chlorate, and a 3,600 ton glacial acetic acid plant. A new 600 ton capacity chromate plant at Mysore will supply dyeing and tanning industries. Chemical and drug production has accelerated. Increases were also recorded in sulfuric acid, ammonium sulfate, and aviation gasoline from India and Burman crudes. Iron production was up to 1,835,000 tons in 1940.

The normal five-billion pound jute crop was cut to one-third, although India shipped a billion sand bags and three million yards of jute to Great Britain for tarpaulins and canvas. Jute rayon clothing was in all probability being used in the French and German armies.

Italy installed new plants for recovering phenol from ammonia waters of coke ovens, for distilling coal tar, for compressing methane, and for producing methanol, by Vetrocoke's; more potassium derivatives and alumina from Rome leucites, the enlarging of the sodium chloride plant, and a new electrolytic alkali and chlorine plant at Torre Viscosa; a new calcium carbide factory, 600,000 quintal capacity; a coke factory by the new Cokapuania Company with a connecting nitrogen factory having a capacity of a million quintals of fertilizer; plants to produce 7,000 tons of oil from bituminous shale, by the Societa Friulana; a magnesium industry at Bolzano, developed in the past two years. Anticipated exhaustion of the Istria and Pugli bauxites has led to consideration of leucite from Naples and alumite from Rome. The oxide is extracted at Venice, electrolyzed in Mori and Bolzano and fabricated elsewhere. Lead chambers in 146 companies in 1939 produced two million tons of sulfuric acid; and some 33 contact plants produced 500,000 tons.

Japan published sketchy news. As the Manchukuo five-year plan came to an end, electric power consumption rose from 28,000,000 kilowatt-hours in 1933 to 500,000,000 kw-hrs, 1940. Ammonium sulfate rose from 29,000 tons in 1933 to 548,000 tons in 1941. Japan has apparently not yet exploited the vast Manchurian timber resources for rayon and paper pulp. Coal shortage was the greatest deterrent to chemical progress. Fertilizer production

was insufficient, with ammonium sulfate production 30 per cent below 1936-37. The Mitsui Chemical Company will use the Fischer-Tropsch process for gasoline from coal; and gasoline blended with power alcohol or ether was available. A new plant at Asahigawa will boost benzene output. Magnesium ore from Tashichiao, one of the largest deposits in the world, is chlorinated, and the magnesium recovered by electrolysis; commercial production began in 1936. Expansion of the pyrite mines kept sulfuric acid high; the ratio of lead chamber to vanadium catalyst plants was 7:3, although the chamber process is declining. All carbon disulfide plants are probably close, to make sulfur available for war industries. Silk piling was a major problem upon which two million families depended. Japan's meager dyestuffs industry was undoubtedly halted by war efforts. Vast as her domination of the textile field has been, most of the chemical industries in Japan are still in their infancy; and an enormous production program, such as is planned in the United States, cannot be achieved by Japan.

Netherlands Indies plans 45,000 tons of ammonium sulfate fertilizer from petroleum gases by the end of 1942; soap and volcanic sulfur industries are also being encouraged.

New Zealand is to make silicosuperphosphate fertilizer from serpentine, 100,000 tons a year. A low temperature carbonization plant at Rotowaro treated 413,845 gal. of tar and oil

Palestine doubled its potash and bromine production in 1941; and many pharmaceuticals and pure chemicals are manufactured within the country. Ninety thousand citrus fruit wrapped in diphenyl impregnated paper (YEAR BOOK, 1939, p. 128) showed a spoilage loss of 0.37 per cent compared with 9.6 per cent for unwrapped fruit.

Peru has a potential fish-oil vitamin industry, according to a U.S. Government survey. Domestic production of sulfuric acid cut imports. Mussala, a Chilean firm, is manufacturing pure chemicals and copper insecticides for agriculture

Spain was able to export only one-quarter its peace-time quota of pyrites. Production in the first half of 1941 was 239,211 tons, most of which was sent to England; in return, Spain received 500 tons of soap. Cyanamid replaced ammonium sulfate in the Spanish rice region. Prohibition on United States serums and vaccines remained.

Swedish chemical industry continued to grow at a rapid pace: acetone for smokeless powder, dyestuffs, medicinals; a new cyanamid plant at Stockvik, capacity 40,000 tons; tanning materials; a 20,000 ton sulfuric acid plant to increase facilities for fermenting wood pulp to power alcohol; methanol and acetic acid in a new charcoal plant in northern Sweden; five new sulfite-alcohol plants with a 4,500,000 gal. capacity of 95 per cent alcohol, to supplement the 1,830,000 gal. capacity of present expanded plants.

Switzerland rationed its soap production, with Russian fats and oils curtailed.

Thailand projected plants for wood distillation, explosives, hydroelectric power, and the electrolysis of brine.

In **Venezuela** a National Price Board, formed in December, 1941, controls alkalies, alcohol, calcium carbide, dyes, insecticides, medicinals, and fertilizers. Coal tar and medicinal imports have increased five-fold from the United States as European markets were closed.

See AGRICULTURE, U.S. DEPARTMENT OF under *Agricultural Chemistry*; PHOTOGRAPHY; articles on products, as BOMBS, RUBBER.

HUBERT N. ALYEA.

CHEMISTRY, Pure. Defense research by our scientific leaders remains a military secret; and for this reason the report on pure chemistry is curtailed and the section on wartime industrial chemistry expanded.

Apparatus. Industry is providing the chemist with analytical machines complex in construction but simple to operate. The RCA electron microscope was announced in the 1940 YEAR BOOK, (p. 117). This year a polarograph, or dropping mercury electrode, for qualitative and quantitative analysis of solutions, which Heyrovsky developed over the past decade, has been marketed by Leeds and Northrup, and by the American Instrument Company. It costs about \$1,000. Hipple of Westinghouse exhibited, at the Chemical Exposition in December, 1941, a mobile mass spectrograph costing several thousand dollars. In this machine the components of a sample of petroleum gas, for instance, can be separated according to their weights, or masses, with accuracies up to 1 part in 100,000.

Kapitza, in Moscow, has described a new liquid air apparatus which operates at 5 atmospheres pressure instead of the 200 atmospheres required by the Linde machine. Greater efficiency in dissipating energy is achieved by having the expanding gas drive a turbine. Low-temperature fractionation of petroleum hydrocarbons and blast furnace gases in the Kapitza machine was rumored.

Archeology. Documents charred, such as by incendiary bombings, can be deciphered, according to Taylor and Walls, by alternate treatment and drying with solutions of 25 per cent chloral hydrate in alcohol, and finally a similar solution containing, in addition, 10 per cent glycerine. A mass of chloral hydrate crystals appears on the surface and may be photographed.

Astronomy. Lyttleton and Hoyle postulated that the stars sweep up hydrogen and its compounds from interstellar space; this provides them with enormous stellar energy, resulting from the transmutation of hydrogen to helium (1939 YEAR BOOK, p. 122).

An outstanding problem in astronomical spectroscopy may be solved. Edlen has identified many of the forbidden lines in the sun's corona as due to highly ionized iron, calcium, and nickel, corresponding to meteoritic materials. The theory associates the prominent green line with Fe^{+13} , and postulates ionization potentials of 400 volts. Such large potentials could be achieved only if the corona were millions of degrees hot. Menzel assumes these high temperatures exist near the surface, in accordance with Edlen's theory; and he believes that the sudden expansion in gases emerging from the sun produces rapid cooling and a fall of temperature to the 10,000° usually accepted for the sun's surface.

Wildt, who previously showed that Jupiter and Saturn are surrounded by clouds of ammonia, with some methane, postulated clouds of solidified formaldehyde, or polyoxymethylene, around Venus. It was apparently photosynthesized from carbon dioxide and water vapor.

King is thought to have discovered thulium in the sun's atmosphere.

Awards. The American Institute awarded its Medal to W. M. Stanley "for crystallizing the virus of tobacco mosaic." L. F. Fieser was the first American to win the \$1,000 Judd Cancer award. Two brothers will receive the 1942 Chandler Medal for work on vitamin B₁₂ (R. R. Williams) and on pantothenic acid and the vitamin B complex (R. J. Williams). The latter is also the 1941 recipient of the Mead Johnson and Company \$1,000 vitamin B complex award. Chemical and Metallurgical Engineering awarded its annual medal to the Dow

Chemical Company for its plant to recover magnesium from seawater. The Davy Medal was awarded to H. D. Dakin for biochemical and metabolism studies. The 1941 Eli Lilly Company Award in Biological Chemistry went to D. Rittenberg for his study of isotopes as tracers. Fritz Hofman has received the Goethe Medal in recognition of his research on synthetic rubber. The Nichols Medalist for 1942 will be D. A. MacInnes, in recognition of his work on electrolytes. Harlow Shapley received the Pius XI Medal in Astronomy, one of the most distinguished of scientific honors. The Perkin medal was presented to Thomas Midgley, discoverer of tetra-ethyl lead anti-knock, and of Freon refrigerant. The Rumford Medal went to V. K. Zworykin for his researches upon photocells, television, and the electron microscope.

Cyclotron. Research at the University of California continued under Lawrence. There are now about forty cyclotrons in existence, twenty-four of them having been built by scientists trained in his laboratory. He has attained 96 MEV carbon particles, and anticipates six-fold better results with the giant 3,700-ton cyclotron now under construction.

Medical research with the cyclotrons at California now include neutrons for cancer—61 out of 129 patients saved from certain death; radio-phosphorus—now being shipped to Peru—for blood diseases; radio-iodine for tumors and enlarged thyroid glands, and radio-strontium, more accessible than radio-calcium, for bone-cancer.

In plant studies radio-rubidium has proved more useful than radio-potassium since half-lives of 19 days and 12 hours respectively make the former more generally useful. Radio-carbon was produced in relatively large quantities early this year. Formaldehyde is supposed to be the intermediate product in photosynthesis, but assimilation of radio-carbon in the plant produced not formaldehyde but a yet unidentified compound as the true intermediate.

For other sub-atomic research, and a description of the Kerst betatron see PHYSICS.

Electron Microscope (see also PHYSICS). American Cyanamid showed that, contrary to belief, precipitated chalk and magnesium oxide, used as pigments in paper, are crystalline; and that these substances, and also zinc oxide and alumina smoke, were useful as particle size standards for micrograph studies.

Extensive use of this instrument in many fields may be expected: in the investigation of dusts and smokes, of photographic grains for improving films, of synthetic and natural fibers, of evaporated metal films—Zworykin reports a new technique for obtaining micrographs of the surface of metals without preparing transparent specimens, and of sub-microscopic biological materials. Micrographs of the influenza germ were obtained.

Unfortunately the specimens used in the electron microscope must be resistant to vacuum and to the heat generated by the electron beam. These criteria eliminate many organic crystals, and some biological materials.

Houston and Bradner reported a two-stage magnetic lens electron microscope with increased resolving power.

Isotopes. Improved methods for the thermal diffusion method (1938 YEAR BOOK, p. 135) for separating isotopes were reported. Watson applied it effectively for slightly increasing the heavy-carbon content of methane, for biological studies. Brewer patented a column provided with baffles properly spaced to induce advantageous convection currents.

Monomolecular Films. Langmuir has extended his film technique of detecting viruses. On the slide (a)

47 layers of barium stearate are built up, followed by (b) thorium nitrate (c) a specific reagent and (d) the toxin, virus, or poison to be detected. If the suspected substance is present, the layers will change the intensity of sodium light under which the film is examined.

A number of anti-glare glasses have been patented. In the General Electric Company glass is coated, by evaporation *in vacuo*, with a $\frac{1}{300,000}$ inch layer of magnesium fluoride. The RCA laboratories etch with 0.5 per cent HF solution, which produces a calcium fluoride layer, and increases the transmissivity of the window glass to 99 per cent. The film withstands moderate heat and washing with water and alcohol. Land has produced a new Polaroid, known as Type H, from polyvinyl alcohol. The plastic is extended to align the fibers, and then exposed to an iodine solution. The resultant sheet is three times more transparent than the earlier polarizing sheets.

Harkins reports the anomalous behavior of monomolecular layers of three higher alcohols, which, while freezing from the liquid state, decreased in viscosity just before solidifying.

Substances. Mayer at Columbia demonstrated mathematically the probability of a second rare earth group of elements beyond Uranium.

The Carnegie Institution Geophysical Laboratory has been simulating conditions within the earth by fusing silicates under steam in an electric furnace at several hundred atmospheres pressure. Deposition of minerals from the vapor state formed large crystals of sillimanite and of clear quartz.

Hassis and McCready have accomplished the first synthesis of starch from glucose. Glucose was combined with phosphoric acid to form phosphorylated glucose; this was decomposed by the enzyme phosphorylase into phosphoric acid and starch.

Research Institute. Researches for 1940-41 at the Mellon Institute and at the Armour Research Foundation are reported in *The Journal of Industrial and Engineering Chemistry*, News Edition, Volume 19, on pages 391 and 1,465 respectively.

The Armour Research Foundation, now in its fifth year, placed 16 new laboratories in service. Research was continued on industrial problems and on seven fundamental researches including diffraction, high-pressure, and high-speed studies.

Research for Defense. The National Defense Research Council (NDRC) created by presidential order in June, 1940, spent \$10,000,000 in 1941 on defense research, directed by James Conant. About a hundred scientists in universities and seven hundred in industrial laboratories were placed on defense projects. One hundred and fifty physicists were transplanted to the MIT radiation laboratory for a highly confidential research project.

Government control of chemical industry was put under the direction of E. R. Weidlein of the Mellon Institute with three assistants for production, industrial relations, and priorities. Experts under him control (1) coal-tar, (2) cotton and oils, (3) solvents and plastics, (4) explosives and nitrogen, (5) inorganic chemicals, and (6) petroleum.

See ASTRONOMY; PHYSICS.

HUBERT N. ALYEA.

CHEMOTHERAPY. See MEDICINE AND SURGERY.

CHESS. With international chess pretty much on the sidelines, all activity in 1941 was concentrated in domestic circles, wherein Samuel Reshevsky of New York retained his title against a challenge by Israel Horowitz. Reshevsky later competed in the New York State championship at Colgate University, and

there Reuben Fine took honors. The match between Fine and Reshevsky was drawn. Fine then successfully defended his open championship of the United States Federation at St. Louis, where Herman Steiner of Los Angeles was runner-up. The lone failure chalked against Fine was a loss to Albert Pinkus, Manhattan Chess Club champion, in the deciding match of the Metropolitan Chess League, which was topped by the Marshall Chess Club.

Except for the Soviet championship, regained by Mikhail Botvinnik of Moscow, there was not much play outside of the United States. Gideon Stahlberg of Sweden won the international competition in Argentina, with Moische Najdorf of Poland second. Dr. Alexander Alekhine, world's champion, is living in Lisbon.

In college circles, Yale repeated in the H.Y.P.D. Chess League and Brooklyn College repeated in the Eastern League. Among the women, Miss N. May Karff, of Boston, won the Hazel Allen Trophy and later defeated the national champion, Mrs. Donald Belcher, five to one, for the title.

CHILDREN'S BUREAU. The objectives of the Children's Bureau of the U.S. Department of Labor, during the past year, as summarized by the Chief of the Bureau in the annual report of the Secretary of Labor, have been threefold: To support, promote, and develop in every possible way the fullest measure of protection for the health and well-being of children wherever they may live and however immediately or remotely they may be at present affected by defense activities; to help to cushion the impact upon child life of dislocations and strains associated with defense effort, and to insure the protection of children in areas of potential danger from overt attack, through adequate advance planning. This program has been carried on in conjunction with the regular functions of the Children's Bureau (see *YEAR BOOK* for 1940).

In addition to studies carried over from the previous year, research was conducted during 1941 on the following subjects: Maternal and child-health facilities in 654 cities, home-delivery services conducted by 15 medical schools in 11 States; the health, welfare, and employment status of the children of agricultural laborers in a Texas community, leading causes of death among children under 20 years of age; employment conditions among children under 18 out of school in three cities; regulation of minors in public performances; child labor in Alaska; public services for children in St. Louis, Mo.; community resources for mentally retarded children; administrative provisions of laws relating to State training schools; and children in defense communities.

The Division of Health Services, the Child Welfare Division, and the Industrial Division are each charged with administration of a specific program. In the Division of Health Services are combined the former Maternal and Child Health Division and the former Crippled Children's Division. The Director of the former Maternal and Child Health Division is Director of the new division, which also

has an Assistant Director for Maternal and Child Health and an Assistant Director for Crippled Children.

Maternal and child-health services, services for crippled children, and child-welfare services were in operation in all the States, the District of Columbia, Alaska, Hawaii, and Puerto Rico throughout 1941. The full amounts authorized by Congress for grants to the States for these services under the Social Security Act as amended in 1939 were appropriated for the first time in 1941: For maternal and child-health services, \$5,820,000; for services for crippled children, \$3,870,000, for child-welfare services, \$1,510,000.

State maternal and child-health programs show extension in 1941 of established services such as prenatal and child-health conferences, postgraduate professional education for staff members and for practicing physicians and dentists, and nutrition service, together with the provision of a limited amount of medical and hospital care for mothers at delivery and for sick children and of clinical case consultation by obstetricians or pediatricians.

Health services given under the supervision of State health departments during the year ended June 30, 1941, included the following: For mothers—464,989 medical visits and 768,082 nursing visits for antepartum care, 20,940 visits for delivery nursing service, and 39,655 medical examinations and 499,638 nursing visits for postpartum care; for infants—508,831 visits for medical service and 1,490,861 visits for nursing service; for preschool children—581,094 medical visits and 1,323,108 nursing visits; and for school children—1,713,398 medical examinations and 1,619,981 nursing visits. Twenty-five States had programs for improving the care of premature infants.

Infant and maternal mortality rates continued to fall in 1940. There were 47 deaths of infants under 1 year of age per 1,000 live births in 1940 and 38 maternal deaths per 10,000 live births. The corresponding figures for 1939 were 48 and 40, and for 1935, the year in which the Social Security Act was enacted, they were 56 and 58, respectively. The 1940 figures are the lowest ever recorded in the United States and indicate that work for improvement in these fields is being successfully carried forward.

Significant progress was made in extending and improving services for crippled children during 1941. Diagnostic clinic services were further extended, especially in rural areas, and admission requirements were simplified. Improved procedures were developed for meeting the needs of children with poliomyelitis during epidemics and the after-care period. Ten States encountered epidemics of poliomyelitis during 1941, and approximately \$200,000 from Federal funds was allotted to States on the basis of special need during poliomyelitis epidemics. The Children's Bureau nursing consultants assisted the States involved in obtaining the services of qualified orthopedic nurses. Methods of locating crippled children were improved with the result that the number listed on the registers rose from 266,460 in June, 1940, to 307,478 in June, 1941.

Child-welfare programs in all States have been substantially influenced by the expansion of services and the additional leadership made possible through Federal funds, and in many States improved legislative standards have been enacted. On May 31, 1941, nearly 49,000 children in 50 States and Territories were receiving case-work services from child-welfare workers paid in whole or in part from Federal funds. The corresponding figure in

1940 was 41,000 for 45 States and Territories. Because of serious problems developing in defense areas, provision was made in the 1942 plans of 35 States for children's workers in 73 such areas whose salaries would be paid in whole or in part from Federal funds. The Committee on Case Recording in Public Child Welfare Agencies in Rural Areas completed its work during the year.

The constitutionality of the Fair Labor Standards Act of 1938, of which the Children's Bureau administers the provisions relating to child labor, was upheld by the U.S. Supreme Court, Feb. 3, 1941 (see LABOR LEGISLATION). In the fiscal year 1941 cooperative arrangements were completed under which State employment and age certificates issued by Louisiana and Nevada are accepted as proof of age under the act. This brings to 47 the number of jurisdictions in the cooperating group. Plans for the issuance of age certificates in Alaska were pending at the end of the year. In four States, Federal certificates are issued with the cooperation and assistance of State and local officials.

The purpose of making age certificates available is to prevent violations by giving employers a means of being certain that they are not employing children under the legal age. In addition, inspections are made by Bureau representatives to enforce the provisions of the act, and legal proceedings are instituted against the establishments persisting in violation. The educational effect of this enforcement program carries far beyond the number of establishments actually visited.

Investigations into the hazards for young workers in the logging and sawmilling industries and occupations involving operation of power-driven woodworking machines were made during the year, and hazardous-occupations orders No. 4 and No. 5 were issued by the Chief of the Children's Bureau making the employment of minors in these occupations subject to an 18-year minimum age, effective Aug. 1, 1941. During the latter part of 1941 the hazards of the shipbuilding and ship-repairing industry were being investigated.

Two States, New Jersey and Florida, established a 16-year age minimum for employment in factories at any time and in any occupation during school hours, and materially strengthened their child-labor laws in various other respects. This brings the total number of States with a basic 16-year age minimum for employment to 14.

Preliminary figures from the 1940 census made available during the year show that the number of working children 14 to 17 years of age, inclusive, and particularly those 14 and 15 years of age, decreased considerably during the decade 1930-40, in spite of a slight increase in the total population of those ages. Nevertheless, there were 255,336 children 14 and 15 years of age and 1,047,316 minors 16 and 17 years listed as in the labor force in April, 1940. An upswing in the employment of minors began to be evident in 1940 and was accelerated in 1941 with the rapid increase in employment associated with the vast defense program. According to reports from 21 States where employment certificates are issued on request for 16- and 17-year-old minors the number of such certificates issued in 1939 was 8,000, in 1940 it increased to 15,000; and in the first half of 1941, 20,000 certificates were issued, an increase of 282 per cent over the number for the first half of 1940. Even the 14- and 15-year-old children were leaving school for work in increasing numbers in 1941, in States where the law still allows them to do so. In 29 States and the District of Columbia, where the minimum age for employment during school hours remained un-

changed in both years, 2,355 first regular employment certificates were issued for 14- and 15-year-old boys and girls in the first half of 1941 compared with 1,236 in the first half of 1940, an increase of nearly 100 per cent.

The increase in employment of children under 16, although not yet large in numbers, indicates a tendency toward a breakdown in child-labor and educational standards that may easily become serious. Pressure toward the lowering of child-labor and school-attendance laws is already evident in bills introduced in a number of State legislatures. The Children's Bureau is increasingly concerning itself with measures that will prevent a widespread breakdown in standards and that will make the impact of defense employment as light as possible on young people whose growth and education are still incomplete.

Aspects of the defense program in which the Children's Bureau has recognized its special responsibility because of their bearing on maternal and child health and welfare include the nutrition program, protection of children and mothers in defense areas, the problem of providing day care for children of employed mothers, and the care and supervision of European children coming to the United States from war zones.

The Chief of the Children's Bureau serves as child-welfare consultant to the Director of Defense Health and Welfare Services (q.v.) and the Bureau maintains liaison officers with the Division of Recreation in the Federal Security Agency (q.v.) and the Office of Civilian Defense. The Associate Chief of the Bureau visited England in February, as a member of a civil-defense mission under the auspices of the Department of War, to study the provisions for the health and welfare of the civilian population with special reference to children. The report of this study is being printed under the title, "Civil Defense Measures for the Protection of Children." The Children's Bureau also took an active part in the planning and program of the National Nutrition Conference for Defense, held in Washington, May 26-28.

Day care for children whose mothers are being drawn into employment as a result of the defense program emerged as a pressing problem during the year. The Children's Bureau called a conference which met in Washington, July 31 and August 1, to consider all aspects of the question. The conference adopted a statement of principles and recommended a plan for continuing committees. In October consideration of the entire problem was placed on a more permanent basis through the appointment of an advisory committee on day care of children to work with the Children's Bureau. In addition, a Joint Planning Board on the Day Care of Children has been formed by the Children's Bureau, U.S. Department of Labor, the Office of Education, Federal Security Agency, and the Work Projects Administration, Federal Works Agency.

In defense areas where the normal population has been doubled or redoubled acute problems of child health and welfare are created by the lack of suitable housing for families with children, the inadequacy of hospital and school facilities, and the shortage of physicians, public-health nurses, and social workers trained in child welfare. In accordance with a plan worked out in cooperation with the Office of Civilian Defense (q.v.) opportunities for volunteer workers to participate in child health and welfare work under the direction of professional workers are to be provided on a large scale. A manual for volunteers on child care contains suggestions for a basic course and shorter specialized

courses for volunteers, and lists many kinds of work that can be undertaken by volunteers.

In connection with the care of European children seeking refuge in the United States, the Children's Bureau designated 184 child-caring agencies in 40 States to cooperate with the United States Committee for the Care of European Children for service in placement and supervision of the children. The names of 7,034 children were on the central register of European children maintained by the Children's Bureau, as of Nov. 30, 1941; of these, 1,068 children were the responsibility of the United States Committee for the Care of European Children.

Cooperation with other American Republics increased in importance during the year, with the decision to hold the Eighth Pan American Child Congress in Washington, D.C., May 2-9, 1942, and the appointment of the Chief of the Children's Bureau as chairman of the organizing committee. The Children's Bureau assigned a pediatrician and a social worker to assist the National Children's Bureau of Brazil, a social worker to the American International Institute for the Protection of Childhood (with headquarters in Uruguay), and a technical consultant on children's services to the Ministry of Health of Paraguay. The program for 1942 also provided for a number of specialists from the other American Republics to visit the United States for a period of in-service observation and field study under the auspices of the Children's Bureau.

A list of publications in these and other fields relating to children may be obtained from the Bureau. See JUVENILE DELINQUENCY

KATHARINE F. LENHOOT.

CHILD WELFARE. See AMERICAN LEGION, CHILDREN'S BUREAU; JUVENILE DELINQUENCY, PHILANTHROPY, SOCIAL SECURITY BOARD.

CHILE. A South American republic. Capital, Santiago

Area and Population. Area, 286,396 square miles, population, 5,000,782 at 1940 census (4,287,445 in 1930). Of 105,463 aliens residing in Chile in 1930, 23,439 were Spaniards, 11,070 Italians, and 10,861 Germans. United States citizens numbered 1,281 on Jan. 1, 1941. Chileans are predominantly of European (chiefly Spanish) origin but there is a considerable Indian strain in the lower classes. Estimated populations of the chief cities in 1939 were: Santiago, 829,830; Valparaíso, 263,228; Concepción, 77,589; Antofagasta, 53,591; Viña del Mar, 49,488; Iquique, 46,458; Talca, 45,020; Chillán, 39,511.

Defense. Under the compulsory military service system, all youths of 20 are called to the colors, mostly for nine months, and then serve in the reserve until 45. As of Jan. 1, 1941, the active army numbered 40,915 (including some 20,000 regulars) and trained reserves 212,000, active air force, 1,912 men, with over 100 airplanes. The navy comprises 1 battleship, 3 cruisers, 8 large destroyers, 9 submarines, and various auxiliary vessels, manned by about 8,000 men in all. A United States military aviation mission was engaged in 1940. Defense appropriations increased from 448,916,000 pesos in 1939 to 621,898,000 (estimate) in the 1941 budget, exclusive of the special appropriation of 4,000,000,000 pesos authorized in 1941 (see *History*).

Education and Religion. Elementary education is compulsory, but about 25 per cent of all adults remain illiterate. In 1940 there were estimated to be 900,000 children of school age, of whom 583,664 were enrolled in public schools and 90,595 in 834 private schools. Of the private schools, 657 received

state aid. The five universities had 6,448 students in 1939. Roman Catholicism is professed by the great majority of Chileans, but the Church was disestablished in 1925.

Production. At the 1930 census, 37.8 per cent of the working population was engaged in agriculture and 22.1 per cent in industry and mining. Yields of the chief crops in 1939-40 were (in metric tons): Wheat, 870,613; barley, 76,364; oats, 84,382; rye, 8,000; corn, 63,446 (in 1938-39). Exports of other leading farm and ranch products in 1940 were (in metric tons): Beans, 34,623; lentils, 14,145; dried peas, 11,754; wool, 10,995, fresh and frozen meats, 17,359; hides, 3,213, hemp fiber, 4,108. Lumber production in 1939-40 was 23,800,000 board inches (30,400,000 in 1939).

The 1940 mineral output (in metric tons) was: Copper, 352,010, nitrate, 1,428,379, iron, 1,748,418; coal, 1,937,438, iodine, 1,294. Gold production was about 10,663 kilograms, silver, 47,139 kilograms. Average number of workers in the mining industry in 1940, 63,181, in lumbering, 14,611 in 1939-40. The index of industrial production (1927-29 100) increased from 140.5 in 1936 to 167.2 in 1940. In the latter year the output of cement was 9,061,000 bags (of 93.5 lb.); coke, 96,500 metric tons, knitting wool, 411 metric tons; cloth, 3,957,000 meters, refined sugar, 123,958 metric tons; beer, 78,028,000 liters; gas, 93,699,000 cu meters; electric powers, 569,806,000 kilowatt-hours. Wages paid to workmen in 1940 totaled 2,455,500,000 pesos (2,018,900,000 in 1939).

Foreign Trade. Merchandise imports in 1940 were 505,900,000 pesos of sixpence gold (equivalent to \$0.2061) against 410,400,000 in 1939, exports, 679,500,000 gold pesos in 1940 against 660,500,000 in 1939. Imports of gold and specie were 1,205,300 gold pesos in 1940 (307,100 in 1939), exports, 17,246,200 in 1940 (10,909,000 in 1939). Minerals accounted for 83 per cent of the 1940 exports. Chief export items were (in 1,000 gold pesos): Copper bars, 380,838; nitrate, 128,161; gold and silver ores and concentrates, 30,651; wool, 23,362; gold in bars, 17,172; iron ores, 14,698, iodine, 12,843; beans, 12,156. Leading imports (in 1,000 gold pesos): Textiles, 81,798, chemicals, 70,258, metals and products, 61,185, industrial machinery, 56,615; transportation equipment, 52,986; coal and fuels, 45,252. The United States in 1940 supplied 47.9 per cent of all Chilean imports by value (31.1 in 1939), United Kingdom, 10.4 (8.3); Germany, 3.5 (22.7). Of the 1940 exports, the United States took 58.3 per cent (30.5 in 1939); United Kingdom, 5.8 (12.3), Germany, 0.0 (8.4).

Finance. Actual ordinary revenues for 1940 were 2,051,560,000 pesos (1,792,524,000 in 1939); expenditures, 2,201,821,000 (1,777,383,000 in 1939). The deficit of 150,261,000 pesos in 1940 was reduced to 120,180,000 pesos by subtracting the accumulated surplus of 30,081,000 pesos carried over from preceding budgets. The internal debt of the national government was 2,554,296,000 paper pesos on Dec. 31, 1940 (2,274,225,000 on Dec. 31, 1939) and the external debt was equivalent to \$345,489,146 (\$353,941,973 on Dec. 31, 1939), of which \$196,027,430 was held in the United States. Interest payments on the external debt averaged 2.0925 per cent in 1939, 1.525 per cent in 1940, and 1.539 per cent in 1941. The peso of sixpence gold (\$0.2061) is used only in foreign trade transactions. Exchange values of the paper peso in 1940 were (1939 rates in parentheses): Official, \$0.05163 (\$0.05163); export draft, \$0.04 (\$0.04); curb, \$0.03027 (\$0.03080); free, \$0.03221 (\$0.03222).

Transportation. At the beginning of 1941, Chile

had about 5,450 miles of railway line in operation and 277 miles under construction. Construction of six additional lines was authorized Nov. 27, 1940. State railways in operation in 1940 extended 2,933 miles; operating income for the year was 520,000,000 pesos. Passengers on all lines in 1940 numbered 20,920,800; freight transported, 1,894,771,900 ton-kilometers. For highways, see **ROADS AND STREETS**. Chilean national airlines in 1940 carried 2,574 passengers and 15,614 kilos of freight. In April, 1941, Pan American-Grace Airways inaugurated a three-day service between the United States and Santiago. The Chilean merchant marine on June 30, 1939, comprised 106 ships of 176,289 tons.

Government. The Constitution of Oct. 18, 1925, vested executive powers in a President, elected by popular vote for six years and ineligible to succeed himself, and legislative powers in a popularly elected Congress consisting of a Senate of 45 members serving for eight years and a Chamber of Deputies of 146 members serving four years. Pedro Aguirre Cerda (Radical) was elected President by a Popular Front coalition on Oct. 25, 1938, and assumed office Dec. 24, 1938. His cabinet represented a coalition of the Radical, Socialist, and Democratic parties. It had the support of the Communist party in Congress.

HISTORY

Political Trends. President Pedro Aguirre Cerda's Popular Front Government during the first half of 1941 was handicapped by the continuance of strife between the Socialist and Communist parties and also within the Radical party (see **YEAR BOOK** for 1940, p. 129-130, for background). The Socialists and Communists were in growing competition for the control of Chile's labor unions, and clashed over the issue of Chile's foreign policy. Led by Minister of Development Oscar Schnake, the Socialists supported the democratic cause in general and Washington's policies of inter-American collaboration in particular. The Communists denounced "Yankee imperialism" more violently than Hitlerism, espoused Stalin's policy of pro-Axis neutrality, and charged Minister Schnake with "selling out" Chile in return for U.S. loans and trade concessions. The Socialists in turn attacked the Communists as "traitors" to Chile and betrayers of the working classes.

The Popular Front was shattered temporarily when the Socialists refused to cooperate further with the Communists and withdrew (Jan. 7, 1941). While the Socialists sought to form a new Leftist Front without the Communists, the other Popular Front parties—Radicals, Radical Socialists, and Democrats—formed a bloc for mutual support in the March Congressional elections. Meanwhile, with Socialist support, Congress on January 22 approved an amended version of the bill outlawing the Communist party, introduced by the opposition Conservative-Liberal bloc in December, 1940. However President Aguirre Cerda on February 21 vetoed the measure as undemocratic. The three Socialist members of the Cabinet then offered their resignations on the eve of the elections, but the President refused to accept them.

The Elections. The Congressional elections, held on March 2, resulted in the victory of the Leftist parties, who wrested control of both the Chamber of Deputies and Senate from the opposition. The conservative bloc retained 62 seats in the Chamber (Conservatives, 32; Liberals, 22; Agrarians, 3; Falangists, 3; Popular Socialist Vanguard, 2 as compared with the 85 seats won by the Leftists (Radicals, 44; Communists, 15; Socialists, 15;

Democrats, 9; Dissident Socialists and others, 2). In the Senate the Rightist parties held 21 seats to 24 for the Leftists; the party line-up was: Conservatives, 11; Liberals, 8; Agrarians, 1; Independent, 1; Radicals, 13, Socialists, 5; Communists, 4; Democrats, 2.

The Communists made the greatest gains, electing 17 Deputies and 4 Senators as against 7 Deputies and 1 Senator in the previous Congress. They displaced the Socialists as the fourth largest political party, measured by representation in Congress. On the other hand, the pro-Fascist Popular Socialist Vanguard, which joined the conservative coalition, retained only two seats in the Chamber. In the municipal elections of April 6 the conservative bloc did better, winning control of a slight majority of the new councils.

The electoral victory provoked further factionalism within the Leftist bloc in Congress. The Socialists, holding the balance of power between Left and Right in both houses, used it to press their fight with the Communists. They voted with the opposition on measures adversely affecting the Communists but supported the Government on other issues. This caused friction between Radicals and Socialists.

Radical Party Split. Beginning in April a serious split developed within the Radical party. The Radical Minister of Interior, Arturo Olavarría, suspended the Communist organ *El Siglo* for attacking the governments of Spain and the United States. At the same time he closed the ultra-conservative newspaper *Imparcial* for violent criticism of the Chilean Government. He also ordered the deportation of three Spanish refugees connected with *El Siglo*. President Aguirre Cerda and the five other Radical Cabinet Ministers approved Minister Olavarría's action, but the party's executive committee declared it a violation of party principles and demanded the resignation of all Radical Ministers. When President Aguirre Cerda refused to accept the resignations, the executive committee on April 29 expelled all six Cabinet Ministers from the party. This schism was healed during the party convention of May 16-22. Five of the Ministers agreed to adhere to party principles and were readmitted to membership, but Olavarría held to his position.

His refusal to resign from the Cabinet led the Radical executive committee once more to demand the resignation of the five Radical Ministers. President Aguirre Cerda refused to give way under pressure. He accepted the resignations on June 10 and the next day appointed five new Ministers of independent views. The Radical executive committee, fearful of losing further influence, then agreed to accept the President's decisions regarding Cabinet membership. On June 24 the Radicals signed a working agreement with the Socialists from which the Communists were excluded. The Socialist campaign for elimination of the Communists from the Popular Front appeared well on the road to success when the outbreak of the German-Russian war (June 22) and the subsequent reversal of the Communist party line paved the way for the reestablishment of cooperation among all of the Popular Front parties.

Popular Front Reformed. With Socialist cooperation, the Government parties on July 24 and 30 rejected opposition motions to expel the Communist Deputies and Senators elected March 2. However the Socialists announced that they would introduce a constitutional amendment barring representation in Congress to Chilean parties owing allegiance to foreign entities such as the Third Inter-

national and the German National Socialist party. Meanwhile the Communists had ceased their attacks upon "Yankee imperialism" and espoused the Socialist policy of aid to the democracies and support of Washington's hemisphere defense program. This led the Socialists and Communists to compose their differences in a political accord reached early in September.

A further obstacle to Popular Front unity was removed September 16 with the resignation of Minister of Interior Olavarría. His withdrawal made possible the return of the Radicals to the Cabinet in a reorganization effected October 6. As the new Minister of Interior, a post corresponding to that of Premier in other countries, the President appointed Dr. Leonardo Guzmán, a strongly anti-Nazi and pro-democratic former Minister of Education. Three other Radicals were given posts in the new Cabinet.

The new unity of the Popular Front was reflected in steps taken during October to coordinate the action of the Leftist parties behind the President's program and against alleged Rightist conspiracies to recapture power. This was followed by the unexpected retirement of President Aguirre Cerda on November 10. Stating that ill health made it impossible for him to carry on his duties, he turned over the Presidential powers to Gerónimo Méndez, leader of the Radical party, after first appointing Méndez Minister of Interior to give him Cabinet rank.

President's Death. The Rightist parties vigorously attacked the Acting President and the manner of his appointment. However Méndez was supported by the armed forces and by all four Leftist parties. The death of President Aguirre Cerda on November 25 (see *NECROLOGY*) plunged Chile into a heated election campaign, as the selection of his successor was set for Feb. 2, 1942. The Socialist party on December 15 nominated Minister of Development Schnake for President. The Radicals selected Juan Antonio Ríos as their candidate. Ex-President Carlos Ibáñez, who was expected to receive strong Rightist support, announced his independent candidacy. The complete line-up in the Presidential race was still incomplete at the end of the year.

Vanguardist Plot. The reborn unity of the Popular Front was in part due to recurrent threats from anti-democratic groups. Members of the pro-Nazi Popular Socialist Vanguard attacked the Radical convention in Santiago on May 16, killing one delegate and wounding four others. The police later arrested 32 Vanguardists on charges of plotting a second coup against the Government (see *YEAR BOOK* for 1938 for previous attempt). Since the Vanguardist leader, Jorge González von Marées, was a Deputy and immune to arrest, the Minister of Interior on May 24 placed him in an insane asylum for observation, but he was released on order of the Court of Appeals.

At this time a new threat to the Government appeared in the return to Chile of former President Carlos Ibáñez, who headed the virtual dictatorship of 1927-31 and fled the country in 1939 following an abortive revolt against the Aguirre Cerda Government.

German Nazi Activities. Suspicion of Nazi activities among the Germans of southern Chile (see preceding *YEAR BOOK*) was increased by developments in Argentina and Bolivia (qq.v.) and by a conference of the German Ambassadors to Argentina, Bolivia, Chile and Peru held in Santiago in March. The Bolivian Government's action to prevent a pro-Nazi coup in July led Chilean authorities to

take precautionary measures and to investigate German Nazi activities more closely. Early in August a number of arms caches were seized in the vicinity of Puerto Montt and five leaders of the *Landesgruppe*, a so-called German sports organization, were arrested for their connection with a "militarized organization." During the first half of September the investigation unearthed evidence of additional Nazi organizations among German citizens in Chile that seemed designed for subversive action. Arrests of more than a score of additional Germans as leaders of these units followed. However the investigation was interrupted at the end of September when the Chilean Supreme Court ordered the unconditional release of 13 Germans arrested in Santiago and taken to Valdivia to face charges of subversive activities.

Meanwhile the Government on September 5 introduced a bill in Congress outlawing associations "inspired by foreign governments or political parties or in any way contrary to the established democratic regime, even if the associations are composed to a certain extent of Chileans."

Other Internal Affairs. Internal and external dangers led Congress late in the year to approve a Government bill for the expenditure of 4,000,000,000 pesos for national defense.

The world crisis continued to affect the Chilean economy adversely through lack of shipping and of export markets for non-defense materials, and through inability to obtain manufactured articles in the customary quantities abroad. In July Congress empowered the President to prohibit the export of all merchandise of Chilean or foreign manufacture. The rise in the cost of living led the Government to increase salaries of municipal employees by from 14 to 71 per cent on June 25. In May there was a serious strike of street railway workers which threatened to tie up all public utility services. The shipping shortage, reflected in a growing scarcity of foodstuffs in nonagricultural northern Chile, led the Government on June 26 to commandeer cargo space on ships engaged in coastal trade. In September the Government expropriated 350 miles of British-owned railway lines in the province of Tarapaca.

The Reconstruction Corporation and Development Corporation established in 1939 for earthquake rehabilitation and economic development purposes (see *YEAR BOOKS* for 1939 and 1940) continued their operations in 1941. The President's message to Congress of May 21, 1941, surveyed their accomplishments up to that time (see *Bulletin of Pan American Union*, October, 1941, p. 602, for abstract of his remarks.) Early in 1941 funds allotted for the redemption or amortization of the foreign debt by the decree of Jan. 31, 1935, were temporarily diverted and placed at the disposal of the Development and Reconstruction Corporations. The Development Corporation on Aug. 1, 1941, obtained authorization from the Export-Import Bank of Washington for an additional credit of \$5,000,000 to be used for the purchase of U.S. agricultural and industrial products. Up to Aug. 15, 1941, the Corporation had utilized only \$3,485,335 of the \$17,000,000 credit previously advanced by the Export-Import Bank.

Foreign Relations. Although President Aguirre Cerda repeatedly emphasized that Chile's policy of strict neutrality remained unchanged, there was a noticeable trend toward closer collaboration with the United States during the last half of 1941. This was due to rapidly growing economic and financial relations with the United States, the revelations concerning Nazi activities in Chile and

neighboring republics, the shift in the Communist party line, and mounting evidence that the United States would enter the war against the Axis. In connection with Chilean negotiations for a United States "lease lend" armament loan, pro-Nazi Deputies in October charged in Congress that Washington was attempting to obtain air and naval bases in Chile in return for the loan. This was denied by Foreign Minister Juan B. Rossetti.

Immediately after Japan attacked the United States the Chilean Cabinet unanimously decided to issue a decree declaring non-belligerent the United States and other American nations which had entered the conflict. The decree declared Chile's support of the United States and stated that Chile would fulfill all obligations relating to continental defense. The navy began a patrol of the entire coast of Chile, convoying both domestic and foreign merchant ships. On December 10 Foreign Minister Rossetti announced an agreement with Argentina to fortify the Strait of Magellan. The German-controlled Condor air line was forced to suspend its service into Chile December 15 through inability to get gasoline and other supplies. The Government asked Congress for special powers to control oil, metals, imported fuels, and otherwise to adjust Chile's economy to war conditions.

Chile took the initiative among the American republics by seizing on February 15, three Danish ships tied up at Talcahuano since the German occupation of Denmark. Two other Danish ships were later requisitioned and in July they were placed in service between Chile, the United States and intermediate points, under the management of a Chilean shipping company. The Government announced that ample compensation would be paid the owners and the ships returned at the end of the war. However the Minister of National Defense in July rejected a bill of \$631,000 from the owners for occupation of the ships to June 30.

Chile cooperated actively in the development of closer political and economic relations among the American republics. Early in 1941 the Minister of Foreign Affairs visited La Paz and Lima and concluded a number of political, cultural and economic accords. (See *BOLIVIA* under *History* for accords reached in La Paz January 16.) Three Chilean-Peruvian accords were initiated in Lima February 7. Two of them coordinated defense policies and plans, provided for peaceful settlement of mutual disputes, and encouraged cultural exchange. The third established the bases for a new commercial treaty. A number of important agreements were concluded with Argentina (see *ARGENTINA* under *History*).

See *BOLIVIA*, *CANADA*, *PERU*, under *History*; *CHEMISTRY*, *INDUSTRIAL*, *COMMUNISM*, *CUSTOMS*, *BUREAU OF LABOR CONDITIONS*, *LEND-LEASE ADMINISTRATION*, *SOCIALISM*.

CHINA. A republic of eastern Asia. Provisional capital, Chungking. Nanking, the former capital, was captured by the Japanese in December, 1937, and Hankow, to which most of the Chinese Ministries were then transferred, fell in October, 1938.

Area and Population. Including the nominal dependencies of Sinkiang (Chinese Turkestan), Outer Mongolia (see *MONGOLIA*), and Tibet (q.v.), over which the Central Government exercised little or no actual control, and the former Chinese Provinces incorporated in the Japanese protectorate of Manchoukuo (q.v.), China has an area estimated by the Ministry of the Interior in 1937 at 4,516,934 square miles and a total population of 466,785,856. Official 1937 estimates of the

area and population by Provinces are shown in the accompanying table.

AREA AND POPULATION OF CHINA

Province (Capital ^a)	Sq miles	Population
Anhui (Anking)	51,902	23,265,368
Chahar ^b (Wanchuan, Kalgan, Chang-chiakow)	107,705	2,035,957
Chekiang (Hanghsien, Hangchow) ..	39,791	21,230,749
Fukien (Minhou, Foochow)	61,275	11,755,625
Heilungkiang ^c (Lungkiang, Tsitsihar)	173,600	3,822,344
Honan (Kaifeng)	66,693	34,289,848
Hopei (Paoting since June 1, 1935) ..	59,377	28,644,737
Hunan (Changsha)	91,595	28,293,735
Hupeh (Wuchang)	80,190	25,541,635
Jehol ^d (Chengtch)	74,297	3,054,306
Kansu (Kaolan, Lanchow)	145,968	6,705,445
Kiangsi (Nanchang)	77,301	15,820,406
Kiangsu (Chinkiang)	41,830	36,469,328
Kirin ^e (Tungki, Kirin)	109,413	7,666,641
Kwangsi (Yungning, Nanning) ..	84,007	13,385,218
Kwangtung (Fanyu, Canton, Kwangchow)	83,940	32,385,215
Kwoichow (Kweiyang)	69,297	9,043,207
Liaoning ^e (Schenyang, Mukden, Fengtien)	124,256	16,465,303
Ningsia ^b (Ningsia)	106,143	1,023,143
Outer Mongolia ^d (Kulun, Urga ^e)	625,946	2,077,669
Shansi (Taiyuan)	58,662	11,601,026
Shantung (Tsinan)	69,216	38,029,294
Shensi (Changan, Sian)	72,353	7,717,881
Sikang (Kangtung)	143,475	968,187
Sinkiang ^d (Tihwa, Urumtchi)	705,953	4,360,020
Suiyui ^b (Kwaisui, Kweihua)	125,220	2,083,693
Szechwan (Chengtu) ..	166,529	52,963,269
Tibet ^d (Lhasa)	469,416	3,722,011
Tanghai (Sining)	269,187	1,106,054
Yunnan (Kunming, Yunnanfu)	123,572	11,994,549

^a Where more than one name is given for the respective capitals in parentheses, they represent the official name, postal map name, and popular or ancient name, in the order given. ^b Chahar, Ningsia, and Suiyui Provinces, together with part of Jehol, form the geographical region known as Inner Mongolia. ^c The Provinces of Heilungkiang, Kirin, and Liaoning constitute the geographical region known as Manchuria, which on Feb. 18, 1932, was proclaimed the free State of Manchoukuo. Jehol Province was incorporated in Manchoukuo in 1933. ^d Dependencies. ^e The Mongol name for Urga has been changed to Ulan Bator Khoto.

As no census has been taken in modern times, the above figures are merely rough estimates. Including the nominal dependencies, the area is roughly equal to that of the United States and Mexico combined, while the population is approximately one-fourth of the world's total. In addition there were estimated to be 7,828,888 Chinese residing abroad in 1936. The Japanese civilian population of China on Jan. 1, 1940, was 345,700, an increase of 300 per cent since July, 1937. The estimated population of Shanghai and its environs in 1936 was 3,489,998 including 1,450,685 persons in the Foreign Settlements, Peiping, capital of China until 1928, 1,556,364, Tientsin, 1,292,025; Nanking, 1,019,948, Tsingtao, 514,769. Estimated populations of the other chief cities in 1931 were: Canton, 861,024; Hankow (including Wuchang and Hanyang), 777,993; Chungking, 635,000; Wenchow, 631,276, Changsha, 606,972; Hangchow, 606,930; Weihaiwei, 390,337; Foochow, 322,725; Soochow, 260,000; Amoy, 234,159, Ningpo, 218,774; Wanhhsien, 201,937; Chinkiang, 199,776.

Education and Religion. Between 25 and 50 per cent of the population were estimated to be literate in 1937, compared with an estimated 15 per cent in 1912. In 1935 there were 16,000,000 children in primary schools, of whom 12,383,479 were in 259,095 regular schools and the rest in one-year primary schools. Enrollment in secondary schools was over 600,000 in 1941-42, in the 115 universities, over 45,000. Between the outbreak of war in 1937 and October, 1939, 17 universities and colleges moved from Japanese-occupied areas to Yunnan, Kweichow, and Kwangsi provinces, 17 to Hunan and Szechwan, and 5 to Shensi and Kansu.

Several new technical and normal colleges were founded during this period by the Chungking Government.

With the exception of Christians and Mohammedans, most Chinese practise and profess all three indigenous or adopted religions—Confucianism, Buddhism, and Taoism. The Mohammedans are estimated at about 20,000,000. In 1934 there were 2,623,560 native Roman Catholics and 123 Catholic missions, with a staff of 16,241. The Protestant churches, with 1,130 mission stations and 488,539 communicants in 1932, had 19 colleges, 267 middle schools, and 37,714 students in 1934. The number of Christian missionaries in China declined from nearly 6,000 in 1937 to about 3,600 on June 30, 1941.

Production. Previous to the outbreak of Chinese-Japanese hostilities in 1937, China was the world's leading producer of rice, soybeans, tea, kaoliang, sweet potatoes, millet, and vegetable oils; it ranked second in the output of raw silk and wheat; third in cotton, and was an important producer of corn, tobacco, fruits and vegetables, and cane sugar, as well as the leading exporter of eggs and tung oil. Estimated production of rough rice in 1940-41 was 2,440,000,000 bu., wheat in 1941, 19,440,000 metric tons (preliminary); cotton in 1940, 2,250,000 bales of 500 lb. (compared with an average of 3,000,000 bales previous to 1937), flue-cured tobacco in 1940, 140,000,000 lb.; rape-seed in 1940, 3,014,460 metric tons, raw silk in 1940, 107,430 picul bales (of 132¼ lb.). Production of other crops, in metric tons, was: Bailey, 6,371,400 in 1937; oats, 852,500 in 1937; corn, 6,130,100 in 1936, sesamum, 865,000 in 1936, peanuts, 2,631,100 in 1936; soybeans, 5,911,000 in 1936. Tea production is estimated at 300,000 to 500,000 metric tons annually. The wool and mohair clip for China and Manchoukuo was about 55,000 metric tons in 1938.

China is normally one of the world's principal producers of antimony, tin, tungsten, and manganese. The estimated mineral output of all China, excluding Manchoukuo, in 1940 was (in metric tons except as stated): Coal, 17,828,711, antimony, 7,418, tin ingots and slabs, 23,361; tungsten ore, 11,580; white alum, 21,000, arsenic, 1,200, coke, 50,430; copper ore, 1,100, gold, 377,000 fine oz.; gypsum, 75,000, iron ore, 551,000, pig iron, 107,000, lead ore, 1,800, crude petroleum, 440,000 U.S. gal., potash, 3,317, quicksilver, 118, rock salt, 926,716, refined salt, 18,837; soda, 1,927; sulphur, 3,600. China's rapidly expanding manufacturing industries (see YEAR BOOK, 1937, p. 152) were disrupted by the war, but during 1937-41 1,354 factories (with a minimum of \$10,000 capital and 30 workers) were established in West China.

Foreign Trade. Excluding bullion, net imports in 1940 were 2,027,143,048 yuan (Chinese standard dollars); net exports, 1,970,120,647 yuan. Leading 1940 exports, in millions of yuan, were: Textile fibers, 341.8; animal products, 322.3; metals and minerals, 140.7; piece goods, 116.1, tea, 104.6; oils, tallow and wax, 100.9. The chief imports were raw cotton, yarn and thread, metals and ores, chemicals, machinery, cotton piece goods, coal and coke, dyes and paints. The chief sources of imports were (in 1,000 yuan): Japan, 466,289; United States, 435,486, India, 175,275; Hong Kong, 146,972; Netherlands Indies, 107,504. The distribution of exports was (in 1,000 yuan): To the United States, 565,669; Hong Kong, 367,502; Great Britain, 196,798; Japan, 126,408; India, 89,903; Singapore, 64,865. For trade with United States in 1941, see TRADE, FOREIGN.

Finance. The Nationalist Government at Chungking estimated expenditures for 1939 at 2,850,000,000 yuan, or three times the 1936 budget. Actual budgetary receipts were variously reported at from 200,000,000 to 1,200,000,000 yuan. The 1940 expenditures were estimated at about 3,500,000,000 yuan. Revenues of the Japanese-sponsored Nanking regime were estimated at about 500,000,000 yuan in 1940.

The indebtedness of the Chungking Government on June 30, 1939, was stated to be 8,100,000,000 yuan (domestic, 5,600,000,000; external, 2,500,000,000). War loans floated by Chungking from July 1, 1937, to June 30, 1940, totaled 3,430,000,000 yuan, 100,000 customs gold units, 100,000,000 U.S. dollars, and £20,000,000 sterling. Extension of a 300,000,000-yen reconstruction loan to the Nanking Government was announced by the Japanese Government June 29, 1941.

The circulation of Chinese (Chungking) legal-tender notes rose from 1,444,900,000 yuan in June, 1937, to 3,962,000,000 yuan on June 30, 1940, according to the Central Bank of China *Bulletin*. As of Dec. 31, 1940, circulation of legal-tender notes was unofficially estimated at 4,000,000,000 to 8,000,000,000 yuan, of provincial bank notes, 500,000,000 yuan, notes of Chinese commercial banks, 200,000,000 yuan, notes of the "Communist Border Government" in northwest China, 50,000,000 yuan. In addition, there was the "wei-wah" or "transfer money" used in Shanghai in connection with the "blocked" accounts of Chinese modern and native banks, the "customs gold unit" adopted in 1930 to protect Chinese customs import revenues from currency depreciation, and Hong Kong currency which circulated extensively in South and Central China. The average nominal exchange rate in U.S. currency of the Chungking Government's legal-tender yuan in Shanghai was \$0.2136 in 1938, \$0.1188 in 1939, \$0.0600 in 1940, and \$0.0524 in July, 1941.

The Japanese-sponsored note issues in "occupied China" increased from 52,900,000 yen in July, 1938, to 1,450,800,000 yen (estimates) on Dec. 31, 1940. On the latter date, these issues were distributed approximately as follows (in millions of yen): Federal Reserve Bank of China, 715.0, Meng Chiang Bank, Ltd., 94.4; Hua Hsing Commercial Bank, 3.3, Central Reserve Bank of China, 38.1; military scrip yen, 600.0.

Transportation. As of Aug. 1, 1939, 4,546 miles of China's railways were reported to be in Japanese-occupied territory and about 2,285 miles in Chinese-held territory. Operations of some of these lines were suspended or restricted to military traffic during 1939-41, but construction of new lines continued in both regions. The most important lines under construction in Chinese-held territory were the Yunnan-Burma and Yunnan-Szechwan railways. Sections of these lines in the vicinity of Kunming were completed during 1940-41 with rails torn up from the severed Yunnan-French Indo-China Railway. The Kwangsi-Kweichow line was scheduled for completion in October, 1941.

In the occupied regions of North China, Japanese military engineers completed the 150-kilometer Luan-Tungkwanchen (Tailo) line and the 200-kilometer Shihkiachwang-Tehchow line. On Mar. 20, 1941, the Japanese-controlled North China Transportation Co., holding a transportation monopoly in North China, was operating railway passenger cars over 5,900 kilometers of line (an increase of 430 kilometers over the preceding year). Its motor-bus lines extended 14,000 kilo-

meters, an increase of 5,000 kilometers during the preceding year, and its inland navigation service about 3,750 kilometers. In all China there were estimated to be over 61,430 miles of highways in 1940. Road construction proceeded at a rapid rate in 1941. In North China about 2,000 kilometers of highway were built or repaired during 1941. Despite Japanese air attacks the Burma Road (see *History*) functioned continuously in 1941; during the six months ending in mid-April, 1941, 16,196 trucks completed the trip from Lashio near the Burma frontier to Kunming.

Japanese air-transport routes in China on Dec. 31, 1940, extended 8,300 kilometers, the principal lines being Shanghai-Peiping, Shanghai-Tsingtao-Dairen, Shanghai-Canton, Tsingtao-Kaifeng-Taiyuan, Peiping-Kalgan, Peiping-Japan, Shanghai-Japan, Canton-Japan, Canton-Bangkok. Under the Chungking Government's auspices, the China National Aviation Corp. (Chino-American) operated routes between Hong Kong, Chungking, and Kunming. There was an airline from Chungking to Calcutta, India, via Lashio, Burma, and a Chungking-Moscow line operated in collaboration with the Soviet Government.

Shipping. At the end of 1940, ocean-going shipping entering Shanghai was about one-fourth of the 1937 level, coastal tonnage about one-third, and tonnage operating on inland water routes from Shanghai about one-fifth. Commercial traffic on the Yangtze remained a monopoly of Japanese interests. During 1940 a total of 91,891 vessels aggregating 25,675,594 tons entered Chinese ports from and cleared for abroad; 10,671 vessels of 13,736,469 tons were Japanese and 1,894 ships of 4,437,605 tons British.

Government. The Organic Law of Oct. 4, 1928, revised on Dec. 29, 1931, and Dec. 27, 1932, vested the supreme governing powers of the Chinese Nationalist Government in the National Congress of the Kuomintang (Nationalist party), acting through the Central Executive Committee, the Central Supervisory Committee, and the Central Political Council. Executive control, however, centered mainly in the hands of Gen. Chiang Kai-shek, commander-in-chief of the Nationalist armies. After the outbreak of hostilities with Japan in 1937, a Supreme National Defense Council, headed by Chiang Kai-shek, assumed direction of all political and military affairs. It included the heads of all party, political and military organs together with other members nominated by the chairman and approved by the Council.

Establishment of a centralized, democratic, representative government, following a period of "political tutelage" by the Kuomintang, is an official objective of the party. Five minority parties in existence in 1941 were as a rule accorded considerable freedom of speech and assembly. Their leaders were members of the People's Political Council, an advisory governmental body serving as the forerunner of the promised parliament. In April, 1940, the People's Political Council approved a final revised draft of a new Constitution for submission to a National Assembly. Pending adoption of the new Constitution, governmental functions were carried on by appointive committees (see *YEAR BOOK* for 1932 for description of committee system).

The chairman of the State Council and nominal head of the government in 1941 was Lin Sen. The chairmen of the five yuan (committees) of the government were: Executive, Gen. Chiang Kai-shek, assisted by Dr. H. H. Kung as vice-chairman; Legislative, Sun Fo; Judicial, Chu Cheng; Exam-

ination, Tai Chi-tao; Control, Yu Yu-chen. Under the chairman of the Executive Yuan were eight ministers, headed as follows: Interior, Chow Chung-yueh, Foreign Affairs, Dr. Wang Chung-hui (replaced by Quo Tai-chi Apr. 3, 1941); Military Affairs, Gen. Ho Ying-chun; Finance, Dr. H. H. Kung; National Economy, Dr. Wang Wen-hao; Communications, Chang Chiangau; Education, Chen Li-fu, Agriculture and Forestry, Gen. Chen Chi-tang. Attached to the Executive Yuan are three subordinate Commissions, supervising Mongolian and Tibetan Affairs, Overseas Chinese Affairs, and Famine Relief.

Leaders of the five minority parties in 1941 were: Communists, Mao Tse-tung; National Socialists, Carson Chang; Young China, Tseng Chi; Social Democrats, Yang Kan-tao; Third Party, Chang Pai-chuen.

HISTORY

Progress of War. Repeated Japanese offensives during 1941 failed to end the military stalemate that developed in the Sino-Japanese War toward the end of 1938. The battle lines existing Jan. 1, 1941, remained relatively unchanged on December 31. With surprising regularity the gains registered by successive Japanese drives were wiped out by powerful Chinese counter-attacks. At the year's end the prospect of a decisive Japanese victory on the Chinese military front seemed farther off than ever.

The first Japanese offensive of 1941 got under way on January 23 against Chinese forces holding a 150-mile section of the Peiping-Hankow railway. The Japanese at first reported sensational gains and the "annihilation" of 100,000 Chinese troops, but by the middle of February the invaders were driven back on their original bases with heavy losses.

South China Campaigns. Renewing their efforts to cut Chinese supply routes in South China, a Japanese force landed at Bias Bay near Hong Kong on February 4 and marched on Waichow, 65 miles northeast of Hong Kong. At Shayuchung and Tamshui they destroyed large stores of tungsten ore and tung oil destined for the United States and Russia as well as imported stocks of gasoline, tires, and tobacco. Failing in the effort to capture Waichow, the Japanese retained their hold on Tamshui and the Bias Bay base. Beginning March 3 they carried out a similar operation along the coast west of Canton, landing troops at six points including Pakhoi, a foreign treaty port. Large non-military supplies, consisting mostly of goods for export to the United States, were seized or destroyed. Efforts by Japanese troops to drive inland from the captured ports met stubborn resistance and on March 9 the Japanese announced the evacuation of their forces.

Toward the end of March the Japanese made new landings along the Kwangtung coast, occupying Kongpeng, Swabue and other points in a new drive against Free China's foreign trade. In mid-April these points were evacuated to permit similar operations along the coasts of Chekiang and Fukien provinces. Ningpo, Wenchow, Taichow, and Foochow were occupied along with large areas in the interior. Chinese counter-offensives then drove the Japanese back to their bases on the coast. Wenchow was recaptured early in May and in September Foochow was evacuated. Meanwhile the invaders made sporadic raids on other Chinese-held ports and bombed towns in the interior. The naval blockade of the coast also was tightened and the supplies entering China by the south coast materially reduced.

Fighting in Interior. Fighting of more or less intensity continued on other sectors of the far-flung front. In March heavy but indecisive fighting was reported near Ichang in the Yangtze valley and in North Kiangsi Province, where a Japanese offensive from Nanchang was halted. Early in May the Japanese launched an offensive against large Chinese forces in the Han river valley between Hankow and Ichang, but again failed to register important gains. At the same time the Nipponese began another attempt to drive the Chinese from southwestern Shansi. They achieved some costly successes against troops under Gen. Wei Li-huang in the Chungtiao Mountains and won control of important crossings of the Yellow River. However the drive was halted in June by guerrilla attacks upon the Japanese lines of communication and the invaders were unable to follow up their initial advantage.

Changsha Captured. With their offensives everywhere bogged down, the Japanese in mid-summer again opened unofficial peace negotiations with the Chungking Government. Gen. Chiang Kai-shek, in line with his improved military position, rejected the Japanese terms and reportedly raised his own demands to include indemnities. After a summer lull, marked by minor Japanese "mopping up" operations and Chinese guerrilla warfare, the invaders in September made another attempt to capture Changsha and open the Hankow-Canton railway by simultaneous drives along the railway southward from Yochow on the Yangtze and northward from Canton. The offensive from Canton soon petered out, but the drive from Yochow resulted in the capture of Changsha on September 28. The Japanese column was driven out almost immediately by a Chinese counter-offensive. On October 1 the Japanese announced that their forces at Changsha had been ordered to withdraw to the vicinity of Yochow. Both sides suffered heavy casualties in this campaign. Missionaries reported that before evacuating Changsha the Japanese engaged in an orgy of looting, murder, and rape.

To relieve pressure on Changsha, Gen. Chiang Kai-shek on September 27 began a drive to recapture Ichang, the city at the mouth of the Yangtze gorges captured by the Japanese in 1940. The Chinese fought their way into Ichang on October 7 and held possession of most of it for three days, but withdrew under severe poisonous gas and bombing attacks from Japanese planes which killed many civilians. While the fighting raged at Ichang, Japanese forces in Northern Honan crossed the Yellow River and on October 4 captured Chengchow, the important junction on the Peiping-Hankow and Lung-Hai railways that the Chinese had saved by dynamiting the dikes of the Yellow River in 1938. Under pressure from surrounding Chinese forces, the Japanese withdrew from the Chengchow district at the end of October after destroying Chinese army bases there. Another powerful Japanese offensive toward Changsha got under way at the end of December.

Air Raids Continued. Throughout most of the year the Japanese air force intensified its destructive bombing raids upon the cities of unoccupied China. The raids on Chungking were renewed beginning March 18 and the capital was raided heavily almost daily until the autumn mists obscured the target in October. A new tactic of sending bombers over in relays kept Chungking residents in shelters for long hours at a time. Two cases of mass suffocation in air-raid shelters were reported, with more than 700 civilians dying in one

incident and 400 in another. The arrival in China during the year of numerous American air instructors and an increasing inflow of American planes offered the Chinese hope of combating the Japanese air raids in 1942.

Military Situation at Year's End. Chinese war casualties up to the autumn of 1941 were estimated by neutral experts at some 2,100,000 dead and wounded as against Japanese estimates of 3,800,000 dead. But despite these losses, War Minister Ho Ying-chin in November stated that China had 6,000,000 soldiers plentifully supplied with small arms and ammunition, of whom 4,000,000 were at the front. An increasing flow of heavy arms and munitions was reaching the Chinese forces from the United States via the Burma Road. China's growing military strength was reflected in General Chiang's declaration on September 18, the tenth anniversary of the Japanese attack on Manchuria, that the recovery of Manchuria was one of his Government's war aims.

Other developments greatly strengthening Chiang's hand were the growing tension between Japan and the anti-Axis powers, America's entrance into the war, and the increasing financial, economic, and military aid extended to Chungking by the United States and Great Britain. On the other hand, the Japanese advance into French Indo-China and Thailand (q.v.) increased the danger that Japan would cut the Burma Road and thus isolate China from all outside sources of supply. Shipments of war material from the Soviet Union across Sinking diminished after the outbreak of the Russo-German conflict on June 22 and were stopped altogether in October. Moreover the economic strain upon the Chinese deepened perceptibly. Most serious of all was the breach between the Kuomintang and the Chinese Communist party, which repeatedly threatened to impair the united front against Japan.

Kuomintang-Communist Split Friction between Chiang Kai-shek's Government and the Communists was intensified when War Minister Ho Ying-chin in October, 1940, ordered the Communist Fourth Route Army to move north of the Yellow River from its guerrilla bases on both sides of the Yangtze. He accused the Fourth Army of not staying within its assigned area, expanding its forces without permission, disobeying orders of the Central Government, and attacking non-Communist Chungking troops. Beginning Jan 6, 1941, Chungking forces attacked and cut up a Fourth Route Army detachment of some 10,000 men near the town of Maolin south of the Yangtze. According to the Communists, the detachment was treacherously entrapped while marching to cross the Yangtze in obedience to the War Minister's order.

Gen. Ku Chu-tung, Chungking's district commander who ordered the attack, charged that the Fourth Army had "lengthily prepared for revolt." The National Military Council cited him for suppressing "rebels" and on January 17 ordered the dissolution of the Fourth Route Army, which still comprised some 90,000 troops north of the Yangtze. The Chinese Communist party defied this order. It reconstituted its Central Revolutionary Military Committee at Yen-an in northern Shansi, disbanded in 1937 as part of the Kuomintang-Communist united front agreement against Japan. The new committee issued a manifesto setting forth 12 conditions as the price of its further cooperation with the Chungking Government. Among its demands were revocation of the order disbanding the Fourth Route Army, release of prisoners and arms captured at Maolin, compensation for families of the

Communist soldiers killed and wounded, punishment of those responsible for the attack, immediate release of political prisoners held by the Chungking Government, and abolition of the Kuomintang dictatorship.

Ignoring these demands, the Chungking authorities ordered some 200,000 troops under Gen. Tang En-po to surround and capture the Fourth Army units north of the Yangtze. The Communists sent reinforcements from their Eighth Route Army in Shantung to aid the Fourth Army. When a large-scale civil war seemed imminent, the Japanese on January 23 suddenly launched their offensive against General Tang's troops guarding the Peiping-Hankow railway in southern Honan. The attack was thrown back by the Chungking troops after severe fighting with the aid of the Fourth Army, which attacked the Japanese rear. This action relaxed the Kuomintang-Communist tension and led Chiang Kai-shek to open negotiations with the Yen-an Committee.

However, when the second People's Political Council met in Chungking, March 1-10, the seven Communist delegates boycotted the sessions. Addressing the Council on March 6, Chiang Kai-shek rejected most of the demands made by the Yen-an Committee. He said there could be only one "source of command" and that the Government would not recognize "anomalous political organizations." However he said he intended to democratize the political system and had no intention of waging war on the Communists. The Communists were given one representative on the standing committee established by the People's Political Council March 10. The Communist-Kuomintang breach remained unhealed, however, and only the objections of some Chungking generals prevented War Minister Ho Ying-chin from launching a general offensive in April against the Eighth Route Army and the Communist-ruled Border Region in Kansu and Shensi.

The Japanese strove to widen the Kuomintang-Communist breach. Their offensive of May-June in Shansi was directed exclusively against troops of the Chungking Government. Despite their political differences, the Communist armies in Shansi, Hopei, and Suiyuan were reported to have lent invaluable aid to the Chungking forces by attacking the Japanese lines of communication. In July, however, the National Military Council at Chungking again charged the Communists with attacking its troops in Shansi and Shantung. In the same month Communist sources admitted that units of the Fourth Route Army were still operating and organizing in the region south of the Yangtze from which they were ordered to withdraw by the Central Government. Nevertheless, friction between the Kuomintang-Communist factions appeared to decrease during the remainder of the year, partly because of the outbreak of the Russo-German war and the new line adopted by the Communist International. See COMMUNISM.

Chungking's Other Problems. The Communist-Kuomintang breach was accompanied during 1941 by the extensive curtailment by Kuomintang officials of the democratic rights that prevailed in Free China during the first years of the struggle with Japan. Other factors contributing to this illiberal trend were growing financial and economic hardships, the spread of inflation, food hoarding and profiteering, the activities of "a not altogether negligible fringe of 'Quislings' and traitors," to quote Madame Sun Yat-sen; and other strains arising from the war. The censorship was tightened. Hundreds of liberals and Communists were arrested and scores executed, often without trial.

In his speech opening the 10-day session of the Kuomintang Central Executive Committee on March 25, Chiang Kai-shek declared "the economic difficulties are now 70 per cent and the military difficulties 30 per cent of the war problems now facing the nation." To deal with these problems the committee approved the creation of the new Ministries of Food, Trade, and Social Welfare, and adopted a three-year program for wartime reconstruction. Government monopolies were established over salt, sugar, tobacco, and wine. The collection of land taxes, under provincial control since 1928, was returned to the Central Government. The budget for mass education was increased and autonomy in local matters extended to Mongols, Tibetans, and other border minority groups. At the same time Foreign Minister Wang Chung-hui was replaced by Dr. Quo Tui-chi, Chinese Ambassador to London. The new Minister of Social Welfare assumed supervision of the fast-growing industrial cooperative movement. It undertook to bring other popular organizations, including farm and labor groups, under its control. In June the National Financial Conference increased land taxes five to 15 fold and revived the ancient system of collecting land taxes in kind in order to feed the army and the State civilian employees.

Foreign Relations. On January 23 President Roosevelt sent Lauchlin Currie, one of his administrative assistants, to Chungking to study China's economic situation with a view to the employment of the \$50,000,000 credit granted China by the U.S. Treasury Nov. 30, 1940. Following Currie's return to Washington, an agreement for monetary cooperation between the United States and China was signed in Washington April 25. It provided for establishment by China of a dollar-yuan stabilization fund consisting in part of dollars acquired from the United States and of \$20,000,000 U.S. contributed by Chinese Government banks. At the same time it was announced that China had entered into a similar stabilization accord with the British Treasury, which contributed £5,000,000 toward the pound-yuan stabilization fund in addition to the £5,000,000 fund established in 1939. Both funds were to be managed by a five-man board of three Chinese, one American, and one Briton.

On May 27 Chungking announced that the United States had agreed to supply lend-lease aid valued at nearly \$100,000,000 in the form of airplanes, trucks, guns, shells, power plants, steel, and other equipment. Secretary of State Hull followed this on May 31 with a note to the Chinese Foreign Minister stating that the U.S. Government "expects when conditions of peace again prevail to move rapidly, by process of orderly negotiations and agreement with the Chinese Government, toward relinquishment of the last of certain rights of a special character which this country, together with other countries, has long possessed in China by virtue of agreements providing for extraterritorial jurisdiction and related practices."

On recommendation of President Roosevelt, Chiang Kai-shek late in June appointed Owen Lattimore, American authority on the Far East, as special political adviser to the Chungking Government. The \$50,000,000 U.S. stabilization credit to China was extended for another year on July 2. In mid-July three American highway transportation experts arrived in Chungking via the Burma Road and submitted recommendations which proved effective in expanding and speeding up the traffic in military supplies over that highway. On August 16, Washington announced that 16 American public

health experts and sanitary engineers would be sent to China on lend-lease funds to fight disease among 250,000 Chinese workmen constructing a railway paralleling the Burma Road. Ten days later President Roosevelt announced the appointment of a military mission headed by Brig. Gen. John Magruder to arrange for increased lend-lease aid and to assist and advise the Chinese Army.

By November important American lend-lease aid was reaching the Chungking Government. One hundred U.S. army pilots were instructing Chinese airmen in China and a number of Chinese air cadets were being trained in the United States.

The aid received from America was duplicated, on a smaller scale, by the British measures in support of China. On July 14, the British promised to negotiate for the abandonment of extraterritorial rights in China when peace was obtained. On July 28, London joined the United States in freezing all Chinese assets in British territories at the request of the Chungking Government, thus helping to stabilize the yuan. A British military mission was sent to Chungking.

The Chungking regime opened diplomatic relations with Canada and Australia through an exchange of Ministers, and joined in the political and military conferences that led to the formation of a united front by the United States, Britain, China, the Netherlands Indies, Australia, New Zealand, and Canada against further Japanese aggression.

War with the Axis. During the critical American-Japanese negotiations in Washington in November, Chiang Kai-shek was reported to have warned President Roosevelt that any cessation of American aid to China would promote a Chungking peace agreement with Tokyo. The American response was seen in the arrival in South China in December of an all-American air unit, under the Chinese flag, for the defense of the Burma Road against Japanese bombing attacks. After Japan's surprise attacks upon the United States and Britain, the Chungking Government on December 9 formally declared war on Germany, Italy, and Japan. Plans for joint military cooperation of the anti-Axis powers in the Far East were formulated at a conference between Chiang Kai-shek, Gen. Sir Archibald P. Wavell of Britain, and Major Gen. George H. Brett of the U.S. Army Air Corps, held in Chungking at the end of December. At the same time T. V. Soong, Chinese Ambassador to Washington was appointed Foreign Minister to facilitate China's collaboration with the Anglo-American front.

On July 1 Chungking was thrown more definitely into the anti-Axis camp when Japan announced that Germany, Italy, Slovakia, Rumania, and Croatia had recognized Wang Ching-wei's puppet government in Nanking. Spain and Bulgaria also were reported to have extended recognition. The Chungking authorities immediately broke off diplomatic relations with the Axis powers and forced their news agencies to suspend activity in Free China.

The Nanking Regime. Despite recognition by the Axis countries, Wang Ching-wei made no important progress during 1941 in stabilizing his Japanese-controlled administration. In May he was reported to have threatened to resign unless the Japanese transferred their control of commerce and finance in the Yangtze valley to his government, provided his army of 140,000 with arms and munitions, and obtained Axis recognition. In the latter part of June Wang Ching-wei visited Japan as the guest of Emperor Hirohito. He pledged his collaboration with Japan and the European Axis powers in constructing a "new world order," and agreed upon a specific program of cooperation with Japan. In re-

turn, Japan agreed to extend his government a loan of 300,000,000 yen to equip and maintain the Nanking army.

In November the Japanese turned over to Wang's government the properties and interests of third powers in and around Nanking which had been under Tokyo's control since 1937. Meanwhile foreign observers reported difficulties within the Nanking regime, which caused Wang to reshuffle his Cabinet in August. Desertions of Wang's troops to Chungking were reported from time to time. Chungking claimed on September 15 that 30,000 of Wang's soldiers had mutinied in Honan, killed their Japanese officers, and switched their allegiance to Chiang Kai-shek. On the other hand, some Chungking officers and troops were reported to have gone over to Wang.

Fate of Shanghai. The position of the International Settlement at Shanghai became increasingly difficult. On February 1 the Chinese municipality and the Council of the International Settlement signed an agreement for policing the western border areas within and adjoining the Settlement. A meeting of Settlement's taxpayers on April 17 changed the membership of the Municipal Council to include three Americans, three Britons, three Japanese, four Chinese, one German, one Swiss, and one Netherlander.

Nevertheless hostility, marked by frequent terrorist outbreaks, continued to mark the relations between Chinese and Japanese, and between Japanese and foreigners (especially the British and Americans). Agents of the Chungking and Nanking regimes waged underground war upon each other. There were bombing outrages in Chungking- and Nanking-controlled banks in April. The soaring cost of living and an acute shortage of food and fuel caused repeated strikes and riots among native workers. Several thousand unemployed German Nazi refugees flocked to Shanghai from all parts of the anti-Axis world, adding to racial tensions. Late in July the development of economic warfare between Japan and the Anglo-American-Dutch territories proved a further blow to Shanghai's dwindling foreign trade and spurred Japanese army officers to demand the seizure of the entire International Settlement. The withdrawal of the American marines from Shanghai late in November enabled Japanese troops to occupy the Settlement area without difficulty coincident with the attack upon Pearl Harbor. In doing so they sank a British gunboat and captured the American gunboat *Wake*.

CHRISTIAN CHURCHES. See DISCIPLES OF CHRIST.

CHRISTIAN REFORMED CHURCH. See REFORMED CHURCH, RELIGIOUS ORGANIZATIONS.

CHRISTIAN SCIENCE. A system of metaphysical or spiritual healing, discovered by Mrs. Mary Baker Eddy in 1866 and set forth in her textbook of the Movement, *Science and Health with Key to the Scriptures*, first published in 1875. The first church was established by Mrs. Eddy in Boston in 1879. In 1892 it was reorganized as a voluntary religious association, known as The First Church of Christ, Scientist, in Boston, but called more frequently by

its adherents "The Mother Church." The total number of recognized branches of The Mother Church in the United States reported for the fiscal year ending May 31, 1940, was 2,190, and 74 college and university organizations. Total branches for the world 2,863.

The affairs of The Mother Church are administered by a board of directors which supervises the work of the board of education, board of lectureship, and committee on publication. The board of education instructs and authorizes students to teach Christian Science. The board of lectureship consists of 22 members who are engaged in delivering free lectures on Christian Science.

The Christian Science Publishing Society, whose affairs are administered by a board of trustees according to the Manual of the church, issues the daily paper of the organization, *The Christian Science Monitor*. Other periodicals include *The Christian Science Journal*, *Christian Science Sentinel*, *Christian Science Quarterly*, and four editions of *The Herald of Christian Science* in the German, French, Dutch, and Scandinavian languages, each with the English translation opposite, and in Braille.

John Randall Dunn is president of The Mother Church for the year 1941-42. Headquarters are at 107 Falmouth Street, Boston, Mass. See GERMANY under *History*.

CHROME, CHROMITE. See CHROMIUM.

CHROMIUM. The second World War took the "stainless" out of steel, as the demand for chromium continued to increase in 1941. Rising steel production made devouring demands on this vital alloying metal in 1940, and it was put under export-license control by government order late in that year. Early in 1941 it was known that other alloy steels would have to be substituted for stainless steels wherever possible, and "stainless" was removed from many specifications.

Germany had access in 1941 to all the chrome ore produced in Yugoslavia and Greece, or about 10 per cent of the world's supply. Turkey, which produces about 17 per cent of the world's total, continued to fend off with success Germany's bullying negotiations for her output, and continued to fulfill her export contracts to Great Britain and the United States. Russia, who produces 15 per cent of the world's chrome ore, exported none in 1940 or '41.

The United States formerly depended almost entirely on the outside world for its chromium supply. Africa, India, New Caledonia, the Philippines, and Cuba together produce about 55 per cent of all chrome ores in the world. United States domestic production has always been very small in comparison. Only about 3,000 long tons per year (from California and Oregon) were the measure of United States output up to and including 1940.

Chromium is used to toughen steel and therefore is among the basic metals vital to war production. It goes into the linings of gun barrels and armor plate for tanks, airplanes, and ships. Huge amounts also are taken for the equipment used in industries essential to war, namely the chemical and petroleum industries. United States consumption of chromium, which was 800,000 tons in 1941, was estimated to become at least 900,000 tons in 1942.

None could possibly be available for nonessential uses. In July, 1941, the OPM put chromium under full priority control to conserve all available stocks for use in the defense program. In November, control over deliveries was intensified; the

manufacture and delivery of chrome steel was prohibited except under preference ratings of A-10 or higher. Chrome plate was prohibited for use on automobiles after December 15. In December all manufacturers of ferrochromium agreed to return to the specifications of 20 years ago, which made possible the use of lower grade ores. Engineering steels having a maximum of 3 per cent chromium only were affected by the change. No chromium or stainless steel could go to civilian uses except for electrical conduction and refrigeration, and these were ordered cut 50 per cent beginning January, 1942, and 75 per cent in February. A complete allocations system for chromium was put into effect by the WPB in February, 1942, specifying that no chromium whatever could be melted without authorization by the Director of Industrial Operations.

The difficulties and increasing hazards of shipping, the cessation of imports from certain sources, added to apprehension that all foreign supplies might become unavailable, plus the ever increasing demand, stimulated United States production in 1941 to an unprecedented 12,000 long tons (3,000 in 1940). The Pilliken mine in California was the largest producer, but altogether 25 operations in California and Oregon were busy through the year. New deposits were discovered in Montana, Washington, Alaska, and Wyoming, which were reported suitable for refractory and chemical uses.

In spite of all obstacles, however, imports during the first nine months of 1941 amounted to 660,936 long tons compared with 657,689 for all of 1940. The increase was due to purchases from Cuba, Africa, and the Philippine Islands, but some amounts also arrived from Turkey and New Caledonia. As early as July, 1941, all ores from the Transvaal and India were sold out beyond the end of 1941. The Metals Reserve Company was the principal buyer. The nation's stockpile, December, 1941, was 400,000 tons. And all imports of chromium were handled by the MRC after December 28. See GEOLOGICAL SURVEY; MINES, BUREAU OF.

CHRONOLOGY. The following chronology lists the more important happenings of the year 1941 according to the dates of occurrence. In most cases, these events are treated in detail under their respective headings. To such articles, particularly those on leading countries, such as UNITED STATES, GREAT BRITAIN, and the article WORLD WAR, the reader is referred for additional information. For a list of prominent persons who died during the past year, reference should be made to the article **NECROLOGY**.

JANUARY

- 1—R A F launched a series of bombing raids on Bremen and other war production centers.
- Neutral Eric was bombed, Irish Government protested to Germany, January 3.
- ASCAP music went off the air, following failure to agree with National Association of Broadeners.
- 2—New constitution of Panama went into effect.
- 3—Shipbuilding program called for 200 U S merchant vessels.
- 4—Government of French Indo-China was made autonomous.
- 5—British captured Bardia, Libya, and 25,000 Italians after a 20-day siege.
- Amy Johnson, serving as a pilot in the Air Transport Auxiliary, bailed out from an R A F. plane and was drowned.
- 6—President Roosevelt asked "all-out aid" for the democracies in his message to the new 77th Congress.
- 7—Office of Production Management was established by executive order to supervise defense output, William S. Knudsen, industrialist, and Sidney Hillman, labor leader, were given equal powers.
- 8—The Greeks opened an offensive in Albania, capturing Kluksa on January 10.
- President's budget envisaged expenditures of \$17,485,528,049 in fiscal 1942, including \$10,811,000,000 for defense.

U.S Navy was reorganized into Pacific, Atlantic, and Asiatic fleets with Adm. Husband E. Kimmel as commander-in-chief.

9—Harry L. Hopkins arrived in London as personal envoy of President Roosevelt.

10—Renewed Soviet-German trade treaty provided increased supplies of raw materials for Germany and established Polish Baltic frontier.

Axis bombers, launching Mediterranean attacks, damaged the British aircraft carrier *Illustrious*, a cruiser, and a destroyer.

The Lend-Lease bill was introduced in Congress, to provide supplies to any country whose defense is deemed necessary to that of the United States.

11—Germany decreed the death penalty for profiteering in wartime.

13—In Italian army shake up Gen Ugo Cavallero replaced Gen Ubaldo Soddu as commander in Albania.

14—Two were killed in New York City in a dramatic Fifth Avenue hold-up and gunchase by the Esposito brothers (convicted May 1).

15—Haile Selassie returned to Ethiopia to join British offensive against Italians.

Mayor Fiorello H. LaGuardia held the first New York City Defense Council meeting.

18—Thai flag was raised over Cambodia.

Joseph P. Kennedy, retiring ambassador to Britain, opposed surrender of Congressional authority in lend-lease bill, urged peace.

19—Axis made mass air attacks on Malta.

20—President Roosevelt was inaugurated for the first presidential third term in U S history.

Germany reported secret meeting between Hitler and Mussolini.

British invaded Eritrea.

21—Assassination of German army major in Bucharest precipitated a conflict between extremist faction of Rumanian Iron Guard and Premier Ion Antonescu; thou sands killed in four-day fighting.

Japan offered to mediate conflict between French Indo-China and Thailand, Vichy accepted the following day.

22—British captured Tobruk, 14,000 Italians captured.

A wave of big defense industry strikes began in United States with stoppage in Allis Chalmers.

Supreme Court Justice James Clark McReynolds retired (effective February 1).

23—Col Charles A Lindbergh, in committee hearings on Lend-Lease Bill, advocated a negotiated peace, said aid to Britain would only prolong war.

24—Marshal Henri Petain designated a National Council of 188 members in France, named committee to unify political parties (January 29).

New British Ambassador to Washington, Viscount Halifax, arrived on the battleship *King George V* and was met in person by President Roosevelt.

25—Premier Antonescu restored order in Rumania with aid of German troops, Vice Premier Hora Sima arrested as leader of outbreak, 7,000 subsequently arrested.

26—Wendell L. Willkie arrived in London for an unofficial ten-day visit, on his return, he advocated more aid for Britain.

Gen Francisco Franco put Spanish railroads under government control.

27—Italian Foreign Minister, Count Ciano, was sent to active duty on the front.

Hungarian Foreign Minister, Count Czaky, died.

28—Free French forces, advancing into Libya, defeated the Italians at Murzak and captured Gatrun (January 30).

Secretary of the Treasury Henry Morgenthau reported that British dollar resources in the United States were exhausted.

29—Greek dictator, Gen John Metaxas, died, succeeded by Alexander Korizis.

30—Hitler on the 8th anniversary of the founding of the Third Reich prophesied victory in 1941, warned that ships carrying aid to Britain would be sunk.

British captured Derna in Libyan campaign.

An armistice between French Indo-China and Thailand was signed at Saigon, peace conference opened in Tokyo February 7.

War Department rejected the lowest bid on a U S contract, submitted by Ford Motor Company, because it refused to accept labor provisions.

FEBRUARY

1—British captured Agordat in Eritrea.

President Anastasio Somoza pledged Nicaragua to cooperation with the United States.

3—Cuban army and navy chiefs who rebelled against civil rule were ousted, President Fulgencio Batista assumed command.

British captured Cirene, Libya.

U S Supreme Court upheld the Wage and Hour law.

Guy S. Swope was appointed Governor of Puerto Rico.

4—Italian Fascist party underwent a shake-up; 83 officials affected.

5—Belgian Government attached funds of the Bank of

France in New York to make good \$260,000,000 of its gold delivered by France to the Germans

6—British captured Bengasi, last important stronghold of Eastern Libya (abandoned it eight weeks later).

8—U. S. House passed Lend-Lease Bill, 260-165.

Malcolm MacDonald was appointed British High Commissioner to Canada

9—Adm. Jean Darlan became Vice Premier and Foreign Minister of France, succeeding Pierre Flandin.

British navy shelled Genoa

12—British severed diplomatic relations with Rumania
U. S. Senate confirmed nomination of John G. Winant as ambassador to Great Britain

17—Italy notified foreign diplomats not to leave Rome without permission

Dies Committee was extended for 15 months

12—General Franco conferred with Mussolini and (February 13) with Petain, agreement on food and supplies for Spain reported

Economic treaties affecting Argentina, Bolivia, and Paraguay implemented the agreements reached at the River Plate Conference.

Gen Gregory K. Zhukov was appointed Chief of the General Staff of the Russian Army

13—Yugoslav Premier and Foreign Minister were summoned to Berlin.

14—Adm Kichisaburo Nomura presented his credentials as new Japanese Ambassador to the United States

15—British drove the Italians from Kurmuk, last stronghold in Anglo-Egyptian Sudan.

16—Hurricane in Portugal and northern Spain cost hundreds of lives

17—Bulgaria and Turkey signed a non-aggression pact

Earl Browder lost his appeal to the Supreme Court against his four-year sentence for passport fraud (Robert Minor serves as acting head of U. S. Communist Party while Browder is in prison)

18—Japan offered to act as mediator to end war, Britain declined, February 24

19—Nomura stated that there would be war between Japan and the United States only if the United States began it

Bill was signed increasing United States national debt limit to \$65,000,000,000

ASCAP accepted a consent decree settling the U. S. Government's anti-trust suits against it

Costa Rica and Panama settle border dispute

21—Maxim Litvinov was expelled from the Central Committee of the Soviet Communist party

22—Nazi staff officers moved into Sofia, Bulgaria

23—United Press reported that 16 current strikes were holding up \$60,000,000 of U. S. defense orders

Nobel Prize winner, Sir Frederick Banting, was lost in a military airplane crash in Newfoundland

24—OPM invoked the first mandatory industry-wide priorities, affecting aluminum and machine tools

25—Brazil banned foreign-language newspapers and instituted export licenses

26—Successful two month drive into Italian Somaliland culminated in British capture of the capital, Mogadiscio, all Italians driven out by March 7

Amsterdam was subjected to martial law by the Germans as a result of riots and disorders; 15,000,000-guilder fine imposed March 2

U. S. S. R. and Rumania signed a trade agreement

CIO went on strike at Bethlehem Steel, OPM peace formula, accepted after 39 hours, was acclaimed by CIO as its greatest victory in history

27—Rep William D. Byron of Maryland and six others were killed in crash of an Eastern Airliner near Atlanta, Ga

28—Anglo-Turkish pact was reaffirmed after Ankara conference with British Foreign Secretary Anthony Eden, Chief of Staff Sir John Dill, and Ambassador to Moscow Sir Stafford Cripps.

The Churchill Government received a unanimous vote of confidence in the House of Commons

Alfonso XIII, exiled ex-king of Spain, died in Rome

MARCH

1—Bulgaria became the seventh adherent to the Axis tripartite pact, Nazis occupied strategic Bulgarian bases
U. S. Senate approved an investigation of defense contracts

Gen. Shunroku Hata became Japanese commander-in-chief in China

2—Turkey closed the Dardanelles except to ships having permits

Leftist parties prevailed in Chilean Congressional elections

3—German troops occupying Bulgaria reached Greek frontier, U. S. S. R. condemned yielding to Axis; United States froze Bulgarian credits

4—German special mission arrived in Turkey

5—Britain severed diplomatic relations with Bulgaria as the German war machine poured through.

Greece rejected German demand that she make peace with Italy, Eden and Dill, in Athens, promised full aid from Britain

6—Ex-King Carol escaped with Magda Lupescu from Spain to Portugal, obtained permission to reside in Chile, March 25.

United States requested closing of Italian consulates in Newark and Detroit as counter to Italian closure of U. S. consulates

7—Mexico pledged aid to any American nation defending itself.

Britain refused to let the Red Cross carry food through the blockade to unoccupied France.

8—Senate passed the Lend Lease bill, 60-31 (signed March 11). Vichy Government drafted labor for agriculture

10—Twelve firemen were killed, 20 hurt, in burning theater in Brockton, Mass

17—French Indo-China ceded disputed areas (approximately 25,000 square miles) to Thailand under Japanese mediation, peace treaty signed at Tokyo, May 9, with Japanese guaranty of new borders

12—U. S. S. R. and Thailand established diplomatic relations
Plebiscite in Rumania endorsed Antonescu's regime

16—Britain announced drafting of girls 20 and 21 and men of 41 to 45 for war industries, recaptured Berbera, British Somaliland

Sabotaged rails caused a wreck on the Pennsylvania Railroad near Baden, Pa., killing four and injuring 50

17—National Gallery of Art was dedicated in Washington, D. C.

19—A National Defense Mediation Board was created to act in labor disputes in defense industries, Clarence A. Dykstra, chairman

United States and Canada signed an agreement for development of the St Lawrence Seaway and power project

Nationalist members of the Uruguayan Cabinet resigned

20—Belgrade rumored British landings in Greece (news censored by British until April 6)

21—Three Yugoslav Cabinet members, resigned in opposition to proposed pact with Axis, anti-Nazi rallies followed

Jarabub, last Italian post in Cyrenaica, was captured
President Manuel Quezon appointed an Emergency Board as Philippine Commonwealth assumed full responsibility for defense

22—Operation of Grand Coulee Dam began, two years ahead of schedule

24—A Turkish-Soviet communique promised neutrality in case either country should be attacked

Violence accompanied new CIO strike at Bethlehem Steel, strike ended March 28

Japanese Foreign Minister Yosuke Matsuoka conferred with Stalin, went to Berlin, March 27, and Rome, April 1

25—Yugoslav Government signed protocol adhering to Axis, disension spread, United States froze Yugoslav credits

Germany extended war zone to within three miles of Greenland, including Iceland

CIVILIAN CONSERVATION CORPS (CCC). Adaptation of the Civilian Conservation Corps program to the needs of national defense represented the outstanding development in Corps activities during the 1941 calendar year. National defense activities at the end of December included the training of young men in skills useful in national defense industries, the development of physical hardihood in youth, the conduct of work on military reservations for the purpose of aiding the army in development of training grounds, and the advancement of conservation projects in forest areas, on farms, and on the public domain.

The CCC began the 1933 calendar year with 1,500 camps and approximately 300,000 enrollees. At the conclusion of 1941 there were in operation 872 camps with an enrollment of 160,000. In eight years of operation—April, 1933, to April, 1941—two and one-half million men served in the CCC. Expansion of national defense activities in industry and the enormous increase in the Army reduced the ranks of unemployed youth, thus resulting in a decrease in the number of CCC camps in operation. As of December 31 sufficient applications for enrollment were available to maintain the Corps at an average strength of approximately 150,000 men for the balance of the fiscal year which ends on June 30, 1942.

While the number of camps in operation was smaller, the rate of turnover among enrollees was much greater than normal due to increased employment opportunities for youth. In recent years enrollees, on the average, have remained in the Corps about nine months. During the last year the average enrollee left the Corps after about 6½ months of CCC training. The average age of enrollees entering the CCC was smaller than in any previous year, about one-half of the new juniors being in the 17-year age group. The average age of junior enrollees was 18½ years. Of the enrolled personnel, about 10 per cent were war veterans and the balance juniors between the ages of 17 and 23. More

than 10 per cent of the junior enrollees were Negroes. It is estimated that about 550,000 men were enrolled for varying periods of time during the calendar year.

The CCC training program included the development of health and physical fitness in youth, the training of young men to drive trucks, tractors, and to perform all the various kinds of work carried on by the Corps, and the training of young men as cooks, bakers, and mechanics in special schools and in the central repair shops. Young men also were afforded opportunity to attend vocational schools offering special national defense courses where these schools were adjacent to CCC camps.

Eighty-one CCC companies were assigned to military reservations for the purpose of aiding the War Department in the development of training grounds and for the protection of forest areas and other work. The CCC on military reservations cleared land for new development, built small arms, machine gun and anti-tank and artillery ranges, air fields, maneuver grounds, and recreational centers for service men, installed endless miles of communications and utilities systems, conducted malaria and rodent control operations in southern and western cantonments, built and maintained bridges and roads, fenced in areas used as firing ranges, and devoted thousands of man-days to forest fire pre-suppression. On Annette Island, Alaska, CCC constructed a military landing field, docks, a supply depot, and necessary installations for a garrison. Assignment of many additional companies to this type of work was under consideration.

The training of cooks and bakers in special schools continued throughout the year. The value of this training was highlighted by Gen. George C. Marshall, Army Chief of Staff, when he testified before a Congressional Committee that 25 per cent of all head cooks in the army were CCC-trained and that, because of this fortunate reservoir, the Army had escaped a shortage problem.

Basic vocational training courses were concentrated in fields invaluable to both industry and the military forces. Electricity, carpentry, metal working, welding, and radio operation and maintenance were the main subjects. So great was the response of enrollee-students to these training opportunities that time off the 40-hour-week work projects was granted to favor this intensified educational program.

In 1941 it was made mandatory for all enrollees to take the standard Red Cross First Aid course of 20 hours. More than 110,000 enrollees completed the course during the calendar year, forming an important nucleus for the army of air raid protection workers needed in an emergency.

Preparations matured to afford special training facilities at 15 of the 55 central motor repair shops where young enrollees with pronounced aptitudes undergo a year's training in repair and maintenance of all types of automotive equipment, including both gasoline and Diesel motors. Side-camps, similar to school dormitories, have been constructed adjacent to many of the central motor repair shops to house students and for classroom purposes. In tractor operation and maintenance alone, the Corps turned out hundreds of young men who could quickly master the intricacies of tank operation because of their tractor experience.

Fifteen minutes daily marching in military formation was made an order of the day in mid-summer. This, coupled with daily calisthenics, accounted for a half-hour daily of planned exercise and was designed to take the rookie edge off these youngsters, many of whom will be of Selective Service age

within the next few years. A total of 11,209 enrollees left the Corps before the end of their enrollment to enlist or be inducted in the military services.

Under an emergency order by the Corps Director, some 3,000 enrollees were furloughed to farms, ranches, and orchards to help harried growers harvest produce. On completing their tasks, the enrollees were returned to their Corps duties.

In the conservation field, a recent survey prepared for congressional committees disclosed that the future physical value of work completed by the Corps exceeded one billion seven hundred fifty million dollars.

Well-lighted and equipped classrooms permit enrollees to further their academic educations in their leisure time. In fiscal 1941, 54.3 per cent of the enrollment completed the eighth grade, 10.2 per cent finished high school, 0.6 per cent completed college.

An enrollee is paid \$30 a month, \$8 of it in cash, \$15 to his dependents, the remaining \$7 being deposited to his credit and given him on his discharge. If he has no dependents, he must deposit \$22 a month to his credit. Enrollment period is six months, but an enrollee with a good record can re-enroll for a total period of two years.

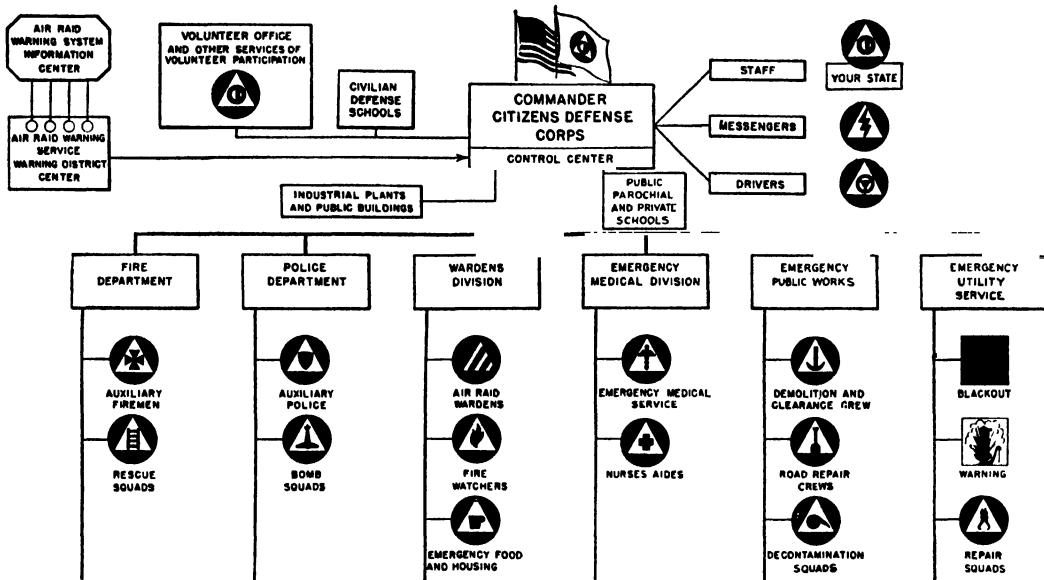

Outstanding achievements of the Corps from its beginning through June 30, 1941, apart from the defense effort, are as follows. Forest trees planted, 2,246,100,600; truck trails and minor roads laid, 122,169 miles; telephone lines laid, 85,548 miles; bridges erected, 45,382; reduction of fire hazards, 2,116,820 acres; check dams built to halt erosion, 5,875,578; rods of fence laid, 26,368,295; forest stand improvement, 3,998,328 acres; impounding and large diversion dams created, 7,073; springs, wells, waterholes, and small reservoirs (mostly for improvement of western grazing areas), 23,725; fighting forest fires, 6,304,211 man-days; fire prevention and fire pre-suppression, 6,182,269 man-days.

J J McENTEE.

CIVILIAN DEFENSE, Office of (OCD). Established by the President's Executive Order No. 8,757 on May 20, 1941, the Office of Civilian Defense, headed by Mayor F. H. LaGuardia of New York, assisted by Mrs. Franklin D. Roosevelt, took over the Division of State and Local Cooperation and became a part of the Office for Emergency Management. Its functions are to coordinate Federal, State, and local defense relationships, to plan and carry out programs of protection for civilian life and property; to sustain the national morale and to create opportunities for civilian participation in the national defense program.

The objectives of the Office of Civilian Defense are to utilize all existing facilities operating for community and national security; to expand those services through enlistment and placement of trained volunteer civilian personnel, and to achieve a state of preparedness against all emergency arising from enemy action. To these ends have been directed the efforts of the two principal divisions of the Civilian Defense Program. The Civilian Protection Program (quasi-military) and the Division of Volunteer and Community Participation.

Civilian Protection is concerned directly with the safeguarding of civilian life and property. Its chief functions are the training of personnel for the 14 volunteer protective services including fire fighting; emergency medical service; air raid precautions; rescue, demolition, decontamination, and repair work. It also includes industrial plant protection.

CIVILIAN PROTECTION ORGANIZATION FOR A MUNICIPALITY
(Citizen's Defense Corps)

The volunteer participation division's functions include the recruitment of individuals and their assignment to proper defense services, it seeks the establishment of a volunteer office for each defense council through which such individuals may be enrolled and placed. It maintains departments to deal directly with groups within communities, to initiate and carry out a national program of youth activities, to maintain contact with veterans' groups, and to conduct a national program of physical fitness. The participation division is particularly concerned with the impact of the national defense effort upon communities and the adjustments necessitated in such localities by new conditions arising from the war.

Established by OCD in cooperation with the War Department, the Navy Department, and the Civil Aeronautics Administration, the Civil Air Patrol coordinates its functions with the entire defense effort and all government departments. It also is under the administration of Director LaGuardia and is concerned with the utilization of the nation's civil aviation resources. It is estimated that 70,000 certified civilian pilots supported by adequate ground personnel will take part in the program.

Fundamentally, the program of civilian defense depends upon the active participation of all State and local governments for its operation, and responsibility for the establishment, maintenance, financing, and administration of State and local defense rests directly upon the authority of State and local governments who are recognized as civilian defense coordinating authorities in their respective areas. To coordinate further the national program, nine regional offices co-terminous with the War Department corps areas have been established along lines similar to the Washington office.

Two advisory bodies function in the Office of Civilian Defense. One is the Board for Civilian Protection, comprised of the Director of OCD and representatives of the Departments of War, Navy, Justice, the Federal Security Agency; Council of State Governments; the American Municipal Association; the U.S. Conference of Mayors; and the American Red Cross. The other is the Volunteer

Participation Committee, composed of representatives from all regions and interests of the nation.

As originally established, the Office of Civilian Defense has no authority under law to compel any State or locality to follow its directions for defense and civilian protection. It can only request and recommend. Before Congress, however, are measures to authorize appropriations of sums for facilities, supplies, and services for the adequate protection of persons and property from air raids; to authorize the loan of equipment without charge from other governmental departments to the Office of Civilian Defense, and to make unlawful the wearing of official civilian defense insignia except as prescribed by the director. These measures are Senate Bill No. 1,936 and H. R. No. 5,727.

Budgetary requirements submitted to the Director of the Budget for study are estimated at \$231,887,693 for the current civilian defense program. This estimate includes cost of 51,750,000 gas masks for the civilian population in the coastal areas, auxiliary fire-fighting equipment; medical supplies and protective clothing.

American civilian defense is based on a close study of war time conditions in the British Isles. Two missions were sent to England and the experience gained at first hand was adapted to American conditions. The American system operates from Washington through the nine regional offices which are in turn in contact with State and local defense councils. It is the council's responsibility to establish and maintain its volunteer office. At the time of the attack on Pearl Harbor, December 7th, there were approximately 6,000 defense councils and an estimated 150 volunteer offices. Volunteers enrolled in the protective services numbered approximately 1,000,000 persons.

Anticipating a future crisis, instructional literature on many phases of civilian defense had been prepared in advance. Much of it is based on English experience and adapted to American needs. Millions of pieces of this literature had been distributed and virtually the entire publication program was completed by Jan. 1, 1942.

The Office of Civilian Defense has rapidly ex-

panded its education program for volunteers as well as its plans and programs for application throughout the country. Courses are offered in most of the protective services and many other schools are being conducted along more technical lines in industrial plant protection and other subjects.

CIVIL SERVICE COMMISSION, U.S. Through methods described in the article under this heading in the YEAR BOOK for 1940, the U.S. Civil Service Commission continued to fill successfully the heavily increased personnel needs of the Government. Over 680,000 placements (including both additions to the Government service and shifts of persons already employed) were made in the War and Navy Departments alone during the calendar year 1941. During the five months (February-June) of 1941, the Commission's central office at Washington received 416,854 applications and issued 27,342 certificates bearing the names of 239,616 eligibles, whereas during the five months (January-May, 1940) immediately preceding the inauguration of the national-defense program it received 170,036 applications and issued 8,465 certificates bearing the names of 71,090 eligibles. The field offices of the Commission showed similar increases.

On June 30, 1941, the classified service included 990,218 positions, or 72.9 per cent of the 1,358,150 positions in the executive civil service on that date. There were 1,091,743 men and 266,407 women in the executive civil service on June 30, 1941. Within the District of Columbia 42.3 per cent of the employees were women. Outside the District of Columbia 16.1 per cent of the employees were women, this relatively small proportion is caused by the large number of men employed in the Postal Service and in the navy yards, arsenals, and other manufacturing and construction projects.

Civil-Service Examinations. During the fiscal year ended June 30, 1941, 2,622,080 applications for civil-service examinations were received. Ratings were completed and eligible registers established in examinations for which 2,808,344 persons applied. Of these 2,465,104 took the examinations, and 1,288,584 received eligible ratings. The various Federal departments and establishments appointed 252,172 persons from civil-service registers.

During the same period, 242,326 persons applied for veteran preference in examinations. Of those who passed civil-service examinations, 130,829 had been granted veteran preference. Of the appointees to the classified service from open competitive entrance examinations during the fiscal year, 15.3 per cent had veteran preference, including 37,295 men and 40 women receiving preference because of their own service, 1,017 widows of veterans, and 224 wives of disabled veterans.

Recent Legislation and Executive Orders. By Executive Order No. 8743 of Apr. 23, 1941, effective Jan. 1, 1942, the President extended the provisions of the Civil Service Act to include all positions in the Federal executive civil service except tempo-

rary positions, positions listed in Schedules A and B of the civil service rules, and positions expressly excepted by the "Ramspeck Act" of Nov. 26, 1940, or later legislation. The order also provided for the establishment within the Commission of a Board of Legal Examiners to develop a career system for Government lawyers.

The Service Extension Act of Aug. 18, 1941, extended the mandatory reemployment provisions of the Selective Training and Service Act to Government employees, other than temporary employees, who enter upon active military or naval service with the land or naval forces of the Government after May 1, 1940. Several Executive orders have been issued to safeguard the rights of such employees to acquire a classified civil-service status. An act of Aug. 1, 1941 (Public Law 202, 77th Cong.), permits Federal employees who are ordered into active duty with the military or naval forces of the United States to receive compensation in their civilian positions covering their accumulated current accrued leave, in addition to their military pay. Executive Order No. 8937 of Nov. 7, 1941, makes provision for the restoration to civil-service registers of eligibles thereon who serve in the military or naval forces after May 1, 1940.

Regulations governing the establishment and operation of the efficiency-rating review boards provided for by the "Ramspeck Act" of Nov. 26, 1940, were approved by the President on May 1, 1941. A number of the boards are now in operation. An act of Aug. 1, 1941, amended the Classification Act of 1923 to provide for the granting of automatic salary increases, at fixed intervals after their last salary increase of any kind, to employees who maintain sufficiently high efficiency ratings. Executive Order No. 8760 of May 27, 1941, made the written consent of the employing agency a prerequisite to competition in open competitive civil service examinations by probational or permanent Government employees. Similar restrictions had previously been placed upon the transfer, or reinstatement within a short period after separation, of employees of national-defense agencies. Executive Order No. 8781 of June 12, 1941, as amended by Executive Order No. 8914 of Oct. 1, 1941, required the fingerprinting of all persons employed by the Government except such temporary employees as the Civil Service Commission exempted from this requirement.

COAL AND COKE. The total production of bituminous coal in the United States for the year ending Dec. 27, 1941, was 499,657,000 net tons. With the figures adjusted to the calendar year, the 1941 total production was well over 500,000,000 tons, as compared with about 411,845,000 tons in 1940. Stocks held by industrial consumers were 52,004,000 net tons on December 1. At the November daily consumption rate industrial plants had on hand, December 1, enough to last 45 days. Retail dealers had a 34-day supply.

Production of anthracite coal, January-October, 1941, showed a 9 per cent increase over the same 1940 period, with an output of 46,434,000 net tons, and indicated a 1941 total production of about 56,000,000 net tons. This was exclusive of bootleg

production, which was about 4,500,000 tons in 1940. The Pennsylvania Anthracite Emergency Committee approved a plan to end bootlegging early in 1941 and at the end of the year estimated that 70 per cent of bootlegging tonnage had been absorbed in legitimate operations. The Pennsylvania anthracite industry in November had a production capacity of 70,000,000 tons per year and could enormously increase its output at need. Stocks totaled 63,299,000 tons, November 1, a 53-day supply, compared with 48,665,000 tons, Nov. 1, 1940. The production forecast for May 1, 1941, to May 1, 1942, is 531,000,000 tons. The peak figures of World War I were 502,000,000 tons in 1916, 552,000,000 tons in 1917, and 579,000,000 tons in 1918.

The nation's war effort speeded up the beehive coke output to an all time high of 6,700,000 tons in 1941. Production from by-product ovens plus beehive production was 47,980,221 tons by the end of September, 1941. The increasing demand for metallurgical coke in the West, caused by the expansion of iron and steel producing capacity, gave rise to investigations of western coals by the U.S. Bureau of Mines with the result that coals mined in Washington, Oklahoma, and Kansas were found suitable for making coke.

Prices of coke, September, 1941, were \$6.25 per net ton at ovens of Connellsville furnace, \$7.25 per net ton for beehive coke. September, 1940, prices were \$4.75 and \$5.75 respectively. By-product foundry coke prices at ovens were \$8.50, Birmingham, \$11.50, Chicago, \$13.75, New England. The 1940 prices were \$7.50, \$10.50, and \$12.50 respectively. See BITUMINOUS COAL DIVISION, CHEMISTRY, INDUSTRIAL under *Fuels*, LABOR CONDITIONS; LABOR LEGISLATION under *Strikes*; MINES, BUREAU OF; SHIPPING under *Inland Water Carriers*, TRANSPORTATION DIVISION. For index of industrial activity, see BUSINESS REVIEW.

COAST GUARD, U.S. A very substantial increase in duties of a national defense nature, culminating in the transfer of the Service to the Navy on November 1, characterized the work of the U.S. Coast Guard during 1941. An expansion program never before equaled or demanded of the Service was put into effect.

Highlights of the year's activities follow: Increased participation in the neutrality patrol and other naval operations in the North Atlantic, and the supplying of ships and personnel for naval operations. A substantial increase in the authorized number of enlisted personnel. An increase in the size of the classes entering the Coast Guard Academy. A stepping up of the tempo of the training program for enlisted personnel. Construction of new plant facilities and increase of the forces at the Coast Guard Yard, Baltimore, Md., for the building, reconditioning, and rearmament of ships. The construction of building ways and a floating drydock at the same yard. Special efforts, by means of planes cooperating with ice-breaking vessels, to expedite the opening of navigation upon the Great Lakes in the spring and to retard its closing in the fall, as a national defense measure. The taking over of a national system of radio direction finder stations, of great use to shipping, which had previously been maintained by the Navy. A great increase in the number of officers serving as captains of the port and controlling the movements of ships in all the large ports of the country. The reorganization of the former non-military Coast Guard Reserve into the present Coast Guard Auxiliary, and the establishment of a fully militarized Coast Guard Re-

serve, as the result of recent legislation. Certain important transfers of ships and personnel.

The shipbuilding program has been stepped up to meet the increase in Coast Guard duties and to offset the losses due to transfers to other services. This has been accomplished through the award of contracts to private shipyards and by the adding of shipbuilding ways to the facilities of the Coast Guard's Yard at Baltimore.

Rapidly expanding duties of the Captains of the Port, have required large numbers of small boats. Deliveries under a contract awarded early in the year were resulting in the commissioning of about one new boat a week by December. Another large contract was awarded in November, to provide 100 small boats within three months. In its own building shops the Coast Guard about doubled its production. Authority to purchase small boats in the open market was secured from Congress, and under the Coast Guard Reserve legislation the full complement of 270 boats was commissioned.

The earliest opening of navigation through the Federal locks at Saulte Ste. Marie, Mich., in forty years, took place on Apr. 13, 1941, largely through the efforts of the Coast Guard in breaking channels through ice in strategic parts of the Great Lakes. These locks, located at the falls of the St. Mary's River, control the movement of traffic between Lake Superior and Lake Huron. This early opening of Lakes navigation facilitated national defense activities by reestablishing the flow of iron ore from the Lake Superior region to the steel mills upon the lower Lakes.

The active development of the Coast Guard Reserve, a new fully military organization established by Act of Congress Feb. 19, 1941, has provided much of the additional personnel and small boats demanded by the rapidly expanding task of preventing sabotage and otherwise controlling ship movements in the large ports, a work being done under the direction of the Captains of the Port. Under the law which provides that members of the Coast Guard Auxiliary (a voluntary non-military organization) may offer to the Coast Guard the boats which they own, the Service has been able to acquire, for temporary use, a fleet of 270 small but serviceable craft suitable for inshore patrol duties. In many cases the owners of these boats have received temporary appointments in the Coast Guard Reserve and are now serving aboard their own craft.

At the end of the year the Coast Guard Reserve consisted of approximately 217 officers and 1,620 enlisted men, nearly all of whom were on active duty. The non-military Auxiliary now consists of about 5,000 members, owning about 4,500 boats. About 270 small boats have been taken over by the Coast Guard under the provisions of the recent Act.

Mississippi River flood conditions were made the subject of a special plan of operations designed to cover Coast Guard emergency work on any part of the Western Rivers. This plan, drawn up during the year, will act as a guide to the personnel of the St. Louis District of the Coast Guard, and will also serve to acquaint personnel of certain adjoining districts with the kind of cooperation which they may be called upon to afford. Greater comprehensiveness, because of the increased facilities at the disposal of the Coast Guard since the consolidation with it of the former Lighthouse Service, is the keynote of the new plan. Basically it divides the Mississippi valley into definite sections which serve as administrative units. An action timing plan defining a zero gauge for river conditions at various points, established a height which constitutes a zero

hour at which positive action begins. Important parts of the plan are instructions for equipping and shipping boats, available unloading points, and communications instructions. For the first time comprehensive provisions were made for utilizing the services of the men and boats constituting the Coast Guard Auxiliary.

Weather patrol work in the North Atlantic, inaugurated in 1940, was continued by Coast Guard vessels during the year. See YEAR BOOK for 1940.

The system of aids to marine navigation has continued to expand along normal lines. From a total of 31,000 aids of all types the number increased during the year by nearly 1,000, greatest changes having taken place in the buoys, beacons, and smaller automatic lights. Further extension of such improved waterways as the Intracoastal Waterway, and the deepening of existing channels for the use of vessels of greater draft, resulted in the establishment of a considerable proportion of the new aids. There have been several new radio beacons established at existing lighthouses and radio beacons are now also being established upon buoys, the latter a development of most recent years.

A national system of marine radio direction finders, originally established and developed by the Navy, was turned over to the Coast Guard for operation during the year. This places under unified control the two types of radio aids to marine navigation, namely, the radio direction finders and the radio beacons. These two systems, under one of which the navigator of a ship makes his own observations and plots his own position, and the other where the observations are made by shore stations and transmitted to the inquiring ship by radio, provide long range position finding facilities for a very large portion of the shipping operations in United States waters.

Expansion of the personnel of the Coast Guard and the resultant demand for additional officer material was foreseen some months ago and plans made for increasing the teaching facilities of the Coast Guard Academy, located at New London, Conn. The classes which have entered the Academy in the last two years have been substantially larger than those previously admitted. Entering classes now approximate 150 cadets. An important addition to the sea training facilities of the Coast Guard Academy was the gift to the Service of the yacht *Atlantic*, by her owner, Gerald B. Lambert, rear commodore of the New York Yacht Club.

The need of the Navy for skilled officers and crews for the manning of transports resulted in the Coast Guard providing such personnel, and a special training program is now in operation designed to provide a steady stream of specially trained ratings for this work.

The Maritime Service, the organization for the training of merchant seamen administered by the Coast Guard for the U.S. Maritime Commission, has undergone certain important changes of policy during the year. The program as originally conceived, emphasized training for licensed officers and experienced unlicensed men of the merchant marine. For these officers and men an original 3 months' training period with pay was provided, and after satisfactory completion of this probationary training, the regular enrollees who continued to go to sea in the merchant marine became eligible for one month's annual active duty training with pay in addition to one month's retainer pay for each year. Correspondence courses in their specialties were also made available to all regular enrollees without charge through the Coast Guard Institute.

It became necessary to modify this policy and to

provide thorough training for large numbers of young men who had no previous seagoing experience, because of the greatly expanded merchant shipbuilding program and number of skilled seamen being drawn into the shipbuilding trades. A probationary training course of six months for these apprentice seamen is now provided, except for those being trained as merchant marine radio operators who require a ten months' course. Upon completion of the probationary training course, the now large groups of previously inexperienced enrollees become eligible for the same annual active duty training and retainer pay benefits as are provided for experienced regular enrollees.

With six training stations and five training ships, the training capacity of the Maritime Service has been more than doubled during the past year, and now provides training for approximately 1,000 licensed officers and 5,400 unlicensed men a year. It is expected that shortly the facilities will accommodate 1,200 licensed officers and 10,000 unlicensed men per year.

The U.S. Coast Guard is now operating as a part of the U.S. Navy, as the result of Executive Order No. 8929, signed by President Roosevelt on Nov. 1, 1941. On that date the Coast Guard ceased to function as a part of the Treasury Department. Authority for such transfer in time of war or national emergency has been upon the statute books since 1915. The Commandant of the Coast Guard continues to administer the Service, but directly under the Chief of Naval Operations. Most of the basic functions of the Coast Guard will be carried out in the customary manner. For an account of the more normal and constantly recurring services, see YEAR BOOK for 1940.

RUSSELL R. WAESCHE.

COCHIN CHINA. See FRENCH INDO-CHINA.

COFFEE. World production of coffee in 1940-41, as indicated by statistics of the International Institute of Agriculture, amounted to 4,861 million pounds. As in the previous season, the crop was below the 1934-35 to 1938-39 average of 5,205 million pounds, and in spite of good results in Central America and Africa which compensated only in part for the moderate Brazilian crops. Production in Brazil had been declining for some years due to a succession of unfavorable weather conditions, crop pests, and the giving up of many old unprofitable plantations because of the overproduction crisis. Combination of these factors resulted in a crop approximating 2,756 million pounds in 1940-41 compared to 2,919 million pounds in 1939-40. The crop in other American countries was for Colombia 995 million lb.; Venezuela 112 million lb.; Salvador 143 million lb.; Guatemala 119 million lb.; Mexico 110 million lb.; Costa Rica 51 million lb.; Cuba 68 million lb.; Haiti 66 million lb.; and Dominican Republic 49 million lb.; and the total for American countries was estimated at 4,200 million lb. versus 4,328 million lb. in 1939-40. Coffee production in Netherlands Indies, the main non-American producer, totaled 242½ million lb.

The 1941-42 crop of Brazil, as estimated by the New York Coffee and Sugar Exchange, would total about 12,787,000 132-lb. bags (35 per cent compulsory sale to the National Coffee Department for destruction) compared to 20,850,000 bags in 1940-41 (25 per cent sacrifice quota plus 30 per cent additional for São Paulo) and 21,861,000 bags in 1939-40. The Republic had pledged 7,662,759 bags against the 1930-40 coffee loan and had destroyed 4,222,000 bags from July 1, 1940, to

Oct. 15, 1941. Coffee destroyed to Oct. 15, 1941, amounted to 73,230,000 bags, not including 479,000 destroyed prior to June, 1931, by São Paulo Coffee Institute. Exports from Brazil, 1940-41 totaled 12,879,000 bags, and from Colombia 4,401,289 bags. Coffee delivered in the United States in 1940-41 amounted to 16,415,709 bags compared to 13,886,000 in 1939-40. Revised quotas of the Inter-American Coffee Board totaled 17,640,287 (including Brazil 10,317,904 and Colombia 3,494,774) for the year to end Sept. 30, 1942. This was 1,740,287 bags above the basic quotas and 1,030,193 bags above the final quota for 1940-41. Spot prices in New York ranged from 6 $\frac{1}{2}$ ¢ per pound in January, 1941, to 12 $\frac{1}{4}$ ¢ in August for Santos No. 4 (soft); 4 $\frac{1}{2}$ ¢ to 8 $\frac{1}{2}$ ¢ for No. 7; and 9¢ to 16¢ for Colombian. The OPM Administrator announced a ceiling at coffee prices prevailing at the close of business Dec. 8, 1941, when December Coffee Contract "A" (Basis No. 7) closed at 8.26¢ and December, 1941, Contract "D" (Basis Santos No. 4) closed at 12.31¢. See CHEMISTRY, INDUSTRIAL under *Plastics*.

COLLECTIVE BARGAINING. See LABOR CONDITIONS

COLLEGES. See UNIVERSITIES AND COLLEGES.

COLOMBIA. A South American republic. Capital, Bogotá.

Area and Population. Area, about 444,900 square miles; estimated population, 9,334,392 in 1941 (8,701,816 at 1938 census). About 20 per cent of the inhabitants are white, 7 per cent Indians, 5 per cent Negroes, and 68 per cent of mixed race. Among the 34,322 foreigners counted in 1938 were 9,942 Venezuelans, 2,887 Americans, 2,977 Germans, 1,944 British, 1,448 Italians, 1,059 Poles, 1,055 French. Estimated populations of the chief cities on Jan. 1, 1940, were Bogotá, 351,723; Medellín, 178,146; Barranquilla, 162,574; Cali, 108,284; Manizales, 90,628; Cartagena, 88,228; Ibagué, 64,830; Cúcuta, 60,194; Bucaramanga, 54,160; Pasto, 51,699.

Defense. Military training for one year and service in the reserve for nine years is compulsory. The army's peace strength in 1941 was 15,850 men, trained reserves, 100,000; active air force, 1,150 men with about 80 planes. Police number about 5,000. The navy has 2 modern destroyers, 3 sea-going gunboats, 3 coastal patrol vessels, and 4 river gunboats. United States military aviation and naval missions were contracted for in 1938 and a French military mission in March, 1940.

Education and Religion. About 19.5 per cent of the urban population and 80.5 per cent of the rural population are estimated to be illiterate. Schools, with the number of pupils in parentheses, are as follows: Kindergartens, 525 (13,400), elementary, 8,562 (576,061); vocational, 37 (3,513); night, 184 (9,989); commercial, 127 (11,823); high schools, 450 (34,599), agricultural, 22 (981); art, 16 (2,490); religious, 29 (1,657), colleges and universities, 63 (7,635). Roman Catholicism is the prevailing religious faith; the Church was disestablished in 1936.

Production. An unofficial estimate placed the value of production of the chief industries in 1940 at about one billion pesos, divided as follows: Agriculture, 40 per cent; livestock, 20 per cent; factories, 20 per cent; mines, 10 per cent. In 1940 coffee, gold, petroleum, and bananas accounted for 97 per cent of the value of all exports. Colombia ranks second to Brazil as a coffee producer. The

1940-41 export crop of coffee was 4,401,289 sacks (of 132 lb.) against 3,781,866 sacks in 1939-40.

Livestock estimates for 1941: Beef cattle, 9,000,000; horses and mules, 1,500,000; sheep, 1,000,000. Mineral output in 1940 included 25,356,000 bbl. of petroleum, 631,927 troy oz. of gold, 4,008 troy oz. of platinum, 260,310 troy oz. of silver, and 3,751 metric tons of land salt (sea salt output, 39,419 tons in 1939). There are about 5,000 industrial establishments having a capital of more than 1,000 pesos. The principal manufactured products are cotton textiles, silk and wool cloth, soaps, vegetable oils, candy and biscuits, beverages, shoes, beer, cigars and cigarettes, leather products, cement. Electrical plants numbered 332 in 1941. As of Dec. 31, 1939, Colombia had 935 stock companies with total assets of 1,029,991,000 pesos (\$587,095,000) and paid-up capital and reserves of 399,637,000 pesos (\$227,793,000).

Foreign Trade. Imports in 1940 were 148,192,000 pesos (183,442,000 in 1939); exports, 166,386,000 pesos (177,054,000). Value of the chief 1940 exports were (in 1,000 pesos): Coffee, 74,023; gold, 41,839; petroleum, 39,920; bananas, 5,610; cattle hides, 1,475. Leading 1940 imports (in 1,000 pesos): Automobiles, 4,068; mining machinery, 3,815; iron and steel bars and sheets, 3,742; raw cotton, 3,634; rubber tires, 2,984; sewing machines and parts, 2,882. The United States provided 74.4 per cent of the 1940 imports by value (54 in 1939); United Kingdom, 8.4 (9.5); Germany, 0.6 (12.8). Of the 1940 exports, the United States took 69.8 per cent (66.9 in 1939), Canada, 11.3 (7.1); Curaçao, 7.8 (8.1), mostly oil; Germany, 0.1 (7.3).

Finance. Actual ordinary revenues in 1940 were 76,946,000 pesos and expenditures 84,487,000 pesos, according to provisional returns. Final results for 1939: Ordinary receipts, 91,359,000 pesos; expenditures, 89,017,000. Ordinary budget estimates for 1941 balanced at 79,218,000 pesos; extraordinary, 3,191,403, special, 2,192,482. The dollar debt of the Colombian Government on Dec. 31, 1940 was \$54,504,000 (\$65,259,000 on Dec. 31, 1939), other external debt, 31,719,000 pesos (32,871,000 on Dec. 31, 1939), internal debt, 89,144,000 pesos (74,956,000 on Dec. 31, 1939). Consolidated internal bonds totaling 40,000,000 pesos were issued Jan. 1, 1941, for conversion and amortization of the internal debt. Also see *History*. Average dollar exchange rates of the Colombian peso in 1940 were: Controlled, \$0.5714, Bank of Republic's rate, \$0.5698; curb, \$0.5181 (\$0.5618 in 1939).

Transportation. Colombia in 1941 had 5,346 miles of navigable rivers, 1,395 miles of railways (mostly government-owned), 7,794 miles of highways in operation and 6,533 miles under construction, and an extensive network of national airlines operated by the government-controlled Avianca Airways. The Pan American Airways system provides international air connections through Barranquilla and Cali. Freight moved by the railways in 1940 totaled 3,140,000 metric tons; by Magdalena River steamers, 898,000 tons (plus 148,484 passengers); by Avianca planes, 5,652 tons (plus 53,357 passengers). The chief seaports are Cartagena, Barranquilla (opened to ocean-going vessels in 1936), and Santa Marta on the Caribbean coast and Buenaventura on the Pacific.

Government. The Constitution of Aug. 5, 1886, vests executive power in a President elected for four years by direct popular vote and ineligible for re-election for four years after completion of his term. A Congress of two houses exercises the legislative power. The Senate has 56 members, elected for 4 years by departmental assemblies; the Cham-

ber of Deputies, 118 members, elected for 2 years by direct suffrage. Extensive amendments to the Constitution were voted in 1936 (see 1936 YEAR BOOK, p. 174 f.). President in 1941, Dr. Eduardo Santos (Liberal), who assumed office Aug. 7, 1938. In the 1939 elections 77 Liberals and 41 Conservatives were elected to the Chamber of Deputies and 37 Liberals and 19 Conservatves to the Senate.

HISTORY

Political Events. The split between the radical and conservative wings of the Liberal party widened during 1941, offering the Conservatives an opportunity to regain control of the Government, which they held for 40 years prior to 1930 (see YEAR BOOK for 1940, p. 149, for background). Ex-President Alfonso López, leader of the radical Liberals, returned to Colombia on January 19 from a long stay in New York and commenced his campaign to secure the Liberal nomination for the Presidential elections in May, 1942. The conservative or anti-Lopista wing of the Liberals, to which President Santos belonged, supported the candidacy of Carlos Arango Vélez.

The major issue in the elections held Mar. 16, 1941, for a new Chamber of Deputies and for departmental legislative assemblies throughout Colombia was the fight for control of the Liberal party. López and his supporters attacked the internal social and economic reform policies of the Santos administration as ineffective and inadequate. They also criticized the Santos Government for its close collaboration with the foreign policy of the United States, which they charged threatened to draw Colombia into the European War. Dr. López expressed himself as willing to work with the United States but as unwilling to accept commitments of a vague and far-reaching character. A third party to the controversy was Dr. Laureano Gómez, pro-Axis head of the Conservative party. He violently attacked the United States and opposed any political or military collaboration with Washington except in case of an attack upon Colombia by a third party. But Gómez's policy was likewise attacked by a minority of pro-United States Conservatives who favored the Santos foreign policy.

The López wing of the Liberals gained a victory in the Congressional elections, capturing 42 seats in the Chamber of Deputies as against 39 by the anti-López Liberals and 50 by the Conservatives. López adherents also controlled more seats than the rival Liberals in the departmental legislatures. When the Liberal party convention met in Bogotá August 16-19 to nominate a Presidential candidate, an open break occurred. Lacking the two-thirds majority needed to nominate, 62 of the 120 delegates proclaimed López as their candidate and empowered him to name a new national Liberal committee to replace that dissolved through the resignation of anti-López committeemen. The 58 anti-López delegates then withdrew from the convention and named their own executive committee. Gómez, the Conservative leader, encouraged this split by announcing on August 10 that the Conservatives would not enter a candidate in the Presidential race but would support the nominee of the anti-López Liberals.

When Congress reconvened, 13 anti-López Liberal Senators and all of the Conservatives in the Senate offered to resign (September 22) in protest against the candidacy of Dr. López. In the Chamber of Deputies the anti-López Liberals and Conservatives combined a few days later to elect Dr. Alfonso Aguirre, conservative Liberal, as Controller

General of the republic. Amid extraordinary excitement and disorder, the adherents of Dr. López abandoned the Chamber when the voting started. The pro-López Liberals more than offset this setback by their victory in municipal elections held October 5. With the anti-López Liberals offering no candidates, the Liberals captured 382 municipal councils, including those of Bogotá and all the departmental capitals, while the Conservatives won control of 162 councils. Negotiations for healing the breach between the Liberal factions were then renewed.

The Cabinet resigned on October 16 in support of War Minister José Joaquín Martínez Castro, who had been under attack, chiefly in connection with the sale of a Colombian-owned ship to U.S. interests. President Santos retained the Ministers of Foreign Affairs, Interior, and Finance in the reorganized Cabinet named October 21.

Anti-democratic Movements. The Liberal Government during the year continued its struggle with European and native Nazi-Fascist groups. The small Colombian Communist party also became more active, holding its first national convention in Bogotá August 4-7, with 300 delegates in attendance. Nazi-Fascist propaganda was rife (see *New York Times*, issues of Apr. 24, 28, 30, and Nov. 6, 1941). But though taking effective advantage of the anti-democratic bias of many Colombian Conservatives, it appeared to make little headway against the Government and public opinion, which was overwhelmingly pro-democratic. The Government displayed growing vigilance, making occasional arrests of German Nazis charged with subversive activity or suspected espionage. On July 21 the U.S. Commerce Department reported that Paul von Bauer, a pioneer in the development of the Scadta system in Colombia and other German airlines in South America, had abandoned his activities in Colombia as a result of "the recent restricting regulations of the United States Government and the hearty cooperation of the President of Colombia."

On September 11 President Roosevelt stated in a speech that secret Nazi landing fields had been discovered in Colombia within easy striking distance of the Panama Canal. A communiqué issued by the Colombian War Minister tended to support this statement, but the Senate at Bogotá on September 12 denied Mr. Roosevelt's assertion. The Colombian Confederation of Workers on September 15 requested the Government to investigate and suppress fifth column activities. It was announced November 7 that the Government had arranged to police all Colombian airports taken over from the German Scadta system in 1939-40 by the Avianca Company under Colombian-United States management.

Evidence of anti-Government propaganda in the army was seen in the arrest of a number of suspected fifth columnists early in August. The War Minister announced August 4 that 2,500 soldiers of the Bogotá garrison had been confined to their barracks for the purpose of ascertaining the progress made by anti-democratic and totalitarian propagandists. The press reported that the Government's action had balked a German Nazi plan for infiltration into the army in preparation for eventual subversive action. On August 9 the President ordered strict enforcement of the 1940 decree for the expulsion of aliens engaged in propaganda on behalf of the belligerent countries. Measures were taken to curb anti-democratic influences in the schools and in October new restrictions were imposed on travel by foreigners in Colombia.

Foreign Relations. In his annual message to Congress on July 20 President Santos clarified his Government's foreign policy. Pointing out that the Panama Canal was vital both to the defense of the United States and to Colombia's economy, he said Colombia had an obligation "to see that it (the Canal) can never be prejudiced or attacked from our territory." This obligation, he said, could be fulfilled without sending Colombian soldiers beyond the republic's frontiers. He asserted that "the question of naval, military, or air bases for the collaboration of foreign and national forces in our common interest has not arisen." No such bases seemed necessary, the President said, but if the question did arise Colombia would have to "resolve it with her own resources and under her sole authority." At the same time he strongly emphasized his Government's support of the cause of democracy and continental solidarity as against totalitarianism.

On May 1 the Export-Import Bank of Washington undertook to extend a \$12,000,000 credit to the Colombian Government for "materials, equipment, and services." The loan was approved by the Colombian Senate on September 28 and by the Chamber of Deputies on October 4. It was to be used for roads, irrigation projects, and hydroelectric plants. The Senate on November 7 unanimously approved a motion stating that it was unacceptable that United States blacklists of pro-Axis individuals and firms should include "individuals and societies in the Ibero-American republics, without the respective governments having been consulted previously . . ."

However the day after Japan's surprise attack upon the United States, the Colombian Government declared it to be a clear case of aggression. Diplomatic relations with Japan were broken. The Government reaffirmed its adherence to the policy of inter-American solidarity and cooperation, and declared it would cooperate in continental defense and in the defense of the Panama Canal. On December 11 all Axis funds were frozen and it was decreed that all communications across the border must be in the Spanish, Portuguese, French, or English languages. Diplomatic relations with Germany and Italy were broken off on December 19. Before closing its regular session on December 16, Congress granted President Santos extraordinary powers.

Negotiations with the Vatican for the adjustment of Church-State relations in Colombia in accordance with the 1936 amendments to the Constitution (see YEAR BOOK for 1936) were reported to have been completed in October. In November Colombia and Mexico exchanged Ambassadors instead of Ministers. On April 5 the Colombian and Venezuelan Foreign Ministers met in the historic church at Cúcuta where the First General Congress of Greater Colombia met in May, 1821. There they signed a treaty settling a 100-year-old boundary dispute, providing for free navigation on their common rivers, and laying the groundwork for closer economic and commercial relations.

Economic Situation. Economic conditions in Colombia became more favorable during 1941 due chiefly to the increase in coffee prices produced by the Inter-American Coffee Agreement. Production of gold and petroleum also increased, and local manufacturing was expanding. These factors served to offset the shortage of shipping, severance of trade relations with Europe, restriction of imports from the United States due to defense requirements in that country, decline in banana production and shipments, and rising cost of living.

See ARCHITECTURE; LEND-LEASE ADMINISTRATION, WORLD WAR.

COLORADO. A mountain State. Area: 104,247 sq. mi., including 280 sq. mi. of inland water. Population: (1940 census) 1,123,296. The urban population comprises 52.6 per cent of the total (U.S. average, 56.5 per cent); non-white population, 1.5 per cent (U.S. average, 10.2); elderly (65 years and over), 7.4 per cent. Colorado ranks seventh among the States in area, 33d in population, and 39th in density, with an average of 10.8 persons per square mile. The largest city and capital is Denver with 322,412 inhabitants. There are 63 counties and eight cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Inez Johnson Lewis, Superintendent of Public Instruction, there were 229,022 pupils enrolled in the public schools of Colorado during the school year 1939-40, 149,145 in elementary schools and 55,564 in secondary schools. Teachers numbered 9,552 and received an annual average salary of \$1,349.82. Total expenditures for the year were \$24,260,669.26. For higher education, see *Colorado* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 12,100, of which 8,273 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 355,309; 292,626 were private and commercial automobiles, 1,166 busses, and 58,318 trucks and tractor trucks. Gross motor-fuel consumption was 251,877,000 gallons. Net motor-fuel tax receipts were \$8,291,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$2,797,000.

Railways of all classes extended 4,560 miles (Dec. 31, 1939) 1.94 per cent of the total mileage in the United States. Class I steam railways (3,949 miles) reported 7,883,207 tons of revenue freight originating in Colorado in 1940 and 7,308,394 tons terminating in Colorado. There are 37 airports and landing fields in the State (nine lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 224 civil aircraft in the State and 1,260 airline transport, commercial, and private pilots (1,109 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 6,140,500, as compared with 5,489,000 acres in 1940. According to the latest census, there are 51,436 farms, valued at \$388,343,847, averaging 612.9 acres each. Farm population numbered 252,958 or 22.5 per cent of the total. Leading crops with production were: Wheat, \$22,783,000, 25,036,000 bu.; hay, \$14,510,000, 2,310,000 tons, corn, \$10,819,000, 15,028,000 bu.; commercial truck crops, \$8,123,000; potatoes, \$6,702,000, 11,968,000 bu.; barley, \$6,456,000, 15,372,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,298 manufacturing establishments in Colorado, employing 23,716 wage earners who received \$23,391,933 in wages for the year. Total value of products was \$221,642,666, value added by manufacture, \$91,256,161.

Mineral Production. Leading mineral products are. Coal, of which 6,516,000 net tons were produced in 1940 (5,890,000 net tons valued at \$14,548,000 in 1939); gold, 377,503 fine ounces produced in 1941 (preliminary) valued at \$13,212,605; silver, 7,234,487 fine ounces in 1941 (preliminary) \$5,144,524. The 1941 production of silver showed a decrease of about 25 per cent from the preceding year; gold

increased about 3 per cent. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$64,071,621 or 1.51 per cent of the total for the United States. Colorado ranks 17th among the States in value of mineral products

Trade. According to the 1940 census there were 2,296 wholesale establishments in Colorado, employing 13,675 persons, reporting net sales for 1939 of \$435,126,000 and annual pay roll of \$20,433,000. There were 16,785 retail stores with 45,083 employees, reporting sales of \$409,103,000 and pay roll of \$43,503,000. Service establishments numbered 6,186, employing 9,422 persons for \$8,221,000 per year, and reporting a business volume amounting to \$27,473,000. The leading business center of the State is Denver which reported wholesale sales of \$340,989,000 and \$177,963,000 retail

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Colorado was \$40,281,000. Under the Social Security program, financed by Federal funds matching State grants, 42,551 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$33.79 (U.S. average pension, \$21.08); 15,572 dependent children in 6,362 families received average monthly payments of \$30.28 per family (U.S. average, \$32.73), and 607 blind persons received \$31.54 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 10,013 and received \$14.19 per case (average payment for 41 States, \$22.68)

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses). CCC, 2,057 (\$136,000), NYA student work program, 3,240 (\$24,000), NYA out-of-school work program, 3,083 (\$70,000), WPA, 16,939 (\$1,149,000); other Federal emergency projects, 210 (\$38,000); regular Federal construction projects, 4,863 (\$688,000). The Farm Security Administration certified subsistence payments totaling \$29,000 for the month to 780 cases.

Legislature. The General Assembly convenes in regular session on the first Wednesday of January in odd years. It is composed of 35 Senators (18 Democrats and 17 Republicans in 1941) and 65 Representatives (29 Democrats and 36 Republicans). The following summary of important 1941 legislation comprises excerpts from *The Denver Post*, Apr. 13, 1941:

From birth certificates to burials—nearly every realm of human activity was affected in one way or another by the bills passed by the thirty-third general assembly, which finally closed its session on Friday. The 1941 crop of laws was the second largest in the history of the State

Reorganization. Tax collecting agencies were consolidated in a new department of revenue. The executive council, sometimes called a "board of five governors," was abolished and an advisory council substituted. The governor was given the power to determine how many employees each department may have. A number of boards were abolished. The salary of the governor, beginning in 1943, will be increased from \$5,000 to \$10,000 a year.

Taxes. The service tax was reenacted. Sixty-five per cent of the State income tax revenues were placed in the State general fund as compared with a slightly higher diversion to the general fund two years ago. Nonresidents were exempted from income and inheritance taxes under certain conditions although they remain in the State for longer than six months. Double taxation on sales of cars and machinery upon which old cars or machinery are traded in was abolished. Taxes on the caravanning of motor vehicles were increased. The inheritance tax law was revised.

Defense. Authorization to create a special defense force to maintain order while the Colorado National Guard is absent from the State on Federal duty was the main feature of the State defense program enacted. The Assembly also gave the governor authority to create a State defense council which will integrate all phases of the State's program with the national program. An act aimed at subterfuge and subversive elements will give authorities a strong weapon to use in protecting the State against such activi-

ties, and creation of a "little Dies" committee of legislators to investigate un-American activities will provide an organization that can keep constant watch over "fifth column" groups.

Elections. The most important change in the election laws was an act changing the regulations governing the initiating of constitutional amendments or statutes by petition. It made it a felony to secure petition signatures for hire and provided a number of new safeguards. Another act greatly simplified the method of handling absentee ballots. Other changes authorized use of voting machines in Denver and provided that in the future voters will vote directly for presidential and vice-presidential candidates by name instead of by presidential electors.

Welfare and Labor. A 30-day "cooling" period is to be required before a strike may become effective. Tips and gratuities given an employee may not be considered part of his pay. Laws relating to aid to the blind and dependent children were changed to conform to Federal laws. The appropriation for tuberculosis control was increased by \$100,000, and \$3,700,000 was appropriated for direct relief for the next biennium. Minor changes were made in unemployment and workmen's compensation and the old-age pension laws.

Insurance. New companies were required to put up deposits with the State before they can sell stock insurance agents for cause shown may be required to take examinations to determine their fitness. The principal insuring company was made responsible for the premium tax due from reinsuring companies. The ban on writing insurance on children under the age of ten years was removed. Mutual burial societies were required to pay benefits in cash instead of in funeral services.

Stores. Filling stations were exempted from the chain store tax. Liquor dealers were brought under the fair trade practices act. The penalty provision putting out of business any store found guilty of three violations of the unfair practices act was repealed.

Liquor. Tax collecting functions of the liquor department were transferred to the new department of revenue, but the Secretary of State still directs the enforcement of the liquor laws. He was given broad powers to regulate the industry. Bonds no longer will be required of liquor dealers.

Other Laws. School boards were given the authority to set up teacher retirement plans to which the teachers themselves will contribute. Soil conservation districts were made more difficult to organize. Counties are allowed to set up their own agricultural research laboratories. Bank regulations were tightened to require banks to build up larger reserves. A new industrial bank code was adopted. The Legislature approved the Republican River compact.

Finances. Total tax collections in Colorado for the fiscal year ending in June, 1941, were \$42,192,000 (1940, \$39,826,000). Total sales taxes amounted to \$20,088,000, including general sales, \$9,416,000, and motor fuel, \$8,470,000. Taxes on specific businesses ran to \$4,543,000, general and selective property, \$5,154,000, and unemployment compensation, \$4,662,000. The net income taxes were \$3,560,000. Cost payments for the operation of general government totaled \$38,678,000 in 1939, the latest year available. (Revenues for the general government for that year were \$52,216,000.) Cost of operation per capita was \$34.81. Total gross debt outstanding in 1941 was \$26,145,000, as compared with \$8,162,000 in 1932.

Officers and Judiciary. The Governor is Ralph L. Carr (Rep.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, John C. Vivian, Secretary of State, Walter F. Morrison; Attorney General, Gail L. Ireland; State Auditor, Charles M. Armstrong, State Treasurer, Homer F. Bedford. Chief Justice of the Colorado Supreme Court is Francis E. Bouck, there are six associate members elected by popular vote for 10-year terms. See CONSUMERS' COOPERATIVES; LIVESTOCK; PRISONS; TUNNELS.

COMMONWEALTH FUND. This endowment, established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind," and later increased by gifts from the founder and from Mr. Edward S. Harkness, President of the Fund from its inception until his death on Jan. 29, 1940, now amounts to approximately \$49,000,000. In the year ending Sept. 30, 1941, the Fund appropriated some \$1,800,000. Of this total more than half was devoted to the promotion and maintenance of physical health. Sums amounting to \$550,000 were set aside for philanthropic needs arising out of the war. Public health activities, designed to raise standards of rural service, centered in Tennessee, Mississippi, Oklahoma, and Alabama. The thirteenth in a group of rural community hospitals built or remodeled with aid from the Fund was completed in 1941; one more was under way in December, 1941. These hospitals stress opportunities for professional education as well as standards of medical, nursing, and technical service. Fellowships were offered to instructors in medical schools, without restriction as to field of study, as a means of encouraging able young investigators and strengthening teaching resources; continued aid was given to departments of preventive medicine and psychiatry, to extension teaching and other forms of postgraduate medical education, and to teaching arrangements designed to promote interplay between pediatrics and psychiatry. Some \$366,000 was given for medical research. The Commonwealth Fund Fellowships for British graduate students at American universities were suspended, but grants were made to assist the research of several British scientists in this country. The Fund continued to aid child guidance enterprises in England; maintained an advisory service for community mental hygiene clinics in the United States; supported studies in administrative law and legal history; and during the year published eight books and pamphlets of educational significance in its fields of operation. The Fund directors for 1941 were Malcolm P. Aldrich, President, Phil W. Bunnell, Samuel H. Fisher, George Welwood Murray, Dean Sage, and William E. Stevenson. Headquarters are at 41 East 57 Street, New York City.

COMMUNICATIONS. For the communications industry as a whole, 1941 was an all-time record year, a situation brought about largely by the rapid growth of war efforts in the Western Hemisphere. European cable traffic suffered, but radio, telephony, and telegraphy were called upon for enormous expansion of facility to accommodate traffic in some instances several times that of 1940.

Censorship of cable and radiotelegraph and radiotelephone was instituted in a prearranged pattern within a few hours after the Japanese attack on Pearl Harbor. This was followed closely by government controls enabling the military services to use, take over, or shut down any communication facility of strategic importance. The industry was assured by Chairman J. L. Fly of the Defense Communications Board (q.v.) that the government "had no intention of taking over the wire services" or of interfering with operations beyond the dictates of military needs. No censorship of domestic

communications had been imposed by the year-end, but all radio amateurs not specifically authorized for civilian-defense operations were shut down to facilitate the operations of the monitoring patrols of the Federal Communications Commission in their efforts to locate and liquidate spy or other illegal stations. Communications with Axis belligerents and adherents were severed and, initially at least, communications with all other nations were required to be written in plain English; Spanish was permitted subsequently.

By the end of 1941 allocations and priorities procedures and machinery covering the entire industry had been set up under a dual arrangement whereby the Defense Communications Board would act as the policy-making and advisory agency, and the newly created communications division of the Office for Production Management (q.v.) would serve as the implementing agency through which the industry would receive its authorizations for strategic metals and materials. Because of the essential nature of communications services to all branches of military, civilian, and industrial service, the industry was early given a relatively high priority rating.

Indications at the end of the year were that the FCC would divert most of its attention and staff from regulatory to defense work. By year-end about half of FCC's 800-odd Washington, D.C., employees and two-thirds of its 600-odd field workers were engaged in war work.

See articles on RADIO; TELEGRAPHY, TELEPHONY.
G. ROSS HENNINGER.

COMMUNISM. The German attack upon Soviet Russia beginning June 22, 1941, produced the fifth major shift since 1921 in the orthodox Communist (Stalinist) strategy of world revolution. The objective remained the same—consolidation of Communist power in the Soviet Union as a base for the overthrow of capitalism everywhere with the aid of the masses in industrialized countries and of the native populations in colonial possessions. But the German invasion forced the directors of the Communist International (Comintern) in Moscow temporarily to abandon their preparations for revolution abroad and concentrate upon the defense of Russia, the "Socialist fatherland."

The New Party Line. To this end Communists the world over were instructed to discard the tactic of neutrality, adopted upon the signing of the Hitler-Stalin nonaggression pact of Aug. 23, 1939 (see YEAR BOOKS for 1939 and 1940). Communist parties everywhere scrapped their propaganda against "Anglo-American imperialism" and "capitalist war," their advocacy of a "Socialist peace" with Hitler, and their sabotage of defense preparations in the capitalist democracies. Instead they sought to rally the peoples of the world behind new slogans of "all aid to the Soviet Union and Great Britain," "war to the death upon Hitlerite Germany," and "a people's front" of all "democratic" forces against fascism. This complete reversal of the Communist party line had profound repercussions the world over.

Previous Status of Movement. Previous to June 22, the status of the Communist movement in the various parts of the world remained substantially the same as in 1940 (see YEAR BOOK for 1940, p. 153). The policy of tacit collaboration with Nazi Germany made the Communists increasingly unpopular in all of the democratic countries. They lost ground steadily among the Allied peoples and the countries sympathetic to the Allied cause.

In Chile, Mexico, and Cuba, the Latin American

countries in which communism had gained the strongest influence, the Communist parties found themselves on the defensive and in imminent danger of dissolution. In China the substantial gains registered by the Communists in 1940 were partly cancelled by the reassertion of the Chungking Government's authority over Communist-controlled areas and military forces and the ensuing civil warfare (see CHINA under *History*). This action by the Chungking authorities was possible because the increased aid furnished by the United States and Great Britain made Chiang Kai-shek less dependent upon the Soviet Union.

In the Balkans and Central Europe, the Communists lost much of the ground gained in 1940 when Bulgaria entered the Axis and Yugoslavia and Greece were conquered by Germany. It was in the Balkans that the clearest indications of the impending Russo-German conflict were given in the spring of 1941. Local Communists and Soviet diplomats and agents worked ceaselessly to prevent Bulgaria's adhesion to the Axis and to stiffen Yugoslav resistance to German pressure. The triumph of the Axis was followed by ruthless efforts to extirpate communism in both countries.

Effect of Communist-Nazi Clash. The reversal of the Communist party line following Hitler's invasion of Russia, combined with the unexpectedly strong resistance of the Red Army, helped to restore the waning influence and prestige of the Communist movement in some parts of the world. The new anti-Hitler party line brought the Communists into closer alignment with other leftist groups. Cessation of Communist attacks upon the capitalist democracies and the new Communist stand against Axis intrigues in the Western Hemisphere made possible the reconstitution of the Popular Front in Chile. The agitation to outlaw Communist parties in the United States, Chile, Cuba, and Mexico lost much of its support.

In Great Britain and the British dominions, the Anglo-Soviet alliance helped to dissipate some of the odium attached to the native Communist parties. However in Australia, Canada, and Britain alike the governments and non-Communist political parties rejected Communist offers of collaboration in domestic politics and fought Communist penetration into non-Communist organizations. The British Government ignored the agitation for lifting the ban on the official Communist organ, the *Daily Worker*. The Canadian Government maintained its ban against the Canadian Communist party. In Australia the Federal Labor party voted to oust members who joined or associated with pro-Communist organizations.

The termination of Soviet aid to China in October, due to the strain of the war with Germany, weakened the Chinese Communists in their game of jockeying with the Chungking Government for a favorable position at the end of the Sino-Japanese war. But in Europe, and particularly in France, the Nazi "crusade" against Bolshevism gave the Communist movement new strength and prestige. The Red Army's stubborn resistance aroused hope of liberation from German rule among all the subject peoples of the Continent. The renewal of anti-Nazi agitation by Communist parties in the occupied countries demonstrated their capacity to maintain well-knit organizations despite all measures of repression. Moreover the Germans and their allies gave communism much undeserved prestige among the conquered peoples by labeling thousands of executed patriots as "Communists."

United States. American Communist Party. The Communist party in the United States during 1941 bore

the brunt of the resentment aroused among all classes by Stalin's tacit collaboration with Hitler. The political somersault performed by the party after the German attack upon Russia confirmed the widely held opinion that it was "just a tool of Stalin's." The American Institute of Public Opinion reported on June 17 that a nation-wide test poll revealed 71 per cent of the population favoring legal prohibition of membership in the Communist party and 22 per cent opposed.

The party was further handicapped by the elimination of two of its three outstanding leaders. One of them, Clarence A. Hathaway, former editor of the *Daily Worker*, was expelled by the Communist national committee in January. On February 17 the U.S. Supreme Court unanimously ruled that Earl Browder, general secretary of the party, must serve a four-year sentence imposed in 1940 for passport fraud. He started his jail term March 25. Robert Minor, another Communist party wheelhorse, succeeded Browder as acting general secretary.

Anticipating legal dissolution of the Communist party, its leaders prepared to carry on their work behind the screen of a new political party. On March 28 Representative Vito Marcantonio of New York City, a leader of the pro-Communist faction of the American Labor Party, announced that "a people's party and a peace party" was being organized on a national basis through amalgamation of various extreme leftist organizations. Early in June four New York State Communist leaders testified before a legislative investigating committee that all Communist party records in the State dealing with membership or dues payments had been destroyed on order of the national headquarters.

These preparations for going underground were discontinued when the Russo-German war gave the party a new lease on life. On the night of June 22 the Communist party headquarters issued a statement calling for "full support and cooperation with the Soviet Union in its struggle against Hitlerism." At the end of June the national committee of the party met secretly in New York to draft the official "line" in accordance with instructions received from Moscow. A manifesto issued June 29 proclaimed the new policy as follows: "Defend America by giving full aid to the Soviet Union, Great Britain and all nations who fight against Hitler." It declared that the German attack on the Soviet Union "imparts a new and sinister aspect to the menace of Hitlerism for the American people, the British people, and the people of the world. There can be no peace . . . without the complete destruction of Hitler and Hitlerism."

In line with this new policy, the Communist party began violent attacks upon isolationist spokesmen as "fascists" and "fifth columnists." Discarding its former slogan, "The Yanks Aren't Coming," it called for all-out participation in the war by the United States. President Roosevelt and other interventionists, whom the Communist press formerly denounced as "warmongers" and "greedy imperialists," were now strongly supported.

The numerous Communist-front organizations swung into line behind the official policy. There was a noticeable decline in Communist-inspired strikes in defense industries, and Communist influence was thrown behind greater production of defense articles. At the same time the party began an agitation for the release of Browder. Under cover of its self-proclaimed policy of leading the fight for the workers' democratic rights against "Hitler fascism," the Communists sought to regain lost ground and to assume direction of the deep anti-Hitler sentiment of the masses. In the New

York City election of November 4, the party withdrew its own candidates for the higher city offices and supported Mayor LaGuardia and his running mates despite their repudiation of communism. One Communist candidate was elected to the City Council under the proportional representation system—the first in the city or State to win elective office on the Communist ticket.

Communism and Labor. More significant than the political activity of the American Communist party was the influence exerted by Communists in non-political and professedly non-Communist organizations, especially in the labor movement. The extent of this influence was clearly revealed during the first half of the year when Communist labor leaders systematically hampered the production of defense materials and the Administration's policy of aid to Britain. The Communists also worked to undermine the workers confidence in the National Government and in machinery for the adjustment of labor disputes such as the National Defense Mediation Board.

Communists were declared mainly responsible for major interruptions of defense production through strikes in the North American Aviation Co. plant at Inglewood, Calif., the Cleveland plant of the Aluminum Co. of America, the Detroit plant of the Bohn Aluminum Co., the Milwaukee plant of the Allis-Chalmers Manufacturing Co., the Chicago plant of the International Harvester Co., and other important factories. Two former Communist party leaders, Richard Krebs (Jan Valtin) and Benjamin Gitlow, the House Military Affairs Committee at Washington, the Dies Committee, and many other authorities on the Communist movement supported these charges.

A poll by the American Institute of Public Opinion indicated that 78 per cent of the American people attributed a responsible part of the strikes in defense plants to Communists. Communist influence in large C.I.O. unions in the marine transport, communications, newspaper, lumber, longshore, office, cannery, farm equipment, and civil service fields was further demonstrated when these unions followed the June change in the Communist party line with striking unanimity. A few A.F.L. unions likewise were shown to be under Communist domination.

These revelations of Communist control in many vitally important unions produced numerous revolts by non-Communist rank-and-file majorities. In some cases they succeeded in ousting Communists from strategic positions; in others they failed. Among the unions that took action during the year to oust Communist or pro-Communist leaders were Actors Equity Association, the A.F.L. Brotherhood of Painters, Decorators, and Paperhangers, the Industrial Union of Marine and Shipbuilding Workers, American Federation of Hosiery Workers, Textile Workers Union, American Federation of Teachers (which revoked the charters of two Communist-controlled locals in New York City and one in Philadelphia), and the United Automobile Workers.

On the other hand, the Communists succeeded in retaining control of such important unions as the United Electrical, Radio, and Machine Workers, the State, County, and Municipal Workers of America, and the National Maritime Union when the issue was raised in their annual conventions. At the annual convention of the Congress of Industrial Organizations in November, the Communist-dominated unions split with their former ally, John L. Lewis, and voted to support the foreign policy of the Roosevelt Administration. Also see **LABOR CONDITIONS**.

Other Anti-Communist Measures. The widespread hostility toward communism was reflected in other official and unofficial actions. New Jersey and Illinois joined the ranks of those States barring Communist candidates from places on the ballot, while Florida outlawed both the Communist party and the German-American Bund. However in more than half of the State legislatures bills aimed at the political rights of Communists and Bundists failed of passage. A third Communist was convicted under Oklahoma's criminal syndicalism law on April 30 and sentenced to 10 years imprisonment and a \$5,000 fine.

A Federal grand jury in St. Paul on July 15 indicted 29 officers and members of the Socialist Workers party, alleged Trotskyist branch of the Communist movement, on charges of seditious conspiracy and conspiracy to create insubordination in the armed forces of the United States. On December 1, 18 of the defendants were convicted on the latter charge. All were acquitted on the seditious conspiracy charge. Sentences of 16 months in prison were imposed on 12 of those convicted and sentences of one year on the other six. A large number of Communist members or sympathizers employed in private industrial plants on national defense contracts were reported to have been discharged as a result of the investigations made by the Dies Committee.

In February the Federal Government reopened deportation proceedings against Harry Bridges, West Coast C.I.O. leader, on the basis of a report submitted by the Federal Bureau of Investigation charging that Bridges, a native of Australia, was a member of the Communist party. Bridges again denied the charge, but on the basis of evidence taken in San Francisco a special examiner for the Department of Justice recommended his deportation. The U. S. House of Representatives on October 6 again voted to deport Bridges, but no action was taken by the Government up to the end of the year.

Three agents of the Bookniga Corporation, a New York City book store specializing in the distribution of Soviet propaganda literature, were convicted in the U. S. District Court of Washington, D C., on July 14 of failing to register the corporation as a propaganda agent of a foreign principal. Evidence was introduced to show that the concern distributed propaganda material at a fraction of its cost, and that it served as the agent of the Soviet Government.

A purge of Communists on the faculties of New York's city-maintained colleges was inaugurated following the revelation before a State legislative investigating committee of subversive propaganda by campus units of the Communist party. On March 17 the city's Board of Higher Education unanimously adopted a resolution making membership in any Communist, Nazi, or Fascist group sufficient grounds for discharge of a faculty member. A tutor in English at City College, suspended for Communist proselytizing, was convicted of perjury for testifying falsely before the Rapp-Coudert legislative committee.

Charges of heavy infiltration of Communists and fellow-travelers into Federal services were made by Representative Dies, chairman of the House Committee on Un-American Activities. He named Price Controller Leon Henderson and more than 1,000 others as falling in this category. See **DIES COMMITTEE**. The U. S. House of Representatives on December 19 passed a bill requiring the Communist party and German-American Bund organizations to register as agents of foreign governments, and to

identify for public record their officers, directors, and members.

COMMUNITY CHESTS AND COUNCILS, Inc. A membership association of community chests and councils of social agencies, organized in February, 1918, as the American Association for Community Organization. For organization and purpose see the 1939 YEAR BOOK.

Of the 598 chests and councils in operation, 575 are in continental United States, 2 in the territory of Hawaii, 1 in the Virgin Islands, 18 in Canada, and 2 in foreign countries. All but 4 cities of 100,000 population and over in the United States have community chests. Approximately 10,000,000 contributors in 598 cities gave \$90,587,589 to community chests to be used for private social work in their communities during 1941.

The officers in 1941-42 were: president, Robert Cutler, Boston, Mass.; vice-presidents, John Stewart Bryan, Richmond, Va., and Kenneth Sturges, Cleveland; treasurer, J. Herbert Case, Plainfield, N. J.; secretary, Lynn D. Mowat, Los Angeles, Calif. Allen T. Burns is executive vice-president.

COMMUNITY TRUSTS. Distribution of charitable funds in 1940 by 76 community trusts and foundations in continental United States, Canada, and Hawaii totaled \$2,225,000, the largest annual outpayment by these agencies in any year. The aggregate of appropriations in 1939 was \$1,278,000.

The resources of community foundations have risen from \$40,000,000 in 1934 to \$50,000,000 in 1939 and to \$52,500,000 at the close of 1940. The largest amount of capital funds was held by The New York Community Trust with \$9,409,021, followed by the Chicago Community Trust with \$9,126,048 and the Cleveland Foundation with \$6,745,785. Other holdings in excess of \$1,000,000 were reported from community trusts in Boston, Winnipeg, Indianapolis, Minneapolis, Richmond, Philadelphia, Los Angeles, and Buffalo.

Winston-Salem Foundation made outpayments totaling \$882,069 during 1940 while the New York Community Trust paid out \$222,964, the Chicago Community Trust \$191,292, the Permanent Charity Fund, Boston, \$183,535, the California Community Foundation \$162,353, the Cleveland Foundation \$161,049, and the Indianapolis Foundation \$106,016.

New funds received during 1940, including \$5,207,281 in the New York Community Trust, \$546,657 in the Cleveland Foundation, and \$438,959 in the Richmond Foundation, brought the year's additions to community trusts to a record total of \$7,265,202. Initial receipt of principal funds was reported by the LaCrosse Community Trust and the Harrisburg Foundation, while the Peoria Community Trust made its initial outpayment.

A community trust is a composite foundation created for the administration of multiple charitable funds. A trustee bank selected by the donor becomes responsible for the fiscal management of the fund while outpayments are made under supervision of a central Distribution Committee, the majority of whose members are appointed by public sources.

CONCILIATION SERVICE, U.S. In creating the Department of Labor, Congress gave the Secretary of Labor authority to mediate or conciliate industrial disputes. This function was carried on in the Secretary's office until 1917 when a separate division was established for this purpose. Since 1913, Commissioners of Conciliation appointed by the Secretary have disposed of more than 33,000 situations involving approximately 26 million men and women.

During the fiscal year ended June 30, 1941, the Conciliation Service disposed of 5,599 labor situations directly involving approximately 3,446,157 persons in 48 States, the District of Columbia, Alaska, and Hawaii. Of this total, 3,705 situations were classified as labor disputes which included strikes, lockouts, threatened strikes, and controversies. These involved 2,951,944 persons. The remaining 1,894 situations involving 494,213 persons included arbitrations, the rendering of technical services and information, consent elections, and informal consultations with representatives of employers or employees or of both.

Among the most significant work of the Service was its disposition of threatened strikes and controversies. During all the year, the efforts of its Commissioners of Conciliation prevented from becoming strikes or lockouts more than 90 per cent of the 2,251 definite threatened strikes and controversies which were brought to its attention in advance of stoppage action.

One of the outstanding labor relations developments of the year was the creation of the National Defense Mediation Board by Executive Order of the President. The Board was authorized to act whenever the Secretary of Labor should certify to it that any controversy or dispute affecting national defense could not be adjusted by the Commissioners of Conciliation. From the very first the Service and the Board have worked in closest possible cooperation, devoting especial attention to the desirability of certification of any dispute and to the most effective time for such certification.

As of June 30, 1941, 44 disputes handled by the Service had been certified to the Board. From March, when the Board was created, through June, the Service itself disposed of 1,668 other labor disputes.

Since the very beginning of the defense program, of course, it has been the Service's practice to keep every properly interested agency closely and constantly informed of the status and progress of any employer-employee situation materially affecting the prosecution of that program. In turn, especially valuable assistance was received from the labor divisions of the War and Navy Departments and from the informal advisory efforts of the labor and industry consultants of the Office of Production Management. These agencies, however, are only a few among many of the defense bodies with which the Service has cooperated and from which it has received information and aid in its work for industrial peace.

In all that work, complete priority and uninterrupted attention has been given to every case of a defense nature. Indeed, by a careful marshalling of its resources and with only negligible exceptions, the Service has been able to make the assistance of a Commissioner of Conciliation available to any vital enterprise anywhere in the country within less than twenty-four hours of receipt of a request for

its peace-making aid. See LABOR CONDITIONS under *Governments and Labor Disputes*. Compare topics listed under MEDIATION.

CONGREGATIONAL CHRISTIAN CHURCHES, The General Council of the. A general council was instituted at Seattle, Wash., June 27, 1931, when the National Council of the Congregational Churches in the United States and the General Convention of the Christian Church merged their activities in this new organization. The next biennial meeting of the General Council will be held at Hanover, N.H., June 23 to 30, 1942. For the officers elected for the present biennium, see the YEAR BOOK for 1940.

The headquarters of the General Council of the Christian Churches are at 287 Fourth Avenue, New York City. Those of the Board of Home Missions at the same address, with offices also at 14 Beacon St., Boston, Mass., and those of the American Board of Commissioners for Foreign Missions at 14 Beacon St., Boston, Mass. For statistics, see RELIGIOUS ORGANIZATIONS.

CONGRESS, U.S. See REPRESENTATIVES, U.S. HOUSE OF; SENATE, U.S., UNITED STATES under *Legislation*.

CONGRESS OF INDUSTRIAL ORGANIZATIONS See LABOR CONDITIONS under *Union Movements*; also, BUSINESS REVIEW under *Automobiles*, NATIONAL DEFENSE MEDIATION BOARD, NATIONAL LABOR RELATIONS BOARD.

CONNECTICUT. A New England State. Area: 5,009 sq. mi. including 110 sq. mi. of inland water, but excluding part of Long Island Sound, 573 sq. mi. Population: (1940 census) 1,709,242. The urban population comprises 67.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 1.9 per cent (U.S. average, 10.2); elderly (65 years and over), 7.4 per cent. Connecticut ranks 46th among the States in area, 31st in population, and fourth in density, with an average of 348.9 persons per square mile. The largest city and capital is Hartford with 166,267 inhabitants. There are eight counties and 24 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Alonzo G. Grace, Commissioner of Education, there were 287,598 pupils enrolled in the public schools of Connecticut during the school year 1940-41, 185,923 in elementary schools and 101,675 in secondary schools. Teachers (including teaching principals) numbered 10,005 and received an annual average salary of \$1,798.83. Total expenditures for the year, including capital outlay and interest on bonds and loans, were \$31,336,827. For higher education see *Connecticut* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 2,792, of which 2,719 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 498,463; 416,656 were private and commercial automobiles, 1,172 busses, and 75,839 trucks and tractor trucks. Gross motor-fuel consumption was 380,375,000 gallons. Net motor-fuel tax receipts were \$11,084,000, the rate being three cents per gallon (Dec 31, 1940). State motor-vehicle receipts (from registrations licenses, fines, etc.) were \$7,385,000.

Railways of all classes extended 904 miles (Dec. 31, 1939) .38 per cent of the total mileage in the United States. Class I steam railways accounted for 759 miles. There are 18 airports and landing fields in the State (seven lighted fields) and 13 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 245 civil aircraft in the State and 721 airline transport, commercial, and private pilots (583 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 358,000, as compared with 361,900 acres in 1940. According to the latest census, there are 21,163 farms, valued at \$204,761,000, averaging 71.6 acres each. Farm population numbered 103,913 or 6.1 per cent of the total. Leading crops were tobacco, worth \$8,729,000 and producing 23,502,000 lb., and hay, \$8,048,000, 403,000 tons.

Manufacturing. According to the latest census (covering the year 1939) the total value of manufactured products was \$1,229,585,773. For details, see 1940 YEAR BOOK.

Mineral Production. Minerals are of relatively little importance in the output of Connecticut, their total value in 1939 being only \$4,306,351, according to the U.S. Bureau of Mines; approximately half of this sum was accounted for by stone.

Trade. According to the 1940 census there were 1,607 wholesale establishments in Connecticut, employing 15,795 persons, reporting net sales for 1939 of \$413,134,000 and annual pay roll of \$26,378,000. There were 25,873 retail stores with 70,248 employees, reporting sales of \$717,262,000 and pay roll of \$79,905,000. Service establishments numbered 8,352, employing 12,678 persons for \$13,378,000 per year, and reporting a business volume amounting to \$46,033,000. The leading business center of the State is New Haven which reported wholesale sales of \$117,994,000, retail sales of \$87,311,000, and \$8,385,000 receipts for its service establishments. Hartford reported sales of 115,046,000 wholesale and 108,613 retail. Bridgeport, \$52,842,000 and \$73,628,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Connecticut was \$28,917,000. Under the Social Security program, financed by Federal funds matching State grants, 17,636 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$27.64 (U.S. average pension, \$21.08); an estimated 2,950 dependent children in 1,290 families received an estimated total payment of \$58,100; and 233 blind persons (without Federal aid) received \$29.02 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 8,742 and received \$25.46 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 392 (\$26,000); NYA student work program, 2,776 (\$20,000); NYA out-of-school work program, 3,008 (\$71,000); WPA, 6,921 (\$479,000); other Federal emergency projects, 136 (\$13,000); regular Federal construction projects, 11,339 (\$1,772,000).

Legislation. The General Assembly convenes in regular session on Wednesday after the first Monday of January in odd years. It is composed of 35 Senators (22 Democrats and 13 Republicans in 1941) and 272 Representatives (88 Democrats and 184 Republicans). The following comment on the 1941 session is here published with permission from *The Hartford Courant*, June 8, 1941:

"The 1941 session of the Connecticut General As-

sembly, which ended less than an hour short of the limit imposed by the State Constitution, possibly reveals a transition state in Connecticut government. The bitter antipathy against any sort of Federal coercion, with or without a cash coating, which was a feature of even very recent sessions had no visible influence in the 1941 Legislature.

"Probably the most important law of the 1941 session arises from the Federal Social Security Act, acceptance of which is to all intents and purposes mandatory upon the States. Taking advantage of various adjustments permitted by the Federal law, the 1941 Legislature managed to balance the claims of employees for greater unemployment compensation benefits with the claims of the employers for lightening of the burden of payroll taxes. The result is a new State law which provides high benefits and low taxes as long as the State reserve exceeds a fixed amount, in this case \$40,000,000. If the fund falls below that mark, benefits drop and taxes go up. No other State has evolved such an operating method under the law, but if the Connecticut statute works, and the Federal law continues to give the present leeway, the 1941 Legislature probably can claim to have done important pioneering in social security legislation.

"On the other hand, the recent Legislature showed a greater disposition to assert itself than did its two immediate predecessors. More or less trivial incidents during the session, capped by an open protest against gubernatorial interference with the transmission of the Bridgeport bond bill from one house to the other, led up to thumping defeats in the House for two proposed amendments, one to give the Governor power to nominate judges of the minor courts, and the other to prohibit legislators getting worthwhile patronage, both of which had been aggressively sponsored two years ago by the then Governor Raymond E. Baldwin.

"On its own initiative in this session, the House proposed two new amendments looking to great legislative power. One of these would provide for a session every year, rather than every other year as at present, a condition which would possibly lead to reduction of some of the broad fiscal powers the Governor now has. The other proposal would crimp the executive patronage power to requiring him to submit nominations by the first week in March.

"The Legislature had a top-heavy Democratic Senate and an equally top-heavy Republican House, while the Governor and the State administration were Democratic. The majority in each branch several times seemed to be on the point of shattering, but neither leader ever lost on a vital test, though his margin was on occasion provided by members of the opposition. The politically opposed majorities led to the adoption of separate committee organizations. Despite changes in the rules, evolved in the House and copied by the Senate, designed to speed up leadership, the separate committee organization failed to work as well as the joint committees of the past.

"The session had a record amount of business, much of it highly complicated, and some of it exceedingly controversial in a non-partisan way. High points in the 1941 assembly record follow: It revised unemployment compensation law in what may be model for nation, making benefit and tax rates dependent upon size of reserve fund; changed Common Pleas from county to State court and set up State juvenile court districts; wrote milk control law on assumption State control is needed without any emergency; increased annual appropriation for improvement of dirt roads by \$1,000,000 and provided this additional sum shall be distributed among

towns in proportion to mileage of unimproved roads in each town; gave State Liquor Control Commission much wider discretion in issuing permits; adopted total appropriations in excess of \$120,000,000, new record for the State, and provided any surplus in excess of \$1,000,000 in any year shall be used to retire State debt; took first steps toward amending State Constitution to provide for annual sessions of Legislature and quadrennial elections of State officers."

Finances. Total tax collections in Connecticut for the fiscal year ending in June, 1941, were \$64,130,000 (1940: \$61,944,000). Total sales taxes amounted to \$19,683,000, including motor fuel, \$11,688,000. Taxes on specific businesses ran to \$7,246,000, general and selective property, \$2,040,000, and unemployment compensation, \$21,793,000. The net income taxes were \$5,330,000. Cost payments for the operation of general government totaled \$46,984,000 in 1939, the latest year available. (Revenues for the general government for that year were \$73,279,000.) Cost of operation per capita was \$27.72. Total gross debt outstanding in 1941 was \$33,350,000, compared with \$13,568,000 in 1932.

Officers and Judiciary. The Governor is Robert A. Hurley (Dem.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Odell Shepard, Secretary of State, Mrs. Chase G. Woodhouse; Attorney General, Francis A. Pallotti; State Treasurer, Frank Anastasio; State Auditors, Lewis W. Phelps and Frank M. Lynch; State Comptroller, John M. Dowe. Chief Justice of the Connecticut Supreme Court of Errors is William M. Maltbie; there are four associate members appointed for eight-year terms. See BIRTH CONTROL.

CONSCIENTIOUS OBJECTORS. See SELECTIVE SERVICE SYSTEM.

CONSCRIPTION. See AUSTRALIA, CANADA, CUBA, EIRE, GREAT BRITAIN, MEXICO, NEW ZEALAND, IRELAND (NORTHERN), PHILIPPINES, SALVADOR, URUGUAY, under *History*; SELECTIVE SERVICE SYSTEM; UNITED STATES.

CONSERVATION WORK. See AGRICULTURE, U.S. DEPARTMENT OF, CIVILIAN CONSERVATION CORPS, FISH AND WILDLIFE SERVICE; MARYLAND under *Legislation*; PLANNING.

CONSTRUCTION INDUSTRY. As a result of national-defense requirements, followed by the sudden demands of actual warfare, the construction industry of the United States expanded rapidly in 1941. In a review by *Engineering News-Record* it is estimated that construction of all classes reached a record-breaking total of 11½ billion dollars, and will probably reach 10 billion dollars in 1942. These figures are for the continental United States only and do not include Alaska, the Panama Canal Zone, or outside bases. Nor do they include new army housing facilities beyond those already planned for an army of two million men. The existing facilities provide for housing and serving 1,600,000 men.

While the estimated expenditures for 1942 are somewhat below those of 1941, the proportion for war construction must be increased, especially in view of provision for a long and hard conflict. In 1941, war construction requirements accounted for 65 per cent of the total, but in 1942 it may account for as much as 80 per cent, with civilian construction reduced proportionately. Of all construction contracts awarded in 1941 those for Federal projects represented 60 per cent, with 20 per cent for State, county, and municipal work, and 20 per cent for private, railway, industrial, and utility work.

A large volume of the Federal work is in defense-plan construction under contracts with industrial firms which handle the work with their own engineers.

In 1940, under the emergency conditions created by the war abroad and the demands for national defense at home, the total expenditures for construction reached a record total of 8½ billion dollars. The 1941 record of 11½ billion dollars included all public and private engineering construction and also residential building. Of this enormous total, 51½ per cent was in engineering construction, as against 50 per cent in 1940. The figures for engineering construction, as given in the annual review by *Engineering News-Record*, are summarized in the accompanying table.

VALUE OF U. S. CONSTRUCTION
[Million Dollars]

	1940	1941
Public Works	\$2,825	\$4,691
Private construction	1,162	1,178
Total	\$3,987	\$5,869
<i>Engineering Construction</i>		
Public buildings, including Federal industrial plants and defense housing	1,196	2,786
Highways and streets	678	583
Industrial buildings	595	496
Commercial buildings	400	486
Earthwork, irrigation and drainage	234	245
Bridges	120	117
Sewerage and sewage treatment plants	91	89
Waterworks and water treatment plants	70	77
Unclassified, including airports, air bases, shipbuilding yards, etc., etc	603	996
Total	\$3,987	\$5,869

An important change in the management of war construction activities under the War Department was effected through a bill signed December 2 by the President, under which the Corps of Engineers of the U.S. Army took over the Construction Division of the Quartermasters' Corps. Until then, the Corps of Engineers had handled all river and harbor work (including flood control work on navigable rivers), while the Quartermasters' Corps handled the construction of barracks, camp buildings and facilities, and other army buildings and works. The new system puts under one organization a definite construction program of 3½ billion dollars, and a force of 600,000 men (including contractors' employees), with an excellent staff of experienced engineer officers.

A further improvement in the handling of war construction work was the decentralization of the contract system of the Corps of Engineers. Formerly, all contracts for more than \$50,000 had to be signed and executed at Washington. But under the new arrangement, contracts up to \$5,000,000 may be awarded directly by the officers at some 60 local or branch offices of the Corps of Engineers.

The labor situation on construction work has been fairly satisfactory, with relatively few strikes and disturbances. This was due in part to an agreement between Federal contracting agencies and the building-trades unions under which the latter were practically permitted to unionize all defense construction. These unions pledged themselves not to stop work in case of disputes and labor negotiations. With higher costs for wages and materials, the cost of construction is expected to be 15 to 20 per cent higher during 1942.

Planning a program of postwar construction on a large and long-term basis is an important problem to be worked out as a means of minimizing the difficulties of the inevitable disturbed transition period between war-time and peace-time activities. With peace established, there will be a rapid

cessation of work in many lines, and a resultant flood of unemployment. The aim is to have in readiness a reservoir of needed construction work to absorb this flood. One definite plan, already under way, is the preparation of a six-year program of construction by Federal, state, county, municipal, and local agencies, as well as private construction.

Of several organizations at work on this problem, two of the most important are the Federal Works Agency and the Public Work Reserve, both acting in cooperation with the National Resources Planning Board. The Agency is concerned with Federal construction projects, while the Reserve deals with non-Federal public works of all kinds. The basic purpose of the Reserve is to secure from various public departments and organizations lists of work that should be done during the next five or six years. In addition, it is to assist local governments and agencies in developing programs and plans for such work and to keep these up to date, so that when the transition period begins there will be little delay in perfecting plans and specifications, and financing arrangements for a great variety of construction works of all kinds and in all parts of the country. See BUILDING; BUSINESS REVIEW. Also, see articles on branches of industry, as BRIDGES, DAMS; WATERWORKS AND WATER PURIFICATION.

CONSUMER GOODS. See BUSINESS REVIEW.

CONSUMERS' COOPERATIVES There were no particularly spectacular developments in the consumers' cooperative movement in 1941, but the year witnessed a remarkable quickening of interest throughout the country. The trend toward modernization of premises and equipment continued at an accelerated pace. One of the most notable developments was the gain in the grocery field and the expansion not only in volume of goods sold but also in number of associations handling grocery items. In view of the uncertainties attending business operations in the field of petroleum products and automobile tires and accessories, the expansion into grocery sales represents a protective and stabilizing factor.

Well-organized publicity, membership drives, and increasing use of radio and other means of acquainting the public with the meaning and possibilities of cooperation indicate that the days when the cooperative movement was content to go its way unheralded are past. A nation-wide drive to "strengthen and develop existing consumer cooperatives and to awaken America to the advantage of consumer cooperatives" was launched, as well as a campaign for a \$50,000 radio program on a national scale.

Detailed statistics are not yet available regarding the volume of sales of cooperatives in 1941. The reports thus far received by the Bureau of Labor Statistics indicate a considerable increase in business over 1940 by the retail associations. (Detailed statistics on the operations of cooperatives will be published in a later issue of the *Monthly Labor Review*. The table on page 149 gives figures for 1940.) The wholesales showed remarkable gains over the 1940 business ranging as high as 40 per cent.

It is probable that the volume of patronage refunds on 1941 business will be decreased considerably from levels of previous years. Alive to the uncertainties in the merchandising field, cooperative leaders have been urging the associations to

exercise the utmost conservatism and soundness of methods, and have been preaching that if cooperatives are going to survive the difficult times ahead, they must be well capitalized. For this reason a much larger proportion of earnings than usual will undoubtedly be voted for additional capital, by the annual meetings of the members. These meetings will also have to consider the many problems that war conditions have already produced and threaten increasingly in 1942.

ESTIMATED NUMBER, MEMBERSHIP, AND BUSINESS OF CONSUMERS' COOPERATIVES, 1940

Type of association	Number of associations	Members	Amount of business
Retail distributive associations	4,650	990,000	\$228,325,000
Stores and buying clubs	3,100	485,000	129,650,000
Petroleum associations	1,500	480,000	92,875,000
Other	50	25,000	5,800,000
Service associations	1,340	682,000	20,635,000
Associations providing rooms, meals, or both	360	40,000	750,000
Medical-care associations	30	15,750	345,000
Funeral associations	40 ^a	32,500	200,000
Housing associations	60	3,750	2,530,000 ^b
Electricity associations	700	575,000 ^d	16,650,000
Other	150	15,000	160,000
Telephone associations	5,000	330,000	5,485,000
Credit unions	9,510 ^a	2,816,653	302,339,864 ^c
Insurance associations	1,800	6,800,000	103,375,000
Cooperative wholesales	37	2,363 ^e	70,178,300

^a Actual figure, not an estimate
^b Gross income
^c Based upon reports of Rural Electrification Administration, with allowance for pre-REA associations
^d Number of patrons
^e 1936; data not sufficient to warrant later computation
^f Loans made during year
^g Affiliated retail associations

Legislative Status and Action. In the legal field both victories and setbacks were experienced in 1941. North Dakota passed an amendment to the cooperative act making the use of "cooperative" or any abbreviation of it a misdemeanor, unless the organization is incorporated under the cooperative law. Several measures inimical to cooperative associations were introduced during 1941 but failed of passage, notably in Minnesota and Massachusetts.

The opposition of organized medicine to group plans controlled by laymen (i.e. by members of cooperatives) was manifested in bills introduced in Massachusetts and Ohio which provided that no plan could operate without the consent of a majority of physicians in the area to be served nor (in Massachusetts) without the specific approval of the State medical association.

The property right of National Cooperatives in the trade-mark, "CO-OP" was upheld in the U.S. District Court in New York City, in a case in which an organization had used the trade-mark in spite of having been denied it by the wholesale. An injunction was issued by the court against the offending organization.

Taking the position that patronage refunds to member associations constitute an illegitimate discount on price, the Bituminous Coal Commission (q.v.) ruled that consumers' cooperative wholesale associations could not be recognized as wholesale coal distributors under the Guffey Act. (Farmers' cooperatives are, however, specifically recognized as dealers, under the act.) Cooperative associations viewed the above decision as serious, because "any government ruling which classifies cooperative savings returns as 'discounts' is a threat to all cooperative business," and because of the probability of general extension of price fixing during the war emergency.

Early in February, 1941, a favorable decision

was obtained by the Community Cooperative Hospital in Elk City, Okla., when the District Court granted a writ of prohibition barring prosecution by the State medical board of a 4-year-old charge of unprofessional conduct brought by the medical board against the head of the hospital. This cooperative, started in 1929, has had a 12-year fight for existence.

In a jury decision rendered Apr. 4, 1941, in the District of Columbia, the American Medical Association and the District Medical Society were found guilty of conspiracy against Group Health Association, a cooperative providing medical care of all kinds for its members. The two doctors' associations were held liable to a fine of not to exceed \$5,000 each. This case was brought by the Federal government under the Sherman Antitrust Act, it represented the culmination of a long struggle between the cooperative and the medical profession for the cooperative's right to exist and to be accorded hospital and other facilities for practice.

Expansion in the Movement. A great many new associations and buying clubs were formed in 1941. Even in districts already well developed cooperatively, such as Minnesota and Wisconsin, a considerable number sprang up. The Eastern Cooperative League reported that during September and October, 1941, alone, requests for aid in starting new groups were in excess of those received since 1936.

The architectural improvements in cooperatives that were noted in 1940 continued with increased momentum during 1941. The trend toward self-service in cooperative stores continued, this often being installed during the modernization process.

One of the most noteworthy instances of expansion in the cooperative movement was that which has been taking place in the southeastern States. Although farmers' marketing and the purchasing of farm supplies are quite well developed in this region, formerly it was almost a desert as regards consumers' cooperation. With the formation of the Southeastern Cooperative Education Association in 1940, by a group of persons interested in developing cooperatives, interest has steadily grown. Several regional conferences have been held at which representatives were present from existing cooperatives as well as from localities with no cooperative activities. A substantial proportion of the cooperative associations are those of Negro farmers and city dwellers. Out of these conferences grew a new federation—the Southeastern Cooperative League—with headquarters at Carrollton, Ga. Although the credit unions represent the fastest-growing phase in this region, cooperative stores of urban and small-town cooperators are becoming so numerous that joint purchasing of cooperative label goods is being considered.

From Georgia was reported also a completely cooperative community in which the land and buildings are owned by the cooperative association. (*Southeastern Cooperator* [Carrollton, Ga.], November, 1941.) The tasks of life are divided on a community basis. Thus, one family produces the milk for the community, another the vegetables, a third the poultry, etc. In Colorado the Farmers Union of that State launched a program for the wholesale supply of commodities for local associations. Land was purchased and a building is being erected which will house the general offices, a wholesale warehouse, and the already existing insurance service. In the Lake Superior region a new organization, The Cooperative Terminal, was formed which is not only marketing farm produce but is purchasing meat and fruit for the local retail

cooperatives in the district. A county-wide federation to embrace all types of cooperatives was formed for Kandiyohi County, Minn. There are 30 or more cooperatives of various types in the county.

In the Middle West more and more farm-supply associations as well as those handling petroleum products are branching out into the grocery field. Interesting excursions into new lines were reported from Iowa where some of the best customers of a local petroleum association are the gasoline-motored passenger trains of one of the Class I railroads; and from Idaho where a local gasoline cooperative furnishes water for the village from its own supply.

At least three new cooperative funeral associations were formed in 1941—two in Iowa and one in Wisconsin—and a Minnesota store association voted to establish a mortuary department. There was evidence of steady interest of college students in cooperatives providing rooms, meals, books and students' supplies, and other services. Reports to the Bureau of Labor Statistics indicated that a considerable number of new associations were formed during the year and facilities of existing associations were expanded.

Cooperative Education and Recreation. Consumers' cooperation is more and more being recognized as a subject for inclusion in the curriculum of institutions of learning in the United States. In 1941, Maryland University started a 4-year course in consumers' cooperation, and Antioch College installed a course designed for students wishing to go into the cooperative movement for a livelihood. The cooperative movement each year extends and intensifies its work in the training of students to be managers and employees of cooperatives. In addition to Rochdale Institute, national training school for cooperative employees, almost all of the wholesales hold annual training courses. In 1941 the Good Will Fund, Inc. became joint sponsor with several regional cooperatives of the Midwest Cooperative Managers' Institute, which was held in Chicago in January, 1942.

Central States Cooperatives in 1941 hired a full-time field worker in education and trade practices. In Nebraska where the educational work among the Farmers' Union cooperatives is carried on by the State Farmers' Union, the 1941 convention adopted a resolution recommending that all direct or affiliated activities of the organization be asked to contribute 1 per cent or more of their net earnings each year for education. The Ohio Farmers' Union at its 1941 convention went on record as favoring a State wide program of education in cooperation. It was the consensus of the meeting, also, that every local should "devote time to sponsoring cooperative recreation."

Recreation forms a definite and growing part of the program of the cooperative movement. For the past 6 years a national recreation school has been held for the training of leaders in recreation. In Michigan and Illinois, summer camps are run which combine recreation with instruction. The Illinois camp is leased from the government but that in Michigan is being purchased and will be owned by the cooperative movement there. The cooperative associations in Minnesota and Wisconsin own several parks which offer facilities for camping, boating, etc., and for summer educational institutes. The California associations run an all-year camp. "Play Co-ops" are springing up in various sections of the country. These organizations not only undertake to purchase tickets to theaters, concerts, and other entertainments for their members, but also sponsor group singing, dancing, and

other get-togethers. One local association has formed a drama group which has produced and acted in several plays. Play Co-ops are known to have been started in 1941 in the District of Columbia, New Jersey, and Wisconsin.

Combining recreation and education, a tour of cooperatives was arranged in July, 1941, which included visits to cooperative organizations in Illinois, Indiana, Minnesota, Missouri, Ohio, and Wisconsin. The persons participating were given a chance for first-hand examination of some 24 different types of cooperatives.

Cooperatives and Labor. Several joint labor-cooperative meetings were held during the year. Among these was a meeting—the first of its kind in that section—held in North Kansas City, Mo., at which were gathered delegates from labor unions and cooperative associations in the area. Representatives of labor, cooperatives, and various religious and educational organizations met in April in Louisiana. In Racine, Wis., a Joint Consumers' Council was organized in which organized labor, farm organizations, and cooperatives were represented.

A group of five union-operated cooperative cafeterias are reported to have been undertaken in Massachusetts, these having been taken over after the employing company had decided to close them.

Numerous agreements with organized labor were reported during the year, practically all of which contained increased pay, shorter hours, or both. One such agreement (that signed by Midland Cooperative Wholesale with the office employees union) provided for a sliding scale of rates moving up or down in accordance with the quarterly cost-of-living indexes of the U.S. Bureau of Labor Statistics.

The 1941 convention of the American Federation of Labor adopted a report of the resolutions committee directing the Executive Council to "give consideration to the subject of consumers' cooperative activities and to productive and consumers' cooperative organization." The 1941 convention of the Congress of Industrial Organizations passed a unanimous resolution calling upon the officers to "undertake a careful analysis of ways and means whereby the C.I.O. and its affiliated organizations may participate in the development of the consumers' cooperative movement and stimulate the interests and activities of union members along such lines." Unanimous endorsement to the consumers' cooperative movement was also given by the Textile Workers Union. Twenty railroad labor organizations expressed interest in cooperative buying organizations.

COORDINATOR OF COMMERCIAL AND CULTURAL RELATIONS. See COORDINATOR OF INTER-AMERICAN AFFAIRS.

COORDINATOR OF INTER-AMERICAN AFFAIRS, Office of the. This office, established by executive order of President Roosevelt on Aug. 18, 1940, as the Office of the Coordinator of Commercial and Cultural Relations between the American Republics, received its present title by a further executive order of July 30, 1941. Its aims and functions from the start have been to formulate and execute programs

that would strengthen the economic and cultural bonds between the republics of the Western Hemisphere for their mutual benefit, and in so doing to strengthen the defense of the Americas.

The Office was organized to coordinate the activities of public and private agencies in the field of inter-American affairs. However, projects are administered by the Office itself where no agency already exists to handle them. Broadly speaking the work is of a two-fold nature. One is the group of problems that deal with the emergency situation confronting the New World in wartime. The other is a long range program of permanent development and understanding. In each there are two important fields of operation, the economic and the psychological.

Economic. One of the chief inter-American problems facing the 21 republics when the Office was established was the effect of the European war on Central and South American trade. The Coordinator's cooperation with government buying agencies, the Export-Import Bank, executive departments, etc., helped double United States purchases from the other republics. Various other governmental and international bodies have been active in solving economic problems. Among them are, the Inter-American Shipping Committee, of which the Coordinator is a member, the Inter-American Development Commission, of which the Coordinator is chairman and which set up country commissions in each of the 20 other republics, and the Board of Economic Warfare (q.v.), of which the Coordinator is a member. In November, 1941, the Commercial and Financial Division merged certain of its functions with the Board of Economic Warfare with the Assistant Coordinator at the head of the Board's American Hemisphere Division. Thus when Japan attacked the United States on December 7, the broad hemisphere program was smoothly integrated into the economic strategy of war.

Other important activities in the economic field were. The original studies on representation of United States firms in the other republics, which led to proclamation of the so-called blacklist; a study of hemisphere air line ownership, which led to the establishment of a unit in the Defense Supplies Corporation (q.v.) with lending power up to some \$8,000,000, preparation of an Institute of Tropical Agriculture, which will begin to function in 1942, market studies and surveys of the other republics; a vocational training program to help supply these countries with technicians, and the loan of mining and agricultural experts to help develop existing resources. These activities are typical of the many undertaken by the Office, either by placing its organization at the disposal of other agencies, or by executing projects itself.

Psychological. With the outbreak of war, the work in the cultural and communications fields was reoriented from that of "defense" to that of "warfare." In practice this reorientation involved little but intensification and expansion in all fields of activity.

A large part of the Office's program has been devoted to improving the facilities by which the 21 republics learn about each other. News and feature agencies already serving the Latin American press have been helped to improve their channels of information; pictures, articles, and news were supplied in an increasing stream, which was greatly augmented after the United States entered the war. A regular inter-American flow of daily news is supplied to press services and short wave broadcasting stations. Among other activities, the Office distributes 200,000 copies a month of an illustrated

magazine in Spanish and Portuguese devoted to hemisphere defense, and a bi-weekly American Newsletter to thousands of leaders in inter-American affairs.

In the motion picture field, the Office has encouraged the production of pictures of all kinds in the Americas, working with the commercial companies in both feature and news reel fields. The industry has cooperated thoroughly with the Office, submitting scripts and ideas for approval. The Motion Picture Society of the Americas was created. Twenty-five nontheatrical films have been shipped to United States missions in the other republics for general distribution.

The Office also has sought to encourage specially planned radio programs originating in the United States for broadcast to the other American republics, and special programs with a Latin American background for broadcast in this country. Special transcriptions for local stations in the other republics have been a feature.

The Office is cooperating with the other republics in public health, child welfare, social legislation, and related subjects. Public health specialists have been sent to some of the countries, while physicians, social workers, and labor leaders among others have been brought to the United States for study.

In the field of education, the Office has stimulated study of inter-American subjects by a broad program of student exchanges, by preparing teaching aids such as books, pamphlets, motion pictures, etc., and by cooperating with schools and colleges in setting up new courses. There have been interchanges of scientists, engineers, writers, artists, and administrators.

NELSON A. ROCKEFELLER.

COPPER. The armament requirements of the United States and of the nations entitled to aid under the Lend-Lease Act caused an unprecedented demand for copper in 1941 and by the end of the year it was the tightest of all base metals. It had become almost semi-precious. The total production of domestic refined copper was 1,061,000 tons, compared with 1,033,710 tons in 1940. This is the highest production figure reached since the two peak years, 1916 and 1929. But increase in smelter production from domestic sources was only 8 per cent. Imports by commercial organizations and by the government brought the supply up to about 1,661,000 tons. The Metals Reserve Co. holds the government-imported metal as stockpile copper. Mine output of recoverable copper in 1941 was 959,506 tons, a 93 per cent increase over 1940. Defense needs in 1941 reached 600,000 tons. The demand from all sources was for 1,750,000 tons for the year. An official mandatory price of 12¢ a lb. was established in August, 1941; but in November the government decided to pay 17¢ for marginal mine copper that could not be produced at 12¢. In October the OPM restricted the use of copper to the defense industries. The new bill passed by Congress, January, 1942, changing the content of the United States nickel from ¼ nickel, ¾ copper to ½ silver, ½ copper, was designed to save 434 tons of copper per year for vital war purposes.

The United States consumes almost the entire copper output of the Western Hemisphere; and the Allies combined take nine-tenths of the world's production. Yet more is needed. Already the 1942 demands in the United States are estimated at 1,850,000 tons (900,000 tons for brass shell cases; 100,000 tons for special Navy purposes; 150,000 tons for degaussing ships, i.e. making them in-

vulnerable to magnetic mines; 200,000 tons of refined copper for Great Britain; 500,000 tons for electrical requirements; and some 200,000 tons for essential civilian uses). The supply for 1942 (with 1942 requirements estimated at 1,750,000 tons: 1,100,000 tons of domestic, 650,000 tons of imported copper) falls short of even the immediate military demands.

The United States looks to South America, especially to Chile and Peru, to fill this deficit and also to Mexico, Canada, and Australia. The Metals Reserve Company expects to add at least 200,000 tons from these countries to the 350,000 tons acquired in 1941. The OPM granted priorities on machinery and supplies to certain South American countries to help hasten their production of crude and refined copper. No import and export figures after September, 1941, are to be published. The new Phelps Dodge Morenci mine is expected to swell domestic production by 75,000 tons in 1942; Anaconda and Kennecott promise another 40,000 tons, and increases are expected from hundreds of other small far-western mines.

A new campaign for the development of metals put on foot by the British Empire early in 1942 was expected to increase the production of copper in the Belgian Congo and Rhodesia by 100,000 tons a year.

See BUSINESS REVIEW under *Copper*; NATIONAL BUREAU OF STANDARDS, SUPPLY PRIORITIES AND ALLOCATIONS BOARD.

COSTS. See EGYPT; ITALIAN EAST AFRICA.

CORN. Corn production in the United States in 1941 was estimated by the U.S. Department of Agriculture at 2,672,541,000 bushels, the highest in nine years, and compared with the 1940 crop of 2,460,624,000 bushels and the 1930-39 average of 2,307,452,000 bushels. The acreage harvested for all purposes totaled 86,089,000 acres compared with 86,738,000 acres in 1940, 13 per cent below the 10-year average of 98,049,000 acres, and, as in 1940, was the smallest acreage since 1894. The average yield per harvested acre, 31 bushels versus 28.4 bushels in 1940, was exceeded in the 75 years of record only by the 1906 acre yield of 31.7 bushels and compared with the 10-year average of 23.5 bushels. Factors favoring the excellent crop were favorable early weather, increased acreages of high-yielding, drought-enduring hybrids, clean fields made possible by increased use of mechanized equipment, and ample moisture, and warm weather during early fall. The corn harvested for grain was estimated at 2,429,054,000 bushels, the 4,083,000 acres harvested for silage produced 34,026,000 tons of silage, and the remainder of the crop about 3,975,000 acres, was harvested for forage or grazed by livestock. States leading in production of corn for grain were Iowa 442,527,000 bushels, Illinois 387,292,000, Indiana 170,829,000, Minnesota 158,240,000, Nebraska 152,831,000, Ohio 152,559,000, and Missouri 110,418,000 bushels. Wisconsin, Minnesota, New York, Pennsylvania, Michigan, and Iowa in order led in silage production. The season average price per bushel (preliminary) received by farmers averaged 70.9¢ in 1941 and the value of production was estimated at \$1,894,841,000 versus 61.8¢ and \$1,520,723,000 in 1940. COSTA RICA. A Central American republic. Capital, San José.

Area and Population. Area, 23,000 square miles; estimated population, 639,197 on Jan. 1, 1940. The people are largely of Spanish and other European descent, except for some 18,000 Negroes in the Atlantic banana zone and about 3,000 aboriginal Indians. Estimated populations of the chief towns as of Jan. 1, 1940: San José, 74,322; Cartago, 21,334; Limón, 17,065; Alajuela, 12,272; Heredia, 10,211; Puntarenas, 8,741.

Defense. As of Jan. 1, 1941, Costa Rica had an active army of 548 men (220 musicians) and trained reserves of 200. A decree of July 6, 1940, established the National Police Corps, with both police and military duties. By an agreement signed July 14, 1941, Costa Rica engaged a United States military mission to help train its armed forces. A supply of modern arms also was obtained from the United States. The Government maintained one customs patrol launch on the Pacific coast and another in the Caribbean.

Education and Religion. The illiteracy rate is among the lowest in Latin America. Physical education was made compulsory in schools Sept. 19, 1940. At the beginning of 1940 there were 659 elementary schools with 66,876 pupils, 2 secondary schools with 1,234 pupils, 1 normal school with 450 students, and 2 colleges (at Cartago and Alajuela). The University of Costa Rica, founded in 1844 at San José, was reopened Mar. 7, 1941, after having been closed for a number of years. Roman Catholicism is the state religion, but other creeds enjoy complete liberty of worship.

Production. Agriculture is the chief occupation. Coffee, bananas, and cacao comprised 86.8 per cent of total export values in 1940. Coffee exports in 1940 were 288,566 bags (of 132 lb.), bananas, 3,259,415 stems; cacao, 4,903 metric tons. Corn, beans, rice, tobacco, sugar, potatoes, fruits, and vegetables are grown for domestic consumption. The 1940 cattle census showed 331,142 head. The forests yield some cedar, balsa wood, and hardwoods. Gold, silver, and salt are the only minerals extracted. Manufacturing is confined to cigars, cigarettes, furniture, candles, cheese and a few other products.

Foreign Trade. Imports in 1940 were equivalent to 16,840,463 U.S. dollars (\$16,884,962 in 1939); exports, \$7,483,957 (\$9,086,498 in 1939). The imports surpluses were accounted for by large investments of foreign capital and other invisible items. Coffee exports in 1940 amounted to \$3,989,305; bananas, \$1,904,813; cacao, \$604,991; gold in bars, \$473,797. The United States took 58.8 per cent of the 1940 exports (45.6 in 1939); United Kingdom, 25.1 (16.9); Germany, 0.0 (25.1). Of the 1940 imports, the United States furnished 75 per cent (58.8 in 1939); Germany, 3.5 (17.7); United Kingdom, 4.5 (3.9).

Finance. Actual governmental revenues in 1940 were 41,703,000 colones; expenditures, 43,992,000. The expenditure estimate for 1941 was 35,583,000 colones. On Dec. 31, 1940, the external debt was 99,966,943 colones (100,169,428 on Dec. 31, 1939); internal debt, 35,374,629 colones (32,919,052 in 1939). Average exchange rate of the colon in 1940: Controlled, \$0.1779 (\$0.1779 in 1939); uncontrolled, \$0.1754 (\$0.1764 in 1939).

Transportation. In 1941 Costa Rica had 413 miles of railway line, 448 miles of improved highways, and a domestic air network connecting with the Pan American Airways system. The chief ports are Limón on the Caribbean and Puntarenas on the Pacific.

Government. Executive power is vested in a president elected by direct vote for four years and legislative power in a Congress of 44 members, half of whom are elected (for four years) every two years. President in 1941, Dr. Rafael Angel Calderón Guardia, who assumed office May 8, 1940.

History. Negotiations for a settlement of the long-standing boundary controversy between Panama and Costa Rica were resumed in February, 1941. After a friendly meeting between the Presidents of the two republics at Sixaola River in the disputed area late in April, a boundary treaty was signed in San José May 1 and ratified soon afterwards by the Congresses of both countries. The treaty legalized the de facto boundary except for an interior district adjoining the Yorkin River where the two countries exchanged districts of approximately equal size. It set up a mixed commission of two representatives from each country, with a Chilean technical adviser, to survey and mark the frontier. It also granted both governments perpetual and identical rights of unlimited free navigation on parts of the Sixaola and Yorkin Rivers.

Following the example of Chile (q.v.), the Government on March 31 ordered the seizure of a German and an Italian freighter interned in Puntarenas harbor. The ships' crews and officers were imprisoned and then deported for setting fire to and badly damaging the ships. In May the head of German Nazi organizations in Costa Rica and an accomplice were deported for anti-democratic propaganda. In June Nazi employees of the Pacific Railroad were dismissed and an armed patrol of the railway established to prevent sabotage. The Government on October 16 closed German consular agencies in Costa Rica after the Reich Government, over its protest, had ousted Costa Rican consulates in German-occupied countries of Europe. A week later the authorities at San José announced that they would expel foreigners writing or campaigning against the democracies.

This policy received wide popular support. All Costa Rican organizations opposing the Axis and its adherents united in the National Anti-Nazi Front. The Front sponsored a huge pro-democratic demonstration in San José on September 15, the 120th anniversary of independence from Spain, with President Calderón Guardia as the chief speaker. Catholics participated with the written approval of the Archbishop of Costa Rica although the secretary of the Communist party was among the scheduled speakers.

In line with national sentiment, the Government strongly supported Washington's foreign policies. On July 3 it declared its non-belligerency in place of neutrality in the war, following the example of the United States. On September 5 it supported Uruguay's proposal to permit any American country involved in the war to use its ports and airfields. A United States military mission was engaged (see above under *Defense*).

Following the Japanese attack upon the United States, the Costa Rican Government immediately (December 7) declared war upon Japan. A war resolution was passed unanimously by Congress December 8. Arrest of all Japanese in the republic was ordered. Costa Rica again was the first Latin American country to declare war on Germany and Italy (December 11) after those countries declared

themselves at war with the United States. On December 15 it recalled its Minister to Madrid and Vichy.

Costa Rica during 1941 obtained further financial aid from the Export-Import Bank of Washington. A \$500,000 credit for currency stabilization purposes was obtained August 1. On August 7 it was announced that a new loan contract had been signed superseding that of Sept. 23, 1940, under which \$4,600,000 was advanced for construction of the Costa Rican section of the Inter-American Highway. The United States undertook to meet all except \$2,500,000 of the cost of the highway. The new loan, totaling \$4,600,000, provided \$2,500,000 for the construction of other roads and public works. Costa Rica also benefited from the U. S. defense program through the employment of hundreds of Costa Rican artisans and laborers in the construction of the third set of locks for the Panama Canal.

Under President Calderón Guardia, Costa Rica abandoned some of the nationalistic economic legislation adopted by the preceding administration. The state monopoly on the importation and distribution of gasoline was abolished June 2. The project for nationalization of the Electric Bond and Share's power system in San José and neighboring towns was dropped when Congress approved, 40 to 3, a new 25-year contract between the Government and the company. A break in the friendly relations between President Calderón Guardia and ex-President Leon Cortés Castro over political issues was reported on April 30. Later Dr. Calderón Guardia discharged several members of the national police who publicly expressed support of Cortés Castro. He announced that he would resign the Presidency if his party (National Republican) did not receive a vote of confidence in the 1942 Congressional elections.

See LEND-LEASE ADMINISTRATION; PAN AMERICANISM.

COST OF LIVING. See LIVING COSTS AND STANDARDS.

COTTON. The cotton crop of the United States for 1941, as estimated by the U. S. Department of Agriculture on Dec. 8, 1941, amounted to 10,976,000 bales of 500 lb., as compared with 12,566,000 bales in 1940, 13,246,000 bales, the 1930-39 average, and the record crop of 18,946,000 bales in 1937. Lint yield averaged 235.4 lb. per acre compared with 252.5 lb. in 1940, the record of 266.9 lb. in 1937, and 205.4 lb., the 1930-39 average. Of the 23,250,000 acres in cultivation July 1, 1941, 3.8 per cent were abandoned later, leaving 22,376,000 acres for harvest, compared with 23,861,000 acres in 1940.

World carry-over of American cotton on Aug. 1, 1941, as indicated by reports of the New York Cotton Exchange Service and official agencies, was about 12,847,000 bales compared with 14,554,000 at the end of the previous season and 14,137,000 two years before. The carry-over of American cotton in the United States, estimated at 12,010,519 running bales, together with the above estimate of world total, indicated the carry-over of American cotton in foreign countries on Aug. 1, 1941, at about 836,500 bales. Other cottons carried over in the United States included 15,695 bales of American Egyptian, 4,916 bales of sea-island, and 139,622 bales of foreign growths. The 1941-42 season was the fifth consecutive year that the domestic supply of American cotton had been above 22 million bales. Domestic disappearance of American cotton in the 1941-42 season, however, was expected to be con-

siderably above production, thus providing for a reduction in the carry-over at the beginning of the next season. During the past 12 years, domestic carry-over of American cotton averaged 8,300,000 bales, of which an average of 4,500,000 bales were Government held and 3,800,000 "free" cotton. On Aug. 1, 1941, the "free" carry-over totaled over 5,500,000 bales versus 1,700,000 bales a year earlier. Domestic consumption of American cotton totaled 9,700,000 bales last season to surpass the previous record by 1,800,000 bales. With exports at the lowest level since the Civil War, however, domestic disappearance totaled only 10,700,000 bales. World mill consumption of American cotton during the season ended July 31, 1941, was estimated at 11,919,000 bales compared with 12,876,000 bales in 1939-40.

The world supply (carry-over plus production) of all cotton for the 1941-42 season was estimated in December to total about 47,900,000 bales, the total world supply approaching 50 million bales for the fifth consecutive season. World carry-over of all cotton on August 1 was about 21,961,000 bales, as against 20,326,000 bales in 1940-41. The world supply of American cotton prospective for the current season, 1941-42, was indicated at about 23,397,000 bales compared with 24,858,000 bales in 1940-41 and the record supply, 26,224,000 bales in 1932-33. The world carry-over and supply of American cotton had increased materially since 1920 and the total supply, formerly about one-third larger than consumption, currently had been about double consumption. This was indicative of the extent to which consumption had been running below production despite a downward trend in production. Consumption in the 1941-42 season was expected to exceed production, and the world carry-over on Aug. 1, 1942 probably would be smaller than a year earlier. In the last four years the carry-over constituted 50 per cent or more of the supply and 50 to 78 per cent of the carry-over consisted of Government loan stocks.

Cotton production in 1941 in the countries reported was estimated to be, for the United States, 10,976,000; India, 5,021,000; U.S.S.R. (Russia), 4,300,000; China, 2,406,000; Egypt, 1,671,000; Brazil, 2,199,000; Peru, 339,000; Mexico, 333,000; Belgian Congo, 214,000; Iran, 208,000; Haiti, 13,000; Spain, 9,200; Ecuador, 9,200, and Rumania, 21,000 bales. The total world production in 1941-42 was tentatively indicated late in 1940 at 26,500,000 bales compared with 28,615,000 in 1940-41. In 1940-41, Argentina produced 232,000 bales, Brazil, 2,522,000 bales, Uganda, 290,000 bales; Nigeria, 55,000 bales; Anglo-Egyptian Sudan, 245,000 bales; Burma, 92,000, Chosen, 195,000; and Australia, 15,000 bales. The estimated production of Iraq in 1940-41 was 21,000 bales.

The cotton crop of the United States for 1940, as reported by the U.S. Bureau of the Census, the estimated crop for 1941, and the cotton reported ginned to Dec. 13, 1941, are shown in the accompanying table:

The table includes for 1941, under the ginning report, 863 round bales counted as half bales and also 42,104 bales of American-Egyptian cotton, and 2,702 bales of sea-island cotton, grown largely in Georgia and Florida. The 1941 crop was estimated to include 62,000 bales of American-Egyptian cotton grown on 135,900 acres, principally in Arizona. The cotton of the 1941 crop ginned up to Dec. 13, 1941, averaged substantially lower in grade and slightly longer in staple than that ginned up to Dec. 13, 1940, according to reports based on the 9,870,311 bales of American upland cotton ginned to that

date. About 80.9 per cent of the cotton ginned in 1941 was tenderable on future contracts compared to 86.2 in 1940.

UNITED STATES COTTON CROP 1940-41

States	Crop in 1940 500-lb bales	Estimated crop, 1941, 500-lb bales	Bales ¹ ginned before Dec 13, 1941
United States	12,564,988	10,976,000	9,915,117
Alabama	775,459	790,000	772,383

Virginia	21,302	28,000	22,890
All Others	14,669	27,000	22,472

Running bales

Oil mills in the United States, during the cotton year ended July 31, 1941, crushed 4,396,191 tons of cottonseed. The products of the seed included 1,207,309 bales of linters, 1,107,688 tons of hulls, 1,952,911 tons of cake and meal, and 1,424,899,485 lb. of oil.

Consumption of all cottons in the United States rose in 1940-41 to 9,721,700 bales from 7,783,774 bales in 1939-40, and that used by American mills was consumed largely, more than 85 per cent, in the cotton growing states. Consumption of cotton in the United States had fluctuated between five and eight million bales per season since 1913-14. In the 1941-42 season, based on the rate of consumption during and since August, 1941, domestic consumption was expected to approximate from 10.5 to 11 million bales. Foremost among factors contributing to the exceptionally high level of domestic cotton consumption were those traceable to the national defense efforts. The annual consumption of cotton in the United States increased from less than 14 lb per capita in 1876 to 31.8 lb. in 1916, a record which stood until 1940 when it attained 35.8. A further increase was in prospect for 1941. Wool consumption ranged from 1.8 lb to 4.2 lb. per capita since 1876. Consumption of silk increased from a negligible quantity in the earlier part of the period to a high of 0.8 lb in 1929, since when it declined to 0.36 lb. in 1941. The recent decline reflected the sharp increase in rayon consumption. Since 1927, per capita consumption of rayon exceeded that of silk, and since 1938 that of wool, reaching 3.7 lb. in 1940.

Estimates of world consumption of cotton (exclusive of linters in the United States) for the year ended July 31, 1941, were equivalent to about 26,788,000 bales, compared with 28,461,000 in 1939-40. Of the total consumption in 1940-41, about 14,869,000 bales were foreign and 11,919,000 American. The consumption of American cotton in countries other than the United States fell in 1940-41 to 2,348,000 bales, while non-American cotton in countries other than the United States decreased to 14,869,000 bales. Total cotton consumption in foreign countries made a net gain for the period 1920-40 of 39 per cent, and throughout the period there was a marked tendency for any change in the consumption of either American or foreign cotton to be associated with a reverse movement in the other. For the period as a whole, consumption of foreign cotton outside of the United States showed a net increase of 121 per cent, whereas con-

sumption of American cotton declined 58 per cent. In 1940-41, consumption of American cotton was only 16 per cent as large as consumption of foreign growths, whereas from 1920 to 1934 it averaged about three-fourths as large. Foreign consumption of both American and other cottons would be exceptionally small during the current (1941-42) season.

Prices of middling $1\frac{1}{8}$ inch cotton at the 10 spot markets averaged 11 cents per lb. during the year ended July 31, 1941, compared with 10.09 in 1939-40, 9 in 1938-39, 9.09 in 1937-38, 13.25 in 1936-37, and 9.79 cents, the 1937-41 average. Prices averaged in January, 1941, 10.10 cents, February, 10.13, March, 10.58, April, 11.09, May, 12.44, June, 13.79, July, 15.58, August, 16.14, September, 17.10, October, 16.49, November, 16.38, and closed on December 31 at an average of 17.77 in the southern spot markets and at 18.55 cents in New York. Since August, 1939, spot prices in domestic markets have been based on middling $1\frac{1}{8}$ inch cotton. Prices received by producers at local farm markets on Dec. 15, 1941, were estimated to average 16.23 cents per lb. for lint and \$44.65 per ton for cottonseed compared with 9.33 cents and \$24.08, respectively, on Dec. 15, 1940. The value of production of cotton lint (marketing season) was estimated (preliminary) at \$893,159,000 in 1941 and of cottonseed \$235,002,000 compared with \$621,380,000 and \$121,578,000 reported in 1940. Returns from lint and cottonseed per acre of cotton harvested averaged above prewar in 4 of the past 7 and in 10 of the past 17 years. Since 1923 the purchasing power of returns per acre, excluding Government payments, were below prewar, even though cotton yields had increased materially. Inclusion of Government payments raised the average purchasing power index numbers for the eight years 1933-40 from 78 per cent of prewar to 96 per cent. In each of the past three years returns per acre, including Government payments, were above prewar. See AGRICULTURAL COOPERATION; BUSINESS REVIEW under the *Defense Program*; TARIFF COMMISSION, U.S.; TEXTILES.

COTTONSEED. See CHEMISTRY, INDUSTRIAL under *Fats and Oils and Plastics*; COTTON.

COUNCIL MANAGER PLAN. See MUNICIPAL GOVERNMENT.

COURT GAMES. *Court Tennis.* Alastair Bradley Martin, almost a newcomer to the ancient game, won the national court tennis laurels and also won at Tuxedo, where he beat Grant in the final. Jimmy Van Alen, who had alternated with Ogden Phipps on the throne for many years, did not defend his title in 1941. Ogden Phipps and Robert Grant, 3d, won the national doubles. The outbreak of war in December cancelled the annual Payne Whitney Memorial intercity matches at Manhasset, one of the top features of the other seasons.

Racquets. Robert Grant, 3d, of New York, shorn of his racquets title in 1940 when he suffered an ankle hurt, returned to the top in 1941, beating J. Richard Leonard of Tuxedo in the national final and winning back the Clarence C. Pell Cup in the open tournament in which he whipped Norbert Setzler, professional, in the last match. He also won the national doubles with C. C. Pell, Jr., and carried off the Tuxedo Gold Racquet. David S. Milford of England was the world's open champion.

Squash Racquets. Charles Brinton, a Princeton undergraduate, shot to the top in squash racquets in 1941, the Philadelphian surprising as he took

national honors as well as the intercollegiate prize. In taking the national title, defended by Willing Patterson, Brinton conquered Hunter Lott, another Philadelphian, in the final, after eliminating H. Sherman Howes and Neil Sullivan. Brinton tried with Stanley Pearson, runner-up in the college finals, also from Princeton, to take the national doubles, but was beaten off by Lott and William E. Slack in the semi-finals. Lott and Slack scored for the fourth straight year by defeating Sam Cochran and H. W. Putnam in the final. The Boston team won the Lockett Trophy. Stanley Galwin annexed the New York State title for the third year in a row. Joe Janotta of Chicago took national veteran's honors, and Miss Cecile Bowes won the national women's championship by turning back Mrs. Enos Thropp, Jr. in the final match. Lester Cummings returned as professional champion, beating Al Ramsay, defender, in their match at Pittsburgh.

Squash Tennis. Harry Wolf, champion eleven years in succession, retired from active competition after winning a couple of early tournaments, and the national squash tennis championship went to Joseph Lordi, a Notre Dame graduate, who defeated Frank Iannicelli, brother of the world's open champion, Thomas Iannicelli, in the final.

COURTS. See LAW. For juvenile courts, see JUVENILE DELINQUENCY. For decisions, see the subject.

CREDIT UNIONS. See CONSUMERS' COOPERATIVES.

CRETE (KRETE). An insular geographical division of Greece, of which it is the most southerly part. The island is 160 miles in length and from 6 to 35 miles wide. Area, 3,235 square miles. There are many mountain ranges which make it a rugged and wild country. Many good harbors exist along the northern shore, the best being at Suda Bay, but the southern shore is mainly inaccessible though shelter exists at Massera Bay. Crete comprises four departments—Canea, Herakleion, Lasithion, and Rethymnon. Population (Dec 31, 1938), 386,427. Chief towns: Canea (Khania), the capital, 26,604 inhabitants, Candia, 33,404; Rethymnon, 8,632; Hagios Nicholas, 1,543.

History. Crete, which had been occupied by British military, naval, and air forces at the end of October, 1940, was subjected to great damage from the terrific German air offensive which commenced on May 20, 1941. Many of the principal towns, including Canea and Candia, were devastated. The Germans after several days of bitter fighting captured the island. Many of the British and dominion troops had been withdrawn but it was announced on Aug. 6, 1941, that about 1,000 British troops who had failed to escape were living in caves and putting up guerrilla resistance against the German forces. See WORLD WAR; GREECE under *History*.

CRICKET. The war eliminated England's cricket programs for 1941, but there were reports of pick-up games wherever England's fighting men were stationed. In the United States, the championship of the New York and Metropolitan District Association was successfully defended by the General Electric Company of Philadelphia, which won twelve games, lost one and drew one. There was no other organized competition.

CRIME. See CHRONOLOGY; FEDERAL BUREAU OF INVESTIGATION; JUVENILE DELINQUENCY; LAW; PRISONS, PAROLE, and CRIME CONTROL.

CRIPPLED CHILDREN. See CHILDREN'S BUREAU.

CRITICAL MATERIALS. See STRATEGIC AND CRITICAL MATERIALS.

CROATIA. See YUGOSLAVIA.

CROPS. See AGRICULTURE and the topics there referred to, especially the major crops; also the countries under *Production*; BARLEY; CORN; COTTON; OATS; POTATOES; RICE; RYE; WHEAT.

CROSS COUNTRY RUNNING. Gregory Rice, the incomparable little runner from Notre Dame, won the national cross country title late in the year when he loped home at the Empire City Race Track in Yonkers, N.Y. He had been runner-up two years in a row to Don Lash, who reigned seven years in a row, but who retired to join the FBI. Rice also won the Metropolitan championship, while Leslie MacMitchell dominated other cross country events, never being defeated in five years as schoolboy and collegian. MacMitchell won the Intercollegiate A.A.A.A. title for the third straight year, thereby matching the record of Cornell's immortal John Paul Jones, who won in 1910, 1911, and 1912.

In the team events, Rhode Island State, led by Robert Nichols, retained I.C.A.A.A. honors and finished on top in the N.C.A.A. competition, dethroning Indiana University. Indiana's Fred Wilt won that individual title. Joe Smith, an unknown from North Medford, won the national marathon championship, while the annual Boston classic fell to Les Pawson.

CUBA. An island republic of the West Indies. Capital, Havana (Habana).

Area and Population. Area, 44,164 square miles; estimated population on Jan. 1, 1940, 4,253,000 (about 60 per cent classified as white and 40 per cent as Negro). Foreign residents in 1939 numbered 346,839. United States citizens residing in Cuba totaled 5,531 on Jan. 1, 1941. Estimated populations of the chief cities in 1938 were: Havana, 568,913; Holguin, 140,854; Camaguey, 139,295; Santiago de Cuba, 107,125; Santa Clara, 99,509; Cienfuegos, 92,258; Matanzas, 72,826; Guantánamo, 68,372; Manzanillo, 65,965.

Defense. The active army on Jan. 1, 1941, numbered 14,314 officers and men; trained reserves, 29,389. The air force comprised 215 men with about 16 planes. The navy consisted of 2 escort vessels, 5 gunboats, an armed transport, and various small coastguard vessels, staffed with 2,640 officers and men. Defense budget in 1941, 17,416,000 pesos.

Education and Religion. About 39 per cent of the adult population was illiterate at the 1931 census. Statistics for 1938-39 showed 424,094 pupils in 8,786 public classrooms, 31,023 pupils in 360 private schools, 3,089 pupils in 145 communities taught by traveling teachers, 8,972 pupils in 138 night schools for workers, 21 high schools, 8 normal schools. The University of Havana has about 6,000 students. Roman Catholicism is the dominant religion but there is no state church.

Production. Agriculture is the main occupation and sugar and tobacco are the chief crops. Cane sugar production in 1941 was 2,406,988 Spanish long tons of 2,240 Spanish lb. (2,777,230 tons, valued at 84,594,426 pesos, in 1940). Sugar exports in 1940 were 1,989,192 long tons (2,687,186 in 1939). The revised U.S. import quota for Cuban sugar during 1941 was 1,959,947 long tons (1,749,796 in 1940). The 1940 tobacco crop was 55,426,170 lb., the largest since 1931; coffee (1940-41), 27,546 metric tons. Corn, cacao, rice, henequen, fruits, and vegetables are other crops. Livestock in

1938 included 5,074,108 cattle, 587,463 horses, and 83,989 mules.

Mineral production in 1940 was valued at an estimated \$11,700,000 (\$10,000,000 in 1939). Exports of mineral ores in 1940 were (in metric tons): Copper, 40,161; iron ore, 109,453; barite, 16,105; chromite, 53,584; gold, 319; magnesite, 554 in 1939; manganese, 133,361; silica, 88,700; others, 11,551. Practically all these ores went to the United States. Industrial production in 1939 was valued at 63,970,624 pesos (excluding products of sugar mills and similar commodities); workers employed numbered 32,010 and raw materials used were valued at 22,234,300 pesos. Tourists arriving in Havana during 1940 numbered 77,814 (62,990 in 1939) and in addition 49,648 transit or cruise passengers stopped at the port (72,645 in 1939). United States tourists spent an estimated \$12,700,000 in Cuba in 1939 against \$2,500,000 expended by visitors from Cuba in the United States.

Foreign Trade. Excluding specie, imports in 1940 were valued at 103,860,000 pesos (105,862,000 in 1939); exports, 127,288,000 pesos (147,676,000). The United States supplied 78 per cent of Cuba's 1940 imports (74 per cent in 1939), and purchased 82.4 per cent of its exports (75.3 in 1939). Total United States exports to Cuba were \$84,693,000 in 1940 (\$81,646,000 in 1939). Imports from Cuba were \$105,425,000 in 1940 (\$104,930,000 in 1939), of which sugar for consumption in the United States accounted for \$68,273,000 (\$72,772,000 in 1939). See TRADE, FOREIGN, for 1941 data.

Finance. Actual 1940 budget receipts were 75,670,000 pesos and expenditures 79,238,000. The 1940 budget estimates, balancing at 76,000,000 pesos, were extended into 1941 when Congress failed to enact a new budget. Subsequent appropriations increased the 1941 budget to 78,742,000 pesos. The consolidated public debt on June 30, 1941, was \$125,973,000 (foreign, \$119,000,000, domestic, \$11,174,000). The floating debt approximated 90,000,000 pesos on Jan. 1, 1941. The Cuban peso's exchange value remained stable at \$1 through 1937 but depreciated to an average of \$0.928 in 1939 and \$0.901 in 1940.

Transportation. Operating statistics of the common carrier railways, with 3,130 miles of line, were for 1940: Freight, 16,859,819 metric tons; passengers, 6,133,692; revenues, 15,676,240 pesos, expenses, 13,986,846 pesos; net profit, 1,689,394 pesos. Highways in 1941 extended 2,324 miles (2,000 miles paved) and cart roads 1,500 miles. Incoming and outgoing planes in the international air services during 1940 numbered 3,036; they carried 54,031 passengers and 101,773 lb. of mail.

Government. The Constitution promulgated Oct. 10, 1940 (see YEAR BOOK for 1940, p. 171), vested executive power in a President elected for four years. Legislative power rests in a Senate of 54 members (nine from each province) elected for six years, with one-third replaced every two years, and in a House of Representatives containing one member for each 35,000 inhabitants (about 120 in all), with one-half the members elected every two years for four-year terms. (Under a temporary arrangement, one-half of the previous Senate and House retained office along with the new Senators and Representatives elected in 1940.) The President appoints a Premier, who retains office only so long as he enjoys the support of a majority of the House of Representatives. The President, members of Congress, and provincial and municipal officials are elected by compulsory direct popular male

and female suffrage. President in 1941, Col. Fulgencio Batista, who assumed the Presidency Oct. 10, 1940, following his election on July 14, 1940.

HISTORY

Revolt Plot. An attempt by the army and navy chiefs of staff to bring President Batista under their control provoked a dramatic but bloodless test of strength on the night of Feb. 3, 1941, in which the President emerged the victor. When Batista assumed the Presidency, he was succeeded as chief of staff by Col. José Pedraza, who had participated with Batista in the "sergeants' revolt" of 1933. Pedraza and Col. Angel A. González, head of the navy, resented Batista's policy, adopted after he became President, of transferring certain departments of the government from military-naval to civil authorities. In January they refused to permit a new police chief, appointed by the President to curb wide-open gambling in Havana, to assume office. Shortly afterwards they called a meeting of army and navy officers and demanded that they choose between them and the President. Most of the officers apparently remained loyal to Batista. Nevertheless Pedraza and González, with a few associates, on February 3 demanded that Batista consult them with regard to his policies.

Accepting this challenge, Batista ordered reinforcements to the Presidential Palace from Cabanas Fortress. With two aides he then proceeded to army headquarters at Camp Colombia, called together the armed forces, announced that he was assuming personal command, and ordered the arrest of the dissident army-navy chiefs. The next day Colonel Pedraza and three of his associates were deported to the United States by plane. The President appointed new chiefs of the army, navy, and national police and made other changes in the officer personnel. Although he had suspended constitutional guarantees for 15 days, the precaution proved unnecessary. Virtually all political parties, as well as the armed forces, strongly endorsed the President's stand. There was no disorder and on February 5 constitutional guarantees were restored.

Political Developments. The President's prestige was enhanced by his handling of the threatened army-navy revolt. Nevertheless his administration during the remainder of the year was beset with financial and economic problems that proved difficult to solve, partly because of the obstructionist tactics of the Opposition in Congress. The vital sugar industry was hard hit by the loss of its normal European markets. The war provoked a rapid increase in the cost of living, which in turn caused unrest among the laboring classes. Toward the end of the year there was an alarming increase in strikes. A general strike was averted when the President on November 7 signed decrees increasing wages of all workers from 10 to 20 per cent.

Early in the year the President submitted proposals, including an income tax, for eliminating the chronic budget deficit (estimated at \$8,000,000 for 1941). He also recommended the adoption of compulsory military service and asked Congressional authority to contract a \$25,000,000 loan offered by the Export-Import Bank of Washington. Opposition obstruction and controversies over patronage prevented action on the President's recommendations during the regular session which adjourned May 27. The President then called a special session for July 14 to deal with tax reforms and the budget deficit. Because of friction between the Cabinet and Congress, which threatened to block all legislation, the Cabinet resigned July 16.

A new Cabinet, again headed by Senator Carlos Saladrigas, was formed the next day.

After the opposition had exhausted every parliamentary delaying device, the House of Representatives on July 24 approved an administration bill for a 20 per cent flat increase in all taxes for the balance of the fiscal year and for a \$6,000,000 issue of Treasury obligations. It was September 6 before the Senate, after violent debate, approved this emergency tax bill. Meanwhile President Batista on August 2 had formally requested ratification of the \$25,000,000 loan, which was authorized by the Export-Import Bank on May 1, subject to the approval of the Cuban Congress. The President stated the credit would be used to stimulate agriculture and for public works designed to meet the serious economic crisis. At the insistence of the Export-Import Bank, the bill stipulated that there must be no default on the loan and established procedures for raising funds to service it if taxes proved insufficient.

Opposition efforts to obstruct this measure provoked fistcuffs in the Senate on August 4 in which the Premier and many Senators engaged. The four Opposition parties then voted to boycott the Senate sessions until "the necessary guarantees for the minority have been restored." An agreement for resumption of the sessions was soon reached, but it was October 29 before the bill finally passed the Senate. It then went to the House of Representatives, where legislation had been virtually paralyzed by the failure of many Representatives to attend.

On October 27 the House accepted the resignation of its President, who withdrew in protest against these delays. Authorization for the \$25,000,000 loan was later given by the House. The law received the President's signature on November 21. President Batista was still awaiting action on legislation reorganizing the fiscal system, establishing a national bank of issue, regulating foreign exchange transactions, and regulating the relations between President and Congress under the new Constitution. On September 15 leaders of the various political parties agreed to postpone to Mar. 15, 1942, the Congressional elections set for December 1.

Terrorism. The sporadic outbreaks of terrorism that had marked the entire preceding decade recurred during 1941. The University of Havana, closed since the murder of two professors and other violence the preceding December, was fully reopened Jan. 24, 1941, when students in the School of Medicine ended their strike. A week later a secret terrorist organization assassinated an employee of a Havana radio station, who was apparently mistaken for a former police official. On April 25 Julio Ayala, leader of one of the parties supporting President Batista, was seriously wounded by assassins in a Havana suburb. A sudden outbreak of terrorist bombings on the night of August 18 injured 12 persons and caused considerable property damage. Fifteen persons were arrested, including a former officer in the Spanish Republican army.

Anti-Communist Drive. During the first half of 1941 the Cuban Communist party aroused such hostility that a bill making it illegal, introduced in Congress by followers of ex-President Mario C. Menocal, appeared likely to pass. Communist support of Nazi-Fascist attacks upon British and American "imperialism" caused a split in the Communist-dominated Confederation of Cuban Workers in February. The secessionists formed the pro-democratic Socialist Labor party. The Communists

were the only group to oppose the military conscription bill. However the agitation against Communist activities died down after the outbreak of the Russo-German war and the immediate worldwide reversal of the Communist party line (see COMMUNISM). Thereafter Cuban Communists urged full support of the United States, Britain, and the Soviet Union and led the campaign to curb Nazi-Fascist activities in Cuba.

Measures Against Axis. Although President Batista in 1940 was attacked by Opposition groups for his "lukewarm" support of the United States, the Cuban Government during 1941 went further than most of the other Latin American republics in supporting Washington's policy toward the Axis. On January 29 the President signed a decree designed to suppress totalitarian propaganda. In applying this measure the Government prohibited radio broadcasts in German, banned the singing of Communist, Nazi, Fascist or Falangist songs, and prohibited attacks upon the United States or other democratic nations. As a gesture of solidarity with the United States, the Government on March 31 seized the Italian freighter *Recca* in Havana harbor. The Italian consulate in Havana was closed June 30.

Early in July an investigating body was established to root out totalitarian espionage and fifth column activities. Later that month the discovery of a large stock of illicit propaganda leaflets and documents in the home of a German in Havana was followed by the arrest of nine members of the outlawed German Bund and the closing of all German and Italian consulates. The Axis powers retaliated by closing Cuban consulates in their own and occupied territories. On October 27 the House of Representatives unanimously approved a resolution condemning the execution of hostages by Germany in France and other occupied countries.

The activities of Spanish Falangist representatives in Cuba and attempts by the Franco Government to bring pressure on the Batista regime strained relations between the two countries. Early in the year the newly appointed Spanish Consul General in Havana was declared *persona non grata*. In August Falangist soup kitchens and social welfare centers in Cuba were closed. Requests from Madrid for the extradition of Spanish Loyalist refugees in Cuba were bluntly rejected. The Cuban House of Representatives adopted on October 9 a resolution urging amnesty for Spanish political refugees in France.

Relations with United States. Friction with the Axis was accompanied by closer political and economic relations with the United States. On January 9 the Export-Import Bank of Washington authorized a loan of \$11,300,000 to the Cuban Sugar Stabilization Institute to finance the production of 400,000 tons of surplus sugar. A bill authorizing the Government to accept this loan was passed by the Cuban Congress and signed by President Batista March 21. On May 1 the Export-Import Bank authorized another loan of \$25,000,000 to the Cuban Government (see above). At the end of January the U.S. Government sent a five-man mission to Cuba which conducted a two-months' agricultural survey. Its recommendations were incorporated in the bill providing for the disbursement of the \$25,000,000 loan.

Negotiations for a new reciprocal Cuban-American trade treaty, supplemental to that of 1934, were opened in Washington in July and concluded with the signature of the new treaty in Havana December 23. It provided for additional reductions by each country in the tariff rates on speci-

fied imports from the other, as well as other mutually advantageous changes. Cuba's vital interest in these negotiations was intensified when the U.S. Government on August 12 established a maximum price of three and one-half cents a lb. for raw sugar. Cuban sugar planters declared this price "totally unfair" to Cuba and the Cuban Government immediately sought a reconsideration of the order through its Ambassador in Washington. The U.S. Government declined to raise its price ceiling on sugar but mollified the Cuban producers and planters in November by offering to purchase Cuba's entire 1942 sugar crop.

After President Roosevelt's message of June 20 on the *Robin Moor* sinking, the Cuban Cabinet unanimously declared its solidarity with the United States. In July President Batista appointed a commission to cooperate with the United States in applying its blacklist to Axis supporters in Cuba. The annual July 4 celebration in Havana was described as the greatest demonstration of Cuban friendship for the United States in the island's history. President Batista on October 10 declared that Cuba's policy was one of "open alliance" with the United States, Great Britain, Russia, and other nations fighting for democracy. He urged elimination of the neutrality plank in the majority coalition's platform. In June Pan American Airways completed construction of a huge airfield at Camaguey which was expected to be used by the U.S. air force in the event of a war threat to the Caribbean or the east coast of South America.

Early in November an agreement was signed in Washington giving Cuba unspecified amounts of defense equipment and materials under the Lend-Lease Act. Details of the accord were not revealed, but Secretary of State Hull indicated that Cuba would pay for these defense materials through exports of sugar, tobacco, and manganese to the United States. Subsequently it was announced that Cuba's first naval-air base would be constructed at Punta Gorda, in Mariel Bay. After the Japanese attack of December 7 upon the United States and the ensuing German-Italian war declarations, both Houses of the Cuban Congress by unanimous vote declared war upon Japan (December 9) and upon Germany and Italy (December 11).

On December 19 Congress gave final approval to President Batista's request of December 6 for special war powers, affecting both foreign and internal affairs. A state of national emergency was declared. The compulsory military service measure was temporarily shelved on December 21. Some thousands of Axis aliens were rounded up and interned.

For the death of ex-President Mario G. Menocal on Sept. 7, 1941, see NECROLOGY.

See COMMUNISM; LEND-LEASE ADMINISTRATION; NAVAL PROGRESS; PAN AMERICANISM.

CURAÇAO. A Netherlands West Indian colony consisting of two groups of islands (1) Aruba, Bonaire, and Curaçao just north of Venezuela (2) Saba, St. Eustatius, and St. Martin (southern part only) just east of the Virgin Islands. Total area, 403 square miles. Population (Jan. 1, 1940), 105,617. Capital, Willemstad (on Curaçao), 31,264 inhabitants in 1940. Vital statistics (1939): 3,578 births, 1,034 deaths, and 845 marriages. Education (1939): 55 schools and 14,403 pupils.

Production and Trade. Maize, phosphate of lime, and salt are the main products. Livestock (1939): 38,369 cattle, 6,957 goats, 6,157 sheep, and 1,146 hogs. Oil refining is the most important industry.

Trade (1939): 307,521,128 guilders for imports and 344,067,310 guilders for exports (guilder averaged \$0.5334 for 1939). Air services of K.L.M. (Royal Dutch Air Lines), on Aug. 19, 1941, were expanded to include services linking Kingston in Jamaica, with Curaçao, Aruba, and Trinidad. Connections are made, with Pan American Airways, to North and South America. Shipping (1939): 12,639 vessels aggregating 129,388,025 cubic meters entered the ports.

Government. Budget (1939): 11,822,760 guilders for revenue and 11,587,117 guilders for expenditure. Curaçao is administered by a governor, assisted by a council of 4 members, and a States council of 15 members (10 elected by the voters and 5 nominated by the governor). Governor, G. J. J. Wouters (appointed Apr 7, 1936).

CURLING. The Canadian team retained the Gordon International Medal, chief bauble for curling, in 1941, winning thirteen of the nineteen matches with United States curlers and winning by a point total of 272 to 210. The Gordon Grand National and the Richard S. Emmet Memorial Medals fell to the rinks of the Schenectady (N.Y.) Curling Club, on whose ice the play was held. The rink skipped by R. D. Thomson took its third consecutive Gordon award.

CUSTOMS, Bureau of. Many functions of the Customs Service continue from year to year with little change. Such continuing functions are disregarded in the present article which is confined to those activities and operations during 1941 which require special mention. Reference should be made to articles in previous YEAR BOOKS for information regarding the remaining activities of the Customs Service.

Customs Collections. For the second successive year customs collections exceeded those of the previous year. The total of \$392,233,153 was almost 12 per cent larger than in 1940 and 22 per cent larger than in 1939. Increased collections during 1941 were not expected at the beginning of the year. Revenues during the later months of the fiscal year 1940 had diminished with the curtailment of imports from Europe due to the extension of the war area, and this decline continued during the early months of the fiscal year 1941. However, large volumes of raw wool and of various dutiable metals necessary for the defense program resulted in greatly increased collections in February, 1941, and subsequent months so that more than half of the year's total collections were concentrated into the last five months.

The increase in customs collections in 1941 was particularly remarkable in the face of a sharp decline in revenue derived from European importations which amounted to only \$80,256,000 compared with \$130,709,000 in 1940 and \$148,650,000 in 1939. To offset this decline, revenue on imports from every other continental area increased. Customs revenue on goods from Oceania more than trebled; that on South American imports more than doubled; while that on importations from North and Central America, Asia, and Africa increased approximately 15, 9, and 3 per cent, respectively. The augmented collections from these areas represent not only the demand of this country for certain strategic materials but also its ability to take over the market for many commodities formerly sent to Central Europe. Revenue on imports both from Chile and from the Belgian Congo was more than nine times as much as for the previous year, and that on imports from Bolivia and

from Newfoundland was approximately six times as much. Duties on imports from Australia more than quadrupled while collections on imports from Argentina, Uruguay, and Mexico were more than double those of the preceding year.

Volume of Business. The various transactions connected with the entry of merchandise, vessels, or passengers almost without exception declined numerically during the fiscal year 1941. Despite the large increase in revenue, fewer entries of merchandise were made, a phenomenon caused by the character of those imports which yielded the predominant portion of the revenues. Each entry of such articles as wool, sugar, and metals yields a far higher average amount of duties than do entries of the commodities which in the past found their way into this country from Europe in small quantities but at frequent intervals. The number of notices of intent to export with benefit of drawback, on the other hand, was substantially greater in 1941 than during the previous year, in consequence of the increase in the number and value of exports over 1940.

With one single exception, a smaller number of each type of the various vessels and vehicles, carrying fewer passengers, entered in 1941 than during the preceding year. In contrast to the general trend, however, international airplane traffic exhibited a pronounced expansion, the number of aircraft entering the United States in 1941 being 26 per cent greater and airplane passengers 20 per cent more numerous than in 1940.

Enforcement of Customs Laws. As a result of the reduced traffic, seizures made by customs officers were fewer in number and smaller in value than during the previous year, the number of seizures declining to 8,373 or 19 per cent less than in 1940 while the value (\$1,182,000) decreased 6 per cent. In connection with these seizures, 526 arrests were made, an increase of 5 per cent and, of the cases disposed of, 403 convictions were secured or 69 per cent of the total. Almost 10 per cent (789) of the total number of seizures were made in connection with attempts to smuggle marihuana or other narcotics, a practice particularly frequent along the Mexican border. The narcotic cases concluded during the year resulted in 146 convictions and only 26 acquittals. Despite the diversion of the time of some customs officers to investigations involving defense activities, therefore, the primary functions of the Customs Service, namely, the collection of revenue and the prevention and detection of smuggling, was not neglected.

Cost of Administration. Total revenues collected by the Customs Service during the year, including revenues collected for other departments, amounted to \$429,544,621, an increase of \$46,265,046 from the previous year. Expenses of administration, however, were decreased by \$504,250 to \$20,623,423 in 1941 and the cost to collect \$100 was only \$4.80 in 1941 as compared with \$5.51 in 1940.

W. R. JOHNSON.

CUTTING TOOLS. See MACHINE BUILDING.

CYCLING. Military and naval activity abroad kept cycling decidedly moribund in 1941, with the exception of three domestic title events. There was no six-day racing Tom Saetta of Brooklyn took the sprint championship and Mike De Filippo of Newark the paced title in National Cycling Association competition. The Amateur Bicycle League of America crowned Marvin Thomson of Chicago senior road champion and the junior title was taken by Andrew Bernadsky of San Francisco,

while Miss Jean Michels of Chicago won girls' honors. Bob Stauffacher of San Francisco took the Senior track championship of the A.B.L. and Chuck Edwards of Chicago the junior. Stauffacher also won the Century Road Club's senior title.

CYCLOTRON. See CHEMISTRY, PURE; PHYSICS.

CYPRUS. A British island colony in the eastern Mediterranean, 40 miles from Asia Minor and 60 miles from Syria. Area, 3,572 square miles. Population (1938), 376,529. Vital statistics for 1940 (rate per 1,000): 34.6 births, 12.2 deaths. Chief towns: Nicosia (capital), 23,677 inhabitants, Limassol, 13,349; Larnaca, 11,872; Famagusta and Varosha, 9,979; Paphos, 4,517; Kyrenia, 2,137. The majority of the inhabitants profess the Christian faith; about one-fifth are Mohammedans.

Production and Trade. The main products are wheat, barley, olives, cotton, raisins, carobs, potatoes, linseed, wine, olive oil, cupreous pyrites, asbestos, gold, chrome iron ore, gypsum, and terra umbra. Trade (1938): £2,246,435 for imports and £2,478,256 for expenditure. Shipping (1938): 2,995,650 tons entered and cleared. Roads (1940): 2,581 miles.

Government. Finance (1941): £1,082,713 for expenditure (estimated). Public debt (Dec. 31, 1938), £822,300. As a result of the political disturbances of 1931 the legislative council was abolished (see YEAR BOOK for 1931) and the governor was granted the power to legislate. The executive council was retained. During October of 1933 an advisory council was established to advise the government on legislative and other measures. Governor and Commander-in-Chief, Charles Campbell Woolley (appointed during September, 1941).

History. Income tax in Cyprus became law during July, 1941, and was deemed to have come into operation on Jan. 1, 1941. Individuals whose income does not exceed £150 will be exempt. During June the authorities were putting the finishing touches to the island's defenses. Australian troops were among the British garrison, and there were troops of the local defense force and the Cyprus Regiment which had seen service in East and North Africa, Greece, and elsewhere.

Regulations were made imposing penalties for looting and spreading alarmist rumors. Motor traffic was suspended between 10 p.m. and sunrise without special permit. Women and children were voluntarily evacuated, some being sent to South Africa and Rhodesia. By the middle of June practically every British woman had left the island, and the evacuation of the entire Jewish population was completed. About 500 Polish refugees were among the evacuees. The native population in the towns was evacuated to the country districts. On Sept. 5, 1941, heavy reinforcement of the Cyprus defenses was reported in an announcement of a six-day inspection of Cyprus, Palestine, and Syria, mainly by airplane, just completed by Gen. Sir Claude Auchinleck, British commander in the Middle East.

See SEISMOLOGY.

CZECHOSLOVAKIA. A former Central European republic (capital, Prague), partitioned among Germany, Poland, and Hungary in 1938 and 1939, with the exception of part of Slovakia which became a nominally independent republic under German protection, with its capital at Bratislava. The manner in which the Czechoslovak republic was partitioned was described in detail in the YEAR BOOKS for 1938 and 1939 and is summarized in the accompanying table.

PARTITION OF CZECHOSLOVAKIA

Territory annexed	Date of cession or seizure	Area, sq. mi.	Estimated pop. 1939
To Germany:			
Sudetenland	Sept. 29, 1938	11,071	3,653,292
Bohemia-Moravia	Mar. 16, 1939	19,058	6,804,875
To Poland:			
Teschén district ^a	Nov. 1, 1938	419	241,698
To Hungary:			
Parts of Slovakia and Ruthenia ^b	Nov. 2, 1938	4,566	1,027,450
Remainder of Ruthenia	Mar. 14, 1939	4,283	552,124
Additional Slovak districts	Apr. 4, 1939	683	80,923
Slovakia, Republic of	Mar. 14, 1939 ^c	14,165 ^d	2,369,163 ^d
Total		54,245	14,720,535

^a Occupied by Germany in September, 1939; 225 square miles were transferred to Slovakia on Oct. 21, 1939. ^b Ruthenia is also referred to as Carpatho-Ukraine. ^c Date of Slovak declaration of independence. ^d Excluding areas transferred from Poland to Slovakia by Germany of Oct. 21, 1939. Within the frontiers fixed by the German-Slovak treaty of Nov. 31, 1939, Slovakia had an area of 14,706 square miles and a population at the end of 1939 of 2,691,000.

The Sudetenland was annexed as an integral part of the German Reich. Hungary similarly incorporated in its national territory the districts acquired from Czechoslovakia. Bohemia and Moravia were established as a protectorate within "the territory of the Great German Reich." Slovakia on Mar. 18, 1939, signed a treaty accepting German military protection. Neither Slovakia nor the Protectorate of Bohemia and Moravia were recognized by Great Britain, the United States, and various other powers. See separate articles on BOHEMIA AND MORAVIA AND SLOVAKIA.

Czechoslovak Provisional Government. Upon the outbreak of the European War, Czech and Slovak political leaders in exile, headed by ex-President Eduard Beneš, established headquarters in London and declared war on Germany (Sept. 8, 1940). On Nov. 17, 1939, a Czechoslovak National Committee was formed in Paris, with Dr. Beneš as its head. On the same day France recognized this committee as the legal government of Czechoslovakia. The National Committee declared "null and void" the agreement signed between Chancellor Hitler and President Hacha of Czechoslovakia on Mar. 15, 1939, providing for the final dismemberment of the Republic.

In February, 1940, the British Government declared the restoration of Czechoslovak independence to be one of Britain's war aims. Upon the collapse of France, the Czechoslovak National Committee was transferred from Paris to London. The British Government on July 21, 1940, formally recognized "the Provisional Czechoslovak Government established by the Czechoslovak National Committee." Dr. Beneš, acting as President of the Republic, appointed a Cabinet headed by Mgr. Jan Srámek, with Jan Masaryk, son of the founder of Czechoslovakia, as Foreign Minister. On Dec. 10, 1940, President Beneš announced the establishment in London of a State Council of 40 members, including representatives of all Czechoslovak political parties, to serve as a provisional parliament until the end of the war. Rudolf Bechnyes was named president of the Council.

A military accord was signed by the British and Czechoslovak Governments Oct. 25, 1940, which made possible the organization in Britain of a Czechoslovak army and air force of some 20,000 men.

History. A notable accomplishment of the Czechoslovak Government in London during 1941 was the winning of complete recognition from Great Britain, the United States, and the Soviet Union of its status as the legal government of the Czechoslovak Republic.

slovak Republic. Progress toward this goal had been made in 1939 and 1940, particularly through the provisional recognition extended by the British Government July 22, 1940 (see *YEAR BOOK* for 1940, p. 176). The U.S. Government had continued to recognize the Minister and consular representatives in America appointed by the Prague Government before the overthrow of the Czechoslovak Republic, but had no relations with the Government-in-Exile. Soviet Russia withdrew its diplomatic representative from Prague in 1939.

On July 18, 1941, the British Government extended full recognition and announced its decision to accredit a Minister to Dr. Beneš as President of the Czechoslovak Republic. The United States followed suit July 30. On July 18 Soviet-Czechoslovak diplomatic relations were restored through a treaty signed in London, providing for immediate exchange of Ministers. The two governments agreed "to aid and support each other in every way in the present war against Hitlerite Germany." Russia consented to the formation on Soviet territory of "national Czechoslovak military units under a commander appointed by the Czech Government in agreement with the Soviet Government." These troops, however, were to operate under the direction of the high military command of Russia. The organization of a Czechoslovak legion in Russia, principally from Czech soldiers who fought with Poland against Germany and were subsequently confined in Soviet concentration camps, began soon afterwards. Gen. Serge Ingr, commander in chief of the Czechoslovak forces, announced in London September 30 that a Soviet-Czech military accord had been concluded (September 28) in line with the provisions of the July 18th agreement. The expense of organizing and maintaining the Czechoslovak units in Russia was to be met through a credit advanced by the Soviet Government.

The Czechoslovak-Soviet military accord aroused some suspicions among members of the Polish Government-in-Exile. Nevertheless plans for close Polish-Czechoslovak collaboration in postwar Europe (see *YEAR BOOK* for 1940, p. 176) were carried forward. The two Governments-in-Exile announced March 25 that mixed committees were working out details of a scheme for closer cooperation during the war and for a post-war confederation that might include other countries in eastern and central Europe. The Czechoslovak, Polish, Greek, and Yugoslav delegations to the conference of the International Labor Organization in New York City on November 3 issued a joint declaration calling for the formation by their four nations of a bloc that would serve as the nucleus for a larger post-war confederation of Central and Eastern European peoples.

The Czechoslovak Government joined with the other Allied powers in the pledge of June 12, 1941, to continue the struggle with the Axis until victory was won. It likewise formally approved the Allied resolutions of September 24 endorsing the Roosevelt-Churchill Atlantic declaration and providing for joint action to meet the post-war needs of "countries liberated from Nazi oppression."

The Czechoslovak leaders in London maintained close contact with conditions in Bohemia and Moravia and directed the organization of the underground movement there in preparation for the overthrow of German rule. On October 1, immediately after Hitler sent the Gestapo terrorist Reinhard Heydrich to Prague as Reich Protector, President Beneš and Foreign Minister Jan Masaryk broadcast appeals from London to the Czech people to refrain from demonstrations and strikes until

the Government-in-Exile gave the signal for revolt. They warned the Czechs that premature action would expose the nation to terrible reprisals by "cynical murderers who stop at nothing." See *BOHEMIA* and *MORAVIA* under *History* for developments in the Protectorate.

A reconstruction of the Cabinet, without change in personnel or policies, was carried out by President Beneš on October 27. By a decree of November 4 President Beneš named Prokop Maxa, former Czechoslovak Minister to Moscow and Sofia, as head of the State Council, which was further enlarged. Addressing a session of the State Council on November 25, Dr. Beneš made important declarations of policy. He said that Slovakia was regarded as an integral part of Czechoslovakia; that the final decision about confederation with Poland would "be made by our liberated people themselves"; that his Government was based on "the absolute democracy and sovereignty for our people"; that "for us the 'Protectorate' and 'Protectorate' President and Government do not exist. Neither does there exist an independent Slovakia. . . ."

On December 16 President Beneš issued a decree declaring the Czechoslovak Republic in a state of war with all countries which were in a state of war with Great Britain, the U.S.S.R., or the United States.

DAHOMEY. See *FRENCH WEST AFRICA*.

DAIRYING. The announcement of April 3, 1941, by the U.S. Department of Agriculture concerning an expanded food production program included dairy products among the commodities required in greater volume. To assure prices remunerative to producers a minimum price of 31 cents a pound for butterfat was guaranteed to June 30, 1943. With cheese, evaporated milk, and dried skim milk particularly in demand for export under the lend-lease act, these commodities have been purchased by the government at prices which have encouraged expansion of their production rather than that of butter. Still further stimulus was furnished by the 1942 food production goals, announced by the Department of Agriculture in September, which called for a 7 per cent increase in total milk production.

In the face of steadily rising prices and a generally favorable feed situation, total milk production ranged from 3 to 8 per cent higher than in 1940 for every month of 1941. It closely approached 117 billion lb., an increase of 5 per cent over 1940. The total number of milk-cows increased only about 3 per cent in the same period, reaching an estimated total of 26.5 million at the end of the year. The average milk production per cow of approximately 4,700 lb was the highest on record. Liberal feeding of grain and by-product feeds prevailed throughout the year, with an estimated average daily allowance per cow of 4.85 lb. as compared with 4.56 lb. in 1940 and 4.03 lb. for the preceding 5-year period.

The ratio of butterfat to feed prices was more favorable to the dairy producer during the first half of 1941 than a year earlier. Feed prices, particularly for by-product feeds, increased markedly during the closing months while butterfat prices failed to show the usual seasonal increase, resulting in a ratio during the last quarter of the year which was less favorable than that of the preceding year or the 1929-34 average.

In 1940 a fluid milk equivalent of about 54 bil-

lion lb., or 48.5 per cent of the total milk produced, was utilized in the manufacture of butter, whole milk cheese, concentrated milk products, and ice cream, and 10¼ billion lb. of skim milk and butter-milk was dried, condensed, or converted into cheese. Increased production of cheese, evaporated milk, and condensed milk utilized about 20 per cent more milk for these purposes in 1941 than in 1940. Ice-cream production also increased in 1941, while approximately the same percentage of milk went into butter production as in the previous year. In all, both the total amount and the percentage of whole milk going into manufactured products in 1941 exceeded the 1940 level by a considerable margin. The production of dry skim milk in 1941 was about 10 per cent greater than the 1940 total of 472 million lb. yet this quantity proved inadequate for domestic needs and lend-lease shipments. In November, 1941, the Secretary of Agriculture issued a plea for a further 40 to 50 per cent increase in the production of this commodity.

Wholesale prices of butter and cheese were 2 and 36 per cent higher respectively in December, 1941, than a year earlier. Average prices paid to farmers for butterfat and whole milk increased 18 and 30 per cent respectively and the retail price of whole milk on 25 principal markets increased about 15 per cent over the same period.

The average annual per capita consumption of principal dairy products in 1941 included 348 lb. of whole milk (as milk and cream), 17.8 lb. butter, 6.2 lb. cheese (not including skim milk cheese), 20.7 lb. condensed and evaporated milk, and 2.88 gal. ice cream.

Under the general commodities purchase program, the Federal Government purchased approximately 168 million lb. of cheese, 749 million lb. of evaporated milk, and 37 million lb. of dry skim milk, much of which was transferred to other countries under the term of the lend-lease act. In order to stabilize butter prices, the Dairy Product Marketing Association purchased about 5½ million lb. of butter, which is considerably higher than for 1940 but far below the 1938 level of 114 million lb. The privilege of using Blue Food Stamps to purchase butter was suspended from June 1 to October 31, 1941, but during the seven months that the plan was in operation approximately 425 million lb. of butter was retailed in this manner to low income families.

A depressing factor on current butter prices was the extremely heavy stocks of butter in cold storage, amounting to 114,611,000 lb. at the close of the year, or 176 per cent greater than a year earlier. All types of cheese in storage on this date totaled 201,685,000 lb., about 56 per cent larger than a year earlier. Manufacturers stocks of evaporated milk and dry skim milk on Dec. 1, 1941, were 7 per cent larger and 50 per cent smaller respectively than for the same date in 1940.

For the second consecutive year the value of dairy exports far exceeded the imports. During the first 9 months of 1941, exports, mainly of evaporated and dried milk and cheese, were valued at \$42,366,826 as compared with \$12,440,514 for the corresponding period of 1940. Over the same period imports totaled \$3,504,598 in 1941 and \$6,508,496 in 1940, with foreign type cheese the major item of import.

World Conditions. Information compiled by the Office of Foreign Agriculture Relations, U.S.D.A., indicated that the cumulative effects of the scarcity of feed, particularly concentrates, not only further reduced the average milk production per cow during 1941 but also forced the slaughter of large

numbers of milk cows in the principal dairy producing countries of Continental Europe. Germany, with the dairy exports of the occupied countries at her demand, was in a favorable position during the winter of 1940-41, but all indications pointed to much smaller supplies of these products in the winter of 1941-42. France, extremely deficient in all dairy products during 1940-41, faced an even greater shortage in 1941-42. The United Kingdom, always a large importer of dairy products, endured a severe shortage during the winter of 1940-41, but with increasing supplies from Empire Countries and the United States, the situation was greatly improved at the end of 1941. The decision of the British Food Ministry to reduce butter importations about 40 per cent below that of the previous season and increase cheese imports encouraged considerable shift from butter to cheese production in Australia, New Zealand, and Canada. Even so, the end of 1941 found large butterstocks accumulating in Canada while the efforts to fulfill her contract of delivering 112 million lb. of cheese to Great Britain forced a reduction of approximately 13 million lb. in home cheese consumption.

The dairy industry of Argentina enjoyed the greatest year of production and trade in history. Butter, cheese, and casein production were all increased significantly over 1940 levels, while storage stocks were much lower at the end of 1941 than a year earlier. Great Britain was the main outlet for butter. The United States purchased large quantities of casein and far above normal amounts of cheese to replace types formerly obtained from Italy and indications were that trade would be further stimulated by the new U.S.-Argentina agreement which practically halved the import duty on both products.

DAMS. Design and construction of dams is an important feature of the numerous works for irrigation, flood control, river regulation, inland navigation, power development, and municipal water supply. Most of these structures are built by the Federal government, through the Bureau of Reclamation or the Engineer Corps, U.S. Army. Others are built by State governments, semi-governmental organizations (such as the Tennessee Valley Authority), by municipalities, power companies, and local organizations for irrigation or flood control. Many of the reservoirs thus formed serve two or more of the purposes noted above, especially for irrigation and power.

At the great Boulder dam, 726 ft. high (highest in the world and completed in 1936), the water for the first time reached the spillway crest in August, 1941, and has since been drawn down by opening the gates, so that by April, 1942, there will be ample storage for flood waters. The Grand Coulee dam, on the Columbia River, was practically completed and two of its 18 power units (each with a turbine of 150,000 h.p. and a generator of 108,000 kilowatts) were put in service, two years ahead of the scheduled time.

During 1941, the U.S. Bureau of Reclamation completed eight dams, making a total of 163, with nine others still under construction. It has also a total of 364 pumping plants and 16,000 miles of canals and lateral ditches. Four hydroelectric power plants were started, making a total of 28 with a

combined capacity of 954,000 kw, and for national defense purposes this capacity is to be doubled by 1943. For postwar construction, to provide employment, the Bureau has 50 projects planned, each with power possibilities.

To feed the 13-mile Continental-Divide tunnel, for carrying water from the western slopes to irrigate lands on the eastern slopes of the Divide, there will be a main reservoir on the Colorado River, formed by the Granby dam, to be started in 1942, and an auxiliary reservoir on the Blue River, with the Green Mountain dam, 50 per cent completed. This project will have six power plants. The highest earth dam yet built is to be the Bureau's 445-ft. Anderson dam on the Boise River, in Idaho. This dam, begun in 1941, is to serve a combination of irrigation, flood control, and power development.

Dams completed by the Engineer Corps, U.S. Army, in its works for river regulation and flood control included: (1) the Wapapello dam on the St. Francis River near Poplar Bluffs, Mo.; (2) the Mahoning dam of the flood-control project for the protection of Pittsburgh, Pa.; and (3) the Fern dam on the Long Tom River in Oregon. Completion of this last dam, in December, marked the beginning of an \$84,000,000 program for the development of the Willamette Valley by a series of dams and other works for irrigation, flood control, power, water conservation, and reduction of stream pollution. As a first step in regulation of the Cumberland River, work was begun on the Wolf Creek dam near Jamestown, Ky.

Among unusual features in dam construction was the recovery of gold from the gravel excavated for concrete making at the Friant dam (Bureau of Reclamation) in California. After deducting the cost of recovery, the net profit was divided equally between the Federal Government and the contractor. At the Mud Mountain dam (U.S. Engineers) on the White River, in Washington, the work was protected from rain and snow by a canopy or tent 320 x 400 ft., suspended from cables spanning the canyon. At the same dam, the gravel and earth for the fill were passed through oil-burning heater drums to regulate the amount of moisture.

In the comprehensive project of the Tennessee Valley Authority, ten dams with locks are required for a 9-ft. navigation channel in the Tennessee River from the Ohio River to Knoxville, 650 miles. Seven are now completed and the others are scheduled for 1942 to 1944. Other dams are to be built on the river and its tributaries for storage and especially for power to serve extensive plants for the production of aluminum. Among smaller semi-public projects is the Kingsley dam on the North Platte River, which was finished in 1941 for the Central Nebraska Public Power and Irrigation District. In Texas, the Sabine-Neches Reclamation District proposes a dam on the Neches River, near Frankston, to supply a group of small cities with water for irrigation, domestic, and industrial purposes.

Among dams for municipal water supply is the Merriman dam to form a reservoir for the new Delaware River water supply to New York City. Foundation work, completed in 1941, included the sinking of a row of pneumatic caissons 160 ft. through loose ground to solid rock, as a base for the concrete core wall of the earth and rock fill. The dam is to be finished in 1944. At San Diego, Calif., contracts were let for the San Vicente dam to increase the water supply; it will be a concrete dam, 250 ft. high. At Tacoma, Wash., two dams for power development on the Nisqually River are

proposed. One is to be 300 ft. high, with a plant of 50,000 kw capacity. Below this will be the La-Grange dam, for 64,000 kw, serving 40 miles of transmission lines. Both are to be completed in 1944.

An example of smaller structures is the proposed dam of the Clam River Power Co. for storage and power, near Grantsburg, Wis. It is to be an earth dam 30 ft. high, with concrete spillway and power house. Part of the Jim Falls earth dam on the Chippewa River, in Wisconsin, was blown out during the September floods to prevent damage to the power plant by overflow, the spillway being inadequate to carry off the flood. At the Hales Bar dam on the Tennessee River, renewed efforts were made to check the leakage flow under the dam, through the seamy rock on which the dam was built. The first irrigation dam in the United States, built in 1871, in Utah, by the Newton Irrigation District, is to be superseded by the new and larger Newton dam of the Bureau of Reclamation, near Logan, Utah.

Two disputes over dam construction, both in Oklahoma, were settled in 1941. At the Demson dam, being built by the U.S. Engineers on the Red River (Texas-Oklahoma boundary), Governor Phillips, of Oklahoma, had attempted to stop work, as being an invasion of State rights. In March, 1941, he ordered the Federal engineers off the site, put State troops in charge, and sought an injunction to halt further work. A local Federal court denied his application. The U.S. Supreme Court upheld the decision, holding that Federal powers for flood control extend to the tributaries of a navigable stream. On the dispute between Governor Phillips and the Federal government over the Pensacola dam on the Grand River, an agreement was reached in 1941 by which the Governor revoked his order (March, 1940) putting State troops in charge: both parties dismissed their suits against each other, and the Federal government agreed to pay \$689,000 towards the cost of new roads replacing those submerged in the reservoir. Later, the Federal government took over the dam from the Grand River Dam Authority to prevent delay in the use of power, since the Authority was unable to raise funds for the necessary transmission lines.

Of foreign dams, a striking event was the destruction of the great Dnieper dam on the Dnieper River in Russia, by the Russian troops, in August, to check the advance of the German forces. This concrete dam, built in 1927-32 under the direction of American engineers, was 140 ft. high to the spillway crest, with regulating gates on the crest; there were three locks at the east end and a power house at the west end. In Mexico, the Angostura dam on the Yaqui River, completed late in 1940, is a concrete arched dam 291 ft. high, for irrigation. In Spain, a 10-year program for public works was promulgated, including river regulation by dams and other works for flood control, irrigation, and power development.

See AQUEDUCTS; FLOOD CONTROL; FOUNDATIONS; WATERWAYS. Also see illustrations facing p. 81.
E. E. RUSSELL TRATMAN.

DANISH LITERATURE. Judging from the available information, Denmark has not become a substantially less book-producing or book-reading nation under the severe exigencies of Nazi occupation than it was before. Danish publishers, forced to restrict themselves to "politically safe" ventures, however, have turned largely to matters as little controversial as possible. Little poetry has appeared. Among the older poets only Rørdam and Kai Hoffmann (*Dan-*

marks Rige) seem to have been active. The younger generation is represented most significantly by Piet Hein's capable *Vers i Verdensrummet* (*Verses in the Universe*) and Hulda Lutken's *Drømmen* (*The Dream*).

Though fiction has been written in fairly large quantities, no novel of first importance has appeared during the year. The most important novel from the older generation is Marie Bregendahl's posthumous, and unfinished, *Birgitte Borg*. Other novels are: Carlo Andersen's *To Aar er en Evighed* (*Two Years Are An Eternity*), an honest, tragic domestic tale; Karen Aabye's *Vi skal ikke ha' Penge tilbage* (*We Shall Not Get Money Back*); Steen Christensen's *Op med Ballonen* (*Up in the Balloon*), and Tove Ditlevsen's *Man gjorde et Barn Fortraed* (*Harm Done to a Child*). Palle Rosenkrantz (who died during the year) published *Rosenkrantz and Gyldenstjerne*, a rollicking historical romance about the adventures of two spirited Danish junkers in the Denmark of Christian IV. From both a literary and historical point of view probably the most important book that came out of Denmark in 1941 is the long awaited first volume of Johannes Jørgensen's *Den hellige Birgitte af Vadstena* (*Saint Birgitta of Vadstena*), a learned, reverent, and beautifully written biography, covering the years down to 1349, of the Swedish Saint.

ALRIK GUSTAFSON.

DANZIG. A territory including the Baltic port of Danzig at the mouth of the Vistula River, which was detached from Germany and constituted a Free City under the protection of the League of Nations by Article 102 of the Treaty of Versailles, effective Nov. 15, 1920. It was occupied by the German army and reincorporated as an integral part of the Reich at the outbreak of the German-Polish war on Sept. 1, 1939. Area of the Free City, 754 square miles; population (1939), 415,000 including 266,000 in the city of Danzig. Head of the civil administration, Albert Foerster, Nazi party leader in the district. For statistics and other data on Danzig previous to its reunion with Germany, see YEAR BOOK for 1939, p. 189.

DEFENSE AID REPORTS, Division of. An agency of the United States government, established May 2, 1941, within the Office for Emergency Management to provide for the administration of the Lend-Lease Act; subsequently superseded by the Lend-Lease Administration (q.v.).

DEFENSE COMMUNICATIONS BOARD. Created by Executive Order of Sept. 24, 1940, the Defense Communications Board coordinates plans for utilizing and safeguarding the nation's electrical communications facilities under any emergency. Its unified blueprinting for defense communications takes cognizance of broadcast and other forms of radio transmission, as well as the older wire services, such as telephone, telegraph, and cable.

The board, which has no censorship or acquisition functions, reports to the President through the Office for Emergency Management. It is made up

of representatives of Federal departments and agencies primarily concerned with communications under war conditions. It is headed by James Lawrence Fly, who is also chairman of the Federal Communications Commission. Other members are Herbert E. Gaston, Maj. Gen. Dawson Olmstead, Rear Adm. Leigh Noyes, and Breckinridge Long. Without personnel of its own, the board is assisted by a coordinating committee and a law committee, both staffed by officials loaned by their respective agencies.

There are advisory committees representative of labor and industry, as well as committees which speak for domestic and international broadcasters; radiocommunications; cable, telegraph, and telephone; amateurs; aviation; state and municipal facilities, United States Government facilities, and the Interdepartment Radio Advisory Committee.

In addition, a special committee is studying material and equipment requirements for the wire and radio services to assist the Office of Production Management, while another liaison committee cooperates with the Office of Civilian Defense.

The various industry committees have formulated plans to meet any foreseeable contingency with respect to their individual fields in the overall precautionary picture. All are concerned with the maintenance of continuous service and providing supplemental or alternate facilities if needed. In particular, plans have been drafted for regional telephone networks, with a super linking of practically every broadcast station in the country. The broadcasters, in turn, are prepared to prevent their stations from being used as beacons for possible enemy aircraft. Alternate routes for international messages have been worked out, and arrangements made of cable and other repair work under war conditions. Attention has been given to expansion of police and fire communications systems, and defense communications are assured priority over all others.

In addition, the board has cooperated closely with the Federal Communications Commission in facilitating transfer of frequencies for military purposes, and in expediting completion of emergency communication links. Establishment by the Commission of the Foreign Broadcast Monitoring Service was upon special recommendation of the Defense Communications Board. This service is now actively translating, transcribing, analyzing, and reporting on from 600,000 to 900,000 words transmitted daily by foreign broadcast stations throughout the entire world as recorded by the Commission's National Defense Operations Section. (See also **RADIO**.) Working in three shifts of eight hours each, a special force of technicians, translators, analysts, and other experts is keeping abreast of all international broadcasts which emanate outside of this country, 24 hours of the day, 7 days a week. Speeches, newscasts, and entertainment are carefully watched for intelligence and trends, which are reported immediately to Government officials responsible for counter-propaganda or other action, if necessary. The importance of listening-in on foreign transmissions is attested in the fact that all propaganda instigated abroad almost invariably follows the example set in short-wave broadcasts. At the same time, a considerable amount of news and intelligence information comes over the short-wave which is not available from other sources. The German radio bombards the United States alone with nearly 11 hours of emissions daily, the British send us about 6½ hours, Japan 4½ hours, and Italy more than 4 hours, and a score of other nations in lesser proportions.

DEFENSE HEALTH AND WELFARE SERVICES, Office of. The Office of Defense Health and Welfare Services was established by Executive Order of the President on Sept. 3, 1941, under the Office for Emergency Management, superseding the Office of the Coordinator of Health, Welfare, and Related Defense Activities. The Federal Security Administrator, who had previously acted as Coordinator, was named Director. (The Administrator was designated as Coordinator of Health, Welfare, Medical, Nutrition, Recreation, and other related fields of activity affecting the national defense, on Nov. 28, 1940, by the Council of National Defense, with the approval of the President.)

This office serves as the center for coordination of health and welfare services available through Federal and other agencies, both public and private, to meet the needs of localities and of the entire Nation arising from the defense program. It carries out its responsibilities through direct operation in those areas in which no existing agency has had primary responsibility, and through committee organization which integrates planning and action in those areas in which other Federal agencies are operating.

As one of the first steps toward coordination, the Director arranged in January, 1941, for the appointment of an Interdepartmental Advisory Council, representing 20 Federal agencies working in the fields of health and welfare. As a further step, advisory committees, composed of specialists from public and private agencies, professional associations, and other interested groups have been established on Health and Medical Care, Family Security, Nutrition, Social Protection, and Community Organization.

Within the office there are two main functional subdivisions: The Division of Health and Welfare and the Division of Nutrition. In addition to its planning activities, the Division of Health and Welfare conducts its operations through the U.S. Public Health Service (q.v.), the Office of Education (q.v.), the Social Security Board (q.v.), and two newly created sections, Recreation and Social Protection. The field programs of the Office of Defense Health and Welfare Services are integrated through the Program Operation Branch. A Regional Advisory Council functions in each of the 12 geographical regions of the Social Security Board, with the Regional Director of the SSB as chairman. In May, 1941, the Director delegated to the Chief of the Children's Bureau (q.v.) the responsibility for developing comprehensive plans for assuring proper safeguards for children in the national defense program.

A survey of community needs and resources for health, education, recreation, and welfare was made to determine what aid was necessary to meet the defense impact. In dealing with community needs, this office has attempted first, to help the communities organize to help themselves; and second, to secure through Federal aid, needed facilities that cannot otherwise be provided.

The most pressing needs for community facilities are being met under Public Law 137, 77th Congress, authorizing provision of necessary facilities in communities substantially expanded by the national defense program. The facilities to be made available are primarily schools, waterworks, sewers, sewage disposal facilities, hospitals and health centers, and recreational facilities. The act is administered by the Federal Works Agency, but under a cooperative arrangement with it, projects in the fields of health, education, and recreation are submitted to the appropriate unit of the Fed-

eral Security Agency for review and suggestions.

The *Committee on Community Organization* was established in September, 1941, to render advice with respect to organizing local communities in matters pertaining to these fields.

The functions of the *Health and Medical Committee*, originally created by an order of the Council of National Defense in September, 1940, are to coordinate all health and medical programs affecting the national defense, to make studies of defense health and medical problems, and to assist the Director in mobilizing the health and medical resources of the Nation. Subcommittees have been established for (1) Medical Education, (2) Hospitals, (3) Dentistry, (4) Nursing, (5) Industrial Health and Medicine, and (6) Negro Health.

The Federal Security Administrator authorized the creation of a *Family Security Committee* on Feb. 12, 1941, to act in an advisory capacity, review existing resources, plan coordination of services, etc.

Recognizing the importance of recreation to defense, and since no existing Federal agency had permanent responsibility for recreational activities on a nation-wide scale, the Director established, in January, 1941, a *Recreation Section*. It seeks to stimulate and coordinate recreational programs in communities adjacent to Army, Navy, and defense industrial centers. Defense recreation committees have been organized in the various localities to develop local recreation programs. Recreation facilities, especially service centers, are provided locally insofar as possible. Others will be built by Federal funds, where necessary. An agreement has been made with the United Service Organizations (see SOCIETIES) whereby the USO will operate recreation buildings built and equipped by the Federal Government. As of September, 1941, 165 service centers in various communities were in operation.

The *Social Protection Section* was established in the spring of 1941 to safeguard the armed forces on leave and the civilian population from the hazards of commercialized vice.

The *Nutrition Division* has as its chief function the organization of a nation-wide educational program for better nutrition. It works closely with the National Nutrition Advisory Committee which is composed of representatives from the various Federal agencies concerned with nutrition programs and of representatives of several professional organizations concerned with nutrition as technical advisory groups. The National Research Council appointed two subcommittees, on Food and Nutrition and on Food Habits. Recommended Dietary Allowances for specific nutrients were formulated by the Food and Nutrition Committee. State nutrition committees are functioning in every State, and in more than half the States are already organized on a county basis. The local programs stress an adequate school lunch, adult education in nutrition and food selection, more home-produced food, use of whole wheat or enriched flour and bread, and low-cost milk for needy families. See MEDICINE AND SURGERY.

DEFENSE TRANSPORTATION, Office of. With the stated object of assuring maximum utilization of the domestic transportation facilities of the nation for the successful prosecution of the war, the Office of Defense Transportation was created by executive order of the President Dec. 18, 1941, in the Office for Emergency Management of the Executive Office of the President. The Office superseded the Transportation Division (q.v.) of the former Advisory Commission to the Council of National Defense. The term "domestic transportation" as here used includes railroad, motor, inland waterway, pipe line, air transport, and coastwise and intercoastal shipping.

The duties of the Office are to coordinate the transportation policies and activities of the several Federal agencies and private transportation groups to facilitate prosecution of the war; to take necessary steps to assure a domestic transportation system adequate to handle the increased traffic occasioned by the war effort, to coordinate and direct traffic movements so as to prevent transportation congestion; to coordinate domestic traffic movements with ocean shipping; to perform certain statutory functions relating to railroad transportation vested in the President; to take steps to promote increased storage, loading, and unloading facilities where necessary; to represent the defense interest of the Government in negotiating rates with carriers, to advise upon emergency legislation affecting domestic transportation or recommend such legislation.

Joseph B. Eastman, Chairman of the Interstate Commerce Commission, was appointed Director of the Office of Defense Transportation with authority to appoint heads of staff divisions, subject to the approval of the President. The executive order provides that the office shall maintain close liaison with the U.S. Maritime Commission and the Interstate Commerce Commission as to problems related to the jurisdiction of those commissions and to maintain formal liaison also with various other governmental agencies to facilitate unity of policy and action and the use of existing governmental services.

DELAWARE. A south Atlantic State. Area: 2,057 sq. mi., including 79 sq. mi. of inland water, but excluding part of Delaware Bay, 350 sq. mi. Population: (1940 census) 266,505. The urban population comprises 52.3 per cent of the total (U.S. average, 56.5 per cent); non-white population, 13.4 per cent (U.S. average, 10.2); elderly (65 years and over), 7.8 per cent. Delaware ranks 47th among the States in area, 46th in population, and 10th in density, with an average of 134.7 persons per square mile. The capital is Dover with 5,517 inhabitants; largest city, Wilmington, 112,504. There are three counties and one city of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to H. V. Holloway, Superintendent of the Department of Education, there were 43,948 pupils enrolled in the public schools of Delaware during the school year 1940-41, 25,992 in elementary schools and 17,956 in secondary schools. Teachers numbered 1,587 and received an annual average salary of \$1,628. Total expenditures

for the year were \$4,467,730.71 current, total \$4,917,133.34. For higher education, see *Delaware* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 3,894, of which 2,054 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 72,973; 60,209 were private and commercial automobiles, and 11,554 trucks and tractor trucks. Gross motor-fuel consumption was 63,920,000 gallons. Net motor-fuel tax receipts were \$2,325,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,252,000.

Railways of all classes extended 297 miles (Dec. 31, 1939) .13 per cent of the total mileage in the United States. Class I steam railways reported 717,809 tons of revenue freight originating in Delaware in 1940 and 2,216,499 tons terminating in Delaware. There are nine airports and landing fields in the State (one lighted field). On July 1, 1941, according to the Civil Aeronautics Authority, there were 123 civil aircraft in the State and 211 commercial and private pilots (177 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 348,900, as compared with 355,300 acres in 1940. According to the latest census, there are 8,994 farms, valued at \$54,898,828, averaging 99.6 acres each. Farm population numbered 45,724 or 17.2 per cent of the total.

Manufacturing. According to the 1939 Census of Manufactures, there were 429 manufacturing establishments in Delaware, employing 20,393 wage earners who received \$21,959,627 in wages for the year. Total value of products was \$114,753,652; value added by manufacture, \$55,183,179.

Mineral Production. Value of mineral production totals less than a half million dollars annually according to the latest figures of the U.S. Bureau of Mines.

Trade. According to the 1940 census there were 316 wholesale establishments in Delaware, employing 2,946 persons, reporting net sales for 1939 of \$157,474,000 and annual pay roll of \$6,018,000. There were 4,544 retail stores with 10,972 employees, reporting sales of \$110,052,000 and pay roll of \$11,168,000. Service establishments numbered 1,444, employing 1,977 persons for \$1,799,000 per year, and reporting a business volume amounting to \$6,758,000. The leading business center of the State is Wilmington which reported wholesale sales of \$135,640,000, retail sales of \$64,951,000. New Castle County, including the city of Wilmington, is the leading county in the State in the receipts for its service establishments (\$5,541,000).

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Delaware was \$3,164,000. Under the Social Security program, financed by Federal funds matching State grants, 2,507 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$11.61 (U.S. average pension, \$21.08), and 1,735 dependent children in 624 families received average monthly payments of \$34.89 per family (U.S. average, \$32.73). General relief cases, which are supported by State and local funds only, numbered 951 and received \$19.75 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 151 (\$10,000); NYA student work program, 454 (\$2,000); NYA out-of-school work program, 881 (\$16,000); WPA,

1,959 (\$129,000); regular Federal construction projects, 2,864 (\$274,000).

Legislation. The General Assembly convenes in regular session on the first Tuesday of January in odd years. It is composed of 17 Senators (7 Democrats and 10 Republicans in 1941) and 35 Representatives (14 Democrats and 21 Republicans). The following summary of legislation enacted in 1941 was prepared for the YEAR BOOK through the courtesy of the *Wilmington News-Journal*.

"The most notable act of the 1941 Delaware Legislature, perhaps, was repeal of the "Blue Laws" which from colonial days had prohibited all but "necessary" work on Sundays

"The session also enacted legislation creating a system of permanent registration for motor vehicles, the dates of the tags to be changed annually; authorizing a \$1,165,000 bond issue for a State-wide building program, creating a State Council of Defense; appropriating \$750,000 for emergency use in connection with defense or damage from storm or otherwise, to public roads, bridges, and other property; revoking the charter of the town of St. Georges, at the request of the town's officials; to create an agricultural station in Sussex County as a branch of the University of Delaware Department of Agriculture; proposing amendments to the State constitution fixing the pay of members of the Legislature on a new basis and restricting the number of legislative employees, also regulating absentee voting at elections (which will be effective only if passed at the next session also); providing for the settlement of disputes with other States with respect to domiciliary death taxes, regulating the licensing of nonresident contractors doing work in Delaware; authorizing formation and maintenance of a State guard; authorizing New Castle County to borrow \$750,000 for its part of the expense of an airport, and Kent County to borrow \$25,000 for the same purpose; creating a permanent plan for the registration of voters, creating departments of elections for Kent and Sussex Counties, similar to that already in existence in New Castle County, providing for two ballots at presidential elections, one containing the names of the presidential nominees and the other those of nominees for State and local offices; amending the General Corporation Law in certain particulars; creating a new teachers' pension plan for Wilmington; regulating the manufacture, sale, and use of explosives in the State; regulating fees and taxes in connection with horse racing in Delaware; revamping the Regional Planning Commission of New Castle County and increasing its authority; extending the provisions for payments under the State workmen's compensation law; regulating the importation, sale, and transportation of alcoholic liquors; enlarging the power of the Unemployment Compensation Commission in the matter of making reciprocal arrangements with other States to protect the benefits of workers who work in more than one State; providing Delaware representation in the Atlantic States Marine Fisheries Compact; providing for the registration of professional engineers and land surveyors." See LABOR LEGISLATION.

Finances. Total tax collections in Delaware for the fiscal year ending in June, 1941, were \$13,069,000 (1940: \$13,169,000). Total sales taxes amounted to \$3,185,000, including motor fuel, \$2,494,000. Taxes on specific businesses came to \$4,377,000, while unemployment compensation ran to \$2,441,000. The net income taxes were \$1,556,000. Cost payments for the operation of general government totaled \$10,855,000 in 1939, the latest year available. (Revenues for the general government for

that year were \$15,410,000.) Cost of operation per capita was \$41.27. Total gross debt outstanding in 1941 was \$4,195,000, as compared with \$3,216,000 in 1932.

Officers and Judiciary. The Governor is Walter W. Bacon (Rep.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Isaac J. MacCollum; Secretary of State, Earle D. Willey; Attorney General, James R. Morford; State Treasurer, Peter S. Collins; State Auditor, Harrison M. Manning. Chief Justice of the Delaware Supreme Court is Daniel J. Layton, Chancellor is Josiah O. Wolcott; there are four associate members appointed for 12-year terms.

DEMOCRATIC PARTY. On Jan. 1, 1941, the Democratic National Committee, National Headquarters for the Democratic Party, was installed in new offices in the Mayflower Hotel in Washington from the old headquarters in the National Press Building

Franklin D. Roosevelt was inaugurated President of the United States, on January 20, for a precedent-breaking third term. Earlier Henry A. Wallace was sworn in as Vice President by John N. Garner, who was Vice President during the first two terms under President Roosevelt. Later in the day, from the White House, the President reviewed a military parade of mechanized troops as well as cavalry and infantry down Pennsylvania Avenue. Approximately 400,000 persons reviewed the spectacle

The annual Jackson Day dinner was held on March 29 instead of January 8, so as not to conflict with the Inaugural program of the President. Jackson Day is the anniversary of the Battle of New Orleans. On this day the members of the Democratic Party honor the memory of the victor of that battle—Andrew Jackson. While Jackson Day dinners were held in all localities throughout the United States, the principal dinner in Washington was suspended because of a grave crisis arising for America out of the European War. The President, however, made his customary address, which was broadcast from the presidential yacht "Potomac" in Port Everglades, Florida, to the Nation as well as to Jackson Day dinners throughout the country.

Naturally, in off years political activities are somewhat curtailed and there is not such activity as during the years in which Congressional and Presidential Elections are held. Officers of the Democratic Committee as of December, 1941, were: Hon. Edward J. Flynn, Chairman; Mrs. Charles W. Tillett and Hon. Oscar R. Ewing, Assistant Chairman; Hon. Richard J. Reynolds, Treasurer; Hon. Charles Michelson, Director of Publicity; Hon. Edwin A. Halsey, Sergeant-at-Arms.

DEMOLITION BOMBS. See BOMBS

DENMARK. A formerly independent kingdom of northwestern Europe, occupied by German armed forces on Apr. 9, 1940. It comprises the peninsula of Jutland, the two main islands of Zealand and Funen, and about 200 smaller adjacent islands in the Baltic. The Faroe Islands (q.v.), an integral part of the kingdom, were occupied by British troops on Apr. 13, 1940, pending the outcome of the European War. Greenland (q.v.), a Danish dependency, remained under the control of the local Danish administration but direct contact with the Copenhagen Government was severed when the German occupation of Denmark took place. The King of Denmark was also King of Iceland, al-

though the Icelandic Althing (parliament) on May 16, 1941, voted to terminate this personal union at the end of the European War and appointed a regent during the interim (see ICELAND under *History*). Capital of Denmark, Copenhagen (København). King, Christian X, who succeeded to the throne May 14, 1912.

Area and Population. Area, excluding the outlying possessions, 16,576 square miles. Estimated population on Jan. 1, 1940, 3,825,000. American citizens living in Denmark on Jan. 1, 1941, numbered 895. Living births in 1939 numbered 67,914 (17.8 per 1,000); deaths, 38,535 (10.1); marriages in 1938 totaled 33,624 (8.9). Populations of the chief cities at the 1935 census were: Copenhagen, 843,168; Aarhus, 90,898; Odense, 76,116; Aalborg, 48,132.

Education and Religion. There is no illiteracy. The 4,472 lower schools had 480,000 pupils on Jan. 1, 1938; secondary, professional, and vocational schools, 74,100; the two universities at Copenhagen and Aarhus, 5,700. The 1921 census showed 3,221,843 Protestants, 22,137 Roman Catholics, 5,947 Jews.

Production. Previous to the German occupation, 35 per cent of the working population was engaged in agriculture and dairying and 33 per cent in industry. Commerce and fishing were the other leading occupations. Livestock estimates as of November, 1940, with figures for July, 1939, in parentheses, show the effects of the German occupation upon Denmark's most important industry: Cattle, 2,976,000 (3,271,000); swine, 2,528,000 (3,182,000); chickens, 11,260,000 (33,296,000). Further drastic reductions in the livestock population occurred during 1941.

Foreign Trade. After Apr. 9, 1940, Denmark's foreign trade was monopolized largely by Germany and was conducted on a clearing-account instead of a free-exchange basis. Imports in 1940 were reported at 1,373,870,000 Danish crowns (1,740,300,000 in 1939) and exports at 1,507,500,000 crowns (1,578,000,000 in 1939). The 1940 excess of exports over imports (133,630,000 crowns) was unprecedented in Danish foreign trade. Of the 1940 exports, agricultural products totaled 1,206,500,000 crowns (1,147,600,000 in 1939) and manufactured products 232,100,000 crowns (360,400,000). The number of live pigs exported rose from 136,800 in 1939 to 754,000 in 1940, while exports of bacon, butter and eggs declined. In 1939, the United Kingdom was Denmark's chief customer and source of supply. See *HISTORY*.

Finance. The Danish Government reported an ordinary budget surplus of 23,500,000 crowns for the fiscal year ended Mar. 31, 1939, and a surplus of 9,300,000 crowns for 1939-40. It estimated that there would be deficits of 48,700,000 crowns for 1940-41 and 66,700,000 crowns for 1941-42. This excluded the cost of the German army of occupation, estimated at over 500,000,000 crowns annually, which was met by the Danish National Bank. Budget estimates for 1940-41: Ordinary receipts, 644,700,000 crowns; expenditures, 693,100,000 crowns. Preliminary estimates for 1941-42: Ordinary receipts, 522,300,000 crowns; expenditures, 589,000,000 crowns. Public debt on Mar. 31, 1939, 1,229,141,000 crowns. At the official exchange rate (5.18 crowns = \$1) in 1941, the crown was equivalent to \$0.1931 (\$0.2035 in 1939).

Transportation. In 1940 Denmark had 3,189 miles of railway line (1,625 miles state-owned); 32,212 miles of highways; and air lines which carried 71,750 passengers in 1939. Lack of fuel curtailed virtually all forms of transportation. Shipping tonnage entering Danish ports in 1940 declined 70 per

cent from the 1939 level; in 1939, 23,744 ships of 7,600,000 tons entered Copenhagen harbor alone. Following the German occupation of Denmark, two-thirds of all Danish ocean-going ships were taken over by the belligerents or held in neutral ports. The government assumed control of most of the usable tonnage remaining in Denmark's jurisdiction to regulate trade with Baltic, South Norway, and Western German ports. Earnings of the merchant marine for 1940 showed a drastic decline from the 1939 level.

Government. The Constitution of June 5, 1915, as amended Sept. 10, 1920, vests executive power in the King acting through a cabinet responsible to the Rigsdag (Parliament). Legislative power rests jointly in the King and Rigsdag. The Folketing (lower chamber of the Rigsdag) consists of 149 members elected for four years by proportional representation. The Landsting (upper chamber) comprises 76 members serving for eight years; 19 members are elected by the Landsting itself and every four years half the remainder is elected indirectly by voters of over 35 years. Premier in 1941, Thorvald A. M. Stauning (Social Democrat), heading a coalition government of the Social Democratic, Radical, Liberal, and Conservative parties, formed July 8, 1940. These four parties and the Justice League, controlling 137 out of the 149 seats in the Folketing, on July 3, 1940, formally agreed "to abandon all points of disagreement and unite to make sure the independence and integrity promised our country."

HISTORY

Internal Developments. The year 1941 was marked by the progressive extension of German control over the kingdom's internal as well as foreign affairs, despite the pledges given at the time of the military occupation in 1940 (see *YEAR BOOK* for 1940, p. 183). The Danish Government gave way step by step under Berlin's pressure, accepting Denmark's assigned role in the German "new order" in Europe. The bulk of the Danish people, however, apparently viewed this process with growing resentment, and rallied behind King Christian in passive, and sometimes active, resistance to the German protectorate.

On January 28 Lieut. Col. T. P. A. Oerum, who resigned as technical chief of the Danish Air Force upon the Nazi occupation, was sentenced to life imprisonment for espionage in Germany on behalf of a foreign power. Three other members of the Danish Air Force were sentenced to long prison terms on the same charge. In announcing the sentences, the Danish Ministry of Justice issued an official warning to the nation to refrain from anti-German activities.

The active leadership in mobilizing Danish opinion against continued German rule was taken by J. C. Moeller, chairman of the Conservative party. Resigning (under German pressure) his post as Minister of Commerce in 1940 and his seat in Parliament early in 1941, Moeller spent more than three months during the winter of 1940-41 in a speaking tour of the country. The anti-German sentiment demonstrated at his meetings and similar manifestations elsewhere led the Gestapo to curb his activities. At the same time the German Minister demanded the resignation of the Stauning Government and the establishment of a frankly pro-Nazi regime. King Christian reportedly reminded the Minister of the German pledge not to interfere in Danish internal affairs. The failure of the Danish Nazi party under Dr. Fritz Clausen to win popular support also helped to balk the Ger-

man plan. Later the Danish Nazis split into a number of warring factions. On February 15 the Copenhagen authorities postponed municipal elections for one year because of the danger of fighting between pro-Nazi and anti-Nazi elements.

After repeated efforts to obtain 10 Danish naval torpedo boats, Berlin in January demanded their delivery on pain of severe reprisals. The Danes yielded under protest on February 6. Premier Stauning on March 9 urged the necessity for Denmark to adjust itself to a German-controlled Europe. He stated that the Reich had consumed Denmark's agricultural surpluses without supplying the quantities of raw materials and fuels normally received for these products. In consequence "large quantities" of livestock had to be slaughtered for lack of feedstuffs. Nevertheless he expressed belief that the German program for a planned European economy "surely involved advantages when compared with the previous system."

On April 7, two days before the first anniversary of the German occupation, the Danish Government appealed to the nation to avoid anti-German demonstrations. However on June 10 the Ministry of Justice, referring to demonstrations against German troops by "irresponsible persons," warned that future acts of this nature would be punished by increased fines or prison terms up to two years.

Drive on Communism. Coincident with the German attack on Russia June 22 the German secret police, aided by Danish police, raided the Soviet Legation and consular offices in Denmark and rounded up 269 alleged Danish Communists. All except 166 of those arrested were later released. Among those imprisoned were three Communist members of the Folketing, which on September 3 voted to cancel the legislative immunity of the Communists in order to legalize their imprisonment. A bill to outlaw the Communist party was introduced in Parliament August 20. Seven Danish Communists were sentenced to long prison terms on sabotage charges July 7.

The subservience of the Copenhagen authorities to Berlin was further indicated on June 27 when Denmark severed diplomatic relations with the Soviet Union and authorized the recruiting of Danish volunteers for service with the Finnish-German armies against the Russians. On August 18 the Danish Government granted diplomatic recognition to the Japanese-controlled Nanking regime as the "national Government of China." Eric Scavenius, pro-Nazi Danish Foreign Minister, affixed Denmark's signature to the anti-Comintern Pact in Berlin November 25 (see GERMANY under *History*). His action, allegedly endorsed by the King and Government under strong German pressure, provoked spontaneous protest demonstrations in Copenhagen on November 26, according to Swedish correspondents. The police were said to have fired on the demonstrators.

Relations with United States. The subservience of the Stauning Government to Berlin adversely affected Danish interests in many parts of the anti-German world. The U.S. Government on March 30 took "protective custody" of 39 Danish ships tied up in American ports. Despite a reported protest from Copenhagen, these vessels were taken over permanently by the U.S. Maritime Commission beginning in June. Compensation was paid to the Danish owners. Chile had requisitioned three Danish ships in the port of Talcahuano February 17. After the United States acted, a number of other Latin American governments followed suit. Official protests from Copenhagen were rejected.

German activities in Greenland led to the signing

by the United States Government and the Danish Minister in Washington on Apr. 9, 1941, of an agreement making Greenland a protectorate of the United States for the duration of the European War (see GREENLAND under *History*). The Danish Minister, Henrik de Kauffmann, informed his Government of the agreement for the first time on April 11, the day after its announcement in Washington. He stated that he had acted "on behalf of His Majesty the King of Denmark in his capacity as sovereign of Greenland, whose authorities in Greenland have concurred. . . ." Requesting that "judgment of my decision be withheld until Denmark again is free," the Minister said that he had taken "this unusual step" in the best interests of both Denmark and Greenland.

The Copenhagen Government on April 12 declared the Washington agreement void and recalled Minister de Kauffmann from his post. The Minister on April 13 notified Secretary of State Hull that this action had been taken by the Copenhagen authorities under duress and that he therefore considered it invalid. He announced his determination "to carry on the work that was entrusted to me when I was appointed Danish Minister to Washington by a free Danish Government. . . ." This decision, he asserted, had the full support of all the other members of the Danish Foreign Service stationed in the United States. Secretary Hull replied that the U.S. Government "considers it to be a fact that the Government in Denmark in this respect is acting under duress." Consequently Washington continued to recognize de Kauffmann as the duly authorized Minister of Denmark.

The Danish Government on April 16 adopted a resolution ousting de Kauffmann from his Washington post and accusing him of treason and violation of an espionage law passed in January at German instigation. Meanwhile a split developed in the ranks of the Danish diplomatic and consular service in the United States. Einar Blechingberg, consul of the Washington Legation, and two vice consuls in New York repudiated de Kauffmann's stand, while the rest of the diplomatic and consular staffs supported the Minister. The Danish Foreign Office on May 15 announced the dismissal of Consuls General Reimund Baumann in Chicago, Georg Bech in New York, and A. C. F. Sporn-Fiedler in San Francisco. With the support of Minister de Kauffmann, the consuls ignored the dismissal order and continued their duties. The U.S. Government, on the other hand, withdrew recognition from the dissenting counselor of the Danish Legation and the two New York vice consuls. They were obliged to discontinue their official activities on threat of deportation. On July 3 the Stauning Government asked the United States to withdraw its consular officials from Denmark and this was done before July 15.

"Free Denmark" Movement. The Danish National Council, established in London in September, 1940, to win British support for the restoration of Danish independence, became increasingly critical of the Stauning Government's policies. It sponsored the formation of a small unit of Danish soldiers in the British armed forces and assumed responsibility for the interests of some 5,000 Danish seamen sailing under the British flag. To rally Danes and Danish sympathizers behind their movement, the Danish National Council in 1941 sent a mission on a two-months' tour of the United States, Canada, and South America. A United States branch of the Council was established in New York in September.

The Danish National Council and the Danish

press in the United States approved the stand taken by Minister de Kauffmann in Washington regarding Greenland. They also strongly supported the action of the United States in taking Iceland under its protection. See ICELAND under *History*. Count Eduard Reventlow, Danish Minister to Great Britain, repudiated the Copenhagen Government on December 2 because of its adherence to the anti-Comintern Pact. He announced that he would continue to maintain "a free Denmark's diplomatic relations with the British Government."

Economic Conditions. The economic situation became worse during 1941 after a sharp slump in 1940. The Danish Statistical Department on Aug. 12, 1941, reported that during 1940 the value of the kingdom's agricultural resources (animals, raw material stores, crops, etc.) declined by 600,000,000 crowns. Imports decreased by 395,000,000 crowns, exports by 93,000,000, freight and shipping returns by 97,000,000, the profits from foreign ships calling at Danish ports by 50,000,000 crowns. On the other hand the sums owed Denmark and its citizens abroad (chiefly by Germany) increased by 882,000,000 crowns to a total of 1,664,000,000 crowns.

The winter months of 1941 were made difficult by an acute fuel shortage and the more strict rationing of food. Government price control measures failed to check climbing prices and in March an average wage increase of 8 per cent was granted 400,000 civil servants and other workers. The *New York Times* of October 5 reported that the price index for Danish agricultural products had risen 76 per cent, for imported commodities 107 per cent, and for wages 19 per cent. The official Danish statistics showed a decline in the number of registered unemployed from 34,800 in January, 1941, to 11,300 at the end of May. Yet a state loan of 250,000,000 crowns, the largest in the kingdom's history, was offered for public subscription September 20 to finance public works for unemployment relief.

See ARCHITECTURE; CHILE under *History*; FASCISM; LABOR CONDITIONS; LIVESTOCK; WORLD WAR.

DENTISTRY. Dentistry and the Armed Services. For the professional care of an army of 1,400,000 there are required 2,100 dental surgeons (dentists) (*Jour. Dental Ed.*, June 27). If this army is doubled or tripled it will require approximately 2,000 dentists for each multiple, or about 1,500 for each increase of one million in the personnel of the armed forces. These needs cannot be satisfied by the absorption of the total number of recent graduates of the dental schools and those of the immediate future. The deficit is being and will be made up by withdrawal of considerable numbers of dentists from private practice, thereby further reducing the diminishing supply of recent years.

Reduction of the civil population as the result of the increase in the armed forces does not materially decrease the work of the civilian dentist. This is borne out by the relatively high percentage of rejections of candidates for selective service. Rejections due to dental defects run as high as 22 per cent and generally no lower than 15 per cent of those examined. According to an analysis of this situation (*U.S. Public Health Reports*, 56:1369-1387, July, 1941), for each man aged 21 to 35 years in the group rejected for dental reasons there are 22 permanent teeth out of his total complement of 32 that have been attacked by dental decay. Of these 22 teeth, 13 have already been extracted by the time the candidate is examined, many long before. Of the remaining decayed teeth

still in place, two are so badly decayed that they must be extracted, two have fillings in them, and five require immediate filling to save them. This analysis covers only the decay phase of dental disease, although it represents most of it. Obviously one of the important duties of the civilian dentist is to repair or replace the ravages of dental decay in the mouths of those otherwise eligible for service as well as of those approaching the minimum age for induction.

The author of this study concludes that "the prompt placement of fillings during school attendance would have prevented a large share of the tooth loss observed in the men [as noted above]. Although knowledge is not sufficient for the prevention of the initiation of caries [decay of teeth], the procedures of dentistry [suitable fillings] are sufficient to prevent dental rejectability even in persons having marked caries susceptibility [rampant tooth decay]." If to this systematic plan is added the effect of the advice and counsel of the practicing dentist with respect to the care of the teeth from the sixth year on, without doubt even more teeth can be saved.

Dental Education. Between 1,600 and 1,650 dentists were added to the profession in the United States in 1941, and these were recruited from the smallest group of graduates of the dental schools since 1920. There is no promise that the yearly additions will be any greater until the class admitted in the fall of 1941 finishes school. In contrast with this is the estimate that the annual loss of dentists is about 2,250. Therefore, for a number of years there has been a steady decrease at the rate of about 500 a year. In medicine, however, the number of graduates annually exceeds the losses by retirement and death and the facilities of the schools are crowded to the limit.

Nine students constitute the first class registered by the Harvard School of Dental Medicine for the new combined five-year course. No first year students were accepted for the former conventional course, but the enrollment of the 108 members of the three upper classes was continued, so that these students will be able to complete this course of study before it is finally abandoned by Harvard. The University of Louisville has approved a new curriculum for its School of Dentistry to be put into effect soon. Admission requirements and the first two years are to be identical for the courses in dentistry and medicine, credits in the first two years are to be interchangeable.

Dental Caries. Studies of the comparative incidence of dental decay in eight urban populations of suburban Chicago by a group from the National Institute of Health tend to confirm previous reports of the inhibiting effect on dental decay of minute amounts of fluorine in the city water supplies. Study groups were made up of white children, 12 to 14 years of age, in 7th, 8th, and 9th grades, who had been continuously in residence in the same community. The most pertinent finding was that water supplies with a fluoride content just below that capable of causing mottled enamel were associated with an unusually low caries experience. This was particularly striking in the instances of Oak Park and Aurora, the former using water obtained from Lake Michigan containing no fluoride and the latter using an artesian water with about 1.2 parts of fluoride per million parts of water; the Aurora children have a much lower amount of dental decay than those in Oak Park. These studies are but a part of the research work that is gradually bringing nearer a practical plan for the prevention of dental decay.

Progress was made in other fields of research and practice but largely along lines developed in previous years. See NATIONAL BUREAU OF STANDARDS.

EDWARD H. HATTON.

^a The embassy and consulates of the Republic of Turkey in the United States are charged with the protection of Afghan interests in the United States. ^b Accredited also to Iran; resident at Tehran, Iran. ^c Accredited to the Governments of Belgium, Czechoslovakia, Greece, Netherlands, Norway, Poland, and Yugoslavia, established in England. ^d State of war declared by Bulgaria, Dec. 13, 1941. ^e Now in the United States on consultation. ^f Accredited also to Saudi Arabia; resident at Cairo. ^g Acting. ^h Closed. ⁱ State of war declared by Germany; Dec. 11, 1941. ^j Severance of diplomatic relations, Dec. 11, 1941; state of war declared by Hungary, Dec. 13, 1941. ^k Accredited also to Afghanistan; resident at Tehran. ^l State of war declared by Italy, Dec. 11, 1941. ^m State of war declared by Japan, Dec. 7, 1941, United States time. ⁿ Vacant. ^o State of war declared by Rumania, Dec. 11, 1941. ^p Accredited also to Egypt; resident at Cairo.

It was fifth among Protestant communions in the United States in 1941. In policy the churches are congregational. There are six major agencies of the communion: The United Christian Missionary Society; Board of Higher Education; Association for the Promotion of Christian Unity; Pension Fund; National Benevolent Association; Board of Church Extension; besides the missionary societies of the several states and provinces of Canada. These agencies are corporations and are affiliated with the International Convention of Disciples of Christ which meets annually. The general missionary work, both home and foreign, of the churches is administered through The United Christian Missionary Society, with headquarters at 222 Downey Avenue, Indianapolis, Ind.

During the year there were 4,782 baptisms in the foreign fields. The 417 mission schools had a total enrollment of 14,849. The communion maintained 9 hospitals and 18 dispensaries which gave 558,858 treatments. The Church Extension Fund amounted to \$2,785,728.75 with outstanding loans to 423 churches. The Pension Fund for the ministry showed assets of \$3,054,082. One hundred fifteen young people's conferences were held. Work in America was conducted among the French, Highlanders, European immigrants, Negroes, Orientals, Spanish-Americans and Mexicans. The National Benevolent Association maintained six homes for children, and an equal number of homes for the aged. In 1941, 21 Colleges, Universities, Bible Colleges and Foundations cooperated with the Board of Higher Education. The total church membership throughout the world in 1941 was 1,834,562, a gain over 1940 of 5,097; and in the United States and Canada 1,671,966, a gain of 2,744. The Bible School enrollment for the world was 1,175,087, a loss over the previous year of 17,703, and for the United States and Canada, 1,117,680, a decrease of 15,695. Contributions, missionary, benevolence and educational, reported for the fiscal year in the United States and Canada totaled \$3,949,384.73.

Among the periodicals published by the communion are *World Call*, *The Christian-Evangelist*, *Christian Standard* and *Front Rank*. The president of the International Convention held in St. Louis, Missouri, in May, was Dr. Harry B. McCormick, Cleveland, Ohio. Dr. W. A. Shullenberger, Indianapolis, Indiana, was elected president of the Convention to be held in Oakland, Calif., in August, 1942.

DISEASES. See BIOLOGICAL CHEMISTRY; CHILDREN'S BUREAU; DENTISTRY; MEDICINE AND SURGERY; PSYCHIATRY; PUBLIC HEALTH SERVICE; VETERINARY MEDICINE; VITAL STATISTICS. For prehistoric diseases, see ANTHROPOLOGY.

DISTRICT OF COLUMBIA. An area coterminous with the city of Washington, the seat of the U.S. Government. Area: 69 sq. mi., including eight sq. mi. of inland water. Population: (1940 census) 663,091. The urban population comprises 100.0 per cent of the total (U.S. average, 56.5 per cent); non-white population, 28.6 per cent (U.S. average, 10.2); elderly (65 years and over), 6.1 per cent. The District of Columbia represents a density of 10,870.3 persons per square mile. For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 100,672 pupils enrolled in the School System during the school year 1937-38. Of this total, 76,292 were enrolled in kindergartens and elementary schools and 24,380

in secondary schools; 36,616 were in separate Negro schools. The instructional staff comprised 3,158 persons, who received an annual salary of \$2,339 (U.S. average, \$1,374); 415 or 13.8 per cent were men. Expenditures for all public schools in 1937-38 were \$12,016,604, making a total cost per capita of 18.89 (U.S. average, \$17.15). There were 173 school buildings in the District of Columbia, of which one was a one-room, one-teacher school. The value of public property used for school purposes was \$51,495,673. For higher education, see *District of Columbia* under UNIVERSITIES.

Transportation. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 165,220; 146,612 were private and commercial automobiles, 1,374 busses, and 13,928 trucks and tractor trucks. Gross motor-fuel consumption was 169,512,000 gallons. Net motor-fuel tax receipts were \$3,229,000, the rate being two cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,751,000.

Railways of all classes extended 35 miles (Dec. 31, 1939) .01 per cent of the total mileage in the United States. Class I steam railways (19 miles) reported 188,517 tons of revenue freight originating in the District of Columbia in 1940 and 3,864,678 tons terminating in the District of Columbia. There are four airports and landing fields in the District of Columbia (three lighted fields) and two seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 261 civil aircraft in the District of Columbia and 667 airline transport, commercial, and private pilots (522 private).

Manufacturing. According to the 1939 Census of Manufactures, there were 497 manufacturing establishments in the District of Columbia, employing 7,877 wage earners who received \$11,772,280 in wages for the year. The total value of products was \$79,875,299; value added by manufacture, \$44,316,845.

Mineral Production. Value of mineral products totals only about a half million dollars annually, according to the U.S. Bureau of Mines.

Trade. According to the 1940 census there were 753 wholesale establishments in the District of Columbia, employing 10,250 persons, reporting net sales for 1939 of \$347,772,000 and annual pay roll of \$18,388,000. There were 6,893 retail stores with 48,072 employees, reporting sales of \$402,768,000 and pay roll of \$56,007,000. Service establishments numbered 3,830, employing 13,610 persons for \$14,858,000 per year, and reporting a business volume amounting to \$39,491,000.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in the District of Columbia was \$16,395,000. Under the Social Security program 3,494 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$25.74 (U.S. average pension, \$21.08); 2,888 dependent children in 982 families received average monthly payments of \$37.28 per family (U.S. average, \$32.73); and 234 blind persons received \$30.55 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 2,075 and received \$24.57 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 431 (\$29,000); NYA student work program, 1,582 (\$18,000); NYA out-of-school work program, 1,542 (\$29,000); WPA, 7,909 (\$676,000); other Federal emergency proj-

ects, 401 (\$52,000); regular Federal construction projects, 12,261 (\$2,194,000).

Officers. The District is administered by a three-man board of Commissioners, two of whom are appointed by the President and confirmed by the Senate for three-year terms. The third Commissioner is selected by the President from time to time from the U.S. Army Corps of Engineers. The Commissioners in 1941 were: John Russell Young, President; Guy Mason; and Col. C. W. Kutz, Corps of Engineers, U.S.A.

DOGS. Champion Nornay Saddler, James Austin's smooth fox terrier, was the outstanding dog of 1941, despite the rare feat performed by Herman Mellenthin's cocker spaniel, Ch. My Own Bruce, in winning the great Westminster show at Madison Square Garden in New York City for the second consecutive year. The fox terrier had been retired for all time late in 1940, but Austin wanted to see him in a ring once more and entered him at the great Morris and Essex outdoor show in May, and Nornay Saddler easily sidled into the "best in show." This was Saddler's fifty-sixth "best in show" award, marking him one of the best dogs of all time in a show sense. My Own Bruce was the first repeater at the Westminster show in a decade—since Pendley Calling of Blarney early in the Thirties. Dr. Samuel Milbank's Cinar's Chuck was the top field dog of the year, taking three Eastern open all-age stakes.

DOMINICA. See WINDWARD ISLANDS.

DOMINICAN REPUBLIC. A West Indian island, occupying the eastern two-thirds of the island of Hispaniola (Haiti). The name of the capital was changed from Santo Domingo to Ciudad Trujillo, Jan. 9, 1936.

Area and Population. Area, 19,332 square miles; population, estimated on Dec. 31, 1939, at 1,655,779. About 40 per cent of the inhabitants are white (mainly of Spanish descent), 40 per cent mixed, and 20 per cent Negro. American citizens, including Puerto Ricans, in the republic in 1941 numbered 3,158, other foreigners in 1935—Haitians, 52,657; British subjects, 9,272; Spaniards, 1,572. Populations of the chief cities (1935 census): Ciudad Trujillo, 71,297; Santiago de los Caballeros, 33,919; San Pedro de Macoris, 18,889; Puerto Plata, 11,777. Birth rate in 1939, 32.6 per 1,000; death rate, 8.8. Language, Spanish.

Defense. As of Nov. 1, 1940, there were 3,147 officers and men in the active army and 71 in the air force. The municipal police, organized as a national constabulary in 1936, form an auxiliary branch of the army. There are four coastal patrol vessels. National defense budget for 1941, \$2,128,000.

Education and Religion. Four-fifths of all adults were illiterate at the 1935 census. In 1940 there were 947 primary schools with 103,000 pupils, 6 secondary schools with 1,550 pupils, 45 vocational

schools with 3,300 pupils, 3 normal schools with 2,000 students, and the University of Santo Domingo with about 350 students. About 97 per cent of the inhabitants are Roman Catholics.

Production. Agriculture supports about 80 per cent of the population. Raw sugar accounted for 70.3 per cent of the value of all exports in 1940. Sugar production for the crop year ended August, 1941, was 399,957 metric tons (454,836 in 1939-40). Leading exports in the calendar year 1940 were (in metric tons): Raw sugar, 414,114; cacao, 23,018; coffee, 8,567; molasses, 128,162; yucca starch, 6,379; refined sugar, 4,239; corn, 10,787. Banana exports were 693,022 stems; cattle, 5,573 head. Rice culture, introduced in 1936, produced an export surplus in 1941. Potatoes, beans, onions, peanuts, pineapples, etc., are grown mainly for home consumption. Sugar refineries employ about 92 per cent of all persons engaged in industry. Forests yield mahogany, espinillo, lignum-vitae, cedar, and other cabinet and dye-woods.

Foreign Trade. Imports in 1940 totaled \$10,511,403 (\$11,592,166 in 1939); exports, \$18,330,135 (\$18,643,302 in 1939). Raw sugar exports in 1940 were valued at \$12,882,807; cacao, \$1,617,104; coffee, \$769,975; molasses, \$546,996; yucca starch, \$523,518. The United Kingdom took 41.2 per cent of the 1940 exports (36.2 per cent in 1939); United States, 24.7 (27.1); Canada, 15.5 (0.2); France, 6.2 (11.9). Of the 1940 imports, about 61 per cent came from the United States, 8.5 from Japan, 7 from British India and 5.7 from the United Kingdom. See TRADE, FOREIGN.

Finance. The 1941 budget anticipated receipts of \$12,167,000 and expenditures of \$12,156,000 (\$12,140,000 and \$12,135,000, respectively, in 1940). Actual receipts in 1939 were \$12,296,000; expenditures, \$11,933,000. The foreign funded (dollar) debt totaled \$15,250,000 on Jan. 1, 1941; internal (floating) debt, about \$3,265,104. In addition the Export-Import Bank of Washington had outstanding a credit of \$25,000 to the Dominican Government as of Mar. 31, 1941, and was committed to make additional loans of \$3,275,000. The Dominican peso is equivalent to one U.S. dollar. For abolition of the U.S. customs receivership, see *History*.

Transportation. In 1941 there were two state-owned railways with 147 miles of line; 2,141 miles of highways and roads; regular connections with Pan American Airways' Caribbean circuit at San Pedro de Macoris; a deep-water port at Ciudad Trujillo and ports for lighter craft at Azua, Barahona, La Romana, Monte Cristi, Puerto Plata, Sanchez, and San Pedro de Macoris. The Government in 1941 decided to suspend service on the railway lines and convert the roadbeds into automobile highways. The Dominican merchant marine consists of 123 ships of 6,752 tons.

Government. The Constitution of June 20, 1929, revised as of June 9, 1934, vests executive power in a President elected for 4 years by direct vote. There is a Congress of 13 Senators and 35 Deputies, elected for 4 years by direct suffrage of literate males. However Gen. Rafael Leonidas Trujillo Molina's Dominican party is the only political organization permitted. Trujillo was President of the republic from Aug. 16, 1930, to Aug. 16, 1938, when he was succeeded by his own candidate, Dr. Jacinto B. Peñado. When Peñado died, Vice President Manuel de Jesús Troncoso de la Concha assumed the Presidency (Mar. 8, 1940). As officially-designated Benefactor of the nation, General Trujillo enjoyed a legal status co-equal with that of the President. As War Minister, he remained in active control of the army.

HISTORY

Internal Politics. The Dominican dictator, General Trujillo, toward the end of 1941 indicated his intention of resuming the Presidency upon the expiration of President Troncoso de la Concha's term Aug. 16, 1942. At the instigation of his Dominican party, a meeting of leading citizens in Ciudad Trujillo on October 24 unanimously urged him to stand for reelection. Trujillo had previously (June 5) announced his intention of drafting a new Constitution conferring the suffrage and the right to hold public office upon women. On December 16 the voters were asked to pass upon this and numerous other constitutional amendments, among them an extension of the Presidential term from four to six years and a reduction in the number of Congressional representatives. The reforms were approved by the customary large majority, according to the Government.

Relations with United States. The dictator's firm grip on Dominican affairs was strengthened through the termination on Apr. 2, 1941, of American control of Dominican customs collections under the convention of Dec. 27, 1924. The customs receivership, inaugurated in 1905, was ended in accordance with the convention of Sept. 24, 1940, which was ratified by the U.S. Senate Feb. 14, 1941 (see *YEAR BOOK* for 1940, p. 190, for provisions of convention). Under the 1940 convention, the Ciudad Trujillo branch of the National City Bank of New York was designated as the sole depository bank of the Dominican Government for the purpose of insuring interest and amortization payments on outstanding dollar bonds. On October 26 this branch bank and four other Dominican branches of the National City Bank were sold to the Dominican Government and reorganized as the Reserve Bank of the republic. The Reserve Bank became the designated depository bank under the 1940 Dominican-American convention. It was authorized to perform all customary banking transactions but was not a bank of issue. Its authorized capital of \$1,000,000 was supplied by the Government. Withdrawal of the National City Bank left the Royal Bank of Canada and the Bank of Nova Scotia as the only private banks operating in the republic.

In addition to the \$3,000,000 credit granted the Dominican Government Dec. 9, 1940, by the Export-Import Bank of Washington, a credit of \$300,000 was authorized Mar. 3, 1941, for the purchase of United States industrial products. Legislation enacted by the Dominican Congress early in 1941 provided for utilization of the \$3,000,000 credit as follows: \$400,000 to build a hotel in Ciudad Trujillo, \$275,000 for a modern slaughterhouse in the same place, \$1,498,428 for dredging the harbor at San Pedro de Macoris, and \$784,372 for construction of docks and warehouses at the latter port. These expenditures were designed to stimulate the tourist and cattle-raising industries. It was planned to ship Dominican beef to nearby Puerto Rico, especially for use of the expanding U.S. defense establishments there.

When the United States was attacked by Japan on December 7, the Dominican Government declared war on Japan (December 8) and on Germany and Italy (December 11).

Economic and Other Matters. Economic activity was seriously depressed during most of 1941 by the closing of British and other European markets to Dominican sugar, on the sale of which the republic's economy was chiefly dependent. Dominican sugar also was barred from the United States market by the quota system. The sugar producers consequently adopted a scheme for converting

sugar into alcohol, which was expected to find a market in the United States. Exports of Dominican products to Canada also expanded—from \$17,000 in 1939 to \$3,413,000 in 1940. The economic outlook became much brighter when the British Government early in December was reported to have purchased the entire 1941-42 sugar crop at guaranteed minimum price.

Nearly a thousand more refugees from Europe settled during 1941 at the Sosua colony established in 1940 (see *YEAR BOOK* for 1940). On January 10 it was announced that President Trujillo had donated an additional 50,000 acres adjacent to the original tract of 26,000 acres.

On September 5 Trujillo crossed the frontier into Haiti for a conference with the newly elected President of Haiti, Elie Lescot. Incidents along the border were among the subjects discussed. On September 9 the Haitian Government admitted that Haitian "gangs of marauders" had been stealing livestock in the Dominican Republic and selling it in Haiti. This thievery and the resulting clashes with Dominican herdsmen were stated to have been "provoked for the most part by persons interested in creating friction between the two Governments." The statement asserted that "good relations actually existing between the two heads of both Republics have not been altered." Steps to prevent recurrence of these incidents were taken.

DUTCH AND BELGIAN LITERATURE. In countries which have no freedom one can hardly expect great literature. It is therefore probable that most of the recent literary publications in the Netherlands and Belgium will not survive our time. Only a few talented writers escape the Nazi censorship, largely because they write in a symbolic "secret" language, which is intelligible to but a happy few.

The writers of "train literature," comparable to American pulp fiction, enlarged or at least kept their market, for the Nazis know that mediocrity is never dangerous. Most of those authors abhor the Nazis no less than do the great writers whose ideas undermine and attack the national socialist ideologies. The great, however, were eliminated or had to keep quiet.

Peoples like the Dutch and Belgians whose spirit is hurt but far from broken, search for self-affirmation; but since the present is depressing and the future cannot be discussed openly, they have to find comfort and courage in the past. Books of history—although mostly mediocre—enjoy a tremendous popularity. Their main purpose is to provide for the wants of people who never felt more patriotic than under the rule of the enemy. To satisfy the curiosity of the population many books have been published about the short battle against the

Germans in Holland and Belgium. These books are not even important as historical documents, for naturally the writers were not allowed to tell the truth about the most essential matters.

Before the invasion there existed an active anti-Nazi front of writers in the Low Countries, which seemed to break down completely after the invasion. But it is more than probable that the work of the leader of these anti-Nazi writers is read widely, especially now—even if his books are not discussed in public. He is Menno ter Braak, perhaps Holland's most important thinker since Multatuli. Ter Braak belonged, with a few others—J. Greshoff and E. du Perron—to the most intelligent fighters against national socialism. Greshoff is the only one of these three still alive. Ter Braak committed suicide as the Germans took over the Netherlands. Du Perron died of a heart attack during the invasion.

Not long before the invasion of the Low Countries Ter Braak published a little book of great significance, *The New Elite*. His new elite stand apart from both the new barbarians and the old, Western, Christian world. It is an elite of new Christians who accept the cultural achievements of our Christian civilization, but look for new ways to follow—however, without tying themselves down to new dogmas.

The greatest of all contemporary Dutch writers lives outside Holland, in Sestri Levante, Italy. He is Arthur van Schendel, candidate for the Nobel prize. Several of his books have been translated and published in France, England, and Italy. A new philosophical novel of Van Schendel came out in Amsterdam during the year, *Mijnheer Oberon en Mevrouw (Mr. and Mrs. Oberon)*.

The poet and satirical moralist Jan Greshoff left the Netherlands in time; he lives in Capetown, South Africa. If Greshoff had stayed in Holland, it is likely that he would have been sent to a concentration camp on account of his anti-Nazi poems and essays. Since almost everyone has by now been awakened to the dangers of national socialism, it is not astonishing that Greshoff in his most recent work has returned to the age-old problem: the state of the writer in the world, with emphasis on his position in these times of brutal aggression. His works published in 1941 were *Mimosa Pudica*; *Kalender zonder Dagen (Calendar without Days)*, and *Rariteiten (Curiosities)*.

In prewar days, a warning against the Nazi danger perhaps could not be uttered loudly enough. Greshoff, however, despises the phraseology that weakens or spoils so much of the current literature that wants to be timely at all costs. Therefore, to avoid "clichés," he very consciously escapes in a more liberal past at the end of the 19th century, in which he feels much better at home.

Thus we notice two important trends in recent literature in the Low Countries: Greshoff points out how it has been possible to live well; ter Braak shows how it will again be possible to live a happier, more dignified and more intelligent existence.

A young Dutch writer, Leo Vroman, has proved that it is not quite impossible to write good literature dealing with the present. An unusual story, *De adem van Mars (The Breath of Mars)*, about his escape from his country was published in the Netherland East Indies literary magazine, the *Fakkel*. According to its editors this periodical wants to keep "the flame of Dutch literature burning." We cannot forget, however, that the literature of the Low Countries shall only live fully again when they and the whole of Europe are free and intellectually and emotionally awake once more.

ECONOMIC WARFARE, Board of. President Franklin D. Roosevelt, by Executive Order on July 30, 1941, established an Economic Defense Board for the purpose of developing and coordinating policies, plans, and programs designed to protect and strengthen the international economic relations of the United States in the interest of national defense.

The term "economic defense," as used in the order, was defined as "the conduct in the interest of national defense of international economic activities, including those relating to exports, imports, the acquisition and disposition of materials and commodities from foreign countries including preclusive buying, transactions in foreign exchange and foreign-owned or foreign-controlled property, international investments and extensions of credit, shipping and transportation of goods among countries, the international aspects of patents, international communications pertaining to commerce, and other foreign matters."

The initial order named the following as members of the Board: the Vice President, Chairman; the Secretaries of State, Treasury, and War; the Attorney General, and the Secretaries of the Navy, Agriculture, and Commerce. The Chairman was authorized to appoint other members, with the approval of the President, and each member was authorized to designate an alternate, subject to the approval of the Chairman. Other agencies of the Government were directed to designate officers, subject to the approval of the Chairman, to represent the department or agency in its continuing relationships with the Board.

The first functions and duties of the Board were to advise the President on essential economic defense measures; to coordinate the policies and actions of the several departments and agencies carrying on activities relating to economic defense; and to develop integrated economic defense plans and programs for coordinated action by the departments and agencies concerned. The Board also began investigations to determine the relationship of economic defense measures to post-war economic reconstruction.

On September 15 the President signed an Executive Order placing the Office of Export Control, which had been established under the act of July 2, 1940, under the Economic Defense Board. All the powers and functions of the Office of Export Control, including the requisitioning "of certain articles and materials for the use of the United States and for other purposes," were vested in the Board. The Division of Controls of the Department of State was also put under the Board as the Commodity Licensing Division of the Office of Export Control.

The Board was also designated, in the Executive Order of September 15, as the agency to obtain, develop and determine over-all estimates of materials and commodities required for export purposes in the interest of the economic defense of the nation, exclusive of lend-lease operations, and to advise the Supply Priorities and Allocations Board (q.v.) of such estimated requirements.

A clearing service, to which exporters, manufacturers, and foreign importers submit proposals for the export of materials and commodities, was reorganized under the Board to expedite such clearance through the several Federal agencies concerned with the control of exports and related financial transactions.

An Executive Order of Oct. 28, 1941, established the Office of Lend-Lease Administration (q.v.) and authorized the Administrator to make "appropriate arrangements with the Economic Defense Board for the review and clearance of those lend-lease transactions which in the judgment of the Board affect the economic defense of the United States."

On Nov. 22, 1941, in recognition of the growing importance of the Government's economic program in the Western Hemisphere, the Vice President appointed the Coordinator of Inter-American Affairs (q.v.) as a member of the Economic Defense Board. At the same time the Board began a reorganization of its units into four regional divisions, the European and African, the Far Eastern, the British Empire, and the American Hemisphere. The Commercial and Financial Division of the Coordinator's Office and the divisions of the Board engaged in Western Hemisphere matters became the American Hemisphere Division of the Economic Defense Board.

On Dec. 9, 1941, the Department of Commerce placed certain facilities at the service of the Board. It was decided that all functions of the Department of Commerce devoted to international economic affairs should take their principal direction during the war from the Board, of which the Secretary of Commerce is a member. During the war the Board will have the facilities also of the U.S. Tariff Commission. Before the outbreak of the war with Japan, the Tariff Commission had already undertaken to act as a research organization for the Board in gathering and analyzing data with respect to the maximum supply of certain strategic and critical materials which may be obtained from foreign countries in the next two years.

By Executive Order on Dec. 17, 1941, the title of the Board was changed from Economic Defense Board to Board of Economic Warfare. The Board is directly under the President, and has an Executive Director under whom are the Legal Division, the Liaison with Foreign Governments, the Administrative Management Division, and the Operations Division. Under the Assistant Executive Director in Charge of Operations are the Policy Committee, the Information Section, the Office of Export Control, and the Geographical Divisions.

The total number of commodity licenses granted, from January through November, 1941, by the Office of Export Control was 214,771. The dollar value of these commodities licensed for export, excluding arms and ammunition, was \$956,012,314. The value of arms and ammunition licensed for export during this period was \$1,920,388,433.

The Technical Data License Division, between April 15, 1941, and Dec. 22, 1941, received 16,771 applications for export license. During this period, 11,271 special licenses and 758 blanket licenses were granted.

Up to Dec. 11, 1941, the Requisitioning Divi-

sion had executed 257 requisitions. Of these 225 cases had been referred to the Compensation Board. A total of 95 cases, representing a value of over \$10,000,000, had been heard by the Board. Pending, as of Dec. 20, 1941, were 130 cases of an estimated value of about \$18,000,000.

Immediately following the attack upon the United States by the Japanese armed forces, the Board, through the Office of Export Control, invoked a total embargo on exports to Japan and its occupied territories by revoking all licenses for the shipment of American goods to those countries and to all Japanese nationals anywhere in the world. Export control was extended, as of Dec. 23, 1941, to cover all articles and materials not previously brought under control. Even before that date, approximately 90 per cent of all American-produced commodities were under licensing regulations.

The policy of the Board, however, has been and is to allow the continued flow of articles and materials to American Republics and other friendly destinations under broad general licenses and specific allocations of critically needed materials.

MILO PERKINS.

ECUADOR. A South American republic. Capital, Quito

Area and Population. Ecuador's boundary with Peru remains unsettled. The area claimed by Ecuador is officially estimated at 276,007 square miles, including the Galápagos Islands (2,868 square miles). Estimated population in 1940, 2,921,688 (about 10 per cent whites, 39 per cent Indians, 41 per cent mixed, and 10 per cent Negroes and Orientals). Estimated populations of the chief cities: Quito, 215,921, Guayaquil, 180,000; Cuenca, 48,300; Ambato, 25,200. United States citizens residing in Ecuador on Jan. 1, 1941, numbered 562, Germans, about 2,000.

Defense. As of November, 1940, Ecuador had about 5,450 men in the active army, 450 in the air force, and some 40,000 trained reserves. There were a few small naval vessels. The defense budget for 1941 was 24,677,000 sucres (21 per cent of the total ordinary expenditures). United States naval and military aviation missions were engaged Dec. 12, 1940, for four-year terms. See *History*.

Education and Religion. Although primary education is nominally free and compulsory, the Indian and mixed races are largely illiterate. In 1938 there were 221,031 primary, 8,323 secondary, and 1,475 university students enrolled. The education budget for 1941 was 20,271,000 sucres (17 per cent of the total budget). Roman Catholicism is the dominant faith but there is no state religion.

Production. Agriculture supports about 90 per cent of the population, but minerals produced by foreign-owned companies accounted for 36 per cent of all 1940 exports. Yields of the chief crops (in metric tons) were: Cacao, 11,665 in 1939-40; coffee, 16,800 in 1940-41; sugar, 29,526 in 1939-40. Rice production in 1940 was 853,891 quintals (of 101.4 lb.). Tobacco, bananas and other fruits, cotton, corn, lentils, and vegetables are other crops. Vegetable ivory is an important export; the forests also yield cabinet woods, cinchona bark, kapok, rubber, balsa wood and other timber, and tannin. The 1940 petroleum output was 2,349,000 bbl. (2,313,000 in 1939); newly mined gold purchased by the Central Bank, 1,389,678 grams (1,152,148 in 1939). Straw hats, textiles, shoes, paper, leather, cement, chocolate, refined sugar, alcoholic beverages are the chief manufactures.

Foreign Trade. Imports totaled 173,753,312 sucres

(\$11,154,509) in 1940 and 147,860,226 sucres (\$10,184,340) in 1939, while exports were 177,058,059 sucres (\$11,331,832) in 1940 and 167,148,189 sucres (\$11,513,523) in 1939. Leading exports in 1940 were: Cacao, \$1,839,900; cyanide precipitates (chiefly gold), \$1,830,000; crude petroleum, \$1,600,000; coffee, \$1,034,100; rice, \$920,600; gold and silver bullion, \$753,500; copper and lead concentrates, \$683,200. The United States supplied 59.4 per cent of the 1940 imports (48.7 in 1939); Japan, 10.5 (5.3); Germany, 2.0 (18.1). Of the 1940 exports, 59.9 per cent went to the United States (49.1 in 1939) and 27.3 per cent to the other Latin American republics (19.6 in 1939).

Finance. Actual budgetary receipts in 1940 were reported at about 106,300,000 sucres. Budget estimates for 1941 balanced at 125,902,000 sucres; for 1942, at 130,800,000 sucres. Foreign funded debt on June 30, 1939, \$26,470,000 (mostly in default), internal debt on Jan. 2, 1939, 26,059,254 sucres. U.S. Export-Import Bank credits to Ecuador outstanding Mar. 31, 1941, totaled \$30,000, with a commitment covering \$1,150,000 more. Exchange rate of the sucre (Central Bank rate) averaged \$0.06233 in 1940 (\$0.06744 in 1939).

Transportation. Ecuador in 1940 had about 775 miles of railway line; new lines were under construction as follows: Quito-Ibarra, Tambo-Cuenca, Guayaquil-Salmas. Roads passable to automobiles in 1941 extended 3,311 miles; in that year contracts were let with United States credits for 260 miles of new roads spanning two uncompleted sectors of the Pan American Highway and providing direct access from the ports of Esmeraldas and Manta to the interior towns of Quito and Jipijapa, respectively. Two air systems (Pan American-Grace and Sedta, a subsidiary of the German Lufthansa) operated services linking the principal towns (see *History*). Guayaquil is the leading seaport.

Government. The governmental situation has been confused since the *coup d'état* of 1925, when military rule was established. A new Constitution was promulgated in 1929 but continual friction between President and Congress provoked frequent revolutionary outbreaks and a succession of provisional governments, ruling largely by decree. On Sept. 27, 1935, the 1929 Constitution was annulled and the 1906 Constitution provisionally restored. A Constituent Assembly adopted a new Constitution Dec. 1, 1938, but the Congress elected on Jan. 15, 1939, promptly annulled it and the government restored the 1906 Constitution with certain reservations. President in 1941, Dr Carlos A. Arroyo del Río (Liberal Radical), who assumed office Sept. 1, 1940. See below for 1941 developments.

HISTORY

Conflict with Peru. The century-old territorial dispute between Ecuador and Peru flared out in an undeclared war during 1941, despite all neutral efforts at mediation. A revival of armed clashes between frontier patrols in December, 1940, aroused the Ecuadorean people to make extensive military preparations during the first months of 1941. Frontier incidents continued and the Quito authorities reported a gradual Peruvian penetration into territory occupied by Ecuadorean troops. On April 9 the Ecuadorean Government informed all the American republics of its desire to settle the controversy by neutral arbitration or mediation.

The United States, Argentina, and Brazil on May 9 presented a joint mediation proposal to the two parties. It was enthusiastically and unconditionally accepted by Ecuador. Peru, however, refused to

debate the nationality of three provinces (Jaén, Tumbes, and Mainas) under its *de facto* control, and advanced other reservations which nullified its formal acceptance of the mediation proposal. An uneasy truce along the disrupted frontier was broken early in July by the resumption of desultory fighting.

On July 8 the United States, Argentina, and Brazil jointly proposed the withdrawal of the opposing troops for 15 kilometers on each side of the *de facto* boundary. Both Ecuador and Peru agreed, but the accord was not carried into effect. Instead heavy fighting was resumed about July 23 and continued sporadically during August and September notwithstanding all mediatory efforts of the neutral American republics. Argentine, Brazilian, and United States observers were sent to the zone of hostilities in August, but it was not until October 3 that the three mediating powers obtained an agreement for the establishment of a neutral zone. This was carried into effect and on November 24 an agreement for the exchange of prisoners was announced.

In the meantime Peruvian troops had advanced and occupied the seacoast of the province of El Oro, with its towns of Puerto Bolívar, Machala, and Pasaje, according to Ecuadorean reports. These reports were confirmed by the flight of thousands of refugees from El Oro and other border territories to Guayaquil, Cuenca and other more northern cities. Some 10,000 refugees were estimated to have arrived in Guayaquil alone. The three mediating powers were continuing negotiations for a permanent settlement of the dispute at the year's end.

Political Trends. The conflict with Peru and the reverses suffered by Ecuador's forces added to the instability of the Quito Government and to the chronically disturbed political conditions. On January 12 a Quito mob, demanding release of aviators arrested a year earlier for a revolt plot in Guayaquil (see YEAR BOOK for 1940), stoned the Presidential palace and attacked police. The latter opened fire, killing two persons and wounding 30. The Council of State then gave the President extraordinary powers for 150 days. However President Arroyo del Río relinquished these powers immediately after the Congressional elections of May 11-12. Despite serious schisms within the ranks of the dominant Liberal party, the official (Government) wing of the party retained control of Congress.

Violent popular demonstrations against the Government marked the convening of the new Congress on August 4. Tear-gas was used to disperse crowds around Government buildings, but the political crisis over the conflict with Peru continued until the cessation of hostilities in October. On August 6 Congress in secret session voted the President "unlimited" powers over political, economic, and military affairs. The resignation of the Chief of Staff and Defense Minister early in August was followed by a complete reorganization of the Cabinet August 20. The President's extraordinary powers were used to maintain order, curb anti-Government and defeatist propaganda, and censor the press. On September 28 it was announced that these powers would expire on Aug. 20, 1942. The city council of Guayaquil, accused of gross fraud and corruption, was replaced by government appointees.

Anti-Axis Measures. The struggle between democratic and anti-democratic influences, with the United States and Germany playing leading opposing roles, swung strongly in favor of democracy during the year. Following the lead of the United States, the Government on April 1 ordered the seizure of a German freighter in Guayaquil harbor.

The crew set fire to the ship but the flames were brought under control. The crew was interned.

Early in May the Government declared the secretary of the German Legation at Quito *persona non grata* when he refused to permit customs examination of a package delivered by an air passenger in transit through Ecuador with a diplomatic passport. On September 2 the Government ordered the German-controlled Sedta company to suspend services on its air network. The planes were turned over to Ecuadorean authorities. Pan American Airways established services over the same routes.

Early in the year a number of Spanish Republican refugees were permitted to settle in Ecuador. In July a charge that Japanese were serving in the Peruvian army against Ecuador led to anti-Japanese demonstrations in Guayaquil and the detention of Japanese ships bound for Peru. In response to a vigorous protest from Tokyo, the Ecuadorean Government on August 12 apologized for these incidents. Not long afterwards President Arroyo del Río issued a decree sharply restricting imports of Japanese goods to correct Ecuador's heavy unfavorable trade balance with Japan.

Relations with United States. This friction with the Axis powers was in sharp contrast with increasing evidences of close cooperation with the United States, in both the economic and military fields (see preceding YEAR BOOK for collaboration in 1940). Besides seeking to mediate the Ecuadorean-Peruvian dispute, the U.S. Government early in 1941 undertook to make two coastal patrol ships and some military supplies available to Ecuador in connection with the hemisphere defense program. On May 16 Secretary of State Hull denied Peruvian charges that this aid was being extended in order to obtain U.S. bases on the Galápagos Islands.

Nevertheless the Foreign Office in Quito announced October 24 that Ecuador had granted the U.S. Government "facilities to patrol the Galápagos Islands" as a measure of continental defense. The facilities granted were believed to include installations on Albemarle Island in the Galápagos. This island was leased from an Ecuadorean owner early in 1941 by the Pacific Development Co., incorporated in Delaware and headed by Paul Foster, an American engineer and former U.S. Navy Commander. The Pacific Development Co. received a \$30,000 credit from the Export-Import Bank of Washington on Nov. 30, 1940, for "construction equipment, material and services." This loan was listed under the bank's account with the Ecuadorean Government. On July 19 it was announced in Washington that the Reconstruction Finance Corporation had advanced the Pacific Development Co. another loan of \$500,000 for the development of Albemarle Island. Admiral Frank H. Sadler, U.S. naval commandant at Balboa, C.Z., reported on his return from a visit to the Galápagos on February 13 that the islands would be excellent for a naval base.

The Government in March awarded to a New York engineering firm a contract to build 280 miles of roads in various parts of Ecuador. The cost of \$900,000 was to be met from the \$1,150,000 credit extended by the Export-Import Bank in 1940. Increases in shipments and prices of coffee, cacao, and minerals, due primarily to expanding markets in the United States, also helped to relieve the depressed economic conditions produced in Ecuador by the European War. However rising prices in Ecuador contributed to the prevailing political unrest.

After the Japanese attack of December 7 upon

the United States, the Ecuadorean Government on the following day informed Washington that it was prepared to comply with all of its inter-American obligations. President Arroyo del Río, in a message to President Roosevelt on December 9, declared Ecuador's solidarity and sympathy with the United States. On December 12 the Government announced that as a measure of solidarity with the United States it had decided to ban Nazi propaganda agencies, suspend pro-Axis newspapers, move Japanese out of the port of Guayaquil, and cancel the contracts of Japanese oil technicians employed in the northern coastal region of Esmeraldas.

See CANADA under *History*; LEND-LEASE ADMINISTRATION; NEWSPAPERS AND MAGAZINES; PAN AMERICANISM.

EDUCATION. Defense Program. The defense program in which this country was engaged during the year 1941 had a profound influence on the educational system. First and foremost was the emphasis which the program laid on vocational education. The demand for mechanics of all levels was so urgent that every available facility for training youth and older workmen was drawn into action. Public technical high schools, engineering colleges, and newly established centers organized by the National Youth Administration gave courses to two million workers. In many cases institutions operated twenty-four hours a day.

Some of the training thus provided was confessedly of a highly specialized kind. Workers were not prepared to be all-round mechanics. They were made as competent for a single mechanical operation as a short period of preparation could make them. The country found it necessary to remedy in this way a shortage of skilled workmen which had been allowed to accumulate through the stoppage of immigration and as a result of the failure to make wise provision for the recruiting of skilled craftsmen. Some of the courses given were called "refresher courses." These were designed to revive skills which had deteriorated during protracted unemployment, especially the unemployment that was widespread during the depression. Not only did schools attempt to meet the demands of industry, but many industrial shops adopted plans for the most economical use of workers and for the training of new workers.

While much of the vocational education which was thus stimulated by national needs was less efficient than the kind which a well-conceived, deliberately conducted plan of education would have produced, it made both the general public and educators aware of the importance of changing the traditional curriculum of the secondary schools. There was developed a far more hospitable attitude toward shop courses and other devices for vocational education than had ever existed before. It will undoubtedly be far easier in the future to secure approval for vocational courses by local boards of education than it was in the past.

A second effect which the defense program had on the educational system is seen in the reduction of registrations in institutions of higher education. In summarizing the facts, President Raymond Walters, of the University of Cincinnati, made the following statement:

Precise figures as to student attendance just received from 669 approved universities and colleges of the United States show 838 715 full-time students for the current academic year, or 9.16 per cent less than a year ago, and a grand total of 1,269,854, including part-time and summer-session students, or 8.88 per cent less than last year. These decreases, forming the first sharp drop in enrolment since the depression years 1932 and 1933, are ascribed largely

to the effect of the Selective Service Act and somewhat also to the attraction of defense jobs. The decrease in freshman classes, where the young men are well below draft age, is only 4.52 per cent.

Similarly, the enrolment in public and private junior colleges has decreased. The results of a canvass of these institutions made by the American Association of Junior Colleges are reported in the following statement:

Replies were received from 187, or 72 per cent, of the public junior colleges and from 200, or 57 per cent, of the private junior colleges.

Of the public institutions, 29 reported an increase; 19 no change, 139 a decrease. Reports ranged from an increase of 40 per cent to a decrease of the same amount. Of the private institutions, 73 reported an increase; 56 no change, 71 a decrease. Reports ranged from an increase of 60 per cent to a decrease of 50 per cent.

Social Studies. Indirectly the defense program has resulted in discussions of changes in the curriculum other than those which are aimed directly at vocational training. Numerous efforts are being made to capitalize on the popular eagerness to develop instruction in social studies. The United States Office of Education has issued a series of pamphlets outlining study programs. The titles of three of these pamphlets are *Education under Dictatorships and in Democracies*, *Democracy in the Summer Camp*, and *Hemisphere Solidarity*. The Educational Policies Commission of the National Education Association of the United States and the American Association of School Administrators has undertaken a vigorous campaign for the introduction of lessons designed to cultivate a fuller understanding of the nature of democracy. The Commission has published a number of pamphlets and books under such titles as *Education and the Morale of a Free People* and *The Education of Free Men in American Democracy*.

A committee of the North Central Association of Colleges and Secondary Schools has issued a number of pamphlets dealing with social problems. The following statement indicates the reception that these pamphlets have received.

The response of educational circles to the new material has been encouraging. Two titles, *Why Taxes?* and *Civil Service* were published in the summer of 1939. By January, 1941, 11,560 copies of the former and 9,533 copies of the latter were sold. A third title, *Democracy and Its Competitors*, was placed on sale Sept. 13, 1941. . . . Its timely nature and the value of its contents led to the sale of almost 20,000 copies in three months' time. A fourth title, *Housing in the United States*, came off the press Jan. 8, 1941. At least 1,200 copies have been sold in the Chicago area. Thus a total of over 40,000 copies of the three publications have been purchased in less than two years' time.

Textbook Criticism. That any effort to deal with social problems in the schools is likely to encounter opposition is made evident by a series of events which occurred early in 1941. There have been a number of attempts to bring together in textbooks material which will make pupils in public schools intelligent and critical about American ways of life and about the United States government. Certain conservatives who took offense at the teachings contained in these textbooks induced the National Association of Manufacturers to institute an inquiry into the contents of these books. The Association hired Dr. Ralph West Robey, assistant professor of banking at Columbia University, to read the books in question and prepare a report. It is said that the agreement under which Dr. Robey was to do his work stipulated that he was to make a strictly factual report. He took advantage of the large winter meeting of educators in Atlantic City on February 22, and released without authorization of his employers a broadside of violent criticism, charging, as reported in an article in the *New York Times*, that

A "substantial proportion" of the social science textbooks now used in the high schools of this country tend to criticize our form of government and hold in derision or contempt the system of private enterprise.

By and large, the textbooks commonly used by the 7,000,000 secondary school children of America are poorly written, show a lack of scholarly competence and are generally on a "very low level." There is a notable tendency for books to play down what has been accomplished in this country and to stress the defects of our democracy.

Only a few of the textbooks are actually subversive in content and follow the Communist party line. On the whole, the books do not hew to any "line" as such, but tend to create discontent and unrest by their approach and treatment of government and business questions.

In reply to these criticisms it was at once pointed out by authors and publishers that the citations made by Dr. Robey were in some cases perverted because they were taken out of the settings in which they appeared. Furthermore, it was said that criticism of public officials and their doings is the safeguard of democracy.

Youth Unemployment. Attention was directed in many quarters during 1941 to the problem of unemployment among young people. A release of the United States Bureau of the Census entitled "The Facts about Youth as Portrayed in the 1940 Census" contains the following paragraphs:

The 1940 figures on work status are not exactly comparable with previous statistics because of differences in the definition of workers, but the broad outline of the changes that have occurred is clear. At the beginning of the century, over 60 per cent of the boys 14 to 19 years old were workers in the labor market, in 1930 this proportion had dropped to slightly over 40 per cent, and by 1940 it was below 35 per cent. Similarly for girls 14 to 19 years old, the proportion of workers dropped from 28 per cent in 1900 to 23 per cent in 1930 and 19 per cent in 1940.

The burden of unemployment in March, 1940, was especially heavy on youth just out of school. Less than 70 per cent of the boys and girls 14 to 19 years old who had joined the labor force were employed at non-relief jobs, while 23 per cent of the boys and 26 per cent of the girls were entirely without work and looking for a job. The older youth, in the age class 20 to 24 years, fared better, no doubt because they had more work experience and better training, but even at this age 20 per cent of the male and 15 per cent of the female workers were either out of a job and looking for work or reported that they were on emergency work projects. Unemployment rates for adult workers over 25 years old were only about half as great.

There has been some increase in the employment of young people during recent months as a result of the expansion of American industries. It is quite certain, however, that with the ending of the war there will be once more an acute youth problem which can be solved only by some kind of public supplementation of employment by private industries. The importance of planning at this time for the economic and social adjustment of youth under post-war conditions is fully realized by far-sighted leaders. The National Resources Planning Board has undertaken as part of its general program of planning future public works to discover what is to be done with youth.

An extended and fruitful inquiry into all aspects of the youth problem has been carried on over a period of six years by the American Youth Commission of the American Council on Education. This Commission, composed of ten laymen and five educators, has prepared and published during the period of its existence a series of studies that have done much to describe the situation into which young people have been brought by recent changes in technology and in the texture of the American population. The final report of the Commission, which was approved at its meeting in September, 1941, is a comprehensive document, which is sure to affect national policy in many highly significant ways. The first chapter of this report is entitled "Youth Unemployment as a Continuing Problem." In this chapter the facts are summarized which show that in the future as well as in the present this nation must accept very large new responsi-

bilities for the employment of youth if disastrous consequences arising out of the inability of private industry to provide employment are to be avoided.

It is quite impossible to review here at length the report of the Commission. Two extracts will serve to show the general character of its findings and recommendations.

The American Youth Commission has given very extensive consideration to the problems of relationship between the youth work programs and the schools. In order to clarify its analysis, it has attempted to formulate certain general principles which appear to be applicable.

1. Appropriate amounts of useful work are desirable elements in the experience of children and youth of all ages. During the years of compulsory school attendance, such work should be subordinated to the requirements of schooling. In many instances, productive manual labor and other forms of useful work should be introduced into the school program as an element on a par with other major elements of a well-rounded curriculum.

2. In the personal development of every young person there comes a time when, in his or her own interest and in the interests of society, employment should replace school attendance as his or her major occupation. For many young persons this time comes at the age of 16, the age up to which school attendance should be compulsory. Other persons should continue to devote their time primarily to formal education up to 18, 20, 22, or still higher ages, in accordance with their respective interests and capacities, the needs of society for specially educated persons, and the development of suitable programs in schools and colleges.

3. After they have passed the point up to which schooling should be their major occupation, young people should normally be able without undue difficulty to enter private gainful employment. When the opportunities to do so are not adequate in numbers, it is a function of government to provide the necessary additional opportunities.

4. Persons employed on public work programs because they are unable to obtain other employment, from which they would normally expect to derive income, should be paid a suitable wage. On public work programs which have a distinct training value for those employed, a relatively low wage for beginning workers may be appropriate.

5. It is desirable that beginning employment, whether private or public, be so administered by the employing concern or public agency that the developmental effects for young workers will be as great as possible.

Within the age limits specified [16 to 21], there should be no requirement as to relief status or financial need. One of the major reasons for providing youth work programs is to make certain that young people will be able to obtain the maturing experience of employment at the right stage in their personal development. The need for this experience is not confined to youth in low-income families.

Federally Controlled Program. A new conception of the American educational program issues from the consideration of such conclusions as those quoted from the report of the American Youth Commission. How a suitable program of education is to be worked out is by no means clear at the present time. Leading educational administrators are on record as opposed to all Federally controlled programs of youth training. They demand that State and local school systems be supplied with liberal appropriations from the Federal treasury. They refuse absolutely to accept any Federal control of the program of instruction administered by State and local school systems.

The most emphatic statement of the position described in the preceding paragraph appears in a pamphlet issued in October, 1941, by the Educational Policies Commission under the title *The Civilian Conservation Corps, the National Youth Administration, and the Public Schools*. This pamphlet is sure to be the subject of general discussion in the future. It demands that the Civilian Conservation Corps and the National Youth Administration be abolished. Its other demands raise at once the question whether State superintendents of instruction, State boards of education, and local school officials are competent to deal effectively with the problems of youth. There are undoubtedly many Americans who are of the mind that the solu-

tion of these problems requires a higher degree of statesmanship than is now available in the smaller units of the educational system. One ex-school-board member, Herbert B. Mulford, has thus expressed his beliefs:

There are about 127,000 school districts in the country, controlled by about 424,000 men and women board members. To all practical purposes, these people are left largely without information on public-school objectives, the logic of the ownership of the schools, the needs of youth in a rapidly changing world which is supposed to be democratic and the ways of establishing school policies to meet those needs.

The dilemma of professional educators is not only the possible federal control of education, but the loss of democracy of local units of school government through atrophy of school boards because the profession does not lend them a reasonable, helping hand.

Political Interference in Georgia. It is possible to cite cases where the competency of State educational authorities has been called in question by professional organizations. One of the most striking cases of this type appeared in the State of Georgia during 1941. Governor Eugene Talmadge of that State became obsessed with the idea that administrative positions in the institutions of higher education in his State should be held only by native-born Georgians. He trumped up charges against two "foreigners" and appealed to the State Board of Regents to dismiss these men. The Board refused by a close vote to comply with the Governor's demand. He thereupon exerted pressure on certain members of the Board sufficient to induce them to resign. He then appointed subservient partisans. On a second vote the Board dismissed the two executives who were the subjects of the Governor's attack.

When the Southern Association of Colleges and Secondary Schools reviewed the action of the Board, it dropped from its approved list the ten State colleges of Georgia and issued the following statement of the reasons for so doing.

In the light of all the evidence the committee is forced to conclude that the University System of Georgia has been the victim of unprecedented and unjustifiable political interference;

That the Governor of the State has violated not only sound educational policy, but proper democratic procedure in insisting upon the resignation of members of the Board of Regents in order to appoint to that body men who would do his bidding;

That the Board of Regents has flagrantly violated sound educational procedure in dismissals and appointment of staff members, that every institution in the system is profoundly affected by the precedents established and by the actions already taken whether any of its staff has been dismissed to date or not.

That there can be no effective educational program where this condition exists.

That in view of the actions of the Board of Regents of the University System of Georgia which brought about this condition and in view of its dependence upon the concurrence of the Governor in matters vital to the operation of the system, the Board of Regents does not appear to be an independent and effective educational board of control.

Celebrations. Two notable celebrations were held during 1941. The University of Chicago and Stanford University held educational gatherings in celebration of their fiftieth anniversaries. Both celebrations emphasized the rapid development of graduate work in the institutions of higher education of this country. Fifty years ago it was regarded as a necessary part of the preparation of Americans for advanced scholarly work that they go to European universities. There were colleges in the United States and a few institutions that called themselves "universities," but only at such centers as Johns Hopkins and Harvard were there opportunities for graduate work that compared with the opportunities that existed in the older universities on the other side of the Atlantic.

When William Raney Harper became president

of the University of Chicago and David Starr Jordan became president of Stanford University, a new era of scholarship was ushered in on the North American continent. Both institutions began from the day of their organization to offer facilities for advanced scholarly work such as had never before existed in this country.

It is not easy now, when institutions with large equipment for the prosecution of research exist in many states, to realize how great a task it was fifty years ago to organize universities and set in operation advanced graduate work. In a half-century the migration of Americans to foreign universities has changed entirely in character. While it was once the practice of ambitious candidates for the doctoral degree to go to Europe, there is today no reason in any department to seek better facilities for advanced work than can be found in some institution in the United States. Migration to Europe of candidates for degrees has ceased. See also FAIRS, EXPOSITIONS, AND CELEBRATIONS.

War Demand for Scientists and Educators. As was the case during the first World War, a demand has made itself felt in government and in industry for trained scientists. There has been a great expansion in the research agencies of the Federal government in the two decades which have intervened between the two wars. A parallel expansion has taken place in industry. Most of the larger industrial establishments of the country now have research divisions. A recent report prepared by the National Research Council for the National Resources Planning Board shows the extent to which the research movement has developed in industry and commerce.

It became evident with the onset of the present emergency, even while it was regarded as a temporary emergency, that a directory of available research workers was needed. On the recommendation of the Science Committee of the National Resources Planning Board, arrangements were made to collect with the aid of the learned societies of the nation as complete a list as possible of available persons trained in the techniques and results of scholarly investigation. The Civil Service Commission and President Leonard Carmichael, of Tufts College, undertook the preparation of a roster of scientific workers. This roster has been prepared and now includes approximately two hundred fifty thousand names.

The roster has been much used by governmental agencies in finding the scientists whom they need. The roster is the most comprehensive catalogue that has ever been prepared of the intellectual resources of the nation. Its usefulness has been so completely demonstrated that it will undoubtedly be continued as an essential means of making available for many purposes the names and qualifications of the scholars of the United States.

A topic which has been the subject of careful consideration by educators is the most advantageous use in war of persons who are in attendance at educational institutions and are presumably by virtue of their educational preparation of special value to the nation in certain positions of leadership. A committee was organized early in 1941 by the joint action of the National Education Association and the American Council on Education to consider all the problems that arise in adjusting the relations of educational institutions to the Federal government. This committee found one of its most important duties to be the consideration with the War Department of the problems of the selective service. There can be no doubt that in times past there has been a great waste of the human resources of the nation by improper placement of

personnel. The interchange of judgments between the Army and the educational system and the joint discussion of problems of placement have obviated many difficulties.

At the outbreak of the war the United States Commissioner of Education, with the approval of the Federal Security Administrator, organized a commission the functions of which are defined as follows:

It is believed that through the work of this commission schools, colleges and libraries will be able to render even greater service to the nation at this time of crisis. The people of the country have a right to expect this united effort by the government and organized education.

Among the educational services to the government which the commission will seek to improve are plans for removing the educational handicaps for men rejected in the draft, proposals for the utilization of colleges and universities for the training of various types of Army and Navy personnel, adjustments, if any, which might be made in the matter of college requirements for soldiers and sailors, and to speed up graduation by lengthening the school week, shortening vacation periods or reducing curricular content, and what additional special courses, if any, ought to be financed by the government.

Statistical information is to be found in the articles on SCHOOLS and UNIVERSITIES AND COLLEGES, and in the sections on *Education* for the various States and countries. For advances in dental education, see DENTISTRY; for legal education, see LAW. For training in defense industries, see topics listed under DEFENSE TRAINING. CHARLES H. JUDD.

EDUCATION, Office of. See EDUCATION

EGYPT. A kingdom of northeastern Africa. Capital, Cairo. Ruler in 1941, Farouk I, who succeeded to the throne Apr. 28, 1936.

Area and Population. Excluding the Anglo-Egyptian Sudan (q.v.), Egypt has an area of about 386,000 square miles of which only about 13,600 square miles along the Nile are occupied. The estimated population on June 30, 1939, was 16,522,000, including about 65,000 Italians and 100,000 Greeks. Populations of the chief cities at the 1937 census were: Cairo, 1,307,422; Alexandria, 682,101; Port Said, 126,907; Tanta, 94,421; Mansûra, 68,637; Asyût, 59,925; Damanhûr, 61,791.

Education and Religion. About 88 per cent of the adult inhabitants were illiterate at the 1927 census. In 1938-39, there were 3,828 native elementary schools with 1,010,534 pupils; 19 higher elementary schools, with 1,272 girl students; 169 state-administered primary schools with 26,503 boy and 3,705 girl students; 42 secondary schools, with 19,029 boy and 1,556 girl students; 75 special and technical schools, with 33,884 male and 1,167 female students; 6 higher colleges, with 1,517 male and 182 female students; and the State University (renamed University of Fuad I in 1941), with 8,293 male and 704 female students. Excluding nomads, the religious division of the 1937 census population was: Moslems, 14,552,704; Copts and Greek Orthodox, 1,099,186; Protestants, 78,203; Latins and Uniate, 126,581; Jews, 62,953.

Production. More than 60 per cent of the inhabitants are engaged in agriculture. The yields of the chief crops in 1939-40 were (in metric tons): Wheat, 1,333,800; barley, 238,200; corn, 1,522,300; rough rice, 887,800; sugar cane, 159,800;

groundnuts, 16,600; cotton, 390,500 (1,671,000 bales in 1941). Livestock statistics for 1937 showed 983,000 cattle, 956,000 buffaloes, 1,919,000 sheep, 1,311,000 goats, 155,000 camels, and 1,142,000 asses. Mineral production for 1940 was: Phosphates, 183,464 metric tons (547,538 in 1939); petroleum, 6,053,000 bbl.; manganese ore, 35,000 metric tons in 1939. The fish catch in 1939 was: Sea and lake, 29,054 metric tons; Nile River, 3,586 tons. The fisheries employed 40,418 men with 9,718 boats.

Foreign Trade. Publication of trade statistics was suspended in July, 1940. In 1939 imports amounted to £E34,090,716 and exports to £E34,080,913, of which raw cotton accounted for £E24,736,918. Germany and Italy shared substantially in Egypt's 1939 trade, but in 1940 and 1941 a declining volume of trade was diverted largely to the British Empire and the United States. Exports to the United Kingdom in 1940 were £10,369,442, imports from the United Kingdom, £8,901,051. United States exports to Egypt (see TRADE, FOREIGN) increased sharply in 1941. Cotton textiles, fertilizer, and fuel are normally the principal imports, but the war brought rapidly increasing shipments of arms and military supplies to Egypt. See *History*.

Finance. Beginning with the fiscal year ended Apr. 30, 1941, the state railways' budget was re-incorporated in the general state budget. Budget estimates for 1940-41 placed revenues at £E47,718,000 and expenditures at £E45,818,000. As of May 1, 1940, the public debt totaled £93,998,100 (sterling) and the annual service charge £4,101,903. The average official exchange rate of the Egyptian pound was \$5.0130 in 1938 and \$4.5463 in 1939. In 1941 it was \$4.1542.

Transportation. Egypt in 1940 had about 3,550 miles of state-owned railway lines and sidings and 880 miles of privately-owned light farm railways. Highways extended 6,838 miles. Cairo is the hub of British air communications in the Middle East, with lines radiating to South and West Africa, Palestine, Baghdad, India, and Australasia. A route for ferrying warplanes to Egypt from the United States via Brazil, West African ports and Khartoum was opened in 1941. Excluding warships and vessels requisitioned for military service, 8,918 steamers of 30,492,332 tons entered Egyptian ports during 1939. Alexandria, Port Said, and Suez were the leading ports. See *SUEZ CANAL*.

Government. The Constitution of Apr. 19, 1923, provided for a Parliament of two houses—a Senate with 147 members serving 10-year terms, two-fifths nominated by the Crown and three-fifths elected by universal male suffrage, and a Chamber of Deputies with 264 members elected for five years. The elections of Mar. 31 and Apr. 2, 1938, for the Chamber of Deputies showed the following results: Liberal Constitutional party, 93; Saadist, 89; Popular Union party, 19; Wafd, 13; Watani, 3; Independents, 47. Premier, Hussein Sirry Pasha, heading a coalition cabinet appointed Nov. 15, 1940.

HISTORY

Neutrality Maintained. The Egyptian Government throughout 1941 clung to its role as a non-belligerent ally of Great Britain. It faithfully executed the provisions of the Anglo-Egyptian military alliance of 1936 (see *YEAR BOOK*, 1936, for terms). Early in March the British commander in the Middle East, Gen. Sir Archibald Wavell, thanked Premier Hussein Sirry Pasha for the Egyptian army's "cooperation and help" during the successful offensive in Libya. But in accordance with the apparent

wishes of the overwhelming majority of both Parliament and nation, the Government refused to depart from its benevolent neutrality and declare war upon the Axis powers.

In April, May, and June the British suffered severe reverses in Libya, Greece, and Crete that brought the danger of an Axis invasion of Egypt perceptibly nearer. Beginning in May German and Italian planes repeatedly raided Alexandria, the Suez Canal area, and other Egyptian centers. The list of Egyptian civilians killed mounted to over a thousand. After particularly heavy raids upon Alexandria in June and July, more than 100,000 civilians fled from the city to adjacent Delta areas. The Egyptian Government sent formal protests to Berlin and Rome on June 6, and again on September 17 after bombs were dropped on the outskirts of Cairo, considered a holy city by Moslems. Another protest was sent to Germany May 22 against the sinking of the Egyptian steamer *Zamzam* in the South Atlantic by a German raider. But these events, the influence of a pro-war minority of Egyptians, and pressure from Britain all failed to change the Government's neutrality policy.

Pressure for a change in Egypt's policy was relaxed later in the year. The Axis raid on the outskirts of Cairo was not repeated. It provoked protests from both Iraq and Saudi Arabia on religious grounds. Moreover the British threatened to bomb Rome in retaliation. By mid-September Alexandria had established air-raid shelters and other precautions that greatly reduced the number of casualties. In November and December, the British offensive in Libya temporarily removed the danger of an Axis invasion of Egypt from that point.

Internal Politics. The improved international situation brought some relaxation of the dissension among Egyptian political leaders that assumed serious proportions during the critical preceding months. The danger of invasion, uncertainty as to the outcome of the war, and growing economic difficulties contributed to general unrest. The strongly Moslem Egyptians were influenced by the anti-British propaganda of the Axis, which made effective use of Zionist activities and aims in Palestine, Britain, and the United States. After hostilities broke out between the British and the *de facto* Government of Iraq in May, a former Chief of Staff of the Egyptian Army attempted secretly to leave Egypt for Iraq in a military plane with important documents. His plane was forced down and he and two officer associates took refuge in Cairo, where they were arrested June 6 on charges of "injuring the security of the Kingdom." On July 25 the leader of the pro-Fascist Young Egypt movement was arrested for disseminating Axis propaganda.

King Fuad and Premier Sirry Pasha made repeated efforts to form an all-party coalition government to deal with Egypt's pressing internal and external problems. These efforts were balked by the radical, strongly nationalist Wafd, which demanded new parliamentary elections as a prerequisite for its cooperation. The Wafd also demanded that the Government obtain more definite commitments from Britain concerning Egypt's status after the war. A reorganization that strengthened Sirry Pasha's Cabinet was effected July 31, without the cooperation of the Wafd. Five representatives of the strong Saadist party entered the Government while the representatives of the smaller Popular Union party withdrew. The Saadists had resigned from the Cabinet in 1940 because of its refusal to declare war on the Axis.

Reopening Parliament on November 15, Premier

Sirry Pasha declared that Egypt's cooperation with Britain was "becoming closer every day." He outlined the Government's program for dealing with rising prices, the food shortage, and the cotton surplus. The cotton acreage was restricted and a special bonus offered farmers for planting cereals. Minor government employees were promised a bonus to offset the rising cost of living. A Price Control Board was established September 24. The Government during the year sponsored a number of nationalistic economic measures to which foreigners raised objections.

Aid from Britain. The British Government extended substantial aid to Egypt in meeting the war and economic emergency. On June 11 it gave the Egyptian Government £1,000,000 for the improvement of its air raid precautions services and supplied technical assistance to this end. By an agreement signed August 11, the British Government undertook to buy half the Egyptian cotton crop and also half the cotton-seed output at 1940 prices. The Egyptian Parliament authorized a domestic loan equivalent to \$73,000,000 to finance purchase of the other half. The cotton was to be stored pending restoration of foreign markets and shipping facilities.

In line with the British alliance, the Egyptian Government on June 4 listed Syria as "German-occupied territory" and severed all trade and other relations with that French-mandated territory.

See GREAT BRITAIN under *History*, LEND-LEASE ADMINISTRATION; WORLD WAR.

EIB. See EXPORT-IMPORT BANK.

EIRE (IRELAND). A sovereign, independent state, affiliated for certain purposes with the British Commonwealth of Nations; comprising the 26 counties of Southern Ireland formerly designated the Irish Free State. The name was officially changed to "Ireland" in English and to "Eire" in Gaelic by the Constitution effective Dec. 29, 1937.

Area and Population. The area is 26,601 square miles and the population was 2,987,700 at the census of November, 1941, as compared with 2,965,854 at the 1936 census. The increase in population was attributed chiefly to stoppage of emigration to the United Kingdom. Living births in 1939 numbered 56,097 (19.1 per 1,000); deaths, 41,730 (14.2 per 1,000), marriages totaled 14,934 in 1938 (5.1 per 1,000). Populations of the chief cities in 1936 were: Dublin with suburbs, 467,691; Cork, 80,713; Limerick, 41,395; Waterford, 27,962.

Defense. Defense appropriations for 1940-41 (£6,454,601) provided for a standing army of 12,941 officers and men, a reserve force of 1,727, and a volunteer force of 10,030. On May 27, 1940, the government placed the standing army and reserves on a war footing and called for volunteers to expand the standing army and establish home defense units. In September, 1940, men under arms numbered about 100,000, excluding another 100,000 enrolled in local defense units. The defense forces had only three squadrons of airplanes and lacked heavy armaments and tanks.

Education and Religion. School attendance is compulsory and there is practically no illiteracy. Gaelic is gradually supplanting English as the language of instruction. Attendance at elementary schools averages 462,526 and there are about 13,260 teachers; state expenditure on primary schools in 1940-41 was £3,790,718, excluding the cost of administration. Recognized secondary schools, all under private control, numbered 342 with 36,676 pupils in 1938-39. In 1939-40, there were 1,488 students

in Trinity College, Dublin, and 3,965 in the three branches (at Dublin, Cork, and Galway) of the National University. According to the 1936 religious census, there were 2,773,920 Roman Catholics, 145,030 Episcopalians, 28,067 Presbyterians, 9,649 Methodists, and 11,754 of other faiths.

Production. Agriculture, stock raising, manufacturing and fishing are the chief occupations. Yields of root and other non-cereal crops in 1939 were (in long tons): Potatoes, 2,998,480; turnips, 2,579,988; mangels, 1,691,698; sugar beets, 410,403; cabbage, 175,995; flax, 848; hay, 4,182,604.

As of June 10, 1939, there were 4,057,338 cattle, 3,047,813 sheep, 930,907 swine, 445,148 horses, and 19,551,211 poultry. The 1939 fish catch was 187,949 cwt. valued at £196,199. The gross value of production of the principal industries in 1939 was: Grain milling, £10,770,420; brewing, £7,923,446; tobacco products, £7,676,129; butter, cheese, margarine and condensed milk, £6,950,028; bakery products, £5,232,572 in 1938.

Foreign Trade. Imports during 1940 totaled £46,798,948 and exports (including reexports) £35,206,450, as compared with £43,412,488 and £26,892,469 respectively in 1939. Livestock and foodstuffs normally account for 90 per cent of the exports. Great Britain is the chief market and principal source of supply. For trade with the United States in 1940 and 1941, see TRADE, FOREIGN.

Finance. For the fiscal year ended Mar. 31, 1941, actual budget revenues were £34,637,659 (£32,388,747 in 1939-40) and expenditures £37,772,031 (£34,395,023). See *History* The gross public debt on Mar. 31, 1940, totaled £64,831,000; net debt, £32,346,000. The Irish pound, which is convertible into the pound sterling, exchanged at an average of \$4 4354 in 1939 and \$3.83 in 1940 on the free market.

Transportation. Eire in 1940 had 2,511 miles of main railway trackage, 48,550 miles of roads, 650 miles of inland waterways, and an airline connecting Dublin with Great Britain. Gross traffic receipts of the Great Southern Railways in 1940 were £4,402,544; in 1939 gross receipts of all railways were £6,055,577. A total of 11,061 vessels of 7,221,398 tons entered the ports with cargo in 1939, while 4,535 ships of 4,420,832 tons cleared with cargo.

Government. Under the Constitution proclaimed Dec. 29, 1937, there is a President elected by popular vote for seven years. The Oireachtas (Parliament) includes two houses: the Dáil or House of Representatives of 138 members elected by popular suffrage, and the Senate of 60 members (43 elected on a vocational basis, 6 elected directly to represent the two universities, and 11 nominated by the Prime Minister). Executive power is exercised by the government, or cabinet, which is responsible to the Dáil. For further particulars, see 1937 YEAR BOOK. President in 1941, Dr. Douglas Hyde (assumed office June 25, 1938).

The composition of the Dáil following the election of June 17, 1938, was: Fianna Fáil, 77; United Ireland party, 45; Labor, 9; Independents, 5; Farmers, 2. Members of the Fianna Fáil government, as reorganized Sept 27, 1939, were: Prime Minister, External Affairs, Education, Eamon de Valera; Deputy Prime Minister and Finance, Seán T. O'Kelly; Local Government and Public Health, Patrick J. Rutledge; Supplies, Seán F. Lemass; Industry and Commerce, Seán MacEntee; Agriculture, Dr. James Ryan; Coordination of Defensive Measures, Frank Aiken; Lands, Thomas Derrig; Justice, Gerald Boland; Defense, Oscar Traynor; Posts and Telegraphs, Patrick J. Little.

HISTORY

Neutrality Maintained. In spite of severe pressure from both the Allied and Axis sides, Prime Minister de Valera's Government held to its policy of strict neutrality throughout 1941. In January the British press campaign to induce Eire to permit use of naval bases in southern Ireland was intensified as British difficulties in maintaining sea communications increased. A section of the American press also joined in this plea. However the proposal was firmly and repeatedly rejected by de Valera and other Government spokesmen, with the apparent support of the great majority of Eire citizens. In a debate on the subject in the Dail Eireann July 17 John Dillon, deputy leader of the United Ireland party, urged compliance with the British request but received little support even in his own party.

On January 1-3 the Germans gave Eire what seemed like a broad hint not to grant the British request by bombing Dublin and its environs. There were numerous casualties and considerable property damage. The Government demanded reparations from Berlin and took precautions against a possible German invasion. During the night of May 31 more bombs of German origin were dropped on the capital, killing about 27 persons and injuring 87. Again the Dublin authorities protested to the Reich. On June 19 they received an expression of regret and a promise to make financial reparation.

President de Valera declared in an address in Cork on December 14 that the entrance of the United States into the war would cause no change in Eire's neutrality policy.

Relations with Britain. While the issue of acquiring bases in Eire was under discussion, the British Government on January 1 placed exports from Eire in the same category as those from other neutrals. This made Eire products liable to seizure on the high seas unless covered by a British navicert. A few days previously the Board of Trade in London barred the export to Eire, except under license, of certain goods brought to Britain by convoys. While in the United States in April, Eire's Minister of Defense charged that Britain, in violation of an agreement made at the beginning of the war, was not sending Eire a fair share of goods received from overseas.

Another controversy developed on May 22 when Prime Minister Churchill stated before the House of Commons that conscription in Northern Ireland was under consideration. Prime Minister de Valera called the Dail Eireann in special session on May 26 to discuss this issue. Leaders of all the political parties registered their opposition, predicting that the conscripting of the Nationalist minority in Ulster would end hope of continued friendly relations with Britain. The Roman Catholic Primate also issued a statement denouncing any attempt to conscript Catholics in Ulster. On May 27 Churchill announced that the conscription proposal had been dropped.

There was further discussion between the British and Eire Governments in July concerning the utilization of Eire by the Germans as a base for espionage in Northern Ireland and Britain. On this issue de Valera adopted a cooperative attitude. On October 5 he publicly praised Britain's respect for Irish neutrality "despite the temptations and urgings of certain propagandists." Shortly afterwards the British Government concluded a deal for the purchase of cattle and sheep in Eire at a cost equivalent to \$60,000,000.

Defense Preparations. Although the danger of invasion appeared to have declined during the year, the Prime Minister on October 19 repeated his

previous warnings that there was a "high probability" of involvement in the war. The threat of a German attack seemed so acute in January that the Government banned signposts throughout the country, effective February 1. Strict emergency news censorship regulations were imposed January 28. A decree of January 31 empowered the Prime Minister to establish courts-martial for civilians "should the necessity arise."

Early in March the Government sent Defense Minister Frank Aiken to the United States in an effort to buy arms and equipment for 200,000 men. This mission was not successful. The U.S. Government took the position that it had no arms to spare except for countries that were actively fighting the Axis. However through President Roosevelt's influence the Eire Government was authorized to buy or charter two merchant vessels in the United States for the transport of food for the civilian population. Dublin authorities accepted this offer as well as a gift of \$500,000 worth of food and other relief supplies from the American Red Cross, which was distributed among needy refugees from Northern Ireland and Great Britain.

Firm action by the Government restricted the activities of the outlawed Irish Republican Army during the year. Arrests of IRA members and suspects, some of them armed, were reported from time to time. On September 3 a Dublin court sentenced nine Cork members of the IRA to prison terms of three to five years.

The rising cost of defense and other emergency measures was reflected in the draft budget for 1941-42, calling for expenditures of more than £40,000,000. To meet this increased burden, heavy additional taxes were levied on the middle classes and large business enterprises. Nevertheless a deficit of nearly £8,000,000 was anticipated, of which £4,000,000 was to be borrowed. Issuance of an £8,000,000 National Security Loan was announced by the Minister of Finance October 30. Rationing of foodstuffs and imported necessities was extended during the year. A drive for increased farm production attained such success that the Minister of Agriculture on October 27 said there was no danger of a serious food shortage during the coming winter.

ELECTRICAL COMMUNICATIONS. See COMMUNICATIONS.

ELECTRICAL INDUSTRIES. Under impetus of the national-defense program, production by the electrical manufacturers for 1941 reached an all-time peak of \$4,000,000,000, 71 per cent over 1940 and well over the previous high established in 1929. In comparison, general industrial production was up only 24 per cent. As the year ended, 85 per cent of the current dollar volume of goods produced was for defense purposes. With the country now at war, 1942 plans call for at least 91 per cent of dollar volume of goods produced to be for war purposes. More than 60 per cent of the country's electrical manufacturers expanded their production facilities in 1941 and more are expected to do so in 1942. But while concentrating on production for war, the industry is not forgetting to plan for the peace that must follow. Several forward-looking companies are making definite plans for later peacetime activities. Research departments have an eye toward peac

while working on wartime projects, and General Electric Company Vice-President D. C. Prince has drawn up a specific proposal for the anticipated postwar years through 1946. After a rapid rise early in the year, new orders remained at a level about three times higher than the low level of 1938. Shipments are increasing, only 20 per cent behind in October, 1941, compared with 37 per cent in the same month of 1940.

Considering production for 1925 as an index of 100, the Federal Reserve Board index for general production in the United States in 1941 was estimated as 168, compared with 135 for 1940. On the same basis, electrical-industry indexes estimated for 1941, as compared with finals for 1940 are, respectively, as follows: manufacturing, total production, 264 and 154; employment, 151 and 106 (U.S. population, 116 and 115), small appliances, 211 and 151; electrical refrigerators, 2,071 and 1,331; electrical material, 266 and 149, industrial apparatus, 335 and 177; power transmission and distribution equipment, 197 and 124; insulated wire and cable, 164 and 87. While the total production of appliances in 1941 was well above 1940, all were under curtailment at the year-end. Necessity for conserving raw materials for war use will mean further curtailment in 1942—at least 50 per cent and probably more.

Not only did the electrical industry produce great quantities of equipment directly for the use of the armed forces, it also turned out the power-producing and distributing equipment, motors, and control apparatus required by the general wartime industrial expansion. Many of the advances achieved cannot be recorded now, because of their possible value to the enemy.

Aluminum. Production of this vital war metal continued its phenomenal expansion, with new plants and new refining units being constructed in the Northwest, California, Arkansas, and the Southeast, and northern New York State. This required the construction of much conversion equipment, mostly mercury-arc rectifiers, to supply the prodigious amounts of direct current needed for the electrolytic process used to refine aluminum from its ore. To supply power for these expanding operations, the electrical industry built new generating equipment for the power stations supplying them, and plans were being considered for the construction by the Government of a transmission line to carry surplus energy from the New York City area to the new aluminum plant in northern New York State. The first two 108,000-kw hydroelectric generating units for the Grand Coulee plant in the State of Washington, largest of their type, were completed and placed in operation. Eventually, there will be 18 of these units, which will give Grand Coulee 50 per cent greater capacity than the Boulder Dam plant. The requirements of aluminum sheets for aircraft are being met by the installation of new rolling mills, driven and controlled electrically, rivaling the larger steel mills in size.

Steel Industry. Breaking all previous records, steel production for 1941 totaled an estimated 82,900,000 tons of ingots which includes 3,000,000 tons of electric steel. The phenomenal growth of electric-arc-furnace capacity continued through 1941, totaling at year-end more than 4,000,000 tons annually. In addition, some 20 more electric-arc furnaces totaling 1,250,000 tons annually are under consideration. The largest furnaces among the later installations are rated at about 70 tons, but actually can take charges of about 90 tons. For certain types of steels, there is a tendency toward increased use of high-frequency induction furnaces, and it is esti-

ated that 20,000 kw of melting furnaces of this type are installed or nearly completed at the close of 1941.

The world's fastest and highest-powered cold-strip mill, with a nominal rolling speed of 3,300 feet per minute went into operation early in 1941; maximum speed is 3,850 feet per minute and tinsplate already has been rolled on it successfully at 3,750 feet per minute. This mill is driven by d-c motors totaling 11,400 horsepower, which are fed from an 8,000-kw motor generator set comprising two 4,000-kw d-c generators and a 12,000-horsepower synchronous driving motor. The motors for driving the stands are so compensated that almost perfect speed-regulation is obtained at all speeds, and accurate tensions are obtained at all times. There has been notable activity in rod mills, with a trend toward the continuous type having individual driving motors for the various stands. One mill now under construction will be driven by nine motors totaling 7,650 horsepower, and another by 11 motors totaling 9,350 horsepower.

High-frequency induction heating has scored notable advances in 1941, especially in the armament field. Much of this equipment is being used for heating bars intended for forging into 75 and 105 mm. shells. Typical of these installations is one including five 400-kw 1,920-cycle motor generator sets operating 25 heaters, and three 600-kw sets operating 18 heaters. Other installations use frequencies ranging from 1,000 to 9,600 cycles, the higher frequencies being used principally for surface heat-treating rather than thorough heating. Numerous improvements are reported by manufacturers of combustion controls and instruments, generally resulting in simplification and reduced maintenance. The use of electronic tubes in temperature measuring and control equipment is increasing. One of the most recent applications is a photoelectric flame control for Bessemer converters. An autographic record of the flame intensity is made for the entire blow, but its greatest value is in the detection of the beginning and end of the "after blow." The end of the after blow must be determined accurately within an error of 2.5 seconds, or the product will be impaired.

Aviation. One of the outstanding contributions of the electrical industry to aviation in 1941 was the drive and control equipment for the new 400-mile-per-hour wind tunnel built by the U.S. Army at Wright Field, Dayton, Ohio, which is large enough for testing full-sized propellers and engine enclosures. Two giant fans are driven by a 40,000-horsepower wound-rotor induction motor, said to be the largest of its type. It stands 15 feet high and weighs 125 tons. New instruments included: a remote-control liquid-level indicator which provides the pilot with complete knowledge of fuel in from one to four tanks; a magnetic-drag tachometer which includes an instrument on which the pointer makes more than one revolution, each revolution being equivalent to 100 rpm, and a second scale being marked in 1,000-rpm units; a normal-sized dual indicating instrument normally indicating one quantity, but indicating a second quantity when a button is pushed. Engine-driven d-c generators having greatly increased power-output ratio of kilowatts per pound were produced in large quantities. Specially designed motors having a high ratio of horsepower per pound also were produced in large quantities. A 35-horsepower 18,000-rpm motor built into a frame 4 inches in diameter and 10 inches long was built for aeronautical research. An electrically heated flying suit was designed for flying at high altitudes where temperatures may drop to 60

degrees below zero or lower. Not only is it lighter than the suit it replaces, but it permits the use of electrically heated gloves which give the flier the sensitive touch he needs for operating instruments.

Industrial. The necessity for plant electrical systems to carry the increased loads imposed by expanding defense and war production, and the need for conserving the critical materials that make up such systems led to several developments during 1941. One development that is bound to be of lasting benefit is the increased use of capacitors for power-factor correction. Capacitors now are being made in smaller units for connection at and with the load, and this simple expedient alone has materially increased the load capacity of many plant systems.

The so-called "load center" plant distribution system is another recent development. Instead of stepping down the service voltage (say 13,000 volts) outside the plant and running only low-voltage circuits (say 440 volts) inside the plant, the higher-voltage lines are extended to "load center" units distributed at convenient points throughout the plant where the voltage is stepped down in totally enclosed factory-assembled units. From these units, comparatively short low-voltage lines extend to the utilization equipment. This system has the advantage of flexibility and requires less materials than the more conventional systems. Another system, especially applicable where load-densities are high is the plant secondary-network system. This is a prototype of the secondary-network system that has proved so successful in high-density urban central-station distribution, and has all the advantages of the latter.

In switchgear and control equipment for industrial use the trend toward totally enclosed factory-assembled units continues to grow. Control equipment has been improved in many ways to give longer life, reduced maintenance, and faster operation. Electronic devices are playing an important role. A wide-range adjustable-speed drive using electron tubes as controlled rectifiers was introduced. It provides for controlled acceleration and stepless speed regulation of the motors, and has found application on cloth-finishing ranges in textile mills. Another variable-speed drive, for wide speed ranges, combining the high-torque characteristics of the series motor with the flat speed characteristic of the d-c shunt motor, was brought out. It comprises three machines: a squirrel-cage induction motor driving a series d-c generator which is directly connected to a d-c series driving motor. Speed adjustments are made by varying the resistance connected in parallel with the generator series field.

Welding. The greatly increased use of welding in defense industries was reflected in the spectacular 187 per cent rise in welding-set orders received, as compared with the 1940 level. The year was one of great expansion rather than of new equipment. The lack of new devices resulted not from lack of ingenuity, but from the pressure for shipbuilding, armament, and related fabrication which placed a tremendous load on equipment builders. The year, however, saw some remarkable developments in the application of arc welding, one of the most important being in armor-plate fabrication. One aspect stressed in 1941 was the proper application of equipment to assure minimum power consumption. In the d-c field, this resulted in the use of hundreds of constant-potential multiple-operator welding generators in shipyards. Arc-welding machines have been designed especially for use in aircraft

production, with special emphasis on accurate control of welding current and voltage to assure high-speed high-quality operations.

Resistance welding also scored heavily in 1941, particularly in the aircraft industry. One authority even envisioned a spot-welding machine that would produce "half an airplane at the push of a button." A stride toward increased use of welding in fields where it was not previously particularly successful was achieved by the introduction of new welding alloys. The feature of these is their property of flowing and binding at unusually low temperatures, below the critical transformation points of metals and before the formation of critical stresses.

X-rays. Industrial X-ray developments during the year were of major importance, especially in the war-material industries. Several of the portable 1,000,000-volt units previously described were built and placed in service. This unit is remarkably expediting the examination of heavy castings, welds, pressure vessels, and the like. (See illustration accompanying PHOTOGRAPHY) Lower-voltage X-ray equipment is finding increased use in the greatly expanded wartime production, especially in the examination of airplane engine castings and the lighter castings and welds generally. A new bearing-mandrel cassette for use with the 220,000-volt unit makes it possible to X-ray 20 cylindrical aviation-engine bearings in 10 minutes; previously five hours were required. In the medical field, greater accuracy in tuberculosis examinations is provided by a combination of X-ray apparatus and a photo-roentgen unit with accessories permitting stereoscopic photo-roentgenography. Two stereoscopic exposures are taken simultaneously and are viewed with a special orthostereoscope which brings the chest pattern into perspective as a three-dimensional image. This stereoscopic procedure also is used in industrial radiography.

A mobile ozonator has been developed for water purification that promises to be especially useful for army camps and similar applications. A 10-kva gasoline-engine-driven unit will treat up to 150 gal of water per minute, the ozone produced oxidizing the bacterial content of the water. See also HEATING AND VENTILATING; SHIPBUILDING.

ELECTRICAL TRANSPORTATION. See RAILWAYS.

ELECTRIC LIGHT AND POWER. Of all American industry, the electric utility industry as a whole was probably the best able to deliver the full and commanding requirements of the enormous and rapidly expanding national defense program of 1941. The amount of electric power required to meet the needs of American users *increased* during this one year by some 23 billion kilowatt-hours, an amount practically equal to the gross total annual output of the nation at the beginning of the first World War 25 years ago. Industrial power requirements were above those for 1941 by 30 per cent, commercial by 10 per cent, and residential by 7 per cent. Local droughts coupled with the building of enormous defense industries in areas heretofore basically non-industrial created some local shortages of electric power that were acute for a time, but which were relieved by measures ranging from temporary black-outs of all but the most essential local lighting to the emergency construction of interconnecting power lines to enable power to be diverted from areas having relatively more abundant supply. The industry's ability to meet the rapidly growing war-

industry demands for power are bound to be affected by the industry's ability to procure essential materials—turbines, for example, in competition with naval and other war needs.

Power Production. Production of electric energy in 1941 mounted to 168 billion kilowatt-hours and exceeded 1940 by more than 16 per cent, in spite of drought conditions in some areas that severely reduced the hydro-electric output in those areas. Statistical data are given in Table 1.

TABLE 1—ELECTRIC POWER GENERATION
[Billions of Kilowatt-hours]

Year	From fuel	From hydro	From Canada	Gross total	Uses & losses	Available for sale to consumers
1941	115.6	52.4	0.9	168.9	28.5	140.4
1940	97.2	47.8	0.9	145.9	27.3	118.6
1939	86.3	44.0	1.2	131.5	25.8	105.8
1938	71.8	44.8	1.1	117.7	24.1	93.7
1932	49.1	33.3	0.4	82.8	19.1	63.7
1929	62.7	33.2	1.0	96.9	21.6	75.3

Financial. Another new record for gross revenue from the sale of electric energy was established in 1941—\$2,670,450,000. This represents an increase in sales revenue of more than 9 per cent, but in contrast with some 18 per cent concurrent increase in energy sales. Some further rate cuts and heavy sales of energy in low-priced brackets to industries account for the disparity in percentages. The overall industry-wide average price per kilowatt-hour for 1941 was only 1.9 cents, lowest in history. In 1931, the average cost was nearly double this figure—2.74 cents. Taxes accounted for 20½ cents out of every dollar of gross revenue for the year for private utilities, a total of some 510 million dollars and an increase of some 19 per cent for the year. In nine years since 1932 private utilities have experienced an increase of 54 per cent in operating expenses and 153 per cent in taxes against an increase of 44 per cent in gross revenues. Average usage for residential customers for 1941 was 986 kw-hr at an average rate of 3.73 cents, as compared with 950 kw-hr at 3.81 cents in 1940. Selected statistical data concerning customers, sales, and revenues are given in Table 2.

TABLE 2—ELECTRIC POWER SALES AND REVENUE

Customer classification	Urban residential	Rural	Commercial industrial	Totals
New customers 1941	1,020,000	302,000	40,000	1,362,000
Total customers	25,972,000	988,000	4,593,000	31,553,000
Percentage of total 1941 customers	82.4	3.1	14.5	100
Power use in per cent of 1941 total power sales	17.9	1.8	80.3	100
Gross revenue—1941 power sales—Dollars	\$939,058,000	\$63,510,000	\$1,666,882,000	\$2,670,450,000
—Per cent	35.1	2.5	62.4	100

The volume of electric utility financing for the year amounted to about \$740,832,000 of which some \$97,065,000 was new capital and the remainder refundings. Capital expenditures for system extensions and improvements were reported as follows: for fuel power plants, \$219,741,000; for hydroelectric plants, \$27,186,000; for transmission facilities, \$62,476,000; for substation facilities, \$79,218,000; for distribution facilities, \$232,840,000; for miscellaneous items, \$32,687,000; total, \$654,148,000.

Generation. Of the 3,900,000 kilowatts in new capacity for electric generating plants that was pre-

viously scheduled for 1941, some 3,078,375 kw was reported as actually completed during the year. Another 3,600,000 kw is scheduled for 1942, and 3,400,000 for 1943 to meet war needs. Selected statistical data are given in Table 3.

The geographic distribution of electric generating capacity as of the close of 1941 is shown in Table 4.

TABLE 4—DISTRIBUTION IN ELECTRIC GENERATING CAPACITY REPORTED IN ELECTRIC UTILITY POWER PLANTS AT CLOSE OF 1941

Area	No. Plants	Aggregate Capacity (Kilowatts)
6 New England States	327	3,144,000
3 Middle Atlantic States	394	10,297,000
5 East North-Central States	657	9,851,000
7 West North-Central States	823	3,349,000
8 South Atlantic States	408	5,518,000
4 East South-Central States	178	2,247,000
4 West South-Central States	414	2,236,000
8 Mountain States	367	2,318,000
3 Pacific Coast States	304	4,531,000
Totals	3,872	43,491,000

New and highly efficient fuel plants offset the older and less efficient plants brought back into operation to meet war needs, leaving the average fuel economy for 1941 at 1.35 lb. of coal per kilowatt-hour, just about where it was for 1940. All fuels—coal, gas, and oil—consumed for the generation of electric power in 1941 amounted to an equivalent of some 136 million tons of coal as compared with about 119 million tons for 1940. (See POWER PLANTS.)

Transmission and Distribution. More than 9,000 miles of new transmission lines of 11,000 volts or higher were built in 1941. About two-thirds of this amount was accounted for among the 5 East North-Central, 9 South Atlantic, 3 Pacific, and 4 West South-Central States. Tentatively scheduled for 1942 are another 8,800 miles.

New capacity in substations reported totalled 6,222,000 kw in capacity, more than half of which was accounted for in the 9 Middle Atlantic, 5 East North-Central, and 3 Pacific States. Additional capacity amounting to 6,600,000 kw is scheduled tentatively for 1942.

Rural Electrification. By the end of 1941 Rural Electrification Administration reported a total of some 760 systems in actual operation serving an estimated total of 900,000 customers over an estimated total of 350,000 miles of lines. These figures represent a 1941 increase of 28 systems, 120,000 customers, and about 42,000 miles of line. Total public funds allotted to REA to the end of 1941 amount to about \$431,000,000 which have been expended about as follows: for distribution lines, \$393,000,000, for power generation and transmission facilities, \$28,000,000; for consumer facilities, \$11,000-

TABLE 3—ADDITIONS TO ELECTRIC GENERATING CAPACITY

Year	Fuel plants		Total fuel plants		Hydroelectric plants		Total hydro	Grand total		
	Public	Private	No.	Kilowatts	Public	Private				
1941	22	188,000	63	2,104,100	85	2,292,100	17	786,200	102	3,078,300
1940	39	243,000	57	1,210,500	96	1,453,900	17	398,000	113	1,851,900
1939	21	119,750	48	794,930	69	914,680	4	370,150	85	1,284,830
1938						1,350,300		345,600		1,695,900
1934						52,800		41,900		94,700
1929						2,081,300		249,200		2,330,500

000. The number of generating plants operated by REA had grown to a total of 47 with an aggregate capacity of 52,000 kw. These plants produced less than 10 per cent of the 940,000,000 kw-hr of electric energy handled over REA systems for the year, the remainder being purchased. Average annual customer consumption was reported to be 835 kw-hr at an average cost of 4.7 cents per kilowatt-hour. Gross energy losses incidental to transmission and distribution were about 25 per cent. As the year's industrial war efforts grew, REA entered more and more into active competition with established electric utilities for a share of the industrial load, over and beyond its "rural" field. See AGRICULTURE, U. S. DEPARTMENT OF under *Rural Electrification*.

Government. Of interest and special significance in this year of defense and war effort just closed are the diametrically opposite views taken by two different public commissions whose responsibility it is to regulate public utilities in the public interest. One of these commissions—the Massachusetts Department of Public Utilities—announced that, in view of the nation's present crisis which is demanding everything in the way of manpower and service that the utilities can furnish, it would not intervene and interfere at this time by ordering a State-wide investigation—in this instance, of telephone rates—because such could not be said to be genuinely in the public interest for a nation at war. The other commission—the Securities and Exchange Commission, which is working out the much-discussed electric power utility "integration" or "death-sentence" that calls for the disintegration of large interconnected systems into separate small and local units—announced to the industry that war or no war there would be no relenting of efforts to disintegrate holding-company systems. And all this at a time when droughts and war needs have required many emergency interconnections of electric systems to be made to prevent serious interruptions to war industries. Competent students and observers believe that "regulation actually in the public interest" should continue, but that socialization experiments and reforms should not be allowed to interfere with the nation's number one war industry—the electric utility industry, which must produce the power that turns the wheels of all war industries.

First actual order for system disintegration issued by SEC required United Gas Improvement Corporation to divest itself of all interests except those centered in the Philadelphia area. This order was regarded by the industry as being the probable pattern for further SEC orders. Others issued during 1941 affected the properties of Engineers Public Service Company, Commonwealth and Southern Corporation, National Power and Light Company.

The Federal Power Commission was particularly active in the field of power for war industries, having previously drawn up its own plans and prospectuses for dividing the United States into some 48 "power-supply areas" for purposes of control and allocation of capacity and power-producing resources. FPC also was an active and ardent proponent of extensive further developments of electric power by the government—by an RFC subsidiary if necessary.

The FPC's plans for power for war industries came more and more into conflict with the plans of the Office of Production Management (q.v.). As the year came to a close, it was the opinion of many observers that the long-standing battle of the "New Deal" agencies against the electric utilities was in some respects at least resolving itself into a major conflict between two government agencies—over

the electric utility industry as the prize. Observers at year-end were divided in opinion as to whether OPM's relatively new Power Division or FPC would come off second best.

ENEMY ALIENS. By presidential proclamation, the nationals of Germany, Italy, and Japan were designated as "enemy aliens" in 1941. They numbered approximately 1,100,000, of whom 2,971 or only one-quarter of one per cent had been arrested by the FBI at the end of the year—1,484 Japanese, 1,256 Germans, and 231 Italians.

The U. S. government stated that every effort would be made to protect aliens from discrimination and abuse so long as they conducted themselves according to law. They were not permitted to travel by air, however, and were required to file a statement a week in advance of any proposed journey outside their communities (except for commuting to business or to see a government agency). They were also required to surrender to the police all portable cameras, radio transmitters and short wave receivers, and firearms. Aliens considered disloyal were subject to arrest and questioning by the FBI and were then taken into the custody of the immigration authorities. Their cases were heard by *Alien Enemy Hearing Boards*, extralegal organizations created in each Federal judicial district by the Attorney General. Recommendations of these Boards were reviewed by an *Alien Enemy Control Unit*, set up within the Department of Justice under the direction of Edward J. Ennis, being sent to the Attorney General for final action.

Although the Japanese were less numerous than either German or Italian groups (see table under IMMIGRATION) they accounted for the largest number of arrests. According to the 1940 census there were 126,947 Japanese in the continental United States, of whom 47,305 were foreign born, and therefore alien and ineligible for citizenship. The Pacific Coast States of Washington, Oregon, and California had 112,353 Japanese, or 88.5 per cent of the total; 40,869 were aliens. For totals of Japanese by leading States see table on p. 189.

In the territories and possessions of the United States, excluding the Philippine Islands, there were

158,501 Japanese, of whom 37,512 were alien foreign-born. Most of these were in Hawaii, where Japanese numbered 157,905, or 37.3 per cent of the total population. The Philippine Islands contained 29,057 citizens of Japan according to the Philippine census of Jan. 1, 1939. (The total number of persons of the Japanese race in the Philippines is not known, but all persons of the "yellow race," of whom the majority were Chinese, numbered 141,811.) See UNITED STATES under *Civil Liberties*.

ENTOMOLOGY, Economic. The Bureau of Entomology and Plant Quarantine is concerned with investigations on insects and their economic relations; the development and application of methods for their eradication or control; the carrying out, in cooperation with the States, of necessary work to prevent the spread and to control or eradicate insect pests and plant diseases that have gained more or less limited foothold in the United States; and the utilization of those species that are beneficial. These activities include investigations on and direction of control campaigns against the species injurious to agriculture and forestry; investigations on the species affecting the health of man and animals, or infesting human habitations or injurious to industries; the culture and use of honeybees and beekeeping practices, investigations on the natural enemies of insects and plant pests and the possibility of using these as aids for control; the taxonomy, anatomy, physiology, and responses of insects; chemical and other problems relating to the composition, action, and application of insecticides; and the development of methods of manufacturing insecticides and materials used with them.

To aid in carrying out these assignments and to protect agriculture from plant pests and diseases, the Bureau is responsible for the enforcement of acts and restrictive orders promulgated thereunder.

Codling Moth. During the year further confirmation was made of the effectiveness of finely divided phenothiazine in the control of codling moth. Xanthone has shown definite promise for codling moth control in the Northwest. In the Middle West, tank-mixed nicotine bentonite for the fourth consecutive year has resulted in the production of more clean fruit than heavy lead arsenate-oil sprays.

Comstock's Mealybug. In some orchards in West Virginia and Virginia this insect caused commercial injury to as much as 81 per cent of the fruit.

A New Scale Insect in Missouri. This insect, *Parlatoria chinensis* (Marl.), was first discovered in a limited area in St. Louis in 1940. Surveys are under way to develop accurate information with respect to the limits of the area involved.

Oriental Fruit Moth. Methods are being developed for the production of large numbers of parasites for liberation very early in the season, and the results of experiments indicate that the parasite when so liberated is usually of considerable value.

Plum Curculio. Favorable preliminary results in the control of this insect were obtained by treating the soil with dichloroethyl ether early in the summer

Grape Berry Moth. The use of calcium arsenate in two applications against the first brood of this moth followed by three applications of processed nicotine bentonite against the second brood gave favorable control.

California Red Scale. Decidedly improved effectiveness of cyanide fumigation against this insect was obtained by the use of a blower to mix the gas with the air within the tent, and to rapidly produce a uniform concentration

Japanese Beetle. The main area of Japanese beetle infestation has continued to increase. Serious damage is now being done from the District of Columbia and adjoining sections of Maryland and Virginia to southern New England and New York, and in a few points in Ohio. Special emphasis is now being placed on work with milky disease that attacks the grubs of this beetle and offers decided promise in the control of this pest when cultured and distributed artificially.

Pear Psylla. Intensive scouting reveals that the pear psylla distribution extends beyond the Spokane Valley in Washington State. The population has been materially reduced and no infestations were found in the important pear-producing areas of the Wenatchee or Yakima Valleys

Phony Peach. Phony peach disease survey showed that whereas this disease was once known to exist in 17 States, it has now apparently been eradicated from Indiana, Maryland, Oklahoma, and Pennsylvania, and greatly reduced in other States

Peach Mosaic. During the fiscal year 1941 no mosaic was found in 14 previously infected counties but was found in five counties from which the disease had not previously been reported. In addition, there was noted a material reduction in the incidence of the disease in many of the infected areas.

Citrus Canker. The most outstanding event in the citrus canker eradication project during the year was the finding of this disease at Corpus Christi, Tex., involving 154 trees. These were the only infected trees found in the United States and were promptly destroyed.

Termites. Increased attention was given to cooperative work with the Army, the Navy, and defense housing agencies in planning and constructing buildings that will be reasonably safe from infestation; 121 defense housing projects were inspected during the early part of 1941

Bark Beetles. Research has developed a method of selective logging of trees susceptible to attack by bark beetles in northeastern California and southeastern Oregon, thus permitting a fuller utilization of the available supply of mature ponderosa pine.

Gypsy Moth. Defoliation was less extensive during the summer of 1940 than during the previous season. No defoliation was reported from any of the towns lying within the barrier zone. The use of the autogiro in spraying infested areas has been found effective.

Corn Breeding to Resist Insect Attack. Three varieties of dent corn were found to be especially promising. Further investigations are aimed at producing a corn resistant to both corn earworm and chinch bug.

European Corn Borer. Significant increases in the abundance of this insect occurred in parts of seven States. Twenty new counties were found to be infested in five States already known to be infested.

Grasshoppers. In general the grasshopper situation was less critical than at any time during the last few years. The lesser migratory grasshopper occurred in outbreak numbers in parts of the northern Great Plains. Areas of heavy infestation of very limited extent occurred in Arizona, Colorado, Kansas, Oklahoma, and Texas.

Mormon Crickets. These insects in the region east of the Rocky Mountains were decidedly less destructive than in 1940. In limited sections of Idaho and Oregon and in a more extensive area in northern Nevada severe outbreaks occurred. The general adoption of sodium fluosilicate bait and the use of airplanes for spreading it permitted extensive and economical control.

White-fringed Beetle. As a result of a cooperative campaign there was a decided decrease in the intensity of infestation by this insect in the limited area known to be infested in the Gulf region. The replacement of dusts by adhesive sprays has increased the effectiveness of insecticidal control.

Legume Weevil. This Mediterranean insect was first discovered in this country in 1939 in Arizona. Surveys conducted in 1940 and 1941 disclosed that the distribution of the insect was apparently restricted to two small areas in Arizona and adjacent California.

White Pine Blister Rust. During 1940 over 69 million *Ribes* plants, which are the alternate host of this disease, were removed from nearly 2 million acres of control area.

Stored-grain Insects. With a view to the present emergency increased attention was given to the preservation of stored grains from attack by insects. Fumigation with ethylene dichloride mixed with carbon tetrachloride and methyl bromide together with the ventilation or turning of the grain gave practical control. Reinfestation of treated corn was effectively prevented by giving its surface a thin coat of a light, tasteless mineral oil. Where fumigation can be carried out under practically airtight conditions, methyl bromide was found highly effective in dosages as low as 1 pound to 1,000 cubic feet of space.

Wheat Resistant to Insect Attack. Varieties of wheat have been developed showing resistance to hessian fly as high as 96 per cent. Efforts are being made to combine hessian fly resistance with resistance to stem rust.

Sugarcane Insects. Large-scale field tests have indicated that cryolite is effective in the control of the sugarcane borer. Burning the sugarcane trash during the fall and winter reduced populations from over 144 borers per acre to 9.6 per acre.

Chinch Bug. Despite heavy populations of chinch bugs in the fall of 1940, heavy rains at frequent intervals in June reduced them considerably. Nearly 286,000 gallons of creosote, however, were furnished Illinois, Indiana, Iowa, Kansas, Missouri, Nebraska, and Oklahoma by the U.S. Department of Agriculture in cooperation with these States for the use of farmers in preventing migration from small grain into corn.

Black Stem Rust of Wheat. The program for removal of barberry bushes, which are the alternate host of this disease, has apparently resulted in cutting the average annual loss occasioned by this disease more than in half. During the fiscal year 1941 over 28,600,000 barberry bushes were destroyed.

Stored-Tobacco Insects. Due to the decline in exportation because of war conditions, the problem

of storing tobacco has become acute. Special assignment of an entomologist has been made to advise in the selection of suitable storage houses from the viewpoint of insect control.

Fumigation of Open-Storage Tobacco Warehouses. The use of a gas-proof curtain to seal the walls and sides of warehouses has proved highly effective in fumigating tobacco infested with cigarette beetle and tobacco moth with hydrocyanic acid gas. Cold storage control of tobacco in hogsheads has shown that flue-cured tobacco held at temperatures between 55 and 65 degrees F. give excellent insect control.

Potato Aphids. A spray consisting of derris, peanut oil, and insoluble copper, though not reducing the leaf roll disease, increased potato yield in one instance 77 per cent in Maine.

Beet Leafhopper. In the spring of 1941 leafhopper populations were greater than at any time during recent years. Cool weather delayed these leafhoppers from entering the sugar beet fields, thus preventing much crop damage. A combination of pyrethrum and lime sulphur was found to be effective in protection of young plants from curly-top infection.

Sweet Potato Weevil. A campaign for the suppression of this insect has resulted in its eradication from 1,257 properties in the commercial sweet-potato-growing areas in Georgia, Alabama, Mississippi, and Texas since 1937.

Boll Weevil. Populations were very high early in the spring of 1941. They continued to increase as the season advanced and very heavy damage occurred over a large part of the Cotton Belt.

Pink Bollworm. This insect was materially reduced by a clean-up campaign on more than 400,000 acres of cotton in the lower Rio Grande Valley and adjacent counties in Texas.

Bee Culture. Resistant strains of honeybees to American foulbrood have resulted in the distribution of 232 resistant queens to agricultural agencies in 34 States.

Mosquitoes. During the year members of the Bureau assisted several defense agencies by making mosquito surveys in the vicinity of military camps on the Atlantic seaboard and Gulf coast, by furnishing working plans and estimates covering mosquito control programs.

Secretions of Insects. A new healing agent for purulent wounds, ammonium allantoinate, has been discovered in the secretions of fly maggots. Another healing agent discovered in the secretions of fly maggots and known as Extract K is available for treating osteomyelitis, one of the most serious complications that follows war wounds.

Clothes Moths. A new mothproofing agent has been discovered during the year. Considerable time has been spent in advising the defense agencies of stocks of raw wool, blankets, and stored food. Building and commodity fumigation technique has been demonstrated at cantonments for the benefit of military agencies.

Screwworms. A modified plan of ranch management has been developed to reduce losses from screwworms. The plan involves production of calves and other animals and performing surgical operations on livestock only between certain dates. An effective remedy was developed for destroying the worms in the wounds of livestock and at the same time protecting them from further attack in one operation.

Foreign Parasite Introduction. The foreign investigations on the natural enemies of crop pests were continued throughout the year at the field stations at Yokohama, Japan, and Montevideo, Uruguay,

and the imported material was received and passed through quarantine at the Hoboken, N.J., receiving station. A total of 41 lots of parasite material were received at that station.

Control Investigations. Approximately 2,500 tests were made on about 200 synthetic compounds as stomach poisons to leaf-eating insects. Phthalonitrile, 1, 4-diphenyl semicarbazide, p-aminoacetanilide, and p-aminoazobenzene hydrochloride have been found effective against a number of leaf-feeding insects and to be tolerated in insecticidal quantities by a number of crop plants. Tests on greenhouse insect pests indicate that nicotine and possibly other insecticides, when applied in combination with oleic acids or other wetting agents, may be more effective when dispersed as aerosols.

Application of Insecticides. Methods and apparatus for applying insecticides in an air-blended mixture from an autogiro were tested on a series of mixtures. Approximately 600 acres of mountainous forest land were treated for gypsy moth with air-blended lead arsenate and fish oil this season.

Insecticide Investigations. Emphasis was given to work on normicotine. This substance is known to possess insecticidal powers but heretofore has been obtainable only from certain Australian solanaceous plants. The recovery of considerable quantity from a Maryland variety of tobacco opens a new avenue for investigations of this material. A new, short method of determining the pyrethrins in pyrethrum flowers and investigations on materials which might be added to the pyrethrins to enhance their action are under way. Sesame oil has been found to increase the kill of houseflies in pyrethrum-kerosene sprays. Phenothiazine gained new importance when it was discovered that grinding this material to exceedingly fine particle size renders it much more effective than the usual commercial powdered form.

Transit Inspection. During the fiscal year 1941 nearly 1,500,000 shipments moving by common carriers were examined at 23 points of inspection, resulting in the interception of 2,839 lots of material moving in violation of Federal domestic plant quarantine regulations.

Foreign Plant Quarantines. Last fiscal year 26,867 ships from foreign countries and our off-shore possessions were inspected. On the Mexican border 58,152 freight and passenger cars were inspected and at 25 airports 6,946 airplanes arriving from foreign countries or our off-shore possessions were inspected. In all of this work there were 68,201 lots of foreign plants and plant products intercepted when arriving contrary to our foreign plant quarantine regulations.

ESTONIA. A Baltic republic which proclaimed its independence from Soviet Russia Feb. 24, 1918, and was reannexed by the Soviet Union as a constituent republic Aug. 6, 1940. In August-September, 1941, the Russians were driven out by German troops, which remained in occupation of the country. Capital, Tallinn.

Area and Population. Estonia has an area of

18,359 square miles, including internal lakes, and a population estimated on Jan. 1, 1940, at 1,122,000. Living births in 1939 numbered 18,450 (16.3 per 1,000); deaths, 16,940 (15.0 per 1,000). Estimated populations of the chief cities on Jan. 1, 1939, were: Tallinn, 144,978; Tartu, 60,281; Narva, 23,834; Parnu, 21,886.

Religion and Education. About five-sixths of the people are Lutherans and the rest chiefly Greek Orthodox and Roman Catholics. Adult illiteracy was slightly less than 4 per cent in 1940.

Production. Agriculture and dairying support nearly 70 per cent of the population. Yields of the chief crops in 1940 were (in metric tons): Wheat, 76,000; barley, 83,000; rye, 191,000; oats, 148,000; potatoes, 874,300 in 1939; flax, 6,100 in 1939. The leading industrial products are cotton fabrics and yarn, woodpulp (112,000 metric tons in 1939), cellulose, paper, timber, shale oil. On Apr. 1, 1940, there were 56,456 wage earners in manufacturing establishments.

Foreign Trade. Total imports in 1939 were 101,351,000 crowns (107,198,000 in 1938) and exports of Estonian products were 118,217,000 crowns (103,928,000 in 1938). For trade distribution see 1939 YEAR BOOK.

Finance. For the fiscal year ending Mar. 31, 1941, the budget was estimated to balance at 114,988,740 krooni (crowns), as against revenues of 105,878,187 and expenditures of 105,816,637 krooni in the fiscal year 1939-40. The public debt on Jan. 1, 1940, totaled 127,605,613 crowns. The Estonian crown exchanged at an average official rate of \$0.2711 in 1938 and \$0.2538 in 1939 (11 months).

Transportation. At the time of the Soviet annexation in 1940, Estonia had about 1,328 miles of railways, 13,416 miles of roads, and a merchant marine of 195,745 gross tons. The land transportation network suffered severely during the Russo-German war of 1941.

Government. The constitution of Jan. 1, 1938 (see YEAR BOOK for 1940 for basic provisions) was scrapped under Soviet pressure in 1940. Under threat of invasion, the Estonian Government on Sept. 29, 1939, signed a treaty of mutual assistance with the Soviet Union, giving the Russians naval and air bases on the islands of Oesel and Dagoe and at Paldiski (Baltic Port) on the mainland. The preamble of this treaty stated that it was "based on recognition of the independent state of existence and on nonintervention in the internal affairs of the other party." On June 17, 1940, this pledge was violated, when Soviet troops commenced occupation of the entire republic. The government was forced to resign in favor of a pro-Soviet regime, which held elections for a parliament on July 14-15, with only the pro-Soviet slate of candidates permitted on the ballot. The new parliament petitioned the Supreme Soviet in Moscow for incorporation in the Soviet Union and on Aug. 6, 1940, Estonia became a constituent republic of the U.S.S.R. See YEAR BOOK for 1940 for a full description of this process.

History. The German attack upon Russia commencing June 22, 1941, inaugurated a new period of bloodshed and destruction in Estonia. No detailed account of subsequent developments was available but the general trend of events was fairly clear. In Estonia, as in the other Baltic States absorbed by the Soviet Union, the German-Russian war was the signal for a spontaneous revolt against Soviet rule. This was quickly crushed by Soviet troops, with the assistance of a pro-Soviet minority of Estonians. The Moscow radio announced that all Estonian "counter-revolutionaries and German sym-

pathizers were liquidated." Many other Estonians were sent to Russia by Soviet authorities.

After the relatively quick German conquest of Lithuania and Latvia, Estonia became the chief Baltic battleground of the Russo-German war (see EUROPEAN WAR). It suffered immense loss of life and property before the Germans succeeded in expelling the Russians in September. The Germans were at first greeted as liberators by the remaining anti-Soviet elements in Estonia. But Estonian hope that Hitler would permit the restoration of the republic's independence was soon shattered by a series of German actions.

On August 11 Berlin confirmed the appointment of Heinrich Lohse, Governor of Schleswig-Holstein, as Reich Commissioner for the newly-created Ostland Province. This included Estonia, Latvia, Lithuania, and, subsequently, White Russia in the Soviet Union proper. Lohse served under the direction of Dr. Alfred Rosenberg, who was named Reich Minister for all of the territories conquered from Russia. On September 20 the Tallinn radio announced the establishment of a five-man State Council to administer Estonia "in the name of the German military commander." Restoration of private property was a key point in the Council's program.

According to subsequent reports, the German administration in Estonia (as in Latvia and Lithuania) imprisoned members of the hastily organized nationalist regime, who were not prepared to collaborate with the Reich except on the basis of independence. In all three countries, the Germans were said to have registered all persons between the ages of 16 and 60 for compulsory labor service. They confiscated stores of butter, cheese, rubber tires, and other materials needed in the Reich. Strict rationing was established, and each family was required to submit detailed information on the clothes, shoes, and other articles in its possession. Numerous large agricultural estates that had been confiscated under the Soviet regime were placed in the hands of German administrators.

Estonian patriots, who had refused to accept Soviet rule, continued their struggle for the restoration of the country's independence. Estonian diplomatic and consular representatives in the United States announced June 30 that they would not recognize a German-controlled government in Tallinn. They based their hope for Estonia's independence upon the United States and Great Britain, which refused to recognize the Soviet annexation of the Baltic States even after the German attack upon Russia. In July Washington rebuffed a Soviet claim to Estonian and Latvian ships requisitioned by the U.S. Government in American ports when the Baltic States were taken over by Russia in 1940. Some of these ships were employed in transporting supplies from the United States to Britain. Their earnings helped to support the Estonian and Latvian diplomatic and consular representatives in America.

ETHIOPIA. A native empire in East Africa, annexed by Italy May 9, 1936, and reconquered by British Imperial and Allied forces in 1941 (see WORLD WAR). Area, 347,500 square miles; population, estimated at 10,000,000 to 12,000,000. Capital, Addis Ababa. The Emperor Haile Selassie, who was driven into exile by the Italian invasion of 1935-36, was restored to his throne May 5, 1941. See ITALIAN EAST AFRICA for a full description of

Ethiopia and the developments of 1941; also WORLD WAR.

EUROPE. A continent with an area of about 2,094,500 square miles and a population estimated at 400,100,000 (excluding the U.S.S.R.) on Dec. 31, 1938. See separate article on each European country; also BALKAN ENTENTE, COMMUNISM, WORLD WAR, FASCISM, NAVAL PROGRESS, ETC.

EUROPEAN WAR. See WORLD WAR.

EVANGELICAL AND REFORMED CHURCH, The. A denomination formed by the merger in Cleveland, Ohio, on June 26, 1934, of the Evangelical Synod of North America and the Reformed Church in the United States. The former was founded in 1840, by representatives of the Evangelical Churches of Germany and Switzerland. The latter traced its origin chiefly to the German, Swiss, and French Protestants, who settled in America early in the 18th century. Both churches, in doctrine and polity, were akin to the Reformed bodies.

The highest judicatory of the Evangelical and Reformed Church is the General Synod, which meets biennially. A new Constitution was declared in effect at the meeting of the General Synod, held at Lancaster, Pa., in 1940. The officers of the Evangelical and Reformed Church are: President, Rev. Dr. L. W. Goebel, 77 W. Washington St., Chicago, Ill.; First Vice-President, Rev. Dr. George W. Richards; Second Vice-President, Hon. D. J. Snyder; Secretary, Rev. Dr. William E. Lampe, 1505 Race St., Philadelphia, Pa.; Treasurer, Mr. F. A. Keck.

In its combined statistics for the year 1940, the Evangelical and Reformed Church reports a membership of 655,366 in 2,857 congregations. Total expenditures for congregational purposes amounted to \$8,830,349, and total benevolences to \$1,393,751. The Sunday School enrollment is 509,662. For institutions and publications, see YEAR BOOK for 1940.

EVANGELICAL CHURCH. A religious body organized along Methodist lines by Jacob Albright (1759-1808) in Pennsylvania. Headquarters, 1900 Superior Avenue, Cleveland, Ohio, and Harrisburg, Pa. See RELIGIOUS ORGANIZATIONS.

EXPORT-IMPORT BANK OF WASHINGTON (EIB). Created as an agency of the United States on Feb. 12, 1934, for the purpose of financing and facilitating trade between the United States, its territories, insular possessions and foreign countries. By an act ap-

proved Jan. 31, 1935, and amended from time to time, the Bank will be continued as an agency of the United States until Jan. 22, 1947, or such earlier date as may be fixed by the President by Executive order. The latest amendment expanded the activities of the Bank by authorizing it to use not to exceed \$500,000,000 outstanding at any one time for loans to assist in the development of the resources, the stabilization of the economies, and the orderly marketing of the products of the countries of the Western Hemisphere. The Bank has a total lending authority of \$700,000,000.

From its creation to the end of 1941 the Bank had authorized loans of \$837,705,261, as compared with \$654,780,863 at the end of 1940. Actual disbursements in 1941 amounted to \$116,835,507 as compared with \$95,298,476 in 1940. Loans outstanding at the close of 1941 were \$186,130,456 against \$131,031,867 in the previous year. Nineteen hundred forty-one net earnings were \$7,216,129 as compared with \$3,774,591 in 1940.

During 1941 the Bank's activities related almost exclusively to inter-American trade and the development of the resources of the countries of the Western Hemisphere. Further loans to assist in the improvement of Latin-American transportation systems, both railway and highway, became of special importance as a part of the program to increase the delivery of strategic materials required in the United States.

FACTS AND FIGURES, Office of (OFF). The Office of Facts and Figures, established on Oct. 24, 1941, as part of the Executive Offices of the President, was originally assigned the task of encouraging and systematizing the circulation of information about the national defense effort. It was to do this by working through the existing government publicity agencies. With the attack by Japan on December 7, the OFF became the over-all agency for acquainting the public with all information about the war effort which could be released without giving aid to the enemy.

In World War I the United States created the Committee on Public Information of which George Creel was the directing head. News was cleared through the Committee on Public Information. The policy of this Administration, however, is that the news about national defense, and subsequently news of the war, should continue to be issued by the various government agencies concerned.

This method required the existence of a new agency which would see the defense effort in its entirety, and would be equipped to lay down consistent policies. The need for such an instrument developed in the summer of 1941. For a time, the Office of Facts and Figures was part of the Office of Civilian Defense (q.v.). Then the President ordered that it should be a separate body and appointed Archibald MacLeish as Director.

The Office of Facts and Figures, in the words of the executive order creating it, is an inter-departmental clearing house "for the most coherent and comprehensive presentation to the nation of the facts and figures of national defense." The first necessity was establishment of close relationships with branches of the government concerned with defense. For this and other purposes there was created the Committee on War Information, an advisory body provided for in the executive order creating the Office of Facts and Figures. Archibald MacLeish is chairman. Members include high-ranking executives in the State, War, Navy, Treasury, and Justice Departments, OEM, OCD, and other departments and war agencies. The Committee on War Information meets weekly for discussion of war information policy problems. Its decisions are referred to the various agencies through the Office of Facts and Figures.

The Office of Facts and Figures has been named by the President as the agency to coordinate all Government requests for radio time. It has a staff which studies public opinion and a section which maintains contact with such media as newspapers, magazines, and organizations. A small staff of writers and research workers has been assembled to prepare, from time to time, reports on the war effort which are broader in scope than can appropriately be handled by a single government agency. One such was the "Report to the Nation," a 62 page pamphlet describing the progress of war preparations up to Dec. 31, 1941.

ARCHIBALD MACLEISH.

FAIRS, EXPOSITIONS, AND CELEBRATIONS. There were no great world's fairs in operation during 1941 like the two of the two preceding years at San Francisco and New York, and plans for future ones, notably the proposed Rome Fair for 1942, were suspended. However, one new sort of exposition, characteristic of the times, made its appearance—the National Defense Exposition held at Grand Central Palace in New York City from September 20 through October 18. Promoted by a committee of 40 prominent New Yorkers under the chairmanship of George A. Sloan, Commissioner of Commerce for New York City, the exposition was planned to present a comprehensive picture of industrial and commercial activity for national defense, to educate the public on the subject, and to offer opportunity to manufacturers to show how they were cooperating. Exhibits were set up by the U.S. Army, Navy, Marine Corps, and Coast Guard, the New York City Police and Fire Departments, and a large number of individual manufacturers. The presence of actual armored equipment, and liberal use of sound effects and working models, gave vividness and reality to the exhibits. Proceeds went to the United Service Organizations and the Office of Civilian Defense.

The 150th anniversary of the final ratification of the Bill of Rights, falling as it did, on December 15, shortly after the United States became involved in war, was the occasion for patriotic gatherings of more than usual significance. The nationwide event of the day was the broadcasting of a radio hook-up between New York, at the site of the old Federal Hall where the Bill of Rights was passed by the first Congress, and Richmond, Va., where the Virginia Legislature made the final ratification. The governors of those two States were principal speakers.

The State of Vermont observed its sesquicentennial during the year. The featured program, at Montpelier on August 30, was attended by a num-

ber of visiting governors and other officials, who gave to the occasion a political tinge. The city of Stamford, Conn., observed the 300th anniversary of its founding in a two-weeks celebration, featuring a governors' parade on June 14, a pageant, and an industrial exhibition.

Among national "birthdays" the celebration of Switzerland's 650th on August 1 was outstanding. The country was decked with flags, and fires were lit in the capital cities of the cantons with torches carried from a central pyre. The day's pageants centered on the theme of national unity and the chief speech was delivered by Gen. Henri Guisan, who proclaimed Switzerland's resolve to safeguard its liberty. China also celebrated an anniversary, the 30th year of the founding of the Republic, on October 10. The centenary of the cession of Hong Kong to the British by China, however, passed virtually unmarked as a result of what the *London Times* described as "a proper regard for Chinese susceptibilities."

Those of the European trade fairs which were again held, like the famous one at Leipzig, were marked chiefly by efforts to effectuate German propaganda. The customary annual national fairs in Latin America likewise took color from international events, emphasizing inter-American exchange of goods; United States firms were particularly urged to participate. The Canadian National Exposition, at Toronto in August, featured a display of relics of famous British buildings that had been bombed.

Several leading educational institutions commemorated milestones with the customary academic formalities and meetings of scholars. The University of Chicago on September 22 and Stanford University on October 1 marked their fiftieth anniversaries. Fordham University climaxed its centenary year with a three-day celebration starting September 15. Rutgers University also staged a three-day celebration, beginning October 8, the 175th anniversary of its founding. See ART; EDUCATION under *Celebrations*; MUSIC; PHILANTHROPY; PHILOSOPHY; ROMAN CATHOLIC CHURCH, SWISS LITERATURE.

FALANGE ESPAÑOLA. See CUBA and SPAIN under *History*; FASCISM.

FALKLAND ISLANDS. A British crown colony in the South Atlantic, 480 miles northeast of Cape Horn, South America. Area, 4,618 square miles; population (1939), 2,425. Capital: Stanley (on East Falkland), had 1,300 inhabitants. The chief occupation of the people is sheep farming. Small quantities of oats and potatoes are grown. Trade (1939): £93,995 for imports and £198,942 for exports (wool, 3,794,664 lb., £176,197). Tallow, sheepskins and hides, and seal oil are other exports. Finance (1939): £61,905 for revenue and £70,759 for expenditure. The administration is headed by a governor, assisted by an executive council and a legislative council. Governor and Commander-in-Chief, Allan Wolsey Cardinal (appointed Feb. 8, 1941).

Dependencies. These include all islands and territories between 20° and 50° W., south of 50° S., and between 50° and 80° W., south of 58° S. The chief divisions are South Georgia (1,450 sq. mi.; pop. 750, including 7 females, in 1939), South Shetlands, South Orkneys, South Sandwich Islands, and Graham Land. Whaling is the chief industry. During 1938-39, 1,675 whales were caught and 179,875 bbl. of whale oil were produced. Guano output (1939): 124,789 tons. Reindeer have been introduced and are thriving. Trade (1939): £294,128

for imports and £469,534 for exports. Finance (1939): £13,738 for revenue, the surplus (after paying administrative expenses at Stanley) being devoted to local research and development. The administrative authority is vested in the governor and the executive and legislative councils of the Falkland Islands.

FARMERS COOPERATIVES. See AGRICULTURAL COOPERATION.

FARMS AND FARMING. See AGRICULTURE and the topics there referred to.

FARM SECURITY ADMINISTRATION (FSA). See AGRICULTURE, U.S. DEPARTMENT OF.

FAROE ISLANDS. A group of 21 islands (the chief being Bordo, Kalsø, Osterø, Sando, Strómø, Suderø, Vaagø, and Viderø) north of Scotland, forming a county of Denmark, but under British military protection since Apr. 10, 1940. Total area, 540 square miles; population, 25,744. Capital, Thorshavn (on Strómø), 3,200 inhabitants. The chief exports are fish, whale oil, woolen goods, lambskins, and feathers. The islands are administered by a Danish governor and the local parliament (Lagting).

FASCISM. The triumphal march of world fascism was slowed in 1941 by Soviet Russia's stubborn resistance to the German invasion, the growing power of Britain and her Allies, and the entrance of the United States into the world conflagration. Nevertheless, substantial gains were registered. Japan's entrance into the war on the side of the Axis threatened to spread the Nipponese variety of fascism throughout the Far East and the islands of the Pacific. Bulgaria was drawn more firmly within the Axis fold. Yugoslavia and Greece were subjugated and their pro-democratic and anti-Axis elements crushed or driven into exile.

Democratic Finland was driven into tacit alliance with Germany through the aggressive policies of Communist Russia, thus strengthening the pro-Fascist minority in the Finnish republic. Under relentless pressure from Germany and the Pétain Government, France fell increasingly under Fascist influence. Hungary and Rumania, joining in the war on Russia, linked their regimes and their political futures more closely to the Axis.

Anti-Comintern Pact Extended. The Fascist International, launched by Hitler Nov. 25, 1936, through the conclusion of the German-Japanese Anti-Comintern Pact, had been disorganized by the Hitler-Stalin non-aggression accord of Aug. 24, 1939. The German attack upon Soviet Russia in 1941, proclaimed as a crusade against bolshevism, enabled the Reich Government to revive and extend the international anti-Communist movement. Thirteen Governments signed the Anti-Comintern Pact when it was extended for another five years at a ceremony in Berlin on Nov. 25, 1941. Besides Germany and Japan, the Governments renewing the pact were Italy (which adhered originally Nov. 6, 1937), Hungary (adhered Feb. 24, 1939), Spain (adhered Mar. 27, 1939), and Manchoukuo. Governments adhering to the pact for the first time on Nov. 25, 1941, were Bulgaria, Croatia, Denmark, Finland, Rumania, Slovakia, and the Nanking Government in China.

At the Berlin ceremony, representatives of the contracting governments endorsed the aim of the Anti-Comintern Pact and agreed "to lend mutual aid and cooperation in the extermination of the Red peril and its agents at home and abroad." Six of

these Governments, however, were not at war with the Soviet Union. All of the 13 signatories represented Fascist or pro-Fascist regimes except the spokesmen for Denmark and Finland. The Danish Government acted under compulsion, the Finnish Government because it had linked its military and strategic interests with those of the Reich. Missing from the roster was the pro-Fascist Vichy Government in France, which nevertheless officially endorsed Hitler's anti-Communist "crusade" in Russia and encouraged the recruitment of French volunteers for service with the Germans on the Russian front.

German diplomacy utilized the Anti-Comintern Pact as an instrument of warfare in the struggle with the democratic powers. Addressing the representatives of the anti-Communist powers, Foreign Minister Joachim von Ribbentrop declared that although the Axis armies were destroying the Moscow stronghold of communism, the anti-Comintern bloc faced an equally important task of eradicating the "germ cells" of communism in other countries. The Anti-Comintern Pact was described as a "corridor to the Tripartite Pact," the military alliance between Germany, Italy, and Japan. The Axis partners thus made plain their intention to use the Anti-Comintern Pact in enlisting all of the anti-Communist powers in the military struggle with both Russia and the Allied democracies. There were reports that the Anti-Comintern accord signed at Berlin contained secret clauses pledging the signatories to military collaboration under certain circumstances.

Throughout the occupied countries of Europe, the Axis powers continued their efforts to eliminate the remnants of democratic institutions and to win the inhabitants over to Fascist principles and methods. As described in the separate articles on each country, this campaign everywhere encountered stubborn resistance. There was also a revival of anti-Fascist activity by the underground Communist movement throughout occupied Europe and even in the Axis countries after the outbreak of the German-Russian war (see COMMUNISM).

Latin America. Nazi, Fascist and Spanish Falangist propaganda in the Latin American countries encountered more formidable opposition than in previous years. This was due partly to the further clear revelation of the revolutionary aims of the Fascist totalitarian dictatorships in Latin America and partly to effective counter measures by the United States. Plots for the overthrow of the existing governments and the installation of pro-Nazi regimes committed to cooperation with the Axis were uncovered in Argentina, Bolivia, and Chile during 1941. After these conspiracies were crushed, the governments in each case undertook investigations that revealed extensive and well-organized preparations, principally among the German colonies but with the cooperation of some pro-Fascist native elements, for the seizure of power. See ARGENTINA, BOLIVIA, CHILE, and COLOMBIA, under *History*.

These revelations provoked a general revulsion against the Axis powers that was furthered by the subsequent numerous executions of hostages in German-occupied countries of Europe. The executions in France, with which the Latin American countries had close cultural ties, provoked widespread indignation. Led by Chile, a dozen Latin American governments formally protested to Berlin against these atrocities. The Catholic Church in Latin America, while hostile to cooperation with the Soviet Union, refused to recognize the German claim that the Reich was defending European

Christian civilization against bolshevism. Speakers at the international Catholic Youth Congress in Bogotá, Colombia, in July warned that "Nazi paganism" was the most immediate danger to the Christian spirit in Europe.

The United States contributed effectively to the weakening of pro-Fascist and anti-democratic activities in Latin America by a coordinated diplomatic, economic, and cultural campaign (see PAN AMERICANISM). Its most potent weapons were the confidence aroused in Latin America by the "good neighbor" policy; the loans and other financial-economic assistance extended to every Latin American country, particularly by the Export-Import Bank of Washington (q.v.); and the blacklisting of pro-Axis individuals and firms in Latin America.

During the first part of 1941 hundreds of pro-Axis representatives of United States exporting firms were dismissed at Washington's instigation, thus cutting off an important source of revenue for anti-American propaganda. Beginning on July 17, the U.S. Government issued a series of lists of pro-Axis and anti-American individuals and firms in Latin America to whom the exportation of articles and materials from the United States was prohibited as "detrimental to the interest of national defense." Since United States manufactures were virtually the only ones available, this dealt a severe blow to Axis nationals and their Latin American collaborators.

As a result of these various developments, the governments of Argentina, Bolivia, Brazil, and Uruguay agreed to cooperate in exchanging information on Nazi activities. Steps were taken to curb Axis propaganda in virtually every Latin American country. Axis consulates were closed in Cuba, Mexico, and most of the Central American republics. After Japan, Germany, and Italy declared war on the United States in December, all of the Central American and Caribbean republics entered the war on the side of the United States. The other Latin American republics either severed diplomatic relations with the Axis powers or opened their harbors and airports to the United States defense forces.

Thus the end of 1941 found fascism on the defensive throughout most of Latin America. However in many of these republics native totalitarian influences remained strong, especially in the armed forces. In Argentina, Brazil, and some other countries, there was serious danger of army coups that would bring anti-democratic and pro-Axis governments to power.

United States. The U.S. Government also initiated a drive to root out Axis propaganda activities at home. In March the Federal authorities indicted the German-controlled Transocean News Service and its two chief editors for failing to register under the Foreign Agent and Registration Act of 1938. The agency was convicted and fined \$1,000 on July 25. A District of Columbia court on July 11 convicted Friedrich Ernst Auhagen, former Columbia University professor, on a similar charge. He was sentenced to serve eight months to two years in prison and pay a fine of \$1,000. The Government charged that Auhagen formed the American Fellowship Forum as a blind to disseminate Nazi propaganda. On October 8 George Sylvester Viereck, famous pro-German propagandist of World War I, was arrested in New York on charges of withholding information concerning his propaganda activities from the State Department. He was registered as a publicist for German interests.

In June the Federal Government closed German and Italian consulates, the German Library of In-

NECKLINES

formation, and various other Axis propaganda agencies in the United States which were active in creating opposition to the Administration's foreign policy. The Dies Committee continued its revelations of Axis activities. In December it reported that preliminary investigations showed an influx of German-Americans connected with Nazi "front" organizations into the isolationist America First Committee. Nearly 12 per cent of the 11,000 members of the German-American Alliance of Chicago were found to be enrolled members of the America First Committee.

On January 31 nine national leaders and associates of the German-American Bund were sentenced to 12 to 14 months in State prison at Newton, N. J., on charges of violating the State's "race hatred" law in speeches at the Bund's Camp Nordland the previous June. On May 30 Camp Nordland was closed by State authorities as a nuisance, and early in June the State Legislature voted unanimously to revoke the charter and incorporation of the German-American Bund Auxiliary, owner of the camp. When the Bund sought to evade this action by transferring ownership of the Camp Nordland to 217 individual members, the State Assembly passed a bill authorizing confiscation of property owned and used by persons advocating overthrow of the government or engaging in subversive activities. The State then took possession of the property. On December 5 the State Supreme Court freed the nine Bund members convicted January 31, holding that the "race hatred" law violated the free speech provisions of both the Federal and State Constitutions.

A few hours after John Arena, editor of a Chicago Italian-language newspaper, gave information to the Dies Committee on Italian Fascist activities in the United States he was assassinated (April 15). Chairman Dies then revealed that a number of the Committee's witnesses and informers had been "subjected to physical injury and intimidation." As

a result of investigations by the Dies Committee, the Federal Bureau of Investigation, and other agencies, a large number of individuals suspected of pro-Axis activities or sympathies were dismissed from positions in factories working on war orders and from other defense establishments. When Japan, Germany, and Italy declared war on the United States in December, several thousand Axis nationals were immediately rounded up and interned. Offices of the German-American Bund and the German-American Business League in New York City were closed. The House of Representatives on December 19 passed a bill requiring these two organizations to register at the Department of Justice and identify for public record their officers, directors, and members. Fourteen members of a German spy ring were convicted in a Brooklyn, N. Y., U. S. District Court on December 12 of espionage and failure to register as German agents.

Entrance of the United States into the war adversely affected native Fascist movements and publications. William D. Pelley's anti-Semitic magazine, *The Roll Call*, suspended publication December 14.

FASHION EVENTS. The unsettled condition of the world was mirrored in the fashion picture of 1941. Completely cut off from the stimulus of Europe for the first time American manufacturers and designers stood alone, but early in the year defense work hampered and retarded production to the point that originality and innovations became almost impossible. The fashion developments of the year finally resolved themselves into a program of classicism and revival. See **GARMENT INDUSTRY.**

However, new influences were brewing which in

time must have an important effect on American fashion. There was an influx of cultured and wealthy refugees, of important artists, painters, sculptors, designers. Thus, though the fashion history of the year was singularly uneventful, the promise for the future is brilliant. The talent of the world is now centered in America and here, too, are women with the taste and time and money to wear fine clothes. These are the essential ingredients of creative fashion.

Perhaps the most unusual fashion events of the year were, first, the gathering of department store and specialty shop buyers to attend a showing of the collection of California designers held on the West Coast in the spring. Purchases were heavy. The second was the organization of the Dress Institute in New York City. This organization consists of a group of apparel manufacturers whose desire it is to publicize the fashion importance of a New York label in ready-to-wear. They launched an extensive advertising campaign through newspapers and magazines.

The visit of the Duchess of Windsor, famed creator of style trends, occurred in the early fall but failed to leave any noticeable new impress on fashion, though her origination of a simple basic dress worn with elaborate jewelry continued to be the most widely favored of styles. As a result the poorest paid servant will scarcely be seen with a naked lapel.

Retail buying trends became more pronounced in the pattern adopted during the past few years. The manufacturers of ready-to-wear apparel who established factories in the Middle West and those operating on the West Coast, continued to maintain their importance to the regret of the needle trades of New York City who are eager to hold this business. But it is now estimated that 75 leading stores bought 10 per cent of their merchandise in Chicago, while buyers in cities of 15,000 and less, finding the trip to New York too expensive,

concentrated their buying in five cities—Chicago, St. Louis, Dallas, San Francisco, and Los Angeles.

Fashion Organizations. The Fashion Group, a non-commercial organization of professional women, organized in New York now has eight regional groups located in principal cities throughout the United States and a total membership of about 980. Luncheon meetings are held monthly at which various phases of fashion are discussed by prominent speakers. The purpose of the Fashion Group is to "advance the principles of applied art in industry and to foster good taste in fashion; to encourage the cooperation of those engaged in conceiving, designing, and executing fashions, and through proper education and the dissemination of useful information, to inspire a keener interest in fashions to the end that those engaged in the field of fashion may better serve themselves and the public at large."

Fashion Developments. For the first time in fashion history, American manufacturers stepped into the field of creating instead of merely adapting foreign fashions. In the spring sloping shoulders took the preference over padded ones that had for so long been in vogue and this trend became more pronounced as the year progressed. The dolman sleeve was revived, but was not widely welcomed. Necklines plunged downward, and skirt hems which began to be uneven during the summer reached the ankle-bone by winter for dancing costumes, but remained as short as ever for sportswear. However, this development indicates a trend that may become more pronounced during the coming year. The bouffant skirt with basque blouse was most popular for formal wear, and the dirndl gathered even more devotees. There was a revival of many World War I fashions—the peplum, the draped skirt, the middy-blouse, the two-piece dress, and of sequins, beaded trimmings, with emphasis on jet.

Textiles echoed our sympathy with China. There was an extensive promotion of silk and rayon yard

Tunic—Pleats—Dirndl—Harem Drape—Tiers

Courtesy of Bloomingdale's, New York

goods printed with Chinese motifs which were sold for the benefit of that war-ridden nation. Shantung staged an important return. Taffeta and cotton came into increased favor, but rayon and wool held their own. In ready-to-wear apparel pure silk (except shantung) became almost unheard of save in the luxury brackets and there it appeared less often. On the whole, textiles showed much less variety in texture, color, and design as defense activities retarded production. The use of poor quality materials by apparel manufacturers of ready-to-wear and many sales of quality yard goods created a more than usual popularity for the dress-maker.

The color spectrum was all inclusive, with purple tones enjoying a brief vogue in the spring and various shades of red taking center-stage for the majority of the months. Navy was more than usually popular and yellow gained some ascendancy in the spring and summer. There was an endeavor to promote a Latin-American shade of sharp pink under various titles, both historic and naughty. The monotone costume gained followers in the luxury brackets through fall and winter and showed a tendency to continue into the new year and increase in acceptance.

Sportswear unquestionably showed the greatest originality and fine taste in material, design, and tailoring. For beach wear the slogan might have been "the less suit the more sun." The bared midriff was practically unanimous. For winter sports, particularly skiing, costumes combined practicality with charming imagination and color selection. The Southwest, the Hawaiian, the Latin-American influence was obvious in colors and motifs.

The reefer and the short boxy, mannish sport coat continued in popularity, while China devotees reinstated the Coolie Coat in more expensive fabrics and in fur. But 1941 was definitely a suit year with tweeds and gabardines strongly in favor. Collegians became more enthusiastic over "men's wear" fashions, even to doing their shopping for jackets, sportswear, and even underwear in the men's shops of department stores. Jackets, sweaters, skirts, with a good "date dress" of velveteen, rayon, or sheer wool, and a "formal" comprised the usual wardrobe of the Collegian—with a fur coat added if weather required. Flower hats held favor throughout the year but the summer saw great preference for caps and cartwheels, with high built turbans holding first place from the year's beginning to end. Veils were everywhere, and plumes and fur trimming appeared occasionally when the fall and winter set in.

The cosmetic picture was painted in even darker colors than the previous year. Lipsticks in deep South American shades were presented in the spring but were heightened to magenta in the fall. The demand for fancy-formed perfumed soap and bath luxuries increased even above the previous year, and the 10 per cent federal tax levied on all cosmetics did not lessen the demand. With the curtailment of silk importation several cosmetic firms presented a preparation to paint the legs in lieu of stockings, but scored little success as the need was not yet come. Novelty packages of cosmetics for gifts were more numerous and amazing than ever before and were eagerly purchased despite taxes. Everywhere cosmetic shoppers were heard to say they were having one last fling before war frugalities set in, though the cosmetic business is one that has always flourished in time of war.

In August hoarding began. Announcement of a discontinuance of silk imports sent crowds rushing to stores to buy silk stockings and silk underwear.

This furore lasted about ten days, then quieted. But, in the stores handling more expensive apparel the sales of quality materials and better clothes of classic design continued brisk through September and October. Purchases of corsets, brassieres, and shoes were high from fall through the balance of the year indicating hoarding of rubber and leather goods. Hoarding of metal lipsticks and compacts began as war priorities threatened the metal supply.

The last week in September, sales reached a phenomenally high peak, forced upward by the fact that federal taxes on luxury merchandise—jewels, silver, toilet preparations, fur, luggage, et cetera, were to go into effect October 1. Notwithstanding the tax, sales on these luxury articles, amazingly so on jewelry, continued to be good until December. The demand for more and bigger jewelry, real or simulated, was unanimous throughout the year. Buying of fantastic costume jewelry reached new heights as rumors of war priorities threatened the use of metals for any but defense purposes. Many war activities used jewelry in the form of pins and compacts for propaganda.

America's declaration of war on Japan and the Axis set an immediate damper on sales, especially in coastal towns. The demand for formal wear, usually brisk previous to the holidays, slumped but the year closed on a note of resolute brightness. Taking the cue from the women of Britain, Russia, and China, who had retreated behind dull clothes and then cast them aside as being agents of the defeatists, fashion originators agreed not to promote drab clothes. The public realized that patriotism called for gaiety rather than a descent into gloom. There was an upsurge in the demand for gay colored daytime dresses—bright green, red, gold. The American women resolved to eat to be fit, dress to be gay, make-up to look lovely, as a brave gesture to build morale.

FCC. Federal Communications Commission.

FEDERAL BUREAU OF INVESTIGATION (FBI). As the black smoke of a world at war rolled higher in international skies during the year 1941, the duties and responsibilities of the Federal Bureau of Investigation increased manifold. To keep abreast of the great increase in its work due to national defense matters, the FBI has tripled its personnel. Since early in the year 1939, thirteen new field offices have been opened in cities of strategic national defense importance throughout the United States and its territories. In the fiscal year ending June 30, 1941, a total of 68,368 matters pertaining to national defense were received as against 18,885 in the fiscal year 1940.

Newly appointed Special Agents must be between the ages of 23 and 35, and graduates of accredited law schools or recognized accounting schools with three years' commercial accounting or auditing experience. Applicants are considered who have academic degrees and extensive investigative experience or a working knowledge of a foreign language.

The FBI was designated by the President in 1939, to serve as a clearinghouse and coordinating agency to handle law enforcement activities in connection with national defense matters. The FBI

Law Enforcement Officers Mobilization Plan for National Defense was immediately placed into operation. At the 1,034 conferences held during the last fiscal year dealing with investigative problems arising out of national defense cases, 30,372 representatives of over 7,000 key law enforcement agencies attended. Weekly conferences between officials in charge of Military Intelligence, the office of Naval Intelligence and the FBI have resulted in close cooperation and the solving of mutual problems.

While 412 convictions were secured in national defense cases during the year, in handling its national defense program the FBI considers preventive measures as the most effective means of providing internal security for the nation. Since September, 1939, the FBI has conducted plant surveys of key factories designated by the Army and Navy as being vital to national defense. The year 1941 witnessed the completion of 1,359 surveys, the sole purpose of which is the prevention of sabotage and espionage.

The investigative activity of the FBI resulted in 6,182 convictions during the year, more than in any former fiscal period. Convictions were secured in 96 per cent of the cases investigated by the FBI which were brought to trial during the year. Sentences imposed as a result of the 6,182 convictions totaled 5 life, 16,648 years, 11 months, and 6 days. Savings, fines, and recoveries resulting from the cases amounted to \$8,650,272.29. Special Agents of the FBI located and apprehended 2,633 Federal fugitives from justice during the year. In addition, 7,102 fugitives were located for State, county, and municipal law enforcement agencies when their fingerprints were identified by a search through the fingerprint files of the FBI.

Alleged violations of the Selective Training and Service Act are within the investigative jurisdiction of the FBI. In this type of case, 226 convictions were secured during the year with the imposition of sentences totaling 351 years and 15 days. Since the Federal Kidnaping Act was passed on June 22, 1932, 204 cases of kidnaping and conspiracy to kidnap have been investigated by the FBI. All but two of the cases have been solved and they remain under active investigation. Twenty kidnaping cases occurred during the past fiscal year and all were solved. The FBI investigated a total of 889 bank robberies from the time of the enactment of the Federal Bank Robbery Act on May 18, 1934, until June 30, 1941, resulting in 610 convictions in Federal courts. During the fiscal year 1941, 137 convictions were secured in Federal courts. During the fiscal year 1941, 4,671 stolen motor vehicles valued at \$2,240,742 were recovered in cases involving violations of the National Motor Vehicle Theft Act. Federal court action resulted in 2,282 convictions.

Seventeen sessions of the FBI National Police Academy have been completed since the course was started in 1935. A total of 591 selected representatives of municipal, county, and State, and other Federal law enforcement organizations have completed the training course in the FBI National Police Academy and have returned to their respective communities to establish police training schools. Through the graduates advanced police training has been made available to 89,000 police officers.

A total of 8,759,782 fingerprint records were received in the Identification Division for the fiscal year 1941, an amount greater than the total volume of prints received during the entire seven preceding years. Created in 1924, with a nucleus of 810-188 fingerprint cards, the Identification Division, at the end of the fiscal year 1941, contained 21,741,008 sets of fingerprint cards.

A total of 4,282,415 alien registration fingerprint cards were received for filing by the FBI in the fiscal year 1941. The expansion of the Federal Civil Service resulted in the contribution of 499,085 sets of fingerprints to the FBI. The fingerprints of over 64 per cent of all persons arrested during the year were identified with criminal records when searched through the FBI files. A new high of 11,348 contributing law enforcement agencies was reached.

The Technical Laboratory of the FBI received additional burdens as a result of the increase in volume of national defense work. As compared with 7,097 examinations made in 1940, 14,589 were made by FBI technicians in the fiscal year 1941. Assistance was given other government agencies in 335 instances and to municipal, county, and State law enforcement agencies in 1,670 instances. Laboratory experts testified in court in 99 cases. Their testimony was made available to prosecutors in State court criminal proceedings in 23 different States and the District of Columbia.

The FBI has since September, 1930, served as a central clearinghouse for the collection, tabulation, and publication of nation-wide crime statistics. A total of 4,369 law enforcement agencies throughout the United States, its territories and possessions contributed crime reports to the FBI the past year.

FEDERAL COMMUNICATIONS COMMISSION (FCC). See COMMUNICATIONS; MUSIC; NEWSPAPERS AND MAGAZINES; RADIO; TELEPHONY.

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA. An organization established in 1908 by 28 Protestant denominations to act for them in matters of common interest. At the end of 1940 it included most of the major Protestant denominations of the United States.

The total number of communicant members included in the Council's constituency in 1941 was approximately 23,000,000, counting only those 13 years of age and over. The Presbyterian Church in the United States (South) and the Church of the Brethren joined the Council in 1941.

The program of 1941 was marked by a strong emphasis on the new tasks created by the war. The Commission on Army and Navy Chaplains opened an enlarged office in Washington, D.C. The Commission on Camp and Defense Communities was created, with the collaboration of the Home Missions Council, to assist the churches facing enlarged responsibilities because of their proximity to camps or new wartime industries. A Committee on Conscientious Objectors represented the interest of the cooperating churches in the men rendering their "work of national importance" in civilian camps. A Committee on Foreign Relief Appeals, with the collaboration of the Foreign Missions Conference, coordinated the efforts in behalf of refugees, prisoners of war, the suffering in China, children in unoccupied France, missionaries cut off from their normal bases of support, and church groups undergoing unusual privation in Europe. A Commission on Aliens, with special reference to interned aliens in America, was established after the United States entered the war. A Commission to Study the Bases of a Just and Durable Peace was appointed.

The Council continued the National Christian Mission in a dozen centers of population. Interdenominational conferences on family life, on religion and health, on Christian social work, on inter-racial cooperation and on public worship were held in

the different regions of the nation. Ten religious programs over national radio networks were presented each week throughout the year. *Information Service* was published weekly as an analysis of social, international and inter-racial problems of special interest to the churches and the *Federal Council Bulletin* as the official organ of the Council.

Among the important pronouncements of the year were messages on the relation of the Church to racial problems, industry, rural life and the war.

Officers during 1941 were: President, Dean Luther A. Weigle; vice-president, Rev. Albert E. Day; treasurer, Frank H. Mann; and general secretary, the Rev. Samuel McCrea Cavert. National offices are at 297 Fourth Avenue, New York City. An office is also maintained in the Woodward Building, Washington, D.C.

FEDERAL HOUSING ADMINISTRATION (FHA). The Federal Housing Administration, established in June, 1934, pursuant to the terms of the National Housing Act, insures qualified lending institutions against loss on home mortgage or property improvement loans which conform to FHA requirements. The purpose of the FHA program as defined by Congress is "to encourage improvement in housing standards and conditions" and "to provide a system of mutual mortgage insurance."

During 1941 FHA activity was the greatest in its history. All types of insurance written amounted to \$1,185,852,709 as compared with \$1,026,049,609 written in 1940. The total amount of insurance written to date by FHA amounts to \$5,262,117,385. All of the funds involved were advanced by private lending institutions, as FHA lends no money.

Under Title VI, the amendment of Mar. 28, 1941, of the National Housing Act, FHA is authorized to underwrite mortgages to an amount not exceeding \$300,000,000 covering new one- to four-family homes, with mortgages limited to \$4,000 on single family homes and \$10,500 on four-family homes in designated defense areas. As of Dec. 31, 1941, 40,793 mortgages amounting to \$146,413,340 have been accepted for insurance under Title VI. Not all defense activity is reflected under this title, however, as homes valued under \$6,000 or renting for \$50 or less a month in defense areas may be insured under Title I and Sections 203 and 207 of Title II and so be eligible for priority preference for critical materials.

Title II mortgage insurance activity reached its highest point in 1941 when 198,799 small home mortgages amounting to \$876,707,384 were insured under Section 203, and 27 rental housing projects for \$12,997,841 providing 3,001 dwelling units were insured under Section 207. To date 832,822 small home mortgages amounting to \$3,583,060,123, and 344 rental housing projects amounting to \$139,950,516 and providing 37,000 dwelling units have been insured.

Title I activity also was at its highest, 687,827 property improvement loans amounting to \$282,716,234 being insured. Since the start of the FHA program, a total of 3,697,061 loans aggregating \$1,525,675,496 have been insured under this title. Of this volume, since Feb. 3, 1938, 33,000 new small-home mortgages totaling \$84,000,000 have been insured under the provisions of Class 3 of this title.

FHA activities are carried on without cost to the Federal government. Its income, derived from insurance premiums, inspection fees, and other sources, substantially exceeds its operating expenses and insurance losses, and results in large additions

each year to its reserves against possible future losses.

ABNER H. FERGUSON.

FEDERAL LOAN AGENCY. An agency of the United States government under which are grouped those agencies established for the purpose of stimulating and stabilizing the financial, commercial, and industrial enterprises of the nation. The component agencies are: Electric Home and Farm Authority; Export-Import Bank of Washington (q.v.); Federal Home Loan Bank Board; Federal Housing Administration (q.v.); Reconstruction Finance Corporation (q.v.). Administrator in 1941: Jesse H. Jones

FEDERAL POWER COMMISSION. See ELECTRIC LIGHT AND POWER.

FEDERAL RESERVE SYSTEM. See BANKS AND BANKING; also, BUSINESS REVIEW.

FEDERAL SECURITY AGENCY. An agency of the United States government under which are grouped those agencies whose major purposes are to promote social and economic security, educational opportunity, and the health of the citizens. The component agencies are discussed in the following separate articles: CIVILIAN CONSERVATION CORPS; EDUCATION, OFFICE OF; FOOD AND DRUG ADMINISTRATION; NATIONAL YOUTH ADMINISTRATION; PUBLIC HEALTH SERVICE; SOCIAL SECURITY BOARD. Administrator in 1941: Paul V. McNutt.

FEDERAL TRADE COMMISSION (FTC). See GARMENT INDUSTRY.

FEDERAL WORKS AGENCY. An agency of the United States government under which are grouped those agencies dealing with public works and administering Federal grants and loans for the purposes of construction. The component agencies are: Federal Fire Council; Public Buildings Administration; Federal Real Estate Board; Public Roads Administration; Public Works Administration (q.v.); Housing Authority, U.S. (q.v.); and Work Projects Administration (q.v.) Administrator in 1941: John M. Carmody. See CONSTRUCTION INDUSTRY.

FENCING. Dr. Norman C. Armitage, three times Olympian, bested the nation's leading sabermen to become the lone holdover fencing champion in 1941. This steel-armed veteran retained his championship, while all other titleholders, individual and team, were being shuffled back. But at that there was only one newcomer to the purple ranks—Dean Setrulo, captain of the Seton Hall College swordsmen, who won the national foils crown while still a collegian, a rare feat. Gus Heiss, of the U.S. Army, regained the national epee title in the heated milling which saw the defending champion, Capt. Fred Siebert of St. Louis, leave in the first round. The women's title was taken by Miss Helene Mayer, absolutely tops among women fencers, and the three-weapon bauble fell to Miguel A. de Capriles. The New York Athletic Club took the team foils crown, with the epee title going to the Fencers Club of New York City and the saber to the Salle Santelli of the same place, and the Fencers Club accounting for the women's foils.

Among the collegians, New York University remained supreme, winning the three-weapon title

and two of the three other team championships. The Violet took the foil and epee while Harvard and C.C.N.Y. tied for saber honors. The individual foils crown fell to Charles Steinhardt of St. Johns, the epee to Arthur Tauber, N.Y.U. left hander, and the saber to Griffith Stokes of the U.S. Naval Academy. Miss Grace Acel of William and Mary won the women's college title.

FII. A British crown colony in the southern Pacific, consisting of some 250 islands (80 inhabited) and the dependent islands of Rotuma. Total area, 7,083 square miles; total population (Jan 1, 1940), 215,030, (including 102,750 Fijians, 94,966 Indians, 4,259 Europeans, 2,054 Chinese, 4,968 of European and native descent, 2,991 Rotumans, and 3,042 others. Suva (capital), including suburbs, had 15,522 inhabitants (1936). Chief products. sugar, copra, bananas, pineapples, copal, native foodstuffs, and gold (115,742 troy oz. produced in 1940, three mines—Emperor, Loloma, and Fiji Mines—produced gold valued at £970,646 during 1940). Hard and soft woods are produced from the forests. Livestock (1938-39): 70,000 cattle, 18,000 goats, 3,000 swine, 1,300 horses, donkeys, and mules. Trade (1939). £1,624,054 for imports; £2,746,207 for exports. Shipping (1939): 1,895,443 tons entered and cleared Finance (1939): £930,866 for revenue, £1,095,928 for expenditure Public debt (Dec. 31, 1939), £1,574,692. Estimated expenditure for 1941: £1,034,742. The colony is administered by a governor, aided by an executive council. There is a legislative council of 32 members including the governor as president Governor of Fiji and High Commissioner for the Western Pacific, Sir Harry Luke (appointed June 26, 1938).

History. A hurricane reaching a wind force of 110 miles per hour swept through the eastern part of the islands on Feb. 20, 1941, causing extensive damage to property. Most of the telephone and power lines were blown down, many small vessels were blown ashore and a number of small yachts were lost or wrecked. There were only two fatal casualties. Fiji, on Nov. 10, 1941, became a link in the transpacific air service of Pan American Airways in the route from San Francisco to New Zealand when the first pacific clipper in regular scheduled service reached Suva.

FINANCE. See BANKS and BANKING; BUSINESS REVIEW; FINANCIAL REVIEW; PUBLIC FINANCE; articles on countries and States under *Finance.*

FINANCIAL REVIEW. The intensification of the domestic armament program, adoption of the lease-lend program for aid to nations fighting aggression and the outbreak of the war with Japan affected the nation's financial system to a remarkably mild

degree. The series of international crises preceding the beginning of the European war in 1939, the adjustment of the financial markets to the epoch-making events of 1940 and the numerous controls already established by the Treasury, the Federal Reserve System, and the Securities and Exchange Commission all contributed to cushioning the structure of finance against the new shocks and strains.

During the period 1934 to 1940, inclusive, the importation of almost \$16,000,000,000 of gold had been a dominant financial development. The unprecedentedly heavy inflow of gold from abroad had swelled bank reserves and deposits, and had been the key factor depressing interest rates. In 1941, however, the American financial system was largely cut off from the eastern hemisphere. Trade with Great Britain was shifted to a lease-lend basis in large part, except for outstanding commitments under orders placed in the United States before the lease-lend law was passed. Alien funds within this country were registered, and in large part frozen. The American financial system thus became virtually independent of foreign influences, at the same time that the entry of the nation into the war produced a vast expansion of Government spending, sharply higher taxes, and a very obscure economic outlook.

Security Markets. Stock prices declined during the first six weeks of the year as heavy British ship losses clouded the war prospects and greatly increased taxes loomed ahead. The successful Greek resistance to the Italians contributed to a mild rally in March, but the new Allied reverses in the spring were accompanied by another wave of liquidation that brought the level of share prices almost back to the low point of the June, 1940, break. Unexpectedly firm Russian resistance to the German invasion in the summer, however, stimulated rallying tendencies. In the closing months of the year, the stock market suffered intermittent periods of weakness which caused the industrial share price average to touch the lowest point since 1938. Sales to realize losses for tax purposes, and in many instances to register profits, occurred on an unprecedented sale, as taxpayers generally feared that the capital gains and losses provisions of the revenue act would be made less favorable in 1942. The high rates of income taxation in effect further stimulated realization of capital losses. The Japanese attack on Pearl Harbor caused a brief flurry of liquidation, but the market was orderly, and the selling soon petered out. Throughout the year, the market largely ignored the record volume of industrial activity and the increased earnings reported by the great majority of corporations. The apathy of investors and speculators reflected the view that taxes and restrictions would soon check the rise in profits, and that postwar economic prospects were very dubious for most industries.

The highs and lows of the *New York Times* stock price averages during each month of 1941 were as follows:

NEW YORK TIMES STOCK MARKET AVERAGE, 1941
[60 Stocks—25 Rails and 25 Industrials]

Month	High	Low	Last
January	96.60	89.59	89.74
February	90.08	84.54	87.34
March	88.63	86.40	88.14
April	90.08	83.57	83.75
May	86.01	83.27	84.38
June	90.39	84.27	89.33
July	94.70	88.93	93.38
August	93.62	90.39	91.83
September	92.56	89.91	90.80
October	90.93	84.48	84.81
November	86.71	80.63	80.88
December	83.98	74.95	78.13

Stocks of companies that did not benefit materially from wartime activity, while having to pay greatly increased taxes, fared worst in the market movements for the year. Public utility, tobacco, and instalment finance shares were among the hardest hit. The gradual curtailment of automobile production during the year darkened the earnings outlook for this industry, and made for weakness in motor shares. On the other hand, shares of companies receiving large armament orders held up relatively well in many cases, while railroad securities were helped by the favorable tax position of this industry due to the large interest deductions from taxable income made possible by their large outstanding indebtedness and the high invested capital which reduced liability for excess profits taxes.

The high, low and closing prices of leading issues listed on the New York Stock Exchange during 1941 were as follows:

PRICES OF THE MOST ACTIVE STOCKS, 1941

December. A slight softening of quotations in the spring was followed by renewed firmness as insurance companies and banks bid for the limited available supply. Long-term Government and corporate obligations advanced in price up to the actual outbreak of the war, and the decline in December was relatively moderate, although limited official support was forthcoming from the Federal Reserve banks. Short-term interest rates did rise considerably, but this was a direct reflection of the decline in excess reserves of the banks. Weakness in prices of short-term Treasury securities failed to affect the long-term bond market, where the scarcity of offerings was the chief market factor. Municipal bonds were particularly strong, rising to record high prices during the latter part of the year because of the sharply higher personal income taxes in effect and the desire of investors requiring income to obtain an assured return free from tax. After the outbreak of war, however, nervousness prevailed among municipal bond dealers and investors who feared that some way might be found by Congress to tax the income from State and municipal securities, although the Treasury insisted until after the turn of the year that it was interested only in taxing income from future issues of this kind.

The average yield of all Federal obligations with maturity or call dates twelve years or more away was 1.97 per cent in December, 1941, as compared with 1.89 per cent a year before. The yield on five high grade corporate bonds firmed from 2.59 per cent to 2.68 per cent.

Middle grade bonds, especially of railroads, were under pressure of liquidation from financial institutions, above all banks, who feared for the postwar fate of such securities when the stimulus of defense traffic would no longer be available. Defaulted railroads bonds, on the other hand, were strong because of their favorable tax position, although there was heavy liquidation of such issues in the closing weeks of the year to realize losses for tax purposes. The course of corporate bond prices, as reflected in the indices of Standard and Poor's Corporation, was as follows (see also RAILWAYS):

AVERAGES OF BOND PRICES

Number of issues	Total	Corporate		
		Industrial	Railroad	Utility
1941—January	85.3	90.5	64.3	101.2
February	84.5	89.9	62.3	100.9
March	85.3	90.2	64.3	101.3
April	85.8	90.2	65.9	101.1
May	86.0	90.1	66.7	101.2
June	85.8	90.4	65.8	101.1
July	86.3	91.1	66.6	101.0
August	86.0	91.0	65.9	101.2
September	85.6	91.2	63.9	101.6
October	85.6	91.1	64.2	101.6
November	85.4	91.0	64.0	101.3
December	83.9	90.2	61.2	100.2

The turnover on the New York Stock Exchange during the year aggregated 170,603,671 shares, the smallest since 1918. It compared with 207,599,749 shares in 1940. Sales of bonds on the New York Stock Exchange increased, in large part because of the heightened activity in bonds of railroads undergoing reorganization, to \$2,114,098,550, as compared with \$1,671,598,875 in the preceding year. The total value of all listed stocks on the New York exchange at the end of 1941 was \$37,882,000,000, as compared with \$41,890,000,000 a year earlier.

High grade bond prices were remarkably stable throughout the year, considering the rapid rise in Government expenditures and borrowing and the fact that the nation became involved in war in

Financial Regulation. Preoccupation with the national defense program resulted in a less aggressive attitude on the part of the Securities & Exchange Commission in its efforts to extend further the regulation of finance. While proceedings were carried forward to compel public utility holding company systems to conform to the integration and simplification requirements of the Public Utility Holding Company Act of 1935, at least implied recognition was given to the increasing difficulty facing these companies in selling some of their investments to the public. The SEC, in fact, specifically favored exchanges by holding companies of operating company securities for their own preferred stocks, so as not to burden the market with public offerings for sale of such blocks of stocks. The Commission did

adopt a rule requiring registered holding companies and their subsidiaries to offer new issues of securities at competitive bidding, in order to assure the existence of "arm's length bargaining."

A long series of conferences between the SEC and representatives of organizations of security dealers and the stock exchanges produced two separate sets of recommendations for amendment of the securities legislation, parts of which coincided. However, Congress did not find time to act on any of these suggestions, although some hearings were held on the proposals.

No need was found for reviving the Capital Issues Committee of the first World War period, to prevent security issues by non-essential industries. Priority restrictions prevented such industries from expanding plants and equipment in any event, while the SEC did require that the ability of a corporation to obtain preference ratings for materials required should be stated clearly on a prospectus of a security issue to finance capital expansion.

New Financing. New capital issues to finance expansion were somewhat larger during 1941 than in the preceding year, while refunding was in somewhat smaller volume. Financing to raise new capital and to refund outstanding obligations varied from month to month as follows during 1941:

NEW PUBLIC FINANCE, 1941
[Millions of dollars]

Month	Total	New Capital	Refunding
January	421	95	325
February	347	77	270
March	406	182	223
April	920	745	175
May	406	107	299
June	881	519	362
July	612	296	316
August	471	360	110
September	273	65	209
October	299	132	167
November	238	110	127
December	216	121	95

Source: *The Commercial and Financial Chronicle*

The Federal Government in 1941 raised \$4,733,000,000 through the sale of bonds and notes for new money. The Treasury adopted a policy of financing all Federal agencies through the sale of its direct obligations, offering its own four year notes on November 1 in exchange for maturing obligations of the RFC and the CCC. This change in policy in financing its agencies was based on a desire to coordinate fully the raising of money for the Federal Government, so as to eliminate sales of agency issues that might interfere with the Treasury's sale of its own obligations to finance the huge deficit produced by the national defense program. The largest Treasury issues were the \$1,307,000,-

000 of 25 year 2½ per cent bonds sold on October 20 and the \$1,070,000,000 issue of similar maturity and coupon sold on December 15, both of which were sold largely to insurance companies and banks.

With the outbreak of the war and the consequent drastic increase in the size of the prospective deficit, Treasury borrowing needs reached unprecedented proportions. While special tap issues and forced loan plans received widespread consideration, further large flotations in the open market were anticipated.

Public financing by State, municipal, and corporate issuers during the year, and comparisons with preceding years, are tabulated below.

Many corporations again sold new issues of bonds directly to insurance companies through private placements. Furthermore, when the American Telephone & Telegraph Company for the first time offered a \$90,000,000 bond issue at competitive bidding, it was bid in by three large life insurance companies so that security dealers failed to participate in its distribution. This caused alarm among investment bankers, who feared that such tactics of the insurance companies threatened to eliminate them entirely from the distribution of high grade bond issues to institutional investors. Conferences were held between insurance company executives and large bond houses, leading to informal agreements by some of the latter to act virtually as agents of the insurance companies in bidding for new issues, assuring them a large share of new offerings and a narrowing of the banker's profit margin. This trend in security distribution jeopardized more than ever the position of the small retail security distributors.

A number of brokerage houses added to their revenue by placing blocks of listed shares directly with investors through salesmen, without use of the stock exchange mechanism. A plan to establish a special market on the floors of the stock exchanges for such blocks of shares, which would be offered to dealers for resale on the floor at a concession from the quoted price, was seriously studied and debated among brokerage houses, many of whom felt that such "secondary distributions" should be effected with the aid of the stock exchange machinery, since listed securities were involved. The election of Emil Schram, president of the RFC, to the presidency of the New York Stock Exchange was expected to lead to more aggressive study of such methods of expanding income of stock exchange member firms, to offset the loss of speculative activity.

International Capital Movements. The war and the freezing of foreign funds within the United States

SUMMARY OF NEW FINANCING

[In millions of dollars]

Year	Total (New and refunding)	Total new capital	Total domestic	New Capital State and municipal ^a	Federal agencies ^b	Bonds & notes	Corporate Stocks	Foreign ^c	Total refunding

1941	5,515	2,831	2,830	521	1,272	869	168	2	2,683

^a Includes issues of noncontiguous U. S. Territories and Possessions. ^b Includes publicly offered issues of Federal land banks, Federal intermediate credit banks, Federal Farm Mortgage Corporation, and Home Owners Loan Corporation; excludes direct obligations of U. S. Treasury. ^c Figures do not include funds obtained by States and municipalities from any agency of the Federal government.

halted the inflow of capital into this country, which had been pronounced since 1935. Foreigners in Latin America and elsewhere who could withdraw capital from the United States did so in many cases, in fact, and many aliens within this country drew down their funds here for living expenses and commercial purposes. The moderate decline in foreign capital resources in the United States during the year is shown in the following table published by the Treasury Department:

NET CAPITAL MOVEMENT BETWEEN THE UNITED STATES AND FOREIGN COUNTRIES,
1935 THROUGH SEPTEMBER, 1941

[In millions of dollars Capital inflow or capital outflow (—)]

These alien capital funds and the earmarked gold held here for the account of the Bank of France and other foreign central banks provide Europe with a large backlog of liquid capital which could be used to help finance postwar reconstruction. At the end of the first World War, there was no such large fund of alien assets held intact within the United States and available for postwar use.

Foreign Funds Control. Control over foreign funds was greatly extended during the year, as part of the economic warfare waged by the nation upon the Axis countries, as well as to protect persons and corporations in occupied countries who might be compelled to surrender their American assets under compulsion by the invading forces.

The invasion of the Balkans caused the President to subject nationals of those countries, except Turkey, to the Executive Order freezing assets held by them in the United States. On June 14, the President issued a sweeping order covering financial transactions between all persons and banking institutions in the United States and other countries, requiring licenses before such payment could be effected. General licenses were immediately issued covering the British Empire, Latin America, and other specified friendly countries.

On July 17, the President authorized the publication of a "list of certain blocked nationals," which provided a blacklist of persons and concerns abroad with which Americans were not to carry on dealings. This blacklist was prepared by the State and Treasury departments, acting in conjunction with the Attorney General, the Secretary of Commerce, the Administrator of Export Control and the Coordinator of Commercial and Cultural Relations Between the American Republics. At the same time, aliens were required to register all assets held in this country, to facilitate official control.

FINLAND. A republic of Northern Europe. Capital, Helsinki (Helsingfors).

Area and Population. Following the cession of 13,558 square miles of territory to the Soviet Union by the Soviet-Finnish peace treaty of Mar. 12, 1940, Finland had an area of 134,253 square miles. Most of the ceded territory was reoccupied by the end

of 1941. Estimated population in 1938, 3,863,753. Practically all the inhabitants of the area ceded to the Soviet Union were evacuated to Finnish territory. About 90 per cent of the people speak Finnish, and most of the remainder speak Swedish. Estimated populations of the chief cities in 1937 were: Helsinki (Helsingfors), 293,237; Viipuri (Viborg), ceded to Russia, 73,917; Turku (Åbo), 72,918; Tampere (Tammerfors), 74,736; Vaasa (Vasa), 32,108. Swedish place names are given above in

parentheses.

Education and Religion. School attendance in 1938-39 was: Elementary, 403,403; secondary, 50,580; university and schools for higher education, 8,752; vocational and technical, 20,583. Less than 1 per cent of the adult population was illiterate in 1930. War damage to educational institutions in 1939-40 was estimated at 333,000,000 marks. The Technical University of Helsinki, where damage totaled 20,000,000 marks, was repaired and reopened by Oct. 1, 1940. The population on Jan. 1, 1938, included 3,680,237 Lutherans, 70,887 Greek Catholics, 9,840 Baptists and other Evangelical church members, 1,551 Roman Catholics, 1,755 Jews, and 360 Moslems.

Production. The 1930 census showed 60 per cent of the working population engaged in agriculture and 16.8 per cent in industry. About 9,000 new farms were reported established during 1940 for families evacuated from territory ceded to the Soviet Union. Nevertheless farm production was reduced an estimated 10 to 14 per cent as a result of the cession. Estimated 1940 yields of the principal crops, excluding ceded territory, were (in metric tons): Wheat, 163,000; barley, 154,000; rye, 269,000; oats, 596,000; potatoes, 1,556,000 in 1939; beet sugar, 11,700 in 1939. The volume of production of the important forest-products industries in 1940 was about half that of preceding years. Newsprint output in 1940 was 80,000 metric tons (450,000 in 1939); exports, 61,000 tons (422,000). Industrial production for domestic consumption in 1940 increased 20 per cent in value over 1939 due to price increases, although volume output declined.

Foreign Trade. Commercial imports in 1940, excluding war materials, were estimated at 5,180,000,000 marks (7,570,000,000 in 1939); total exports, about 2,870,000,000 marks (7,700,000,000 in 1939). Chief 1940 exports were (millions of marks): Lumber, 1,200; paper and cellulose, 950; metals, 200; ores, 80; hides and skins, 90; textiles, 50; foodstuffs, 70. Chief commercial imports (millions of marks): Raw materials, 2,612.7; machinery, 799.6; industrial products, 578.8; foodstuffs and luxuries, 1,188.5. Trade in 1940 was carried on mainly with Sweden and Germany.

Finance. As adopted by the Diet, the original budget for 1941 balanced at 18,130,000,000 marks each for receipts and expenditures, with more than half the anticipated income coming from loans. A supplementary budget providing for expenditure

of an additional 1,439,700,000 marks for reconstruction and relief was introduced in the Diet Apr. 30, 1941. The preliminary 1942 budget balanced at 11,100,000,000 marks. The national debt increased from 5,000,000,000 marks on Dec. 31, 1939, to 17,500,000,000 on Oct. 4, 1940 (see *History*). The average exchange rate of the Finnish mark was \$0.0216 in 1938, \$0.0199 in 1939, and \$0.0187 in 1940.

Transportation. The Finnish railways, mostly operated by the state, extended 5,107 miles in 1939. An estimated 16 per cent of the total railway mileage was ceded to the Soviet Union in 1940. To adjust the railway network to this loss, the lines Kontiomaki-Taivalkoski, Suolahti-Heapajärvi, and Orivesi-Jamsa were under construction in the spring of 1941 in addition to the Kemijärvi-Kandalaksha line provided for in the Russo-Finnish peace treaty. Highway mileage in 1940, 39,826, number of automobiles, 7,968. Air lines connected Helsinki with Stockholm and the German European network. The Helsinki-Petsamo airline was reopened June 2, 1941, by the Swedish Aerotransport. When the Baltic was closed by the war in 1939, Finland had 145 merchant ships of 230,000 gross tons in that sea and 75 vessels of 230,000 gross tons outside. Some of the latter were used to maintain a service to and from the Arctic port of Petsamo until Finland again became involved in war with Russia in 1941.

Government. The Constitution of July 17, 1919, vested executive power in a President elected for six years by 300 electors, chosen in the same manner as members of the Diet. Legislative power rests with the unicameral Diet and the President. The 200 members of the Diet are elected by direct vote of all citizens, male and female, 24 years or more of age. The cabinet is appointed by the President but is responsible to the Diet. President, Risto Ryti (National Progressive), who became Acting President on Nov. 28, 1940, and was elected President Dec. 19, 1940. For the standing of the parties in the Diet, see *YEAR BOOK*, 1939, p. 276. A government of national union, representing a coalition of the five largest political parties (Social Democrats, Agrarians, National Coalition, Swedish People's party, and National Progressives), was formed Dec. 1, 1939, upon the outbreak of the Russo-Finnish war. It was reorganized Mar. 27, 1940, and Jan. 4, 1941 (see *YEAR BOOK* for 1940). Premier in 1941, Johan Wilhelm Rangell.

HISTORY

The Pro-German Trend. During the latter half of 1940, there were strong indications that Finland was being drawn into closer collaboration with Germany as a result of Moscow's threatening attitude, its open support of the Communist movement in Finland, and Finland's growing economic dependence upon the Reich (see *YEAR BOOK* for 1940, p. 267). This trend was accelerated during the first part of 1941 by signs of increasing Soviet-German estrangement. In April and May the Finnish press reflected the belief of many Finns that a Russo-German war was inevitable and that Finland should align itself with the Reich to profit from the expected German victory.

The Finnish Foreign Minister in his annual survey of Finland's foreign relations before the Diet on March 5 declared that Finnish-Russian relations had returned "to normal." He reported that construction of the Kemijärvi-Kandalaksha railway was proceeding energetically in accordance with the peace treaty. Negotiations for certain border readjustments and for floating timber across the fron-

tier were under way, he stated. The Minister declared the two considerations dominating Finland's foreign policy were the maintenance of neutrality in the German-British war and the effort to make the best of Finland's geographical position.

Dispute over Nickel Mines. Soon afterwards Finnish-Soviet negotiations on the Soviet demand for the entire output of the Petsamo nickel mines came to an impasse. By a Finnish-Russian agreement concluded immediately after the peace treaty of Mar. 12, 1940, Russia received 60 per cent of the mines' production and Germany 40 per cent. In December, 1940, the Russians demanded the entire output. They also wanted to establish a joint Finnish-Russian company to operate the mines, with control of 51 per cent of the shares and a majority on the board of directors. The Germans, however, were reported to have refused to accept any reduction of their share of the Petsamo mines' output. Consequently Finnish negotiators sent to Moscow in January returned to Helsinki early in March without reaching an agreement. The Finnish Government later charged that the Russians threatened to use force in obtaining control of the mines.

Nazi Troops Admitted. The Moscow press on April 30 reported that 12,000 heavily armed German troops had landed at the Finnish port of Abo on April 26. This was formally denied by the Finnish Government, which explained that less than 1,300 unarmed German troops had entered Finland in transit to Norway under the German-Finnish transit accord of the preceding autumn (see *YEAR BOOK* for 1940). However neutral sources later revealed that no less than five fully armed German divisions had been concentrated in Finland under cover of the 1940 transit arrangement.

During the first week in June a group of important officers of the German Air Force visited Helsinki on an official mission. In mid-June there were further indications of a Finnish-German agreement directed at the Soviet Union. The Helsinki Government on June 13 restricted travel by foreigners in northern and central Finland, in all border districts, and along the coast of the Gulf of Bothnia. On the same day Berlin admitted the presence of German troops in Finland. About the same time the Helsinki authorities began to call up reservists and take other military precautions. Meanwhile Soviet-Nazi tension was deepening. On June 17 Finland announced its withdrawal from the League of Nations. Mobilization was virtually completed by the time general mobilization orders were posted on June 20. Women and children were evacuated from Helsinki and other cities, many of them going to Sweden.

Soviet Air Raids. In his statement of June 22 declaring war on the Soviet Union, Chancellor Hitler said that "united with their Finnish comrades" German troops were "standing in the Northern Arctic" to protect Finnish soil. On the same day Soviet planes bombed Finnish coastal fortifications and shipping. Nevertheless the Finnish Foreign Minister on June 23 announced that Finland was neutral in the conflict. According to Stockholm reports, the Finnish Cabinet and people were alike divided on entrance into the war. This indecision was ended by repeated Soviet air attacks upon Finnish ports and fortifications. After a secret meeting of the Diet on the evening of June 25, an official statement was issued announcing that because of these attacks, the Government "has decided to adopt defensive measures in which all available military forces will participate."

Ryti Proclaims War. Moscow charged that on June 23 German planes based in Finland had attacked

Kronstadt, and that on June 24 German forces crossed the Finnish-Soviet frontier near Salla. The Soviet Government notified Helsinki that in view of these developments, Finland could not be considered a neutral state. Following further heavy Soviet air raids on Abo, debarkation port for German forces in Finland, President Ryti in a radio broadcast to the nation on June 26 said that Finland was again fighting a defensive war against the Soviet Union, aided by "great Germany, under her leader of genius, Reichsführer Hitler."

Aland Islands Remilitarized. In a statement of their case issued by the Finnish Legation in Washington, the Finns recapitulated evidence supporting their charge that Moscow aimed at the annihilation of Finnish independence. The statement shed light on the situation in the Aland Islands, where Moscow had obtained the right to install a consulate after forcing the Finns to demilitarize the islands (see *YEAR BOOK* for 1940). It was charged that the establishment of the Soviet Consulate was followed by an excessive increase in its personnel and by subversive propaganda among the islanders by consular officers and employees. On June 28 Helsinki authorities announced that Finnish troops had occupied the Aland Islands beginning June 23. Swedish sources previously had stated that German troops landed on the islands 12 hours before the attack on the Soviet Union.

Finnish hopes that the Russians would collapse at once under the German assault, thus permitting the restoration of the lost territories without further fighting, proved unfounded. At the beginning of July, Finnish armed forces joined the Germans in offensive operations in Soviet territory and against the fortified peninsula of Hango, leased to Russia under the 1940 peace treaty. See *WORLD WAR*.

Tanner Reenters Cabinet. On July 3 ex-Premier Vaino Tanner, the Social Democratic leader forced out of the Cabinet in August, 1940, under Soviet pressure, reentered the Government as Minister of Industry and Commerce. Markedly strengthened by his presence, the Government for the first time informed the Finnish people of the commencement of military operations. It also sought and obtained from the Diet extensive powers for the prosecution of the war. Field Marshal Baron Carl Gustav Mannerheim, Finnish commander-in-chief during the 1939-40 struggle with Russia, was again placed in charge of the Finnish armies. In an order of the day issued July 10, he declared his determination to free not only the territories ceded to the Soviet Union in 1940 but also East Karelia, a Soviet border region with a large Finnish-speaking population.

Split on Foreign Policy. The Finnish people overwhelmingly supported the Government and the army leaders in their determination to reconquer the lost territories. But there was strong opposition to an invasion of East Karelia. In mid-August the Soviet Government indirectly offered to discuss peace on the basis of territorial compensation to Finland. This peace feeler was supported by the British and United States governments, and by a powerful faction in the Finnish Government and Diet. It was fought by the army leaders, who considered East Karelia necessary for the effective defense of Finland, and by a pro-German faction in Finland.

Signs of internal division on this issue appeared early in September, following the recapture of Viipuri (Viborg) from the Russians on August 30. Early in September six Social Democratic members of the Diet were reported arrested. At the same time Germany threatened drastic action against the Finns if they accepted peace on the

basis of the original Soviet-Finnish frontiers. In a radio broadcast of September 14 Minister Tanner stated that Finland was the Reich's ally "only by accident" and would not continue the war any longer than Finnish interests demanded, but that whatever was needed to secure Finland's frontiers must be done. The Government, he said, had no intention of making peace with Russia since the word of the Kremlin's rulers could not be trusted and the Soviet forces in any event would be defeated.

This statement, reflecting the victory of the expansionists in the councils of the Government, was followed by a joint Finnish-German drive into Soviet Karelia, and the capture of its capital, Petrozavodsk, on October 1. The struggle was continued despite growing popular opposition in Finland and the insistence of Britain and the United States that Finland cease offensive action. Early in December the Russians were driven out of Hango, their last foothold on Finnish soil. As in the case of Viipuri and other evacuated sites, they left behind ruin and destruction.

On November 25 Finland joined with other powers in signing the Anti-Comintern Pact in Berlin, but did not adhere to the Rome-Berlin-Tokyo military alliance. The Diet on November 29 unanimously voted to reincorporate in Finland, under military occupation and administration, those districts ceded to Russia in 1940. The Diet reportedly gave a unanimous vote of confidence to the Government's military and foreign policies, which called for annexation of Soviet territories on the basis of an undefined strategical frontier. In Independence Day declarations by President Ryti and Marshal Mannerheim, the Finns were told that they must fight on to final victory against the Soviet Union. However German reverses in Russia in December and the entrance of the United States into the war were followed by renewed pressure within Finland for cessation of hostilities.

Break with Britain. In January the British Government repeated its previous warning to Finland that navicerts for the passage of supplies through the British blockade would be granted only so long as Finland "refrains from any further unneutral act." The navicerts were accordingly withdrawn early in June, when the presence of German divisions in Finland became known. In mid-June three Finnish ships en route to Petsamo were intercepted and detained at a British port. Upon the outbreak of the fighting along the Russo-Finnish frontier, the Finnish Government expelled the British Consul General in Finland along with 120 Britishers who had volunteered for service with the Finnish armies against the Soviet Union in 1940. The British charged that 40 Blenheim bombers, lent by the British Government to Finland during the 1939-40 Soviet-Finnish war, were placed in the service of the German air fleet. Also that a children's home at Rovaniemi, built with British relief contributions, was put at the disposal of German troops. These developments were considered evidence of the dominant influence Germany had already acquired over Finland's internal affairs.

After Finland joined Germany in war on Russia and the Anglo-Russian alliance was concluded, relations between the Finnish and British Governments became steadily worse, although the majority of the Finns continued to show pro-British sympathies. On July 29 the Finnish Government took the initiative in severing diplomatic relations with Britain. A British air attack upon German ships and supplies at the Finnish port of Petsamo followed on July 30. Soon afterward the British

applied the full force of their naval blockade to Finland. On September 22 the British Government warned Finland that if it persisted in invading "purely Russian territory a situation will arise in which Britain will be forced to treat Finland as an open enemy not only while the war lasts but also when peace comes to be made."

The Finnish Government's reply of October 7 rejected this warning, pointing out that parts of Finnish territory were still in Russian hands. At the end of November a second British note informed Helsinki that the London Government would declare war unless Finland withdrew from all active participation in hostilities by December 5. When the Finnish Government declined to cease fighting, Britain declared war on December 6.

Relations with United States. Finland's alignment with Germany ended a long period of extremely friendly relations with the United States. On May 1, 1941, Finland agreed to pay the U.S. Government in 10 annual installments the \$235,398 war-debt payment due Dec. 15, 1940, but postponed in accordance with a joint resolution of the U.S. Congress (see the article on **WAR DEBTS**). In June Washington authorized Finland to postpone a payment due on war relief loans advanced by the Export-Import Bank of Washington in 1939 and 1940. President Ryti cabled "heartfelt gratitude" to President Roosevelt.

Upon Finland's involvement in the Russo-German conflict, the State Department announced that U.S. policy toward Finland would be "determined in the light of further information and future developments." On August 18 Washington transmitted the Russian peace offer to Helsinki, and when this was rejected joined with Britain in pressing Finland to end hostilities. On November 3 Secretary of State Hull publicly warned the Finnish Government that its course risked alienating American friendship, but his admonition was politely rejected in a Finnish note of November 11.

On November 25 the U.S. Secretary of War, Henry L. Stimson, said Finland's military threat to the Murmansk-Moscow railway, over which American supplies were reaching Russia, was directly "harmful to the interests of the United States." Secretary Hull on November 28 said that "every act of the Finnish Government since the delivery of its note (of November 11) has confirmed our apprehensions that it is fully cooperating with the Hitler forces." Finally accepting Finland as part and parcel of the Axis forces, the U.S. Government on December 6 placed 16 Finnish merchant ships in American ports under protective custody. They were taken over by the U.S. Maritime Commission on December 27.

Pressure on Sweden. Having cast its lot with Germany, Finland joined Berlin in bringing pressure upon Sweden to abandon its neutrality and participate in the war upon Russia. Under this pressure, the Swedish Government deviated from neutrality to permit passage of a division of German troops from Norway to Finland late in June, an act that drew a vigorous protest from London. It also authorized enrollment of Swedish volunteers for service in the Finnish army and reluctantly granted Finnish requests for foodstuffs and other supplies. However the Swedes clung to their neutral policy in all other respects.

Reconstruction. The Government's entrance into the war interrupted the gigantic task of reconstruction, which had claimed most of the nation's energies and resources since the peace treaty of Mar. 12, 1940 (see **YEAR BOOK** for 1940, p. 266). This

task was carried forward energetically during the first half of 1941 in the face of an acute food shortage and mounting economic and financial stress. Rations of foodstuffs were progressively reduced during the winter of 1940-41. A representative of the American Red Cross, returning from Finland in April, reported that Finnish workers were receiving less than 70 per cent of the calories needed. In mid-June a Finnish official reported a food shortage of about 40 per cent of the normal supply, with no one having enough to eat. This situation became worse in some respects during the latter half of the year.

To finance reconstruction and at the same time to check the inflationary trend already strongly in evidence, the Council of State on Jan. 13, 1941, authorized internal loans totaling 2,460,000,000 Finnish marks. Under this authority, a bond issue of 1,000,000,000 marks, the largest domestic loan in Finland's history, was offered on February 17 and was fully subscribed within four weeks. A 2,000,000,000-mark war loan was offered for public subscription September 15. The Diet on May 6, by a vote of 149 to 29, gave the Government virtually dictatorial powers over the economic system until the end of 1942. Among other things, it was authorized to regulate rents, prices, wages, tariffs, and labor conditions, as well as to conscript labor.

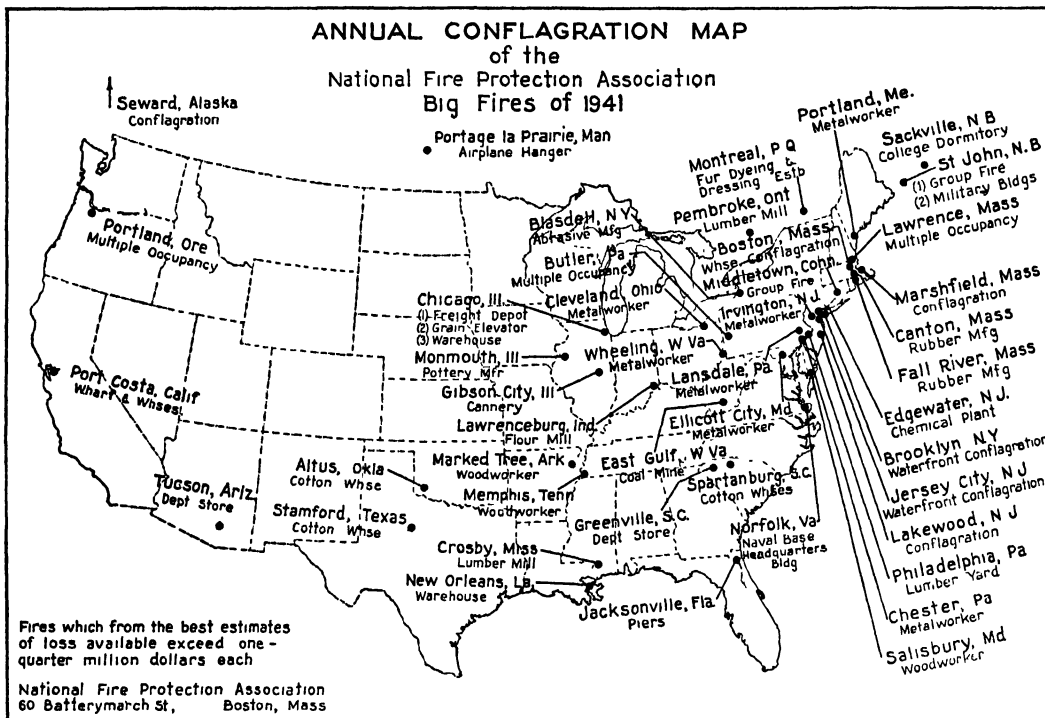

Part of the loan funds obtained went toward the purchase of armaments, the reorganization of the armed forces, and the construction of fortifications along the new Soviet-Finnish frontier. Even greater efforts went into the provision of new farms, occupations, and homes for some 470,000 refugees from the ceded territories, and the immediate expansion of the acreage planted to food crops. New factories, mines, railways, and hydroelectric plants were opened. Heavy payments were made, in cash and in bonds, under the law providing financial compensation for Finnish communities, organizations, and individuals whose properties were damaged or destroyed during the war of 1939-40.

Following reconquest of the territories ceded in 1940, refugees from the Karelian isthmus were authorized beginning August 4 to return to their former homes. By the end of October 40,500 persons, or about 10 per cent of the evacuated population, had returned. The renewal of warfare brought a tightening up of the censorship and of political as well as economic controls. On October 25 the parliamentary elections scheduled for 1942 were postponed until 1944. Heavy damage was caused to Helsinki by the blowing up of a munitions ship in the harbor on September 14. On March 7 Finland concluded an important bilateral trade accord with Germany.

See **GERMANY, GREAT BRITAIN, SWEDEN, and UNION OF SOVIET SOCIALIST REPUBLICS, under History; FASCISM; NAVAL PROGRESS; SOCIALISM; UNITED STATES under Foreign Affairs; WORLD WAR.**

FIRE PROTECTION. Fire protection and fire prevention are obviously of tremendous importance to a nation at war. War-time fire protection resolves itself into two principal problems: (1) Protection of military establishments and vital manufacturing facilities against destruction by fire due either to accidental causes, deliberate sabotage, or incendiary bombs; (2) protection of homes, commercial buildings, and stores of manufactured goods and foodstuffs where loss by fire has an indirect if not a direct effect upon the war effort.

During 1941, the most important aspects of fire control were concerned with civilian defense. The

extensive use of incendiary bombs as a weapon of modern warfare has served to focus public attention upon the destructiveness of fire and the need for some knowledge of fire prevention and protection. There has consequently been a large demand by the public as a whole for information of this kind.

With the organization of the Office of Civilian Defense in Washington, D.C., and state and local defense councils, the problem of strengthening existing fire-fighting forces in both equipment and manpower has been paramount. A survey made by the National Fire Protection Association disclosed that many fire departments are inadequately equipped and manned even for normal peace-time fire fighting. It was shown that in 365 cities of 20,000 or more population, 52 per cent of the pumps and ladder trucks are over 15 years old. While such aged apparatus is useful as reserve equipment, it can not be relied upon for front-line fire fighting. Clarification of the confused apparatus situation had not been carried through by the end of 1941, but much progress will doubtless be made in 1942. By action of the Priorities Board, new fire apparatus will be of standardized design with a minimum use of critical materials. It seems probable that a large quantity of standardized auxiliary equipment to meet emergency war needs may be purchased and provided to cities by the Federal government.

By the end of 1941 only a few cities had enlisted and trained any considerable number of auxiliary firemen, and this is also something which will doubtless develop rapidly during 1942. To provide a standard outline for training these auxiliaries, the National Fire Protection Association organized a Committee on Firemen's Training, the first endeavor of which is the preparation of a suitable training guide.

Fire losses for 1941 were \$322,357,000 or over one million dollars a month above the 1940 figure

of \$306,469,520, according to the National Board of Fire Underwriters. These figures are based upon notices of incurred loss received by insurance companies, members of the board, plus an allowance for unreported and uninsured losses. The accompanying table shows the monthly fire losses for both 1940 and 1941.

COMPARATIVE MONTHLY FIRE ESTIMATES

Months	1940	1941
January	\$36,260,650	\$26,470,000
February	34,410,250	26,102,000
March	29,788,800	31,471,000
April	26,657,190	29,330,000
May	23,446,590	25,637,000
June	19,508,000	24,943,000
July	20,322,800	23,698,000
August	20,722,100	24,122,000
September	21,198,000	24,668,000
October	22,091,140	30,833,000
November	23,449,000	23,822,000
December	28,617,000	31,261,000
Total (12 months)	\$306,469,520	\$322,357,000

According to the National Fire Protection Association, 48 fires occurred in the United States and Canada during 1941, each of which resulted in a loss of \$250,000 or more. Six of these occurred in Canada. This is an increase of 10 fires over the number reported for 1940 and is 12 greater than the average for the past five years. A total of 50 lives were lost in these fires, 21 fewer than were lost in the corresponding fires of 1940. The factors largely responsible for these fires were: inferior construction with large undivided areas and unprotected openings; excessive amounts of combustible stock subject to one fire; lack of adequate private fire protection facilities; delays in calling the fire department; and inadequate water supplies.

The largest fire of the year and the greatest single industrial loss in the United States on record occurred at Fall River, Mass., on October 11. The fire destroyed a large group of factory buildings

manufacturing rubber products and providing storage for some 18,000 tons of crude rubber. The loss from this fire approximated \$14,000,000.

The most recent study by the National Fire Protection Association of the distribution of fires by occupancies and causes discloses that for the year 1940 there were approximately 725,000 fires in the United States, about half of which occurred in dwellings. Careless smoking, sparks on combustible roofs, defective chimneys, defective heating equipment, and misuse of electrical equipment continue to be the principal causes of fire.

During 1941, firemen training activities reached a new high, both in the number of firemen trained and in the scope and quality of the training. More than 65,000 firemen from over 4,000 fire departments received training during the year under State-wide programs. This training is in addition to regular city fire department drill schools. Only four states, Arizona, South Carolina, Utah, and Idaho, do not now report some form of state-wide firemen's training.

Perhaps the most significant item in the field of publications was the book *Fire Defense* published early in 1941 by the National Fire Protection Association. This book provides a compilation of authoritative material on air-set fires, bombs and sabotage, civilian defense, fire fighting and the safeguarding of industrial production for war.

Several important new standards in the fire field were developed in 1941. These included standards on anesthetic gases and the prevention of hospital operating room explosions, trailer pumps and auxiliary pumping equipment, static electricity, and a suggested explosives ordinance for cities.

The States of Arizona, Ohio, Maryland, Minnesota, and Florida enacted satisfactory fireworks control legislation making a total of 14 States now having such laws.

Hartford, Conn., was the winner of the 1940 year-round fire prevention contest conducted by the National Fire Waste Council, while Memphis, Tenn., was the winner of the National Fire Protection Association Fire Prevention Week contest for 1941 in which 1,200 cities participated.

FISH AND FISHERIES. See ALASKA; FISH AND WILDLIFE SERVICE; ZOOLOGY. For duties on crab meat, see TARIFF COMMISSION.

FISH AND WILDLIFE SERVICE. The most important concerns of the Fish and Wildlife Service, U.S. Department of the Interior, that were distinctive of its fiscal year 1941 involved the relationship of the resources it handles to exigencies of national defense. The Service's efforts in this connection have been exerted in two ways: (1) By cooperating with every means at its command in the national defense program and (2) by taking every apparent precaution to safeguard the Nation's fish and wildlife resources against needless damage.

The emergency-period advantages of the recreational opportunities and the national pride that accompany an abundant wildlife have been emphasized. Estimates have been made of the possibilities for increasing the food supply from fisheries, which in 1939 produced 4,443,000,000 lb. of products valued at \$96,500,000. These estimates led to the conclusion that under conditions of wartime emer-

gency the yield could be increased to 4,628,000,000 lb. almost immediately and to 6,200,000,000 lb. over a period of years.

Special attention has been given to safeguarding food supplies by the control of animals that prey on livestock and rodents that destroy crops. In connection with the rodent-control work, an acute shortage of high-grade red squill, an important raticide, was noted as a result of the international situation, which has cut this country off from the Mediterranean source of supply. To meet this problem, scientists of the Service have developed a method for the practical fortification of low-grade red squill and, in cooperation with the Bureau of Plant Industry, U.S. Department of Agriculture, have taken steps to determine whether squill can be satisfactorily grown in the United States. Rat control is important at all times and especially necessary in connection with military operations.

Recognizing the wildlife danger from forces and interests ready to take advantage of any program that promises to divert attention from their own selfish activities, the Service has practiced and advocated alertness to prevent actions *disguised* as defense but designed to promote personal gain at the expense of natural resources. It has also been pointed out that misdirected zeal and inadequate forethought would result in unnecessary damage to wildlife by activities that are actually essential to defense. Such representations have received the support of conservationists throughout the country, and the necessity for precautions has been emphasized by the President and other leaders. The most definite action taken, following a request of the President, was the appointment of a liaison officer from the Service to keep informed of the activities of defense agencies that affect fish and wildlife.

Estimates compiled indicated that the big-game population of the United States in 1940 was nearly 5,850,000, of which more than 5,275,000 were deer. The annual waterfowl inventory in January, 1941, resulted in an estimate of more than 70 million ducks and geese, representing the sixth consecutive annual increase as a result of the restoration program, though the increase from the previous year's estimate of above 65 million was not so great as those noted formerly. Compilations of State reports indicated that in the 1939-40 seasons 7,646,193 persons paid a total of \$12,998,163 for hunting licenses. In the 1938-39 season, latest for which totals are available, 7,858,275 paid a total of \$10,837,168 for fishing licenses. Sales of the Federal stamp required of all over 16 who hunt migratory waterfowl continued to increase, a total of \$1,257,313 stamps having been sold in the 1940-41 year.

The Federal wildlife refuge system increased to a total of 267 refuges, with an acreage of 13,740,304. Output of fish and eggs at the 116 Federal hatcheries during the year ended June 30, 1941, approximated 6,020,000,000, a drop from the previous year's 7,400,000,000, attributed mainly to curtailment in the handling of fertilized eggs of the cod, haddock, and pollock off the New England coast. This offshore work has been considered as salvage and has been periodically adjusted to meet current conditions. Regulations governing migratory waterfowl hunting in 1941 again provided a 60-day hunting season in each of 3 zones.

The program for aiding the States in wildlife restoration became more extensive and more effective. The 46 participating States submitted and had approved 265 wildlife-restoration projects, involving Federal funds of \$2,223,486. The projects in this program, which provides for Federal payment

of 75 per cent of the cost of projects carried on by the States with Federal approval, included 73 for purchase of lands and waters adaptable as feeding, resting, or breeding places for wildlife; 101 for development of land and waters and improvement of conditions to benefit wildlife; 79 for surveys and investigations; and 12 for needed direction and supervision.

Early in 1941 The Macmillan Company published *Wildlife Conservation*, an effort on the part of the Service Director "to put into simple language the basic facts in this field." The 28 official printed publications of the 1941 fiscal year included the following: Administrative Reports 40 and 41, *Alaska Fishery and Fur-Seal Industries, 1939* and *Fishery Industries in the United States, 1939*; Wildlife Research Bulletins 2 and 4, *Food Habits of the American Coot with Notes on Distribution* and *Food Habits of the Coyote*; Wildlife Circulars 6 and 11, *The House Rat and Wildlife of Atlantic Coast Salt Marshes*; and Conservation Bulletin 7, *Plants useful in Upland Wildlife Management*.

IRA N. GABRIELSON.

FLAX. Flaxseed production in the United States in 1941 was estimated by the U. S. Department of Agriculture to total 31,485,000 bu. from 3,202,000 acres as compared with 30,886,000 bu from 3,180,000 acres in 1940 and nearly three times as large as the 1930-39 average production of 11,269,000 bu. Increase in production over 1940 was attributed to the increase in harvested acreage outside of the usual producing States (Minnesota, South Dakota, North Dakota, and Montana), as well as high yields in the Dakotas. Acre yields continued above average, 9.8 bu. versus 9.7 in 1940. Leading flax States were Minnesota with 14,858,000 bu., North Dakota 4,576,000, California 3,267,000, Iowa 3,438,000, South Dakota 2,210,000, and Kansas 1,144,000 bu. The season average price per bushel received by farmers was \$1.725 and the value of production was estimated at \$54,311,000 in 1941 compared to \$1.416 and \$43,738,000 in 1940.

Canada produced 6,473,000 bu. in 1941, and in 1940-41 Argentina produced 57,461,000 bu., U.S.S.R. 29,526,000, India 17,214,300, and Uruguay 2,165,000 bu.

FLOOD CONTROL. Recurring floods in all parts of the United States cause such great economic losses that the Federal government and various authorities are giving increased attention to means of remedying the serious situation. The losses are in deaths, personal injuries, public health and welfare, damage to property and crops, and interference with business and industry. In the aggregate, the money loss is enormous. The Flood Control bill passed by Congress in 1941 carried a total of \$272,000,000. But in view of the war emergency, many of the new works proposed will have to be deferred, and will be included in a program for post-war construction to provide employment when the vast program of war material production is ended.

Most of the projects of this kind are designed by the Corps of Engineers, U. S. Army, and are carried out under its direction, due to its control over navigable streams and their tributaries. The cost is divided between the Federal government and local communities or organizations. A complication in the financing is that since a project may be undertaken as a partnership or cooperation including the Federal government, State governments, and local agencies or authorities, it is neces-

sary to determine the money values of the losses and damage, as well as of the expected benefits, direct and indirect. The present flood-control bill requires local interests to meet the cost of lands, which is a change from the earlier financing arrangements. Funds appropriated in the Corps of Engineers for flood control during the fiscal year 1941 amounted to \$96,763,400. Its work included 155 of the total 485 general flood control projects, while local protection works were under construction at 126 widely dispersed localities.

Many of the projects are of great extent, involving control of main and tributary streams of entire drainage areas or watersheds by means of dams, levees, channels, and other works. To protect the city of Pittsburgh from floods originating on the tributaries of the Allegheny and Monongahela rivers, a series of ten detention dams is planned and has been approved. Of four dams now in service, two were completed in 1941 (on Mahoning Creek and the Loyalhanna River); a fifth is under construction, while studies and plans are being made for the others.

Although the flow of the Ohio River is now controlled by a system of dams with navigation locks, many cities along its course need protection for low-lying lands. In some cases this is provided by flood walls along the water front, as at Portsmouth, Louisville, and Paducah. At Cincinnati, the flooding of an industrial district along Mill Creek by high water in the river will be prevented by a dam with flood gates at the mouth of the creek. Normally, the flow of the creek will pass through the gates, but when these are closed to exclude flood water the flow will be pumped over the dam into the Ohio.

For flood control of the Susquehanna River, to protect a number of cities in an industrial district in the southern part of New York State, seven dams to form detention reservoirs are to be built, supplemented by levees and local protection works, in the upper part of the drainage area, at a cost of \$27,000,000. One dam was completed in 1939 and another is scheduled for March, 1942. The local works have been completed at three cities and are under way at six other cities.

Another extensive project now under construction is for control of the Connecticut River. Along its course of 300 miles are a number of important cities and manufacturing centers. The cost of 20 dams for detention reservoirs, together with levees, flood walls and other works is estimated at \$47,000,000, but as the flood damage in one year (1936) was estimated at \$25,000,000, the economy of the protection work is evident.

On the Lower Rio Grande, from Hidalgo, Texas, to the Gulf, flood protection works include a system of levees and floodways, these latter being channels excavated as branches to connect the river with small lakes which thus serve as detention reservoirs and relieve the main channel. Similar works are being carried out by the Brazos River Conservation and Reclamation District.

Protection for Houston, Texas, is to include two detention reservoirs on Buffalo Bayou, 15 miles west of the city, their discharge being diverted through a new channel south of the city to Galveston Bay. Another reservoir on White Oak Bayou will divert the flow through a channel discharging into the San Jacinto River. The cost will be \$32,000,000, and the first step will be the Barker Dam on Buffalo Bayou, costing \$3,500,000. Part of the funds will be provided by the Harris County Flood Control District.

While plans have been made for enlarging the

channel of the Los Angeles River at Los Angeles, Calif., in order to provide for flood flows, a flood occurred in March which caused the fall of a railroad bridge. In Orange County, adjacent to Los Angeles, the Prado Dam for flood control on the Santa Ana River was completed early in 1941. The Conchas Dam on the South Canadian River, in New Mexico, forms a reservoir of which one-third of its capacity is kept empty for receiving and storing flood waters.

Flood control and protection works, in conjunction with power development, irrigation and inland navigation, are included in a comprehensive project for regulation of the Willamette River, in Oregon. The Fern Dam was completed in 1941 and two others are under construction. As the valley is subjected to floods nearly every year, this protection is needed for its potential agricultural and industrial development.

Flood control throughout the Tennessee River valley is one of the important objectives of the Tennessee Valley Authority, and it may extend its activities into North Carolina, where flood control is needed on the French Broad River, a tributary of the Tennessee. Surveys have been made for such works in the western part of the State, adjacent to Tennessee, where floods caused severe damage in 1940. Another project in North Carolina is that of the PeeDee River, under the direction of the U.S. Department of Agriculture.

Railroads in districts subject to flooding have to spend large sums for the protection of their lines or heavy periodical expenses for repair and reconstruction. But a rather different aspect of railroad work is that of the Atchison, Topeka & Santa Fe Railroad. As a result of frequent and recurring damage to its line in mountain regions by floods which cause washouts and endanger bridges, the railroad has carried on a program of protection work which includes changes in line to avoid troublesome or dangerous places, changes in river channels near the line, the construction of dikes and jetties in streams paralleling the line, and the facing of fills and banks with stone or concrete revetment to prevent erosion.

See AQUEDUCTS; COAST GUARD; DAMS; FLOODS.
E. E. RUSSELL TRATMAN.

FLOODS. There was no outstanding flood of major importance in the United States during 1941, but the year had the usual number of local and minor to moderate floods. At the beginning of the year there was a minor flood in progress in the Pearl River in Mississippi and Louisiana. In the month of February the outstanding flood was one in the Sacramento River in California; this flood was caused by heavy rains during the preceding three months which culminated with unusually heavy rains in the early part of February. About \$500,000 damage was done by this flood in the Sacramento Valley. This February flood was followed by another equally severe in March, and by a third, though less severe, in April. In the mountainous portions of the Sacramento Valley there was much damage done to highway embankments, and in the lower part of the Valley where much of the land is cultivated and is protected by levees the seepage was great enough, due to the prolonged high water, to kill many fruit trees in lowland orchards.

In April there were severe floods in the streams of southwestern Missouri and the adjacent parts of Arkansas, Oklahoma, and Kansas. At this time floods were especially high in the Osage, Gasconade, and Neosho Rivers, where record or near

record stages occurred; lesser overflows occurred in the Meramec, Bourbeuse, Cimarron, Verdigris, North Canadian, Poteau, White, and lower Missouri Rivers. Practically every small stream in southwest Missouri overflowed and the greatest

TABLE OF FLOOD LOSSES IN THE UNITED STATES DURING 1940

Drainage	Reported Losses * Property	Lives
St Lawrence	0	2
Atlantic Slope	\$7,553,000	16
Gulf of Mexico	13,118,233	7
Mississippi	3,301,965	7
Ohio	8,077,275	28
Pacific Slope	8,416,010	0
Total	\$40,466,483	60

* Probably about 75 per cent of actual

damage was to the secondary road system operated by the counties, and to farm lands which were badly eroded by the rains. The water plant at Joplin was forced to close, and heavy damage resulted at Monett by the flooding of stores. Houses and mines in the Webb City-Oronogo district were overflowed and rendered useless, and much livestock was swept away. While most damage was caused by small streams, river stages were quite high and Wyandotte, Okla., on the Neosho River had the highest stage of record.

On May 22 there was a remarkably sudden flood in the Pecos River in New Mexico, this flood occurred at 2 a.m. and was caused by excessive rainfall in the mountains west of Carlsbad. The greater portion of the water came down Hackleberry Draw and Dark Canyon, and the river stage at Carlsbad rose from 8 feet to 20 feet in two hours, in spite of this unusual rise of water during the night no lives were lost but considerable damage was done to property. At 10 a.m. on May 23 the second flood came down on Carlsbad from the same source as the first, but the waters reached a considerably higher stage than in the first flood. Five people were drowned, 111 homes were completely destroyed, and 210 homes were damaged badly and about 1,500 people were left homeless.

Heavy rains with resultant floods occurred over the watersheds of the Guadalupe, Nueces, Brazos, and Sabine Rivers in Texas early in May. Most of the damage from these floods was to farm lands and pastures. There was also flooding in the Colorado River in Colorado at this time.

There were heavy rains over the Monongahela Basin in Pennsylvania and West Virginia on the 3d, 4th, and 5th of June. At the town of Brave, Green County, where Dunkard Creek is normally about 30 feet wide, and the bed of the creek about 15 feet lower than the general level of the ground, in 30 minutes the water rose over the banks and over the tops of automobiles parked along the adjacent highway. Similar sudden rises took place in other tributaries of the Monongahela River during these three days; this river reached a crest of 35.8 feet at 6 p.m. on the 4th at the Greensboro, Pa., gage. This was not an unusually high crest but the damage was much greater than is usual for such stages, due to the swiftness of the Monongahela. It was reported by river men that the river was never known to be so swift. The result was an unusually heavy loss to shipping interests.

At the time of the floods in the Monongahela River Basin there was also severe local flooding in several of the smaller tributaries of the Ohio between Wheeling and Huntington, W.Va. Some of these tributaries had the highest stages since the great flood of 1913; it will be recalled that in this reach of the Ohio the 1913 flood was higher than

the great 1937 flood. Although the tributaries had such high stages this year, the Ohio River itself did not rise above its flood stage.

There were important floods during the summer months and again in October in the rivers of Kansas, Oklahoma, and Texas. The Arkansas River crested at Webbers Falls, Okla., on November 1, with a stage of 35.8 feet and at Fort Smith, and Van Buren, Ark., on November 3, with stages of 37.3 and 35.8 feet, respectively. These stages are the highest for over a century (the previous highest being in 1833) and exceed the stages of the April, 1927 flood at these places.

In November there was a flood in the Willamette River in Oregon. The area covered by this flood extended from the east side of the Willamette River in the vicinity of Corvallis to slightly above the junction of the Row River with the Coast Fork. Flood control dams under construction on the Coast Fork and Long Tom Rivers were completed to such a stage that they proved their effectiveness as flood barriers. The control of water at these two dams averted serious industrial and agricultural losses in the vicinity of Cottage Grove and Monroe. Extensive riprapping along the Willamette River, constructed by the U.S. Engineers, materially reduced bank erosion below Eugene. Channel development from the mouth of the Willamette River south to Albany aided considerably in speeding up run-off, thereby reducing flood crests in these reaches of the river. The streams which contributed the greatest volume of flood water were the Middle Fork of the Willamette and the Row River, although the McKenzie, Calapooya, and Santiam were very important factors in producing the flood conditions. Maries, Luckiamute, Yamhill, Molalla, Tualatin, and Clackamas Rivers, while contributing some water, could be considered as rather minor factors in this flood. See also FLOOD CONTROL.

RICHMOND T. ZOCH.

FLORICULTURE, FLOWERS. See BOTANY.

FLORIDA. A south Atlantic State. Area: 58,560 sq. mi., including 4,298 sq. mi. of inland water, but excluding Atlantic coastal waters, 37 sq. mi.; and Gulf of Mexico coastal waters, 1,698 sq. mi. Population: (1940 census) 1,897,414. The urban population comprises 55.1 per cent of the total (U.S. average, 56.5 per cent); non-white population, 27.0 per cent (U.S. average, 10.2); elderly (65 years and over), 6.8 per cent. Florida ranks 21st among the States in area, 27th in population, and 30th in density, with an average of 35.0 persons per square mile. The capital is Tallahassee with 16,240 inhabitants; largest city, Jacksonville, 173,065. There are 67 counties and 20 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Colin English, Superintendent of Public Instruction, there were 397,900 pupils enrolled in the public schools of Florida during the school year, 1939-40; 250,266 in elementary schools, and 147,634 in secondary schools. Teachers and principals numbered 13,629 and received an annual average salary of \$1,009. Total expenditures for the year, including capital outlay and debt service, were \$25,167,310.

Transportation. State highway mileage in 1939, including streets under State control, totaled 7,453, of which 6,932 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 503,678; 413,723 were

private and commercial automobiles, 1,697 busses, and 79,790 trucks and tractor trucks. Gross motor-fuel consumption was 408,124,000 gallons. Net motor-fuel tax receipts were \$27,448,000, the rate being seven cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$8,002,000.

Railways of all classes extended 5,225 miles (Dec. 31, 1939), 2.22 per cent of the total mileage in the United States. Class I steam railways (3,904 miles) reported 14,192,632 tons of revenue freight originating in Florida in 1940 and 14,124,996 tons terminating in Florida. There are 113 airports and landing fields in the State (28 lighted fields) and 41 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 500 civil aircraft in the State and 1,859 airline transport, commercial, and private pilots (1,324 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,521,000, as compared with 1,510,300 acres in 1940. According to the latest census, there are 62,248 farms, valued at \$324,377,874, averaging 133.9 acres each. Farm population numbered 308,369 or 16.3 per cent of the total. Leading crops with production were: Oranges, \$39,933,000, 31,300,000 boxes (estimated); commercial truck crops, \$36,112,000, grapefruit, \$16,162,000, 21,400,000 boxes; corn, \$5,270,000, 6,588,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 2,083 manufacturing establishments in Florida, employing 52,728 wage earners who received \$37,883,204 in wages for the year. The total value of products was \$241,538,534; value added by manufacture, \$118,015,863.

Mineral Production. The leading mineral product is phosphate rock, of which 2,845,012 long tons were produced in 1940, valued at \$7,741,177 (2,678,784 long tons, \$7,893,457, in 1939). The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$13,060,453 or .31 per cent of the United States total.

Trade. According to the 1940 census there were 2,696 wholesale establishments in Florida, employing 32,442 persons, reporting net sales for 1939 of \$526,889,000 and annual pay roll of \$34,405,000. There were 28,614 retail stores with 73,190 employees, reporting sales of \$614,464,000 and pay roll of \$64,244,000. Service establishments numbered 8,235, employing 20,765 persons for \$15,113,000 per year, and reporting a business volume amounting to \$46,558,000. The leading business center of the State is Miami which reported wholesale sales of \$88,065,000, retail sales of \$103,215,000, and \$10,702,000 receipts for its service establishments. Jacksonville reported sales of \$151,633,000 wholesale and \$73,951 retail, Tampa, \$87,997,000 and \$46,134,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Florida was \$33,656,000. Under the Social Security program, financed by Federal funds matching State grants, 37,688 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$13.14 (U.S. average pension, \$21.08); 10,974 dependent children in 4,235 families received average monthly payments of \$22.32 per family (U.S. average, \$32.73); and 2,536 blind persons received \$13.93 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 5,880 and received \$7.18 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal

work programs was as follows (with total earnings for the month in parentheses): CCC, 3,330 (\$221,000); NYA student work program, 3,451 (\$25,000); NYA out-of-school work program, 6,638 (\$111,000); WPA, 25,372 (\$1,547,000); other Federal emergency projects, 257 (\$27,000); regular Federal construction projects, 13,684 (\$1,738,000). The Farm Security Administration certified subsistence payments totaling \$7,000 for the month to 159 cases.

Legislation. The Legislature convenes in regular session on Tuesday after the first Monday of April in odd years. It is composed of 38 Senators and 95 Representatives, all of whom are Democrats. The following is a summary of important measures enacted into law during the 1941 session (April 6-June 6), as supplied by Florida State Librarian, W. T. Cash:

Perhaps the greatest innovation in legislation enacted by the Florida Legislature of 1941 was the passing of an Act providing for a State Administered Probation and Parole Commission under the direction of three Parole Commissioners selected by the Board of Commissioners of State Institutions (the Governor and his Cabinet), after the holding of competitive examinations taken by those who are candidates for places on said Parole Commission.

In order to provide more money for old age pensions, an extra five per cent tax was made on race track bets. It is estimated that this will increase money for old age pensions from \$3,800,000 per year to more than \$7,000,000 and make the average old age pension recipient get about \$23 per month instead of something like one half of that much at the present time.

An important taxation passed by the Legislature provides that all property must be assessed at its full cash value. As a result of this measure and taking into consideration assessments made since the Legislature adjourned, it is believed that Florida tax assessments for the present fiscal year will run to over two billion dollars instead of one fifth of that amount at the present time.

A series of bills passed by the Legislature set up new regulations for the citrus industry and provided for the appointment of an entirely new Citrus Commission. The Workmen's Compensation Law was so amended as to bring 30,000 persons employed in the citrus industry and not previously covered by Workmen's Compensation benefits under the scope of the law. The Legislature authorized the refunding of the seventeen million dollar Everglades Drainage District bill. It created a State Economic Advancement Council, with an annual appropriation of \$50,000, to bring new industries to the state, and a State Improvement Commission with authority to build toll roads, bridges, and other facilities on a self-liquidating basis. The salaries of all Cabinet officials were raised from \$6,000 to \$7,500 a year. At the Governor's request, his salary remains at \$9,000 per year as before.

Among the principal appropriations, not usually carried in biennial appropriations, bills were \$330,000 for an addition to the State Capitol, \$250,000 for an addition to the Supreme Court Building, and \$100,000 for the erection of a Stephen Foster Memorial Building in the town of White Springs, Florida. An Act was passed to divert \$729,000 received under Murphy Act land sales to the General Revenue Fund. The Murphy Act passed six years ago provided that land on which taxes were delinquent could be sold to the highest bidder; the greater part of the delinquent land was redeemed under this Act; but the unredeemed part, having reverted to the State, is being gradually sold and it is from receipts of these sales that the \$729,000 mentioned above was diverted.

One Act passed requires the State Road Department to take over and maintain city streets which are connecting links in the State highway system. The prices of motor vehicle tags were increased \$5 each for most cars. Each motor vehicle driver will now have to pay \$1 instead of 50 cents as previously for license. The Legislature provided for a tax of \$5 per one thousand dollars of stock in retail stores, but it repealed the one half of 1 per cent gross receipts tax. The 7 cents per gallon tax on gasoline was reenacted. A speed limit of 45 miles per hour for automobiles was raised to 55 miles per hour except for night driving which remains 45 miles per hour.

Under another Act of the 1941 Legislature, state supervision of county and school districts ad valorem tax assessments, collections, and financial budgets must have state supervision. A series of bills passed provide for more adequate State defense in case of emergency. Under the terms of another Act, salaried officials appointed by the Governor must have terms running concurrently with his. This includes such positions as: Members of the State Road Department, Hotel Commissioner, Conservation Commissioner, Executive Secretary, Fresh Water Fish and Game Commissioner and a few others.

Finances. Total tax collections in Florida for the fiscal year ending in June, 1940 were \$80,697,000. Total sales taxes amounted to \$29,772,000, including motor fuel, \$25,511,000. Taxes on specific businesses ran to \$12,657,000, general and selective property, \$2,677,000, unemployment compensation (1941), \$7,290,000. Cost payments for the operation of general government totaled \$51,043,000 in 1939, the latest year available. (Revenues for the general government for that year were \$67,423,000.) Cost of operation per capita was \$27.98.

Officers and Judiciary. The Governor is Spessard L. Holland (Dem.), inaugurated in January, 1941, for a four-year term; Secretary of State, R. A. Gray; Attorney General, J. Tom Watson; State Auditor, W. M. Wainwright; State Comptroller, J. M. Lee. Chief Justice of the Florida Supreme Court is Armstead Brown; there are five associate members elected by popular vote for six-year terms.

FOOD AND DRUG ADMINISTRATION. A material increase in regulatory activity characterized the work of the Food and Drug Administration during the fiscal year 1941. It marked the first complete year in which all provisions of the Food, Drug, and Cosmetic Act of 1938 were enforced. The period of adjustment provided by Congress to afford manufacturers time to meet new labeling requirements had ended. Exploratory work and the training of new personnel by the Administration in 1940 had increased effective enforcement during 1941.

The elimination of filthy food from the market, the prosecution of the responsible manufacturers and shippers, and educational work to improve sanitary conditions in food-processing plants featured the food enforcement program. Standards for various types of cheese, flour, cream, and processed milk, jams and jellies, and oleomargarine were promulgated. Investigation of 57 food-poisoning outbreaks disclosed three major causes: Under-processing of home-canned products, insanitary handling or lack of proper refrigeration in the home, and the accidental mixing, also in the home, of some poisonous insecticide with food materials.

An emergency drug measure was the nation-wide investigation by the Food and Drug Administration and cooperating city and State officials to locate and remove from commercial channels thousands of sulphathiazole tablets dangerously contaminated with phenobarbital, a highly potent sedative. Increased regulatory attention was given to dangerous drugs to prevent their indiscriminate distribution to lay users. A greater number of court actions than in 1940 involved the shipment of proprietary medicines bearing false and misleading claims for a great variety of diseases and inadequate warning statements.

Seizure of over 17,000 units of a poisonous permanent-wave solution in possession of some 500 beauty shops, and embargo by State authorities of material on hand in the factory, constituted the outstanding cosmetic enforcement work in 1941. Other dangerous cosmetics seized were eyelash dyes containing toluenediamine and an injurious product to be used for the removal of stains from the teeth.

Samples of 31,723 domestic foods, drugs, devices, and cosmetics were collected and examined during the year. Seizure of 2,016 violative interstate shipments resulted, in contrast with 1,697 in 1940. Criminal prosecution was instituted against individuals or firms responsible for 1,155 shipments alleged to be in violation of the act, as compared with 337 shipments in 1940.

Imported products from new sources resulted from chaotic shipping conditions occasioned by the war, necessitating increased regulatory attention. Inspections of 15,434 import shipments were made and 2,605 violative lots were refused entry.

Other statutes enforced by the Administration during the fiscal year 1941 were the Tea Act, Filled Milk Act, Caustic Poison Act, and Import Milk Act. June 30, 1941, ended the first year in which the Food and Drug Administration operated as a unit of the Federal Security Agency.

FOOTBALL. The sport of football in 1941 stretched from the multitudinous all-star games of late August to New Year's Day, and merely proved that the professional game carries greater appeal than the college game upon which the sport is built. The populace seemed to demand extreme excellence and as a result the attendance at colleges which didn't foster all-winning elevens fell off, and the professionals prospered thereby.

The year produced what qualified experts called the greatest football team of all time, the holdover professional champions of the National Football League, the Chicago Bears. The Bears waddled through nineteen games with one loss, that a surprise defeat by the Green Bay Packers, who were smothered later in the autumn when the teams met for the third time, in a playoff game for the western title. Then the Bears whipped the New York Giants, Eastern title holders, in the finale. With Sid Luckman, George McAfee, Bulldog Turner, Norman Standlec, Gallarneau, George Musso and the like performing, George Halas, coach and owner of the Bears, was said to have developed football to its highest degree of excellence. And this feat made professional football, for the first time, overshadow the college game.

In the college ranks, the teams of Duke University, undefeated and untied, Fordham University, surprisingly beaten by the University of Pittsburgh, the University of Minnesota, Notre Dame University, Oregon State University, Duquesne University, Texas University, and the University of Missouri stand out above all others. The Minnesota team, which kept intact the unbeaten skein of 1940, was adjudged the best team of the year. Led by Bruce Smith, a remarkable backfield man, the Gophers romped through a tough schedule, beating such fine outfits as those fielded by Washington, Michigan, and Northwestern en route to the title. The Notre Dame team was held to a tie by a sur-

prising Army eleven on a soggy field, but walloped Navy and all other opponents. The Fordham team lost to Pittsburgh, but whipped all other foes from all sections of the country. The Oregon State team, despised in early season predictions, lost twice in the Pacific Coast Conference, but had the best record at the end and thus succeeded Stanford in the Rose Bowl, which was transplanted to Duke's campus in North Carolina under last minute directions by West Coast military authorities when the war came. Duquesne, threatening to abandon the sport, had an undefeated and an untied season. Texas was hailed as the powerhouse of the nation until late in the year when it was tied and then beaten, later rallying to wallop Oregon, and beaten a whisker by Oregon State. Missouri, Big Six champion, waded through opposition with ease, losing only to Ohio State in the first game of the campaign, and was chosen to play Fordham in the Sugar Bowl in New Orleans in 1942. Texas A and M. won the Southwestern Conference title, Mississippi State the Southeastern championship; Tulsa University the Missouri Valley honors and Utah took the title in the Rocky Mountain Conference.

Individual players of headline excellence were scarce, with Smith of Minnesota winning most of the commercial post-season medals, and lots of plaudits going to Bill Dudley of Virginia, the year's top scorer, Steve Filipowicz, Fordham's fullback, and Endicott Peabody III, Harvard's great guard. Frank Leahy, transplanted from Boston College to Notre Dame, was considered the outstanding coach of the season. See RADIO PROGRAMS.

FORESTRY, FOREST SERVICE. See AGRICULTURE, U.S. DEPARTMENT OF. FOR FOREST PRODUCTS, see LUMBER.

FORMOSA (TAIWAN). An island near the southeast coast of China, ceded to Japan by China in 1895. Total area, including the Pescadores, 13,889 square miles. Total population (census of October, 1940), 5,872,084. Chief towns (1935 census): Taihoku (the capital), 278,446, Tainan, 111,959, Keelung, 84,978; Takao, 83,735. The chief agricultural products are rice, sugar, tea, sweet potatoes, ramie, jute, and tumeric. Camphor is obtained from the forests under a government monopoly. Livestock (1937); 1,849,195 swine, 282,101 buffaloes, 76,341 cattle, and 70,384 goats. Gold, silver, copper, and coal are the main minerals. Trade (1939): Y408,649,840 for imports and Y592,938,199 for exports (yen averaged \$0.2596 for 1939; \$0.2344, 1940). Budget (1940-41): Y269,457,562. Governor General, Adm. Kiyoshi Hasegawa succeeded Nov. 26, 1940.

History. The Japanese Ministry of Overseas Affairs announced on Dec. 18, 1941, that 319 persons were killed, 437 persons were injured, and 1,768 homes were destroyed by an earthquake in southern Formosa on Dec. 17, 1941.

FOUNDATIONS. With increasing heights and weights of bridges, buildings, dams and other structures, and the frequent necessity of placing many of these structures on soils of inferior quality and reliability,

there has come more intensive study of the character of the strata at individual sites. Inadequate knowledge of these conditions may result in uneven settlement of the structure, and possibly in expensive subsequent repair work. Thus, settlement has caused considerable damage to the costly main building of a New York airport. In a suit by a contractor who found underground conditions very different from what he had been led to expect, the court awarded him extra pay to cover the additional cost of his foundation work.

To insure against leakage under the Merriman earth-fill dam, for the new Delaware River water supply for New York City, pneumatic caissons have been sunk to unusual depths to reach solid rock and form the foundation for the concrete core wall of the dam. On the other hand, the Hales Bar dam on the Tennessee River, completed in 1914, has given continual trouble due to heavy leakage through the seamy rock on which it is built. In recent years much costly work has been done, with more or less effect. A deep trench along the upstream side of the dam is now being put down to solid rock at depths of 55 to 110 ft. below the river bed. This is to be filled with concrete to form an impervious wall and so stop the underground flow of water. This work is to be finished in 1942.

A remarkable recent development in the exploration of underground conditions is the use of geophysical methods for creating and recording waves of sound, electricity, magnetism, or radioactivity through the soil, and determining from their speed the character of the soils traversed. Some of the methods are based on seismic principles used in recording the travel of earthquake shocks. In this class is an electrical resistivity method employed to determine the depth of rock below the surface along the new 26-mile railway to Fort Leonard Wood, in Missouri, during 1941, where time did not permit the use of test borings. This system of exploration was developed in the search for oil and ore deposits, but is being applied increasingly to foundation work. Closely allied to such studies is the study of soil mechanics, to determine the load-bearing capacities of different soils.

In studying sites for dams on the Willamette River, in Oregon, special apparatus was developed for taking photographs in the drill holes to show the varying formations. For a grain elevator at Buffalo, N.Y., wells 3 ft. in diameter were drilled to rock at a depth of 52 ft., and each well was inspected by a man lowered into it, to insure that there were satisfactory conditions at the bottom. The wells were filled with concrete to form foundation piers. Similar piers for a warehouse at the Navy Yard in Brooklyn, N.Y., were formed by sinking wells 140 to 160 ft. to rock and then 6 ft. into the rock. A steel H-beam was placed as a core in the center of the well, which was then filled with concrete.

Heavy machinery, such as rolling mills and machine tools, require very substantial foundations, since both weight and vibration must be considered. For a new boring machine at the Pittsburgh works of the Westinghouse Electric & Manufacturing Co., weighing 350 tons alone, or 650 tons when loaded with a large casting to be bored, the foundation is a heavy slab of reinforced-concrete, 40 ft. in diameter, capping a group of 120 steel pipes 10-in. in diameter driven to a depth of 30 ft. and filled with concrete. Foundation design was of prime foundation for a new steam power station at Los Angeles, since the delicately balanced turbines would be affected seriously by any slight tilting from uneven settlement. Furthermore, the founda-

tions had to be earthquake resistant. Excavation was carried down to a satisfactory stratum on which to place very large concrete footings which were connected together, except that those for the boilers and turbines were independent of those for the building, so as to prevent transmission of vibration.

Difficulties occur where the soil is wet and unstable, and where new foundations must be close to and deeper than those of adjacent structures. Foundations for an addition to a New York hospital had to be sunk considerably below those of the older buildings, and the concrete slab for a warehouse at Buffalo was placed 10 to 15 ft. below the foundations of adjacent buildings, including a brick smoke-stack 175 ft. high. Realizing the importance of accurate knowledge of foundation conditions, the Department of Public Works, of New York City, has undertaken a systematic program of test borings at all sites for large buildings and other construction works.

FOUNDATIONS AND TRUSTS. See PHILANTHROPY.
FOUR FREEDOMS. See UNITED STATES under *The President and Foreign Affairs*.

FRANCE. A state of Western Europe. As a result of the German invasion of May-June, 1940, the capital was transferred from Paris to Vichy. German and Italian troops remained in occupation of approximately one-half of France from the commencement of the armistice on June 26, 1940.

Area and Population. Through the annexation of Alsace-Lorraine by Germany in 1940, France lost 5,605 square miles of territory and a population of 1,915,627 (1936 census figures). This left an area of 207,117 square miles and a population of about 40,000,000 (on Jan. 1, 1939, the estimated population was 41,980,000). The population of the pre-war area of France as of Apr. 1, 1941, was estimated at 39,302,511 (excluding war prisoners in Germany). The live birth rate in 1939 was 14.6 per 1,000; death rate, 15.3 (including war losses) against 15.4 in 1938. In 1938 deaths exceeded births by 34,741. At the 1936 census there were 2,453,507 foreigners in France, United States citizens residing there on Jan. 1, 1941, numbered 3,000. On the basis of the number of ration cards issued, German occupational authorities in February, 1941, estimated the population of Paris, with suburbs, at 4,247,957. Populations of the chief cities at the 1936 census were: Paris proper, 2,829,748 (1,051,046 on July 7, 1940, before the return of refugees from Southern France); Marseille, 914,232; Lyon, 570,622; Bordeaux, 258,348; Nice, 241,916; Toulouse, 213,220; Lille, 200,575; Nantes, 195,185; Strasbourg, 193,119; Saint-Etienne, 190,236; Le Havre, 164,083; Toulon, 150,310; Rouen, 122,832; Nancy, 121,310; Reims, 116,687; Roubaix, 107,105; Clermont-Ferrand, 101,128.

Colonial Empire. The colonies, protectorates, dependencies, and mandated territories of France had a total area of some 4,617,579 square miles and a total estimated population of 70,000,000 in 1938. See the separate articles in this YEAR BOOK covering each of the following divisions: ALGERIA; CAMEROUN, FRENCH, FRENCH EQUATORIAL AFRICA; FRENCH GUIANA, FRENCH INDIA; FRENCH INDO-CHINA; FRENCH OCEANIA; FRENCH SOMALILAND, FRENCH WEST AFRICA; GUADELOUPE, MADAGASCAR; MARTINIQUE; MOROCCO; NEW CALEDONIA; NEW HEBRIDES; RÉUNION; ST. PIERRE AND MIQUELON; SYRIA AND LEBANON; TOGO, FRENCH; and TUNISIA.

Religion and Education. With the exception of

about 1,000,000 Protestants and a few thousand Jews, the French people profess the Roman Catholic faith. At the 1931 census there were 2,286,273 persons of five years or over (7 per cent of the total) unable to read or write. The school enrollment was: Elementary (1937-38), 5,436,554; higher elementary (Nov. 15, 1937), 257,597; secondary (November, 1938), 268,043; universities (July 31, 1938), 74,832.

Agriculture. At the beginning of the European War, about 38 per cent of the working population was directly engaged in agriculture, 31 per cent in industry, and 11.5 per cent in commerce. There were 50,148,088 acres of arable land (36.84 per cent of the total) in 1937. Yields of the chief products in 1938 in metric tons except where otherwise indicated were: Wheat, 7,800,000 (1939), rye, 811,100; barley, 1,290,800; oats, 5,457,400, corn, 578,600; potatoes, 17,314,500; beet sugar, 930,000 (1939); olive oil, 4,800, wine, 61,000,000 hectoliters. Livestock on Jan. 1, 1939, comprised 2,692,000 horses; 135,000 mules; 185,000 asses; 15,622,000 cattle; 9,872,000 sheep and lambs; 7,127,000 pigs; 1,416,000 goats.

Mining and Manufactures. Mineral and metallurgical production (1938) in metric tons was: Coal and lignite, 47,557,000, iron ore, 10,100,000, pyrites, 147,000; potash (K₂O content), 582,000, bauxite, 683,400; pig iron and ferroalloys, 6,049,000; steel ingots and castings, 6,174,000. Silk production (1939) was 41 metric tons; rayon, 25,500 metric tons; alcohol (1937), 109,701,000 gal.; vessels launched, 47,700 gross tons (1938).

Foreign Trade. Merchandise imports in 1938 were valued at 45,981,000,000 francs; exports at 30,586,000,000. For the first eight months of 1939, imports were 32,539,000,000 francs; exports, 23,832,000,000 francs. For distribution of trade in 1937 and 1938, see the 1939 YEAR BOOK. Also see TRADE, FOREIGN, for France's trade with the United States in 1940 and 1941.

Finance. Ordinary (civil) budget estimates for the calendar year 1941 placed receipts at 68,205,014,000 francs and expenditures at 96,959,905,000 francs, against receipts of 79,961,183,000 and expenditures of 79,889,137,000 francs in 1940. The extraordinary 1941 budget provided for expenditures of 37,233,959,000 francs (28,955,966,000 for "liquidating expenses resulting from hostilities" and 8,277,993,000 for public works and unemployment relief), all to be met by public borrowing. In addition, the German army occupation costs for 1941 were estimated at about 183,000,000,000 francs. The anticipated deficit in the ordinary budget in 1941 was 28,754,891,000 francs and the over-all deficit 65,988,850,000 francs. The extraordinary (national defense) budget for 1940 called for expenditures of 249,111,805,000 francs, all to be raised by borrowing.

The French Treasury reported the total public debt on Aug. 31, 1939, at 445,000,000,000 francs; the domestic debt was 432,634,000,000 francs (funded, 352,210,000,000, floating, 80,424,000,000). Currency in circulation totaled 108,532,000,000 francs on Dec. 31, 1938, 149,416,000,000 on Dec. 31, 1939, and 232,000,000,000 on Apr. 30, 1941. The average annual exchange rate of the franc was \$0.0288 in 1938 and \$0.0251 in 1939. Following the armistice of July 26, 1940, the franc was pegged to the reichsmark at the rate of 1 franc = 0.05 reichsmark, or \$0.02 at the German official rate (\$1 = 2.50 reichsmarks). In unoccupied France, the franc was pegged to the U.S. dollar at 43.90 francs to \$1, or 1 franc = \$0.0228.

Transportation. At the outbreak of the European

War, France had about 26,427 miles of railway line, 393,761 miles of roads, 6,016 miles of navigable waterways, and airlines radiating from Paris to virtually all parts of France and the French Empire. The air network was disrupted and part of the railways and highways damaged by the war. On June 30, 1939, the French merchant marine comprised 11,282 vessels of 2,952,975 gross tons; it likewise had severe losses. The chief ports were Marseille, Le Havre, Cherbourg, Dunkirk, Rouen, Boulogne, and Bordeaux. Those along the English Channel and the northwest coast of France suffered heavy war damage during 1940 and 1941.

Government. Following the capitulation of Marshal Henri Philippe Pétain's Government to Germany on June 22, 1940, the French National Assembly met at Vichy, with one-third of its members absent, and on July 10 by a vote of 569 to 80 authorized Marshal Pétain to promulgate a new Constitution subject to ratification by the nation. In five Constitutional Acts promulgated July 11, 12, and 30, Marshal Pétain abolished the democratic, republican Constitution of 1875 and established an authoritarian regime with himself as Chief of State (see YEAR BOOK for 1940, p. 282 f.). The Government consisted of the Chief of State, Cabinet Ministers, and Secretaries of State without Cabinet rank. Ministers and Secretaries of State were appointed and dismissed by the Head of the State. As of Jan. 1, 1941, the Cabinet comprised Marshal Pétain as Chief of State, Gen. Charles Huntziger (Minister of War), Adm. Jean Darlan (Navy), Pierre-Etienne Flandin (Foreign Affairs), Yves Bouthillier (Finance), Marcel B. Peyrouton (Interior), and René Belin (Industrial Production and Labor). The Secretaries of State were Gen. Jean Marie Bergeret (Aviation), Jean Berthelot (Communications), Rear Adm. René Platon (Colonies), Jacques Chevalier (Education and Youth), Pierre Caziot (Agriculture), Jean Achard (Food). See below for developments during 1941.

HISTORY

The year 1941 was one of suspense, suffering, and rising discontent in France. The nation tasted the full bitter dregs of its defeat and humiliation by Germany in 1940. The "honorable peace" for which Marshal Pétain applied on June 16, 1940, was not attained. Nor did France's economic collaboration with the conqueror, agreed to by Pétain after his Montoire interview of Oct. 24, 1940, with Hitler, bring the anticipated results. It led to the rapid extension of German control over French economic life, and in particular over French industrial enterprises. But it failed to induce the Germans to fulfill the terms of the armistice.

Instead Berlin sought alternately to bludgeon and cajole Marshal Pétain's Government at Vichy into military and naval, as well as economic, cooperation against Britain. The Germans offered Vichy an "honorable place" in Hitler's new European order provided full French collaboration was not delayed. They threatened France with the fate of Poland if it did not yield.

To enforce Vichy's compliance, Hitler held nearly two million French soldiers in German prison camps, mostly at forced labor. He declined to end the military occupation, to relax the restrictions on trade and intercourse between occupied and unoccupied France, or to permit the Vichy Government to return to Paris. He refused to reduce the bill for the maintenance of the army of occupation, although the actual daily cost was estimated at 125,000,000 francs instead of the 400,000,000 francs exacted. And he continued the

wholesale requisitionings of foodstuffs and raw materials that threatened France with starvation and economic collapse. Moreover French advocates of "collaboration," particularly the German-controlled press in occupied France, were mobilized by Berlin to force Vichy unreservedly into the Axis camp.

Marshal Pétain strove to resist the German demands as long as possible in the hope that the fluctuating fortunes of the warring powers would either strengthen France's bargaining position or give a clearer indication of the conflict's outcome. To ally France openly with the Axis would jeopardize both the Vichy Government's support at home and the loyalty and security of the French colonial empire. It would deprive France of the much-needed economic and diplomatic support of the United States, and expose French cities to destruction by the Royal Air Force. If the Allies won the war, a France which had so flagrantly betrayed its associates could expect little sympathy at the peace settlement.

Dissension at Vichy. From the beginning of the Pétain regime a faction within the Government led by Vice Premier Pierre Laval urged immediate and full acceptance of the German demands. The combined pressure of Laval and his German backers induced Pétain on Oct. 24, 1940, to accept "in principle" French economic collaboration with the conqueror. Pétain delegated Laval to work out the details of economic collaboration with the Germans. These negotiations were still in progress when Marshal Pétain discovered Laval's conspiracy to oust him and lead France into immediate military as well as economic cooperation with the Reich (see YEAR BOOK for 1940, p. 285-286).

The arrest and dismissal of Laval on Dec. 13, 1940, precipitated an acute crisis within the Vichy Government and in Franco-German relations. The Germans demanded the restoration of Laval to his former Government posts, meanwhile declining to proceed with the negotiations for economic collaboration. Marshal Pétain had entrusted these discussions to his Navy Minister, Admiral Darlan, who saw Hitler in occupied France on Christmas Day, 1940.

Under strong German pressure, which included a vicious anti-Pétain campaign in the Paris press, the Marshal set out to reconstruct his Government on a basis satisfactory to both himself and Berlin. On Jan. 3, 1941, he dropped Minister of State Paul Baudouin. On January 18 he agreed to meet Laval. A communiqué issued after the interview stated that "the misunderstandings that brought about the events of December 13 were dispelled." But Pétain refused to restore Laval to his former dominant position in the Government, and Vichy made it clear on January 20 that the French fleet and the overseas empire would not be placed at Germany's disposal.

British victories over the Italians in Libya during this critical time strengthened Pétain's hand. He also brought his Ministers and other officials under stricter control by a constitutional act of January 27, requiring each of them to take an oath of allegiance to him as Chief of State. At the same time he named a consultative assembly of 188 members as a temporary advisory parliament. On January 29 he appointed a committee of 40 members to unite all political elements (except the Communists) into a single party, to be called the *Rassemblement National*. The Germans countered this move by approving the formation in Paris of a rival organization, the *Rassemblement National Populaire*, headed by Marcel Déat and including other French extremists of both Right and Left

who were committed to full collaboration with the Reich.

Rise of Darlan. On February 8 it was announced in Vichy that Pétain had offered Laval the post of Minister of State—carrying much less power than Laval formerly exercised. When Laval rejected it, Pétain was finally in a position to supplant him with Admiral Darlan, who had made himself acceptable to the Germans. On February 9 Pétain asked for Foreign Minister Flandin's resignation. The same day he appointed Darlan to the additional posts of Vice Premier and Foreign Minister. The next day, by constitutional act, he designated Darlan to succeed him as Chief of State when he (Pétain) retired.

Another Cabinet shake-up occurred February 24-25. Marcel Peyrouton was dropped as Minister of Interior and Marshal Pétain likewise assigned this office to Darlan, who now enjoyed all the powers formerly exercised by Laval. At the same time Yves Bouthillier was named Minister of National Economy and Finance to carry out the program of economic collaboration with Germany. Joseph Barthelemy became Minister of Justice and General Huntziger and Pierre Caziot were retained as Ministers of War and Agriculture respectively. The reduced Cabinet board of five members controlled eight secretaries of state, each directing an administrative department.

Economic Aid to Reich. Darlan now proceeded to carry into effect the program of limited collaboration with Germany agreed to by the Chief of State. Early in March the details of an economic accord were agreed upon under which French industrial establishments and raw material resources in the unoccupied zone were integrated with French and other European territories under direct German control. Germans received the right to purchase shares in all of the most important industrial, commercial, and financial enterprises in France. By utilizing funds exacted from Vichy as "occupational costs," they rapidly extended their control over the French economic system at little cost to themselves. While continuing their requisitioning of French raw materials and food, the Germans supplied other raw materials. French labor and factories converted the raw materials into finished goods, which were marketed by the Germans and the profits shared.

This arrangement, combined with shorter hours of labor, caused a substantial reduction in unemployment. It also placed the French armament industries in both occupied and unoccupied zones at the service of the Axis. It was reported in September that armament factories were working at top speed producing planes, tanks, guns, trucks, grenades, and other implements of war for the Axis armies. Toward the end of the year a growing raw-material shortage caused some curtailment of production, especially in consumer goods.

Military Collaboration. Not content with the results achieved in the economic field, the Germans continued to press Vichy for the cooperation of the French fleet, for the use of ports and air bases in southern France, Syria, and French North and West Africa, and for French aid in sending troops and equipment to the Axis front in Libya. Through the influence of Admiral Darlan, who now openly espoused full collaboration with the Axis, substantial progress was made.

After lengthy negotiations between Darlan and German representatives, it was announced May 7 that Germany had agreed to ease communication between occupied and unoccupied France and reduce occupational costs from 400,000,000 francs

(\$8,000,000) to 300,000,000 francs (\$6,000,000) a day. On May 11 Darlan met Hitler and the German Foreign Minister at Beichtesgaden, Germany. A general program of Franco-German collaboration was agreed upon, which the Cabinet at Vichy approved, according to an announcement of May 14. The following day Marshal Pétain informed the nation by radio that the Darlan-Hitler interview "permits us to light up the road into the future and to continue the conversations that had been begun with the German Government."

"For you, the French people," he continued, "it is simply a question of following me without mental reservation along the path of honor and national interest. If through our close discipline and our public spirit we can conduct the negotiations in progress, France will surmount her defeat and preserve in the world her rank as a European and colonial power."

The actual concessions made by Darlan were not announced. However their substance was revealed by subsequent authenticated reports of German "tourist" infiltration into French North Africa and Syria. The British charged that Axis troops received French aid in reaching Libya through the British blockade. Statements from Vichy also hinted that Darlan had promised not only to defend the French empire against British, Free French, or American attacks, but also to launch a drive to recover the African colonies that went over to Gen. Charles de Gaulle's Free French movement in 1940. With Darlan's consent, the Germans also requisitioned many French ships for use in the Mediterranean and elsewhere as transports and supply vessels.

Roosevelt's Appeal. These developments aroused fear in Britain and the United States that the Vichy Government had decided on full military collaboration with Berlin. On May 15 President Roosevelt appealed to the French people, over the head of Marshal Pétain, to oppose the program of collaboration with the Reich. "It is inconceivable," he said, "that they (the French people) will willingly accept any agreement for so-called 'collaboration' which will in reality imply their alliance with a military power whose central and fundamental policy calls for the utter destruction of liberty, freedom and popular institutions everywhere." Such a program, he added, "would apparently deliver up France and its colonial empire, including French African colonies and the Atlantic coast," thus menacing the peace and safety of the Western Hemisphere.

The same day the United States seized 11 French merchant ships in American ports. When the French Ambassador in Washington protested, Secretary Hull declared that Vichy's cooperation with Germany appeared to have gone beyond the legitimate role of a neutral, independent state. Admiral Darlan replied to these criticisms in a tart radio speech on May 23. He insisted that the Germans had not asked for or obtained anything beyond the terms of the armistice. Yet the aid extended to the Axis by the French High Commissioner in Syria (q.v.) during May and June indicated that Vichy had definitely aligned France with the German cause.

Weygand-Darlan Split. At this point Darlan's program encountered a major obstacle in Gen. Maxime Weygand, who in 1940 had been appointed French proconsul (Delegate General) for the African colonies, with full military and political powers. During conferences with Marshal Pétain in Vichy early in June, Weygand sharply criticized Gen. Henri Dentz's policies in Syria. He apparently objected to

the use of French African bases by Axis forces and refused either to afford military cooperation against the British or to attack the French colonies under Free French control. Darlan, on the other hand, in a radio address on June 10, declared that full collaboration with Germany was the only alternative to national suicide.

A struggle within the Vichy Government to bring Weygand into line with Darlan's collaborationist program ensued, with the United States making every effort to prevent Darlan's triumph. Washington won Britain's reluctant consent to the shipment of oil and food supplies to French North Africa in order to keep Weygand neutral. The British and Free French invasion of Syria and Lebanon on June 8 and the German attack upon Soviet Russia on June 22 were among the developments that gave the victory to Darlan. Both Pétain and Weygand were strongly anti-Communist. Consequently they were disturbed by the Red Army's strong resistance to the German offensive and the renewal of Communist agitation in France. The Vichy Government formally supported Hitler's anti-Communist "crusade." It severed diplomatic relations with the Soviet Union June 30, intensified the anti-Communist drive in France, and authorized the recruitment of French volunteers to serve with the German armies in Russia.

On July 29 Vichy yielded to German pressure and turned over French Indo-China (q.v.) to Japanese "protection." On August 12 Marshal Pétain in a broadcast to the nation declared that France's only hope lay in collaboration with Germany. Deploing the growing domestic criticisms of his Government, he said that he had entrusted greatly increased powers to Admiral Darlan.

Revolt Against Nazis. Further moves toward bringing French Africa into the sphere of Franco-German collaboration appeared imminent when a rising tide of anti-Nazi revolt intervened to prevent action. Hope of a Nazi defeat was reborn in France due to the heavy German losses in Russia, the growing power of Britain, and the prospect of American intervention in the struggle. All elements of the French people opposed to Nazism began to stir. In his radio address of August 12 Marshal Pétain said that "for the last several weeks I have felt an ill wind rising in many regions of France." On August 14 the underground resistance to German rule broke out in open violence when six persons were killed during a riotous demonstration in Paris.

Succeeding weeks saw a steady increase in terrorist bombings, arson, and sabotage, the latter directed particularly against the French railways. After a German officer was stabbed to death in a Paris subway August 21, the occupational authorities announced that "in case of a new criminal act, a number of hostages corresponding to the gravity of the act committed will be shot." The Vichy police and German soldiers joined in arresting and imprisoning thousands of Communists, Jews, and other anti-collaborationist elements.

On August 28 Paul Collette, a young Free French sympathizer who had enlisted in the French Legion for service in Russia, attempted to assassinate both Laval and Marcel Déat, pro-Nazi editor of Paris, while they were reviewing the Legion. Both were seriously wounded but recovered. By the middle of September the spread of sabotage and violence compelled the Germans to admit that other groups besides "Jews and Communists" were involved. They began to arrest Frenchmen of all classes and announced they would be held as hostages for the good behavior of the French people.

Marshal Pétain on September 21 appealed to the nation to end these "criminal attacks" on Germans and pro-German Frenchmen. The Vichy Government established special tribunals in Paris and Lyons to crush sabotage and terrorism. They were authorized to intern, imprison at hard labor, deport, or execute those charged with acts of violence and anti-German agitation. By mid-October these courts had sentenced more than 30,000 "Communists." Between June and October 11, the police searched and questioned 76,500 persons in Paris alone, holding many for trial before the summary courts.

Nevertheless Lieut. Col. Karl Friedrich Holtz, German commander at Nantes, was assassinated in broad daylight on October 20. Gen. Heinrich von Stuepnagel, commander of the German forces in occupied France, had 50 hostages executed October 22 in reprisal. He announced that 50 more would be shot if the assassins were not arrested by midnight of October 23, and offered a 15,000,000-franc reward for information leading to their capture. On October 22 another German officer was shot to death in Bordeaux. The Germans immediately seized 100 hostages in that city, shot 50 of them the following morning, and announced that the remainder would be executed if the assassins were not produced before midnight October 26.

Through the intervention of Marshal Pétain, the execution of the remaining hostages in Nantes and Bordeaux was postponed indefinitely. On November 18 the Paris press announced the arrest of members of a terrorist gang held responsible for both assassinations. Meanwhile the continuance of passive resistance led the Vichy authorities on October 30 to forbid listening to British, American, and other anti-Axis radio broadcasts, even in the privacy of homes. The Government also intensified its efforts to purge the armed forces and the government services of all individuals considered hostile or lukewarm toward the Pétain regime.

Weygand Ousted. The Germans seized upon the lull in France and Nazi victories in Russia to renew pressure upon the Vichy Government for military assistance. Gen. Charles Huntziger, the Minister of War, was killed in an airplane accident November 12 while returning from an inspection of French defenses in Africa. Admiral Darlan assumed the War portfolio temporarily in addition to his other posts. These developments strengthened the faction in the Vichy Government favoring military collaboration with the Reich.

On November 20 General Weygand resigned as Delegate General for French Africa after an interview with Pétain. The office of Delegate General was abolished. The command of the French forces in Africa, previously held by Weygand, was divided between Gen. Alphonse Juin, who was released from a German prison camp earlier in the year, and Gen. Jean Barrau. These officers, assigned to North Africa and West Africa respectively by Admiral Darlan, extended the drive to eliminate anti-German and pro-Allied officers and civil servants from the French army and government services in Africa. Weygand himself, although apparently opposed to collaboration with the Reich, addressed messages to French officials and officers in Africa urging them to stand behind Marshal Pétain as "the safeguard of our future."

Pétain-Goering Interview. Following Weygand's resignation, Admiral Darlan immediately reopened negotiations with the German authorities in France. On November 23 it was once more announced that the occupation tribute levied on France had been reduced by 1,000,000,000 francs daily, retroactive to May 10—the cut announced May 7 had not

been carried into effect. This was followed by a conference between Pétain and Reich Marshal Hermann Goering at Saint-Florentin near Paris on December 1. According to an official spokesman, this conference made possible the expansion of the collaboration principle, but the actual concessions made by Pétain were not made public.

The belief that the Vichy Government had committed itself to some degree of military cooperation with the Axis was reflected by developments following General Weygand's removal. Gen. Robert Odic, former commander of French air forces in North Africa, repudiated the Vichy regime on November 24 and joined the Free French movement. Desertions from the French air forces to the British in Libya were reported shortly afterwards. On November 11 President Roosevelt authorized lend-lease aid to the Free French forces in Africa and Syria. On November 25 the U.S. Government revoked all export licenses for French North Africa. The French public, kept largely in the dark as to the meaning of these developments, began to stir uneasily once more.

At the beginning of December there was a revival of anti-German terrorism. The German authorities and the Vichy Government sought to check it by new large-scale arrests, severe curfew restrictions, and other measures, but without success. On December 10 the Germans again resorted to executions to overawe the populace. Eleven men accused as terrorists, de Gaullist, or spies were shot at Brest. On December 13 General Stuepnagel announced that 100 "Jews, Communists and anarchists who have for certain had relations with authors of these attacks upon our troops" would be immediately executed. At the same time he imposed a billion-franc fine upon Jews in occupied France, and ordered the deportation "to hard labor in the eastern territories" of "a large number of criminal Judeo-Bolsheviki elements."

Vichy Takes Stronger Stand. The Vichy Government the next day took the unexpectedly strong course of announcing that it had protested to the German authorities "regarding such massive repressions." However the attacks upon German soldiers and retaliatory executions of Frenchmen continued. Marshal Pétain, in a Christmas message to some 1,500,000 French prisoners of war still held in Germany, declared that "night is getting darker in the world" and peace was farther off than ever. However he expressed the conviction that "one day the Germans will take into consideration the necessity of repatriating French prisoners" and that he would do everything so that that day might soon come.

The German reverses in Russia and the entrance of the United States into the war in December made the Germans more insistent in their negotiations with Vichy, but strengthened Pétain's bargaining powers. The Vichy regime proclaimed France's neutrality in the conflict between the Axis powers and the United States. On December 12 the U.S. Government seized 14 French merchant vessels in American ports, including the 83,423-ton liner *Normandie*, which was converted for war purposes. There was danger that the United States would seize France's West Indian colonies. However, on December 18 it was announced that Rear Admiral Robert, French High Commissioner in Martinique, and Rear Admiral Horne of the U.S. Navy had signed an agreement for the maintenance of the status quo of French possessions and naval vessels in the West Indies. The Vichy Government denied knowledge of this accord, which incensed the Germans.

Other Internal Developments. During 1941 the Pétain

Government made only minor progress toward the permanent formulation and consolidation of the totalitarian regime introduced in 1940 (see *YEAR BOOK* for 1940, p. 282 f.). The committee named by the Marshal to draw up a new constitution produced no formal recommendations, but it was reported October 17 that the committee had rejected proposals for a monarchy or dictatorship in favor of continuance of the republic.

Marshal Pétain outlined his constitutional and political aims in his important speech of August 12. He promised to correct the abuses of economic power by the trusts and corporations established in 1940, and to protect consumers against the profiteering of government agents in charge of food distribution. Additional powers were given to the National Food Supply Bureau and the Ministry of Supplies was reorganized. He announced the establishment of commissioners to study means of strengthening the central government. The prefects received increased authority. The Legion of War Veterans was declared to be the true representative of the National Revolution in unoccupied France, while all other political parties were ordered to suspend all activities, meetings, and publications immediately. At the same time, the Marshal announced that payment of salaries of members of the dissolved Parliament would cease on September 30.

This speech was followed late in August by a rump session of 100 members of Parliament, who organized in opposition to the Vichy Government. Immediately afterwards the permanent officers of Parliament were instructed to move their headquarters from Vichy to the small town of Chatel Guyon. On November 19 a decree designated the Legion of Veterans as "the only organization for civic action open to citizens desirous of associating themselves with war veterans in order to serve the principles of National Revolution and of ensuring their application in all fields."

A labor code issued October 27 barred strikes and lockouts, stipulated that wages be paid according to the "social stage" of the work performed, and provided for arbitration of all labor disputes within the framework of government-supervised professional organizations. Labor unions were barred from all political or religious activity. Committees with equal employer, laborer, and employee representation, and including a government commissioner, were authorized to fix wages, hours, working conditions and control health and social security measures.

Reversing a primary tenet of the Third Republic, a decree of November 9 provided for state financial support of church schools of the primary grade of all denominations. Other decrees promulgated during the year provided for optional religious instruction in the national schools and for the restoration to religious associations of church lands and properties confiscated by the state early in the century. Contrary to expectations, however, the secular educational system of the republic was maintained. New restrictions were imposed upon the Jews in line with the Government's proclaimed aim of "eliminating all Jewish influence in the national economy." The drive to purge Government services of Freemasons likewise continued.

Former Premiers Edouard Daladier, Paul Reynaud, and Leon Blum, General Marie Gustave Gamelin, and Georges Mandel, who were arrested by the Vichy Government in 1940 and charged with responsibility for France's entrance into war and defeat (see *YEAR BOOK* for 1940, p. 284), were held in custody throughout 1941 without trial. To

handle this ticklish question, Marshal Pétain on August 12 appointed a Council of Political Justice to devise the best methods of bringing the accused to justice. The Council on October 14 submitted its recommendations. Shortly afterwards Pétain transferred the five defendants to Fort Pourtalet in the Pyrenees and fixed the date of their trial before the Supreme Court at Riom for Jan. 15, 1942. Former Air Minister Guy La Chambre, who returned from the United States to face trial, and Pierre Jacomet, former Secretary-General of the War Ministry, remained interned in Bourassol Manor.

The military tribunal at Clermont-Ferrand continued to pass sentences, many of them in absentia, upon members of the armed forces at home and abroad who opposed the Pétain Government's capitulation to Germany or who were charged with contributing to the French military collapse. The military summary court established at Gannat near Vichy to judge cases of de Gaulist agitators and army and navy deserters was suppressed early in November after passing numerous death sentences by default upon Frenchmen who had escaped to join the Free French forces. Further modification of the judicial system was announced November 22. Trial by jury was restricted, and civil authorities (Ministers and prefects) were empowered to order internment or impounding without other legal process.

Against the defiant but mostly passive resistance of the inhabitants, the Germans continued the process of uprooting Frenchmen from Alsace and Lorraine and sending them into the unoccupied zone. Forty delegates representing the refugees met in Clermont-Ferrand in June and organized, primarily for the undeclared objective of restoring French sovereignty in the two annexed provinces.

Food Situation. Due to German requisitioning, the dislocation of transportation facilities, and the British blockade, there was an acute food shortage in some cities and districts of France during the winter of 1940-41. On March 10 Admiral Darlan threatened to use the French navy to convoy food ships to France unless the British relaxed their blockade. At the same time Marshal Pétain appealed for American aid. As a result of pressure from Washington, the British granted navicerts for several shiploads of American flour and milk to unoccupied France. The American Red Cross and the Quakers continued to distribute small quantities of food in the unoccupied zone, but the Red Cross refused to extend its work into the occupied zone because the German authorities declined to allow it the required freedom in supervising distribution of food.

Norman H. Davis, chairman of the American Red Cross, reported to the U.S. House Appropriations Committee late in the year that reports of widespread starvation and deep suffering in occupied France were "exaggerated." However the food rations for both sections of France were reduced during the autumn and all indications pointed to a difficult winter. Public health records showed a rise in malnutrition and child mortality and a decline in the average weight of adults. The Vichy Government's efforts to control the distribution and price of every item of food led to widespread evasions, to hundred of arrests, and to bureaucratic hampering of the distribution system. Fairly large supplies of foodstuffs were received steadily from French North Africa, but a considerable proportion was reported to have been delivered to Germany and Italy.

Free French Movement. The Free French Movement

established by Gen. Charles de Gaulle in 1940 in opposition to the Pétain Government's capitulation policy, gained strength and influence during 1941. Free French forces under the command of Gen. Georges Catroux joined with the British in the conquest of Syria and Lebanon, which then became an important bastion of Free French power (see SYRIA AND LEBANON). The British Government on August 7 formally recognized French preeminence in the Levant States.

The Vichy Government's tacit alliance with the Reich and its submission to Japan in French Indo-China, coupled with the growing strength of the Allies, caused further defections from Vichy forces to the Free French. General de Gaulle answered criticisms of his one-man leadership on September 24 by forming a Free French National Committee of eight National Commissioners and two Directors, with himself as President. The decree vested legislative powers in General de Gaulle, acting in consultation with the National Committee, or Free French Cabinet. The National Commissioners, with their respective departments, were: Economy, Finance and Colonies, Coordinator of the civil commissariats, René Pleven, Foreign Affairs, Maurice Dejean; War, Gen. LeGentilhomme, Navy and Merchant Marine, Admiral Muselier; Justice and Education, René Cassin; Aviation, Colonel Valin; Labor and Information, André Diethelm; National Commissioner without department, Georges Thierry d'Argenlieu. The two Directors were Hervé Alphan, Economic Affairs, and Henry Hauck, Labor.

The Council for the Defense of the French Empire, established in 1940, continued to function as an advisory body on defense and war activities. A Military High Committee was established later to give advice concerning the general conduct of the war and coordination of land, sea, and air forces. The Free French National Committee was recognized as representing all Free French territories and as the organ qualified to deal with all questions concerning collaboration with the Allied powers by Great Britain, Russia, Belgium, Czechoslovakia, and Poland.

Neither the United States nor the Allied governments granted the Free French request for recognition as the legal government of France. The Free French representatives joined with the other Allied Governments in the mutual accords concluded during 1941 in London (see GREAT BRITAIN under *History*). Immediately after the Japanese attack upon the United States and Great Britain on December 7, General de Gaulle declared Free France and all its territories in the Pacific at war with Japan.

St. Pierre-Miquelon Coup. Some friction between the Free French leaders and the Washington Government developed when a Free French naval force landed unexpectedly on the islands of St. Pierre and Miquelon (q.v.) on December 24 and seized control with the support of the great majority of the population. The next day the U.S. State Department condemned the action strongly as "contrary to the agreement of all parties concerned and certainly without the prior knowledge or consent in any sense of the United States Government." It inquired of the Canadian Government what steps it was prepared to take to restore the status quo of the islands. At the end of the year negotiations to settle diplomatic issues arising from the occupation were under way in Washington. Meanwhile the Free French authorities remained in control.

Darlan-Ciano Meetings. Admiral Darlan arrived in Turin, Italy, on December 9 for a conference with the Italian Foreign Minister, Count Ciano, on

Franco-Italian problems. Soon thereafter Italy released its French prisoners of war, comprising 1 officer and 136 men. Later it was revealed that a Franco-Italian protocol relating to the armistice convention and other accords were signed November 22. Under these accords, France was reported to have extended Italy a credit of 23 billion francs. Italy agreed not to demand delivery of all French weapons and equipment used against Italian forces, as called for by Article X of the Franco-Italian armistice, and to permit French citizens to obtain the income from their properties in Italy.

See BELGIUM, GERMANY, GREAT BRITAIN, ITALY, JAPAN, SPAIN, SYRIA, and YUGOSLAVIA, under *History*, BIRTH CONTROL; DAIRYING; FASCISM; FRENCH LITERATURE; LABOR CONDITIONS under *Employment*, etc.; LEND-LEASE ADMINISTRATION; MUSIC; NAVAL PROGRESS; NEWSPAPERS AND MAGAZINES; REFUGEES; SOCIALISM; THEATER; WORLD WAR.

FRANKLIN INSTITUTE. The Franklin Institute of the State of Pennsylvania for the Promotion of the Mechanic Arts, founded in 1824, is devoted to the increase of useful knowledge, to the encouragement of invention and discovery, and to the education of the public in the achievements of science and industry. Its very title has always indicated a desire to do honor to Benjamin Franklin.

The Committee on Science and Arts, formed of 66 members of the Institute, reviews in great detail many of the advances of science and technology. It recommends to the Board of Managers those persons deserving the annual awards of the Institute, which are formally presented at Medal Day Exercises in May. A Franklin Medal, highest award of the Institute, was presented in 1941 to Sir Chandrasekhara Venkata Raman, F.R.S., LL.D., D.Sc., Director, Indian Institute of Science, Bangalore, Mysore, India "in recognition of his many brilliant contributions to physical science," and to Dr. Edwin Howard Armstrong, Professor of Electrical Engineering, Columbia University "in recognition of his pioneer work in regeneration and the oscillating vacuum tube circuits."

The Franklin Institute includes in its activity publication of *The Journal of the Franklin Institute*, established in January, 1826, lectures presented about 20 times a year by distinguished persons in science and industry, and traveling shows which extend its educational influence beyond its walls. From the laboratories of the Bartol Research Foundation and the Biochemical Research Foundation, additions are constantly being made to scientific knowledge. The Institute also operates a seismograph and promotes scientific expeditions. The seismograph and observatory, with Franklin Hall and the Fels Planetarium, together with its 4,000 active exhibits constitute the Institute's museum. The library now numbers 123,000 volumes and 40,000 pamphlets, devoted entirely to works on applied science and technology, and is particularly noted for the collection of patent literature.

The President in 1941 was Philip C. Staples; Secretary and Director, Henry Butler Allen. The Institute is located in a new building on Benjamin Franklin Parkway, Philadelphia, Pa.

FREEMASONRY. In the United States, including the Philippine Islands, there were in January, 1942, 2,467,185 Masons, organized in 50 independent Grand Lodges composed of 5,547 Lodges. Although this was a slight decrease from last year's figures, many Grand Lodges showed an increase, and it was evident that the period of numerical decline ushered in by the economic depression of

the 1930's was drawing to a close. Recent statistics from the British Empire are not available, but the past few years' steady growth was maintained through the first months of the war.

As a society devoted primarily to individual character building, Masonry's work in the present world crisis is chiefly personal, fraternal, and charitable. All Grand Lodges have taken steps to see that Masons in the armed forces receive special attention from Lodges. Many Grand Lodges are supporting the efforts of the Masonic Service Association of the United States in its efforts to establish Masonic recreational centers near training camps. All Masonic organizations are making determined drives to swell the coffers of established welfare agencies such as the Red Cross and the U.S.O. Many are investing heavily in Defense Bonds, the Grand Lodges of Tennessee and Washington, and Scottish Rite organizations in Seattle, San Francisco, and Washington, D.C., having each made initial subscriptions of \$50,000. Substantial contributions have gone to charitable work of the Grand Lodge of England. The Scottish Rite Masons of Boise, Idaho, sent an ambulance to China. The Southern Jurisdiction as a whole sent ten, and also contributed more than \$69,000 to distressed Masons abroad. The Shriners continued their support of 15 hospitals for crippled children, costing \$1,000,000 a year; bequests of over \$100,000 were received in October. Patriotism and self sacrifice have always been taught by the Fraternity, and are particularly stressed now. In a letter to all New York members dated December 17, Grand Master Henry C. Turner, directed attention to seven of the many specific activities in which civilians can and must serve their country in this emergency.

Freemasonry carried on in Great Britain, with heavy duties assumed by the older members who must take the places of thousands away on military service. Meetings have been regular, but in many cases they have been held during daylight hours instead of in the evening. The modern concrete Freemason's Hall in London is open 24 hours a day for shelter of members and non-members alike. Bombings destroyed some meeting places, and in April a Lodge gathering in Scotland was bombed and 27 members were killed and 36 wounded. *The Freemason*, 71-year-old weekly journal, was bombed out, and suspended publication after Sept. 7, 1940. In addition to the regular peace-time charities, the Royal Masonic Hospital has been greatly expanded, equipped, and opened for war wounded. All over England, members turned in their gold jewels to be melted, \$120,000 having been realized. New South Wales Masons contribute regular sums weekly to the Grand Master's War Benevolent Fund. In September, Ontario Masons, in addition to \$110,000 already sent to British war welfare, planned to add \$10,000 each month.

As late as April 18, Scottish Rite Masons were meeting in Peking, China. The last Grand Master of Norway, Hans Johndal Roenneberg, 74, died September 9. In September the Vichy government suspended five army generals and a State Councilman on the sole ground of their Masonic membership. Bernard Fay, librarian of the National Library, is preparing a museum devoted to banned secret societies. A Paris exhibition of seized Masonic regalia and documents was opened in October, 1940. Until very recently, a few English and Scottish Lodges were quietly tolerated in Japan, on condition that no Japanese national ever be permitted to join.

Conventions, etc. *January 28*, Grand Lodge of the Philippines; John Robert McFie, Jr., was elected

Grand Master; Antonio Gonzalez was reelected Grand Secretary. *February 22-23*, George Washington Masonic National Memorial Association, Alexandria, Va.: \$65,701.99 was received, bringing total contributions for building and maintaining the monument to more than \$4,250,000. Grand Lodge Secretaries' Conference, Washington, D.C.: The Chairman was C. C. Hunt of Iowa, and there was discussion of investigation of candidates and cooperation among organizations. Grand Masters' Conference, Washington, D.C.: the agenda included social security taxes, the national preparedness program, and Masonry in Europe and Mexico. Masonic Service Association of the U.S. Washington, D.C.: Carl H. Claudy, Executive Secretary, reported progress in Masonic welfare work for the armed forces. *March 23*, Grand Lodge of Cuba: Garcia Pedroso was reelected Grand Master. *April 13*, 25,000 attended Easter Sunrise Service of the Grand Encampment of Knights Templar of the U.S. in Arlington, Va. *May 6-8*, Grand Lodge of New York, 160th Annual; Henry C. Turner was reelected Grand Master; Charles H. Johnson was reelected Grand Secretary; the Rt. Rev. Henry St. George Tucker, Presiding Bishop of the Protestant Episcopal Church and former missionary to Japan, was given the Grand Lodge Award for Distinguished Achievement. *June 12*, Grand Lodge of Iowa, 100th Anniversary. *June 22-24*, Grand Lodge of Rhode Island, 150th Anniversary. *June 23-26*, Supreme Council of the Grotto, at St. Louis. *August 28-30*, National Federated Craft, 12th annual, at Nashville, Tenn. *September 21-25*, Northern Supreme Council, Scottish Rite Masons, at Chicago: Grand Com. Melvin M. Johnson, of Boston, presided. *October 7, 8*, Supreme Council of Canada, Scottish Rite Masons, at Regina, Saskatchewan. *October 28*, Virginia Grand Chapter of Royal Arch Masons, 100th Anniversary. *November 6, 7*, Masonic Relief Association of the United States and Canada, at Chicago: President Charles H. Johnson, Grand Secretary of the Grand Lodge of New York, presided, and the program included discussions of Uniform Dues Cards, Uniform Procedure of Interjurisdictional Relief, and Masonic Charity Trends.

See BELGIUM and NETHERLANDS under *History*.

FRENCH CAMEROUN. See CAMEROUN, FRENCH.

FRENCH CONGO. See FRENCH EQUATORIAL AFRICA.

FRENCH EQUATORIAL AFRICA. A French colonial territory consisting of the four colonies: Chad (461,202 sq. mi.; capital, Fort Lamy), Gabon (93,218 sq. mi.; capital, Libreville), Middle Congo (166,069 sq. mi.; capital, Brazzaville), and Ubangi-Shari (238,767 sq. mi.; capital, Bangui). Total area, 959,256 square miles; total population (Jan. 1, 1938 estimate), 3,500,000. Capital, Brazzaville.

Production and Trade. The chief agricultural products are palm kernels, palm oil, coffee, cacao, cotton, and wild rubber. Tropical forests of 300,000 miles in area contain trees of industrial value. Ivory is an important item of export. The minerals found include copper, zinc, lead, gold, and diamonds. A railway, 318 miles in length, connects Pointe-Noire with Brazzaville. Trade, values in old U.S. gold dollars (1938): \$5,000,000 for imports and \$4,500,000 for exports. Roads (1940): 14,713 miles.

Government. Budget (1938): 224,629,000 francs (revenue and expenditure balanced). The franc averaged \$0.0288 for 1938; \$0.0251, 1939. French Equatorial Africa is a single administrative unit under the rule of a governor general, aided by an administrative council. During 1940 the various

colonies of the territory seceded from the Vichy government and joined the "Free French" forces of Gen. Charles de Gaulle (see *YEAR BOOK* for 1940; p. 290). Governor General, M. Eboué (appointed early in 1941); High Commissioner, General de Larminat (appointed Aug. 30, 1940).

History. French Equatorial Africa continued during 1941 under the control of Gen. de Gaulle's Council for the Defense of the Empire, set up on Oct. 27, 1940, and recognized by Great Britain as the *de facto* government of all "Free French" territories. It was announced during June of 1941 that an economic agreement (retroactive from Oct. 1, 1940, to Sept. 30, 1941) had been concluded between Great Britain and French Equatorial Africa under which the British government agreed to guarantee the sale of 20,000 tons of the commercial cotton, and to purchase a considerable portion of the coffee crop, a large quantity of timber, and the total output of palm oil, palm kernels, groundnuts, and beniseed. In addition, the British government agreed to make all purchases in pounds sterling, converted at the official rate of 176.625 francs to the pound, and to facilitate so far as possible supplies of essential imports from the sterling area.

Brazzaville, the capital, and the surrounding country was an important center of "Free French" activity and is a base for the army of Gen. Charles de Gaulle operating against the forces of the Axis Powers in the Sahara Desert and East Africa. A United States Mission, made up of Col. H. F. Cunningham of the U.S. Army, Lieut. Comdr. John Mitchell of the U.S. Naval Air Corps, and Lawrence Taylor of the U.S. State Department, arrived in French Equatorial Africa during October to study the vast territory in order to find out how best to help "Free France." During October, a newly formed company—Air France Libre—was operating an air service between Brazzaville and Damascus, Syria.

See FRANCE under *History*.

FRENCH GUIANA. A French colony in South America. Area, 7,722 square miles; population (1936 census), 30,906. The penal settlement had a population of 5,628 men. Capital, Cayenne, 11,704 inhabitants. Rice, maize, manioc, cacao, coffee, bananas, and sugar cane are the chief agricultural crops. There are large forests rich in various kinds of timber. Gold mining is the most important industry. Trade (1939): 61,584,278 francs for imports; 47,490,741 francs for exports (franc averaged \$0.0251 for 1939). The budget for 1937 balanced at 17,704,755 francs. A governor heads the administration.

Inini. This territory comprises the hinterland separated from French Guiana by the Decree of July 6, 1930. Area, 27,027 square miles; population (1936), 6,099. The main center is Maroni. Rosewood and other cabinet woods are the chief products. Figures of commerce are included in those of French Guiana. The budget for 1937 balanced at 3,329,542 francs. Inini is under the direct administration of the governor of French Guiana, assisted by an administrative council.

See MARTINIQUE under *History*.

FRENCH GUINEA. See FRENCH WEST AFRICA.

FRENCH INDIA. The five French colonies in India—Chandernagor, Karikal, Mahé, Pondichéry, and Yanam. Area, 196 square miles. Population (1939), 304,680. Capital, Pondichéry (51,992 inhabitants). Rice, manioc, and groundnuts are the main products. Trade (1939, at ports of Pondichéry and

Karikal); 80,467,000 francs for imports and 82,075,000 francs for exports (franc averaged \$0.0251 in 1939). All the colonies adhered to the "Free French" movement headed by Gen. Charles de Gaulle following the French capitulation to Germany and Italy in June, 1940.

FRENCH INDO-CHINA. A French dependency in southeastern Asia comprising the divisions shown in the accompanying table.

Division	Sq. mi.	Pop. (1936)	Capital
Annam ^a	57,143	5,656,000	Huế
Cambodia ^a	69,884	3,046,000	Pnom-Penh
Cochin China ^b	25,096	4,616,000	Saigon
Kwangchowan ^c	309	230,000	Fort Bayard
Laos ^c	89,189	1,012,000	Vientiane
Tonkin (Tongking) ^d	44,787	8,700,000	Hanoi
French Indo-China ^e	286,408	23,260,000	Hanoi ^f

^a Protectorate. ^b Colony. ^c Also known as Kwangchow. Leased from China for 99 years in 1898 (territory increased in 1899) and placed under the authority of the Governor-General of French Indo-China. ^d The capital city is Hanoi, but during certain seasons of the year, when climatic conditions are oppressive, the government offices move to Saigon. ^e Under the terms of a peace treaty, concluded on May 9, 1941, France ceded to Thailand the districts of Paklay and Bassac and the larger part of Cambodia. See below under *History*.

Chief towns: Hanoi, the capital, 145,491 inhabitants; Binh-Dinh, 147,199; Cholon, 145,254; Haiphong, 122,000; Saigon, 111,000; Pnom-Penh, 102,678; Tchékam, 35,000; Huế, 33,222; Vientiane, 28,000; Battambang, 22,000; Fort Bayard, 12,000.

Education (1939): For French children there were 42 primary and secondary schools (8,226 pupils enrolled). For native children there were 7,226 schools of all kinds (527,820 pupils enrolled). In addition, there were many private schools for foreign elements of the population. The University of Hanoi had 623 students.

Production and Trade. Rice is the most important agricultural crop, the area under cultivation during 1940-41 being 5,478,000 acres from which 3,000,291 metric tons were produced. The estimated production of rubber for 1941 was 76,000 metric tons (70,000 for 1940). Other agricultural products were maize, pepper, spices, tea, kapok, groundnuts, and copra. Minerals (1940 export figures in metric tons): iron (41,700), tin (2,776), wolframite (454), manganese (500), antimony, lead, and salt. The output of anthracite coal in 1939 totaled 2,615,000 metric tons. Gold produced in 1939 amounted to 8,037 troy oz. Trade (1939): imports, 2,382,262,000 francs (cotton and silk tissues, metal goods, kerosene, and motor vehicles were the main items); exports, 3,494,724,000 francs (rice 1,386 million francs, rubber 916 million francs). The franc averaged \$0.0251 for 1939; the French Indo-China piaster was equal to 10 French francs.

Communications. In 1940 there were 22,658 miles of roads, 2,093 miles of railways, 9,687 miles of telegraph lines, 8,932 miles of telephone lines, and a radio-telephone service from Saigon to Europe.

Finance. The general budget for 1941 was balanced at 1,290,147,500 francs and the extraordinary budget at 189,337,800 francs. For 1940 the general budget balanced at 1,346,788,700 francs and the supplementary railway budget at 153,210,000 francs. The public debt on Dec. 31, 1940, was 2,515,894,110 francs.

Government. The government for the whole of French Indo-China is administered by a governor assisted by a secretary-general, a government council, and a grand council for economic affairs. Cochin China, which is a direct French colony, is headed by a governor aided by a colonial council.

Each of the four protectorates (Annam, Cambodia, Laos, and Tonkin) is headed by a resident-superior assisted by a protectorate council and a council of economic affairs. Governor General, Adm. Jean Decoux.

HISTORY

The foothold gained in Northern French Indo-China by the Japanese in 1940 (see YEAR BOOK for 1940, p. 291) was followed by Japanese military occupation of the entire colony in 1941. The seizure took place without violence or opposition as a result of skillful Japanese diplomacy in playing off Thailand against the French colony and in utilizing Tokyo's influence in Berlin to extort concessions from the Vichy Government in France.

War with Thailand. The sporadic border clashes with Thai troops resulting from Thailand's territorial demands on French Indo-China developed into a full-fledged Thai invasion early in January, 1941. It was reliably reported that Japanese military advisers, as well as planes and pilots, aided the Thai drive. At the same time Japan increased its pressure upon the French authorities in Indo-China to make further political and economic concessions. This squeeze play enabled the Japanese to strengthen their hold on the French colony without provoking outside intervention.

With the Thai invasion making steady headway, the Japanese Government on January 21 offered to "mediate" the dispute. Governor Decoux accepted the same day and the Vichy Government, under pressure from Berlin, consented on January 22. Meeting on board a Japanese cruiser in Saigon harbor, the French and Thai representatives on January 31 signed an armistice drafted by the Japanese mediators.

The armistice provided for a 10-day suspension of hostilities pending the conclusion of a peace treaty between France and Thailand in Tokyo. The French, however, resisted the Japanese demand for the cession to Thailand of about one-third of the western Indo-China provinces of Laos and Cambodia. After the official Japanese spokesman at Tokyo warned France to accept the Japanese proposals or "face the consequences of Japan's determination to assert leadership in Greater East Asia," a compromise peace settlement was finally agreed upon on March 11.

Under it Thailand acquired an estimated 21,750 square miles of territory in Laos and Cambodia—considerably less than the original Japanese proposal. Thailand undertook to pay France 6,000,000 piastres as compensation. The ceded territories were demilitarized, according to the accord, and Indo-China's nationals in that area were guaranteed equality of treatment with Thai nationals. As part of the settlement, an exchange of letters made Japan the guarantor of the execution of the peace terms and bound both French Indo-China and Thailand not to conclude any political, economic, or military agreement with third powers directed against Japan. The treaty incorporating these provisions was signed in Tokyo on May 9.

Economic Concessions. On May 6 Japan reaped further gains from its interventionist program in Indo-China through the conclusion at Tokyo of two economic accords with the French authorities, giving the Japanese an economic stranglehold on the colony. The accords consisted of a general treaty of commerce and navigation, and a five-year trade agreement. The latter reduced or eliminated Indo-China's tariffs on Japanese products and gave Japan a virtual monopoly of Indo-China's exports, particularly rice, corn, rubber, and minerals. These ac-

cords were the outcome of negotiations for economic collaboration initiated in 1940 (see YEAR BOOK for 1940, p. 291).

Japan Takes Military Control. Once in economic control, the Japanese proceeded by indirection to fasten their military domination upon the colony. The airdrome at Saigon had been partially taken over without French sanction early in 1941. There was a gradual infiltration of Japanese military units into the southern part of Indo-China, while Japanese warships frequented the coastal waters and harbors. Japanese correspondents reported a growth of de Gaulist sentiment and activity among the French and native inhabitants of the colony and the Tokyo press, attributing this alleged trend to British intrigue, threatened forceful counter measures. At the same time the Japanese adopted a menacing attitude toward all foreigners in Indo-China. On May 25 they seized more than \$10,000,000 worth of gasoline, iron, and other war stores belonging to two American companies from warehouses in Haiphong. These supplies, purchased with United States Government credits and consigned to the Chinese Government, had been held at Haiphong since the Japanese invasion of northern Indo-China in 1940.

Early in July the Tokyo press began a new campaign against the French authorities in Indo-China, charging evasion of the economic accords of May 6 and persecution of pro-Japanese Annamese. Demands for Japanese military control were served on the Vichy Government, again with support from Berlin. On July 23 Vichy officials announced that the Government had "in principle" accepted Japanese "cooperation" for the defense of French Indo-China against British threats. Japanese warships and troop transports appeared off the southern coast of Indo-China the next day and began the occupation of Saigon July 26.

Three days later the Vichy Government signed a protocol formalizing the Japanese occupation. It provided for joint Franco-Japanese military cooperation for the defense of the colony. In the protocol Japan undertook "to respect the rights and interests of France in East Asia, in particular, the territorial integrity of French Indo-China, and the sovereign rights of France in all parts of the Union of Indo-China." It was stipulated that special defense arrangements under the protocol were to continue in effect "only so long as the circumstances motivating their adoption continue to exist."

An accompanying special military accord authorized Japanese occupation of the Saigon airfield, the partially completed naval base at Cam Ranh Bay, and key points and airdromes along the Thai and Chinese frontiers and the southern coast. In addition to the Japanese forces authorized in northern Indo-China under the accord of Sept. 22, 1940, the Japanese were permitted under the new arrangement to station 40,000 troops at eight air bases and five garrison points in southern French Indo-China.

The Japanese proceeded to fortify and strengthen their newly won positions in preparation for the next expansionist move. Strong forces were concentrated along the border of Thailand to reinforce Japanese diplomatic pressure upon Bangkok (see THAILAND under *History*). The French armed forces were dissolved and their arms seized by the invaders. The authority of the French Government was steadily whittled down while Japanese economic control was extended. Under Japanese pressure the Indo-China Government on August 13 prohibited the export of all merchandise except that going to Japan. A former Japanese Foreign Minister, Kenkichi Yoshizawa, was sent to Saigon as spe-

cial ambassador-at-large to unify all Japanese political, economic, and cultural organs in Indo-China.

Early in October all warehouses, office buildings and stores in the vicinity of the Saigon docks were requisitioned by the Japanese authorities to store equipment. At the same time Japan made new demands on the Indo-China Government, including control of the postal censorship and a large increase in the number of troops permitted under the July 26 agreement. On October 19 a Japanese economic mission of 31 members arrived in Hanoi to speed the economic exploitation of the colony. The American consulate at Saigon was wrecked by a bomb explosion on November 23. Late in November, large-scale Japanese troop movements to Indo-China began behind a screen of denials from Tokyo and Vichy. On December 7 the Japanese naval, air, and land forces stationed there began a simultaneous surprise attack upon Thailand, the Philippines, and the British, Dutch, and United States possessions in the Pacific and southeastern Asia. A new accord granting Japan further rights in Indo-China was announced by the Vichy Government December 10.

French Rule Modified. The Vichy Government announced Jan. 3, 1941, that French authorities in Indo-China had been granted large powers of autonomy in handling colonial affairs. Governor General Decoux used this authority to substitute a highly centralized, dictatorial rule on the Vichy model for the former administrative system. He announced November 16 that he had dismissed 300 officials who opposed the "new order," assumed the right to appoint municipal officials formerly chosen by townships, and imprisoned those who "disturbed my efforts to bring the Indo-China administration into line with political developments in France." This policy, combined with the growing subservience of the Indo-China Government to Japan, was reported to have caused widespread unrest and opposition among both French and native inhabitants of the colony.

King Sisowath Monivong of Cambodia Province died April 23 and was succeeded by his nephew, Prince Sianouk, upon nomination of the Royal Grand Council.

FRENCH IVORY COAST. See FRENCH WEST AFRICA.

FRENCH LITERATURE. There has been a surprising amount of publications in French—even in the field of literature. What must be emphasized at the outset is that tremendous efforts were made from all sides to keep the torch burning. No doubt, all is not of first quality, but for reasons easy to understand. Moreover only what we may call "innocent" literature was allowed to appear in a land crushed under the heel of a more than severe conqueror. A close checking was maintained so that no publication unfavorable to the enemy might be issued, and actual steps were taken to substitute a Nazi-inspired literature to the French. In the first place a number of books were retired from book shops, as listed in an *Index Librorum Germanicus*; then a "Comité du livre français" was formed under German control for books to be printed with such French names of "collaborationists" as Bernard Fay (who already had consented—it seems without reluctance at all—to take over from the then incumbent the supervision of the Bibliothèque Nationale), A. Bellessort, the "Secrétaire perpétuel" of the French Academy, the fanatic pro-German Drieu de la Rochelle, Alfred Siegfried, Paul Morand, some perhaps having accepted reluctantly.

The Rector of the University of Paris, Paul Roussy, was displaced as hostile to Nazism; a request was sent to members of the French Academy to return to Paris and give an appearance of normal life to the capital, with the regular Thursday afternoon meetings attended; the same was done for the Professors of the Collège de France some of whom had retired to Lyons, in the unoccupied zone, and had lectured there.

The task of keeping open at least some of the theaters seemed easier: Copeau, Jouvet, Dullin, Baty, Guitry, and several others returned soon enough to resume a "season." All told it appears that the people of France resisted the invader with more determination than the so-called *Intelligentsia*. Among the publishing firms that agreed to reopen under strict supervision of the Germans, one may name especially Grasset, a very strong believer in "collaboration," who even wrote a book himself, *A la recherche de la France*. Not much less friendly to the "collaboration" was Plon; others, under less conviction possibly, were Gallimard, Michel, Boivin, Corréa, Flammarion, Mercure. Various shades of "collaboration" were evident also in the pages of reviews and newspapers, although all had, of course, to show "patte blanche." The old *Revue des Deux Mondes*, under the direction of Chaumeix of the French Academy, was quite alive, but seemed chiefly anxious to exalt the Vichy government; among contributors one finds Bellessort, Maurras, Bordeaux, Duhamel, Billy, Hazard, Madelin. *L'Illustration* is as nearly normal as possible. The frantically "collaborating" weekly is *Candide*, directed by Massis. Hardly less pro-Nazi is the new *La Gerbe*, founded by A. de Chateaubriant. *Le Temps*, daily, keeps its traditional part as echo of the government of the hour, André Thérive remains literary critic. The *Matin* edited by J. Luchaire, who also founded *Les Temps nouveaux*, is unblushingly pro-Nazi; but the palm for "collaboration" belongs to *L'Oeuvre*, edited by Marcel Déat. Several of the best known French writers, however, refused money to contribute to Nazi-minded publications and had to suffer for it; one cites Valéry, Bouteron, Roger Martin du Gard, Paul Fort; also Germaine Beaumont and Simone Ratel.

Various attempts were made in the unoccupied zone to encourage writing; in Toulouse, a sort of revival of the old *jeux floraux* was arranged. Then, in Avignon, the Félibrist poet Aubanel started a collection of books signed by illustrious authors, to the contents of which no one could object on political grounds—books on history, travel, etc. French Switzerland was the only country able to come to the rescue to a certain extent. (See also SWISS LITERATURE.) A publishing firm in Neuchâtel issued a commemorative volume to honor the lamented philosopher Bergson, the text being furnished by French authors. At Fribourg, was published a timely novel by Ed. Jaloux, *Le vent souffle sur la flamme*; and in Geneva, Jacques de Lacretelle gave out his *L'heure qui change*. In Lausanne a series of books by favorite French authors, and which were no longer obtainable in former editions was launched (by Colette, Renard, Fournier, Péguy, etc.), and a French Swiss "Gilde littéraire" collected money to offer an award of 50,000 francs for a good book written in French. One must not forget to mention the periodical appearing in England with no diminished success ever since its foundation in 1940, with some of the best French names as contributors, *La France libre*.

In America a great deal was done to keep interest in French culture alive. Many French refugees,

many writers among them, settled down, in New York and elsewhere, and wrote what they could not have written overseas: André Breton, Gustave Cohen, Dekobra, Focillon, Maeterlinck, Maritain, Maurois, Pertinax, J. Romains, Rougier, Saint-Exupéry, Mme. Tabouis, H. Torrès, Verneuil, . . . not to mention Julien Green who came "home." Some have been discreet in accepting the hospitality, some less. Quite a number of French books were published in America, especially in the "Editions de la Maison française," and by Brentano—both in New York. In Canada the number of French publications was even greater. Consult their *Bulletin Bibliographique de la Société des Écrivains Canadiens* (Montréal). Literature, history, politics, religion, science—no domain remained unexplored. As to journals in French, they flooded the country: *Voici la France* a monthly published at Carmel, N.Y., which endeavors to offer impartial news; *La Voix de France*, violently anti-Vichy, was started in September; *Amérique* (N.Y.); *Le Travailleur* (Worcester); *Le Messager* (N.Y.); the *French Forum*, quite recently launched in New York; *France speaks*, a weekly mimeographed. In Canada, *La Presse quotidienne* claims the largest circulation as an American daily in French; *La nouvelle relève*; *Bulletin des Études françaises* (Montréal).

Many of the books of the year are comments on the war, and some of them exhibit real literary skill: Lazareff, *Dernière édition. Dix ans de la vie de Paris*—a sort of introduction to the great tragedy; Alex. Werth, *Les derniers jours de Paris*, Mme. Colette, *Journal à rebours*; P. Pélaudau, *On disait en France*, impressions of a young Canadian who happened to be in France just before the war and knew a number of celebrities there; André Morize, *Paris. Été 1940*, by one who witnessed the débâcle, himself having served in the "Bureau of Information" since 1939—and a moving account it is, René de Chambrun (son-in-law of Laval), *De la Lorraine à Washington* (in English, *I saw France fall*); Benoit-Méchin (once attached to the Vichy Government) *La moisson de Quarante*; Max Beer, *La guerre n'a pas eu lieu*. Mme. Margaret Hughes (collaborator of the generous Miss Anne Morgan), *Les lauriers sont coupés*. Let us add: Pierre Mac-Orlan, *Chronique de la fin du monde*, and Fr. Carco, *Nostalgie de Paris*.

The following are less accounts of the tragedy than attempts at interpretation of events; most of them are by writers who took refuge in America: André Maurois, *Tragédie en France*; Jacques Maritain, *A travers le désastre* and *Le crépuscule de la civilisation*; Jules Romains, *Sept mystères du destin de l'Europe* (also published in English and which was received with much reserve); R. Goffin (a Belgian lawyer very active for the cause), *Le roi des Belges a-t-il trahi?*; Robert de Saint-Jean, *Démocratie, beurre et canon*; Pierre de Lanux, *France de ce monde*. Some portraits of eminent figures in the tragedy: Georges Suarez, *Le maréchal Pétain*; Henri Torrès, *Pierre Laval*; Philipp Barrès, *Le Général de Gaulle*. Some who have romanced the war in novels are: René Benjamin, *Printemps tragique*; R. Goffin, *Le fusilier de Dunkerque* and *Les cavaliers de la déroute*; M. Dekobra, *Emigrés de luxe* and *Le Journal d'un lâche*; Clément Riche, *Dernier voyage du Pembroke* (an old cargo); Claire Goll, *Le tombeau des amants inconnus*. (*The Nation*, Dec. 6, published, "Literature of the French Defeat," by a writer somewhere in France.)

Literary productions which try to keep clear of the bloody world conflict are rather astonishingly abundant. In the domain of poetry, literary prizes

have been awarded: the "Prix Alfred Mortier" went to Georges Delaguys for a *Naissance de Tristan*, and a "Grand Prix Fabier-Artigues" to Maurice Magre for *Parc de rossignols*; the "Prix Morès" to André Blanchard for *Entre jour et nuit*. In Canada two women earned poetic laurels: Simone Routier, of Ottawa, published a collection, *Tentation*, in the style of Paul Claudel, and Cécile Chabot, with a religious note too, *Vitrail*. Also from Canada: René Larnier, *Images et proses*; Claude Couban, juvenile dreams in *Visages transparents*. The 50th anniversary of the death of Rimbaud was observed in the ruins of his native town of Roches which had just been razed by the Germans. A young American poet Clark Mills (now at Cornell University) offered a translation in English verses of Mallarmé's fragmentary drama *Hérodiade*. Péguy, Mallarmé, and Verlaine inspired critical studies.

The activity on the stage has been great, considering the circumstances. Theaters opened, but mostly with "reprises." Molière, Racine, and many authors "au-dessus de la mêlée" could be offered without risk on the part of the Nazi authorities. Copeau, at the head of the Comédie française was one of the first to reopen, offering *Le Cid*, *Le Gendre de M. Poirier*, *Le paquebot Tenacity*, *Noë* . . . ; Dullin resumed with his former success *Plutus*; Baty with *Les caprices de Marianne*. Among other "reprises" were *La famille Monestier* (D. Amiel) and *La Grande Catherine*. Guitry even risked a new play, *Le Bien aimé*. And Souplex, with Mme. Colette, risked a *Revue*. In the unoccupied zone companies were organized to go on the road, one by Jacqueline Porel (the granddaughter of Réjane); another by Jean Noham and Claude Dauphin; still another by Léo Savage, called "Compagnie de la Basoche." Péguy's *Jeanne d'Arc* and Paul Claudel's *L'Annonce faite à Marie* were repeatedly presented in the unoccupied zone to keep up the morale of the nation. Jules Romains's timely play, which had been accepted by the Comédie française, *Pitié encore pour la terre*, was presented in a sort of world première at Middlebury College Language Summer School, Vermont, the parts being read by French professors with the author being present. The play is awaiting a regular production in New York.

Professor Baldensperger, now living in California, published a French play in verse, *Cassandre*; it deals with ideas parallel to those of Jules Romains—what can the future mean for the world? Louis Verneuil, the playwright, now in New York, published a book, *La vie glorieuse de Sarah Bernhardt*, whom he had known and for whom he had written plays.

One may well be amazed to find how many nonwar novels could be published in the sad year 1941. First—published in New York—were two more volumes of Jules Romains' *Les Hommes de bonne volonté*; both deal with the repercussion of World War I, in Russia, and the sanguinary revolution in that country which tried to inaugurate a new kind of civilization. Their titles are *Cette grande venue leur de l'Est*; the other, a continuation, is called *Le monde est ton aventure*. François Mauriac gave a novel which may be considered a counter-part of his play *Asmodée* (1937), and called *La Pharisienne*. Henri Bordeaux is less pessimistic in *Les murs sont bons*. Pierre Benoit in *Notre Dame de Tortosa* takes up a theme that reminds one of Loti's *Les Désenchantées*. One of the most striking novels of 1941 was Julien Green's *Varouna*—name of the Vedic deity of reincarnation. It is in three episodes which connect over centuries;

the first takes place in prehistoric times, the second at the time of the Renaissance, the third in modern days. Several novels have a religious atmosphere, like the posthumous *Evasion*, by A. Lichtenberger; *Tentation*, by Paule Régnier (the author of *L'Abbaye d'Évolène*); *La porte fermée* (in the vein of Paul Bourget), by Phil Darciat; Gautier-Vignol, *Les Somnambules*.

The duty of the French people to remain faithful to the good soil of France and cultivate it is suggested in Claude Jolly's *Antoine*, and in Henriette Roussel's *À quatre pas de Souceyrac*. Félix de Chazournes had a "roman de voyages" (in Europe and South America) in *Agnès ou le Rivage de Bohème*. Noëlle Roger depicts through her own imagination a country where modern civilization had not brought its curse, *La vallée perdue*. Some other titles are A. Billy, *Le double assassinat de la Maison du boeuf*; Maxence van der Meersch, *Pêcheurs d'hommes*; Simenon, *Le coup de vague*; Marcel Aymé, *Le boeuf clandestin*. Two novels, by well known authors, were started in the *Revue des Deux Mondes*: Maurice Genevoix, *Le lac fou*, and Duhamel, *Suzanne et les jeunes hommes*. Three volumes of short stories stand out—Mme. Colette, *Chambre d'Hôtel*; Francis Robert, *L'Oie*; Blaise Cendrars, *D'Oultrre-Mer à Indigo*. A Canadian novel, by Léon Desrosiers, *Les opiniâtres*, may well compare with the famous *Trente arpents*, by Ringuet (see YEAR BOOK, 1940).

Under the title *Varia* one could mention a long list of books on French history, geography, travel—all signed by excellent French authors who, evidently, were not allowed to use their talents in their preferred fields. Quite a few of these books treat religious topics, lives of saints, or missionaries. For example, there is an anthology of old medieval stories of the Virgin, by the brothers Tharaud; another anthology, *Paysans d'aujourd'hui* is by Marcel Braibant. There are the *Mélanges*, by Paul Valéry; *Souvenirs littéraires*, by Julien Green; *Souvenirs d'un journaliste*, by Clément Vautel; and also souvenirs by Raïssa Maritain (sister of the philosophers) called *Les grandes amitiés*. We need not dwell here on Gontran de Poncins's *Kabloona*, that remarkable description of the life of the Eskimos, which had as much success in the English version as in the French.

A few words must be said about literary history and literary criticism. Activity along this line has been hardly less than in normal years, but this is due to the considerable contributions brought by American scholars. Readers will easily see by the names given whether books have been written in France or in America: In linguistics, A. Dauz, *L'Europe linguistique*, and A. Thérive, 3d and last of the series *Querelles de langage*. In medievalism, *Anthology of Troubadours provençaux*, by Thompson and Bergen (Yale University Press); Mary Rouck, *Sources du roman de Brut* (Univ. of California). In the 16th Century, Chaigne, *Anthologie de la Renaissance catholique*; A.-M. Schmidt, *Poésie scientifique au XVI^e siècle*. In the 17th Century, Professor Lancaster, of Johns Hopkins, continues his monumental publication, *History of French Dramatic Literature*, with two volumes on Racine; E. E. Williams, *Racine depuis 1885* (bibliography); Helen Monod-Cassidy, *Un voyageur-philosophe au XVII^e siècle. L'abbé Leblanc* (Harvard Press). In the 18th Century, Ira O. Wade, *Voltaire and M^{me} du Châtelet*; H. A. Grubbs, *J. Bapt. Rousseau* (both Princeton Press); R. M. Spurlin, *Montesquieu in America* (Univ. of Louisiana Press); Albert Schinz, *État présent des Etudes sur J.-J. Rousseau* (pub. by Modern Lang. Ass. of America); D. Mornet, *Did-*

rot. In the 19th Century, *Oeuvres d'André Chénier*, ed. by G. Walter (Ed. de la Pléiade); J. Fourcassié, *Le Romantisme et les Pyrénées*; Louis Bertrand, *Lamartine*; M. Bardèche, *Balzac romancier*—up to Père Goriot; R. P. Bowen, *The dramatic construction of Balzac*; A. Feuillerat, *Baudelaire et la Belle aux cheveux d'or* (Yale Press); Art. Artinian, *Maupassant Criticism in France* (Crown Press, N.Y.); Seymour Travers, *Catalog 19th cent. theatrical parodies in France, 1789-1914* (Crown Press, N.Y.); G. Truc, M^{me} Colette; Bachelard, *Lautréamont*; S. Pelletier, *La nature de la grâce chez Bourget* (Toronto); H. C. Hunt, *History of 19th cent. Epic in France* (Blackwell, London). Very few reports crossed the ocean regarding personalia. The following deaths were announced: Henri Bergson, Marcel Prévost, Louis Bertrand—all three of the French Academy; also Gilbert des Voisins, Fernand Herold, Pierre Mille, Henri Spiess; the famous actress Julie Bartet; the "Jeanne" of Victor Hugo's *L'Art d'être grand-père*, M^{me} Négrepont-Hugo.

The "Académie Goncourt" announced the intention to award their famous "Prix Goncourt" late in December, perhaps even to award two, since last year's was not awarded.

ALBERT SCHINZ.

FRENCH OCEANIA. The French possessions in the eastern Pacific, comprising several groups of islands, of which the principals are: Society, Marquesas, Tuamotu, Leeward (Îles sous le Vent), Gambier, Astral, and Rapa islands. Tahiti (600 sq. mi.; pop. 19,029 in 1936), of the Society group, is the main island. Total area, 1,520 square miles. Total population (Jan. 1, 1938), 45,000. Capital: Papeete (on Tahiti), 8,456 inhabitants. Copra, vanilla beans, phosphate, and mother-of-pearl are the chief products. Trade (1939): 80,482,000 francs for imports and 63,536,000 francs for exports (franc averaged \$0.0251 for 1939). Budget (1939): 27,560,000 francs (revenue and expenditure balanced). French Oceania continued under the control of the "Free French" movement of Gen. Charles de Gaulle during 1941. Governor, Gen. Richard Brunot.

FRENCH SOMALILAND. A French colony in Africa, at the southern entrance to the Red Sea. Area, 8,492 square miles; population (1936 census), 44,240, including 27,380 Somalis, 4,200 Arabs, 12,000 Danakils. Djibouti, the capital, had 20,000 inhabitants in 1939.

Production and Trade. The chief occupations of the people were fishing, salt mining, and the transit of goods to and from the interior. Trade (1938): imports, 147,700,000 francs (the chief imports were cotton yarns, cotton goods, cattle, coal, and sugar); exports, 85,300,000 francs (the main exports were coffee, hides, and salt). The 1938 transit trade was valued at 521,563,195 francs (franc averaged \$0.0288 for 1938; \$0.0251 for 1939). Shipping entered at Djibouti in 1938 totaled 2,823,096 tons. There is a railway from Djibouti to Addis Ababa, Ethiopia, 496 miles in length.

Government. Local budget (1939): 26,000,000

francs (revenue and expenditure balanced). The colony was administered by a governor, assisted by an administrative council. Governor in 1941, M. Nouailhetas.

History. French Somaliland remained under the control of the Vichy government in France in spite of the efforts of British and "Free French" forces to win the colony over to the cause of Gen. Charles de Gaulle. It was announced, according to a report from Vichy on June 11, 1941, that the colony had rejected Gen. Sir Archibald Wavell's offer of "preferential treatment" if it rallied to the banner of General de Gaulle. A report of June 13 announced that the colony was completely surrounded by British-controlled territory on land and blockaded from the sea. The Vichy government endeavored to supply the colony by means of transport planes which carried medicines, mails, and instructions for the French governor to hold out against any British threats or attacks.

On Oct. 30, 1941, it was reported that the governor had offered to negotiate the British request for the use of the railway to Addis Ababa and the port of Djibouti. The governor informed Vichy officials that he also would discuss with the British the lifting of the blockade of French Somaliland so that medicine and food supplies could be sent to combat an outbreak of scurvy.

Vice Admiral Rene Platon, French Minister of Colonies, on his return to Vichy (Nov. 11, 1941) from an air trip to French Somaliland, asserted that the French declined to negotiate further when the British said that foods would merely go through Djibouti in transit to Ethiopia and the blockade of French Somaliland would continue. The governor informed the British "that if that was their attitude they would never be able to use the railway, for if the French were forced by famine to surrender they would blow up the port and the railway." Admiral Platon, announced on the same day, that British planes had dropped warnings that the British would execute any persons found guilty of destroying the railway or port facilities at Djibouti.

FRENCH WEST AFRICA. A French colonial federation made up of the colonies shown in the accompanying table.

Colony	Sq. ms	Pop (1937)	Capital
Dahomey	43,232	1,289,128	Porto-Novo
Dakar*	60	120,929	Dakar
French Guinea	96,886	2,065,527	Conakry
French Sudan	590,966	3,635,073	Bamako
Ivory Coast	184,174	3,981,459	Abidjan
Mauritania	323,310	370,764	
Niger	499,410	1,809,576	Niamey
Senegal	77,730	1,666,374	St Louis
French West Africa	1,815,768	14,944,830*	Dakar

* Including dependencies † The lieutenant-governor of Mauritania resides in St. Louis, Senegal ‡ The total population included 26,614 Europeans, of whom 18,188 were French.

Chief towns: Dakar (capital), 42,000 inhabitants; Kaolak, 39,981, St. Louis, 35,927; Porto-Novo, 27,483; Bamako, 32,761 (1940), Abidjan, 26,143; Thiès, 18,915, Bobo-Diulasso, 18,589; Ouagadougou, 16,595, Kayes, 15,894 (1940). Education (1937-38): 514 schools of all kinds and 68,310 pupils.

Production and Trade. The principal agricultural products are groundnuts, maize, rice, palm kernels and oil, cottonseed, coffee, cotton, tobacco, sesamum, and cacao. Gold was the chief mineral, the produc-

tion for 1939 amounting to 129,889 troy oz. Trade (1938): 1,627,200,000 francs (textiles, fuel oil, mechanical implements, food substances, and beverages were the main items); 1,416,100,000 francs (groundnuts, cacao, gold, palm oil, timber, coffee, fruits, and gum were the main items). The franc averaged \$0.0288 for 1938; \$0.0251, 1939.

Communications. In 1938 there were 2,453 route miles of railways. The construction of the Trans-Sahara railway was authorized by a law dated Mar 22, 1941, signed at Vichy, France, by the French Chief of State. Bou-Arfa, French Morocco, was selected as the northern terminus of the railway. In the south it will touch the Niger, by means of two branches, at Segou and Naamey where connections will be made with the railway system of French West Africa. Highways extended 33,565 miles in 1940.

Finance. General budget (1939): 349,000,000 francs (revenue and expenditure estimated to balance). The financial estimates for 1938 were estimated to balance, as follows: 335,000,000 francs for general budget, 498,162,000 francs for local budgets, 293,102,000 francs for supplementary budgets.

Government. The federation of French West Africa was under the general rule of a governor general, aided by a council. Each colony was administered by a lieutenant governor, subject to the governor general at Dakar. Governor General, Gen. Pierre Boisson.

History. On Jan 12, 1941, Pierre Boisson, the Governor General, returned to Vichy, France, and reported that the "Free French" movement was decreasing in French West Africa. Private advices reaching Rio de Janeiro, Brazil, on Mar. 2, 1941, asserted that 1,500 European refugees (Austrians, Belgians, Czechs, Jews, Netherlanders, and Norwegians) were stranded at Dakar, French West Africa, where they arrived on the French ship *Alsina*. Scheduled to reach Rio de Janeiro on Feb 7, 1941, the *Alsina* after leaving Gibraltar was ordered by Vichy to put into Dakar. Fear that the British would seize the ship was thought to be the reason for the order.

A report from Vichy, May 24, 1941, announced that Lieut. Jean Montezet was sentenced *in absentia* to death and eight others received prison terms for plotting the surrender of Dakar to the "Free French" forces of Gen. Charles de Gaulle. Refugees arriving in the United States, May 24, 1941, reported that French military authorities were strengthening the base at Dakar, by using the forced labor of foreigners in the Foreign Legion, Spanish republicans, and Jewish refugees. Other refugees were working on the construction of the Trans-Sahara railway (see *Communications* above). Most of an allotment of 128 million francs made by the Vichy government was for the improvement of the base at Dakar to which Foreign Legion reinforcements were reported, in September, to have been sent.

The French at Vichy announced on Sept. 12, 1941, that Abidjan, in the Ivory Coast colony, was being transformed into "one of the most secure natural harbors in the world." Work on the harbor, which had been underway since June, was estimated to be completed in two years. The largest vessels would be able to stay in the sheltered lagoon (75 miles long, 2 to 4 miles wide, and 16 to 25 yards deep) to which a broad channel (375 yards wide and over 15 feet deep at low tide) was being cut from the sea. Dakar in Senegal and Abidjan in the Ivory Coast would bracket the British port of Freetown, Sierra Leone. See PORTS AND HARBORS.

At Vichy, Sept. 22, 1941, Governor General Bois-

son declared to French, German, and other foreign press representatives that all French West Africa was solidly behind Marshal Pétain. He repeated the declaration he had made many times that there were no Germans in French West Africa. In a dispatch from Dakar it was reported that 29 Africans were sentenced to death on Oct. 20, 1941, for an attack on a Dakar hotel last August when five Frenchmen were killed. Immediate execution of the sentences was ordered by the military court.

GAMBIA. A British colony and protectorate in West Africa, occupying each bank of the Gambia River for a distance of 300 miles from the coast. Total area, 4,068 square miles; total population (1938 estimate), 205,000, as against (1931 census) 199,520. Capital, Bathurst, where resided most of the 14,370 inhabitants of the island of St. Mary. Education (1939): 10 elementary and secondary schools and 2,148 pupils enrolled.

Production and Trade. Groundnuts (50,600 metric tons exported in 1939), palm kernels, hides, skins, and beeswax were the chief products. Rice, maize, guinea corn, cassava, and cotton were grown for local consumption. Trade (1939): £386,161 for imports; £557,304 for exports. The main imports were aircraft parts, cotton piece goods, metals, and kola nuts; the main exports, groundnuts and palm kernels. Shipping (1939): 414 ships aggregating 955,110 tons entered and cleared.

Government. Finance (year ended Dec. 31, 1939): £151,744 for revenue; £205,889, expenditure; £39,760, public debt. The area of the colony (Bathurst, Georgetown, and some adjacent land) is 69 square miles, but by an ordinance enacted in 1902, all Gambia except the island of St. Mary (4 sq. mi.) was placed under the protectorate system. In the protectorate there are 4 provinces each administered by a commissioner, responsible to the gover-

nor who controls the whole country. There is an executive council of 4 members who assist the governor, and a legislative council for the colony (consisting of 10 members over which the governor presides) which has power to legislate for the protectorate. Governor and Commander-in-Chief, Sir Wilfrid T. Southorn (appointed Mar. 10, 1936).

History. It was announced in August, 1941, that in the event of an attack from the air, land, or sea on the town of Bathurst the evacuation, at short notice, of all children with their mothers, all aged persons, and all unemployed persons would be required by law. The ferrying, by Pan American Airways, of warplanes from the United States to West Africa and then to Khartoum was reported during September, 1941. Leaving the United States the warplanes would fly via Puerto Rico, Trinidad, Port Natal in Brazil, Monrovia in Liberia or else Bathurst in the Gambia, to Lagos in Nigeria. A continuation to Léopoldville, Belgian Congo, would connect with airlines serving South Africa, Uganda, and Tanganyika. In addition, Pan American Airways were to establish an air transport service between West Africa and the Middle East to connect with a new American airline between the United States and West Africa.

GAMBIER ISLANDS. See FRENCH OCEANIA.

GARBAGE AND REFUSE DISPOSAL. Joint treatment works for the disposal of garbage and sewage continue to increase in number. The garbage is ground or shredded, then thrown into a tank for digestion with sewage sludge. The gas from the digestion process may be utilized for power or for burning the tankage in case it is incinerated. Such joint means of treatment is generally confined to small cities. For some of these sewage alone might not produce enough gas to make its utilization possible. Cities recently installing joint garbage-sewage treatment include Goshen and Menands, N.Y. Reduction plants, once used to reclaim grease and tankage from the garbage of a number of large cities, have diminished to the eight named in the YEAR BOOK for 1940. Few if any of these attempted to dispose of the tankage commercially on account of the cost of processing and the low market price of such tankage. Even the grease is a gamble, owing to the fluctuating price. The first world war sent up the price of garbage grease. The price rose materially shortly before the United States went into the second world war. Whether it will go to the old-time high remains to be seen.

At Rochester, N.Y., steam for operating the garbage reduction plant is obtained from the incineration of combustible wastes. Ashes and incombustibles, during 1940 and 1941, were placed in trenches 8 ft. wide by 25 ft. deep, dug by a dragline excavator and covered by pushing back the excavated material by bull dozers.

At Washington, D.C., reduction is still used for part of the garbage, but much of it is diverted at the shipping station and fed to privately-owned hogs in Maryland and Virginia. The reduction works, far outside the city, are operated below capacity. Grease only is recovered for sale. Tankage was once dried, ground and sold as a fertilizer base but owing to its low sale price and the fire and dust hazards in processing it, the tankage latterly has been dewatered by pressing and then used to generate steam by burning it in specially designed furnaces of the Dutch oven type. Trash is collected once a week. It is burned, with street sweepings, in two high-temperature destructors. A third is being built to handle the recent enormous increase of

refuse. Ashes are collected weekly. They are used to fill low ground and for temporary surfacing of new streets. At Detroit, one of the four incinerators built two or three years ago was enjoined from burning garbage on account of alleged nuisance but may be used to burn combustible refuse. The city attributed the difficulty to the low percentage of combustible material from the district but was unable to stop complaints by adding auxiliary coal.

Probably the larger part of the garbage of American cities is disposed of by sanitariously-operated land fills or by feeding to hogs. These two methods of disposal require comparatively little capital outlay. Garbage eaten by hogs yields more revenue than any other method of disposal. Toward the end of the year a campaign to salvage newspapers, magazines, waste paper generally, cardboard and cartons made from pulp wood was begun. This starts at the home, office, and store, from which collections are made without charge by the Salvation Army and other agencies, thus conserving vast quantities of material and reducing city expense for collection and disposal. Some of the land reclaimed by sanitary land fills of New City is being used by the Federal Government. ("Landfills Aid National Defense," *Engineering News-Record*, Sept. 25, 1941.)
N. N. BAKER.

GARMENT INDUSTRY. The various divisions of the men's and women's apparel industry generally maintained the status quo or showed a slight rise in volume and profits for 1941 as compared with the previous year. The pace of business for the first nine-month period gave every indication of producing year-end results materially in excess of those experienced in 1940, but a virtual stagnation in consumer demand starting in October nullified much of the earlier strides.

Blame for this condition was attached to the "beat the sales tax" drums which the stores had sounded in their advertising of furs and jewelry prior to the impost by the Federal government of a 10 per cent retail tax upon these articles as of October 1, and which had rolled up sales' response for August and September that often bettered records of many years' standing. Without the tax-saving incentive, it was held, much of this volume would have been gained during the balance of the year.

With business at high pitch in the early fall, many fur manufacturers had proceeded to pile up raw fur stocks at the season's highest prices and turn them into garments, with the intention of capitalizing to the full what loomed up on the horizon as ever brighter vistas. "Caught in the middle" when lassitude enveloped fur trade activity immediately after September 30, manufacturers resorted to deep price slashes in the attempt to reawaken retail and consumer interest. This step was successful to some extent in November and on an ever wider scale during December.

Entrance of the United States into open conflict with the Axis powers in December was reflected in the knowledge that Far Eastern, Russian, and Australian furs, used in the manufacture of from 20 to 25 per cent of the estimated annual American production of one million fur garments, would be extremely difficult to obtain from original sources during the ensuing year. This was tempered with the thought that large quantities of Russian and other furs from that hemisphere had reached our shores in 1941.

The ups and downs of fur activity were echoed in the women's coat and suit trade. A substantial rise was experienced in spring volume. Fall busi-

ness, however, dropped drastically from its high point in September. Nevertheless, the year ended quite satisfactorily. Label sales of the National Coat & Suit Industry Recovery Board, whose members are responsible for 90 per cent of the country's total production of their garment types, reached an 11 months' figure, up to November 30, exceeding that of any full year since the Board's inception in 1936. The label sales' figure of approximately 18 million for the 11 months was 21.5 per cent over that of the year previous.

An important development in this branch of the industry was the Federal Trade Commission charge against the Recovery Board of restraint of trade, and the subsequent engagement by the Board of Wendell L. Willkie as counsel in this case.

Popular priced dresses gained strongly in the first six months' period, but lost ground in the latter half of the year. Volume in the better end of the trade lagged, notably in formal wear. A lower average unit sale prevailed. Sportswear constituted one of the brightest spots in the ready-to wear picture, entrenching its status as a year-round merchandising item. The trend to casual coats, suits, dresses, and slacks was accentuated.

The men's wear trade witnessed an accumulation of topcoat and overcoat inventories in the last few months of the year because of adverse weather conditions. However, these overhanging stocks were not deemed a source of worry, as the manufacturers realized that an increasingly larger portion of their plant capacity would have to be allocated to government output.

As the year ended, the apparel trades girded themselves for participation in the war effort on an ever-widening scale. They pondered the results of absence from the purchasing market of millions of men of draft age; to what extent uniforms for women would replace usual apparel; the repercussions of less traveling, less formal entertaining, and curtailment of automobile production upon the clothes' picture. They recognized that the urge to buy and the desire to retrench would follow closely the changing fortunes of the Allies.

See CHEMISTRY, INDUSTRIAL under *Plastic Wearing Apparel and Textiles*; FASHION EVENTS; LIVING COSTS AND STANDARDS; TEXTILES.

SAMUEL FEINBERG.

GASES. See BOMBS. For **GAS MASKS**, see CIVILIAN DEFENSE, OFFICE OF.

GAS INDUSTRY. In several noteworthy respects, operation of the gas industry in 1941 set up new records. Customers served reached a new high and so did sales and revenues of the combined manufactured and natural gas industries. At the year end, 18,618,000 customers, representing the largest number ever connected to the mains of the industry, were served by manufactured and natural gas companies. This was an increase of 627,000 over the year 1940. As between the two branches of the industry, manufactured gas companies now serve 10,430,000 customers and the remaining 8,188,000 are served by natural gas companies. Total population reached by the industry is approximately 85,000,000.

Revenues of the entire industry, both manufactured and natural, aggregated \$909,441,000, the largest ever recorded, a gain of 4.3 per cent over 1940. Natural gas companies grossed \$522,053,000, a gain of 6.0 per cent for the year, and a new high, while revenues of the manufactured gas companies were \$387,388,000, as compared with \$379,023,000 in 1940, an increase of 2.2 per cent.

Total	\$909,441,000	\$871,740,000	+4.3

* Preliminary estimates.

Sales of natural gas for industrial purposes rose from 716,668,000,000 cubic feet in 1940 to 851,635,000,000 cubic feet in 1941, an increase of 18.8 per cent and an all-time record increase for this class of consumption. Sales of manufactured gas for industrial purposes rose from 61,768,000,000 cubic feet in 1940 to 79,466,000,000 cubic feet in 1941, an increase of 28.7 per cent, and another record-breaking increase. Total gas sales reached a new peak of more than two trillion cubic feet.

Miscellaneous	1,588,000	1,402,000	—
Total	\$387,388,000	\$379,023,000	+2.2

* Preliminary estimates.

In the household use of gas, such as cooking, refrigeration, house heating, water heating, etc., manufactured gas companies sold 264,893,000,000 cubic feet, a decrease of 0.9 per cent for the year. Gas consumed for house heating registered a decrease of 2.8 per cent. Sales of natural gas for domestic uses including house heating, also registered a slight decrease, falling from 419,532,000,000 cubic feet in 1940 to 417,216,000,000 cubic feet in 1941, a loss of 0.6 per cent. Preliminary estimates indicate that the total production of natural gas in 1941, including amounts used in the manufacture of carbon black and for field use, will reach a total of approximately three trillion cubic feet. Approximately 204 billion cubic feet of natural gas were used as fuel for generating electric power in 1941, an increase of 21 billion cubic feet over the previous year.

The outstanding development of the year was the phenomenal increase in sales of gas ranges. Total number sold during 1941 was 2,400,000 units—the highest record in the history of the industry, according to the Association of Gas Appliance and Equipment Manufacturers. Actual sales' increase over 1940 was 657,500 units or 38 per cent. Some 750,000 automatic gas water heaters were sold dur-

* Preliminary estimates.

ing 1941. Furnace, boiler, and conversion burner sales showed an increase of more than 50 per cent. Gas refrigerator sales hit a new high in many localities prior to production restrictions on all automatic refrigerators.

Organization of the natural gas and natural gasoline industries for defense under the Office of Petroleum Coordinator (q.v.) was effected during the latter part of the year. The natural gas industry coordinated all of its defense activities with respect to production and transportation, and the processing and manufacture of derivatives of natural gas, including natural gasoline, liquefied petroleum gas, carbon black and re-cycling operations and their transportation. The appointment of Thomas R. Weymouth as consultant on natural gas was announced by the Office of Petroleum Coordinator.

Plans were underway at the close of the year toward bringing natural gas to the highly industrialized Appalachian region from the productive fields of Louisiana, Texas, and Kansas in order to supplement present supply. An 800-mile pipeline from the Monroe field in Louisiana to West Virginia is being planned to make additional quantities of natural gas available to Cleveland and vicinity.

GENERAL EDUCATION BOARD, The. An institution incorporated by an act of Congress in 1913, with the stated object of promoting education within the United States of America without distinction of race, sex, or creed. The present program of the Board is restricted almost entirely to the support of educational work in the Southern States.

The Board is empowered to spend the income and the principal of its funds. During the year ended Dec. 31, 1941, it appropriated approximately \$900,000. Among the larger donations were: \$160,000 to Meharry Medical College, Nashville, Tennessee, for the current expenses of the College and the hospital; \$50,000 to Paine College, Augusta, Georgia, for the construction and equipment of a library building; \$47,000 to Fisk University, Nashville, for current expenses; \$43,935 to Louisiana State University and Agricultural and Mechanical College for teaching and research in agricultural economics and research in rural sociology; \$35,000 for summer school projects and special conferences related to Board programs in southern education; \$32,100 to the University of Arkansas for research in farm forestry; \$30,000 to the Southern Associa-

tion of Colleges and Secondary Schools for support of work conferences on higher education and for evaluation of experimental secondary school programs; \$30,000 to the University of Tennessee for research in farm forestry in Tennessee; \$25,900 to the Board of Trustees of Institutions of Higher Learning of the State of Mississippi for the State teacher training program; \$25,250 to Clark College, Atlanta, for equipment for its physics laboratory; \$25,000 to Duke University for a study in forest ecology by the School of Forestry; \$25,000 to the University of Texas for the construction and equipment of a marine biological laboratory; \$25,000 to Tulane University for the development of its library, primarily for strengthening the graduate and research collections; \$25,000 to Vanderbilt University for research in the natural sciences; \$25,000 to Furman University, Greenville, South Carolina, for the development of its library; \$22,120 to the Association of Colleges and Secondary Schools for Negroes for improvement of instruction and administration in higher institutions, and \$7,250 for a workshop on secondary education to be held at Hampton Institute; \$17,500 to the Boy Scouts of America for support of work of the Committee on Inter-Racial Scouting; \$15,000 to Baylor University, Waco, Texas, for the development of a program in dramatics; \$15,000 to Dillard University, New Orleans, for the purchase of medical and surgical equipment for the Flint-Goodridge Hospital; \$14,600 to the North Carolina State Department of Public Instruction for support of summer training courses for whites and Negroes in connection with a program in public health education and school health service.

The executive officers of the General Education Board during 1941 were: Ernest M. Hopkins, chairman of the board of trustees; Raymond B. Fosdick, president; Albert R. Mann, vice-president and director; William W. Brierley, secretary; Edward Robinson, treasurer; George J. Beal, comptroller; Thomas M. Debevoise, counsel; Chauncey Belknap, associate counsel. The offices of the Board are at 49 West 49th Street, New York City.

GENETICS. See BOTANY; ZOOLOGY.

GEOGRAPHY. See SOCIETIES under *Geographical* and *Geographic*.

GEOLOGICAL SURVEY, U.S. Science and engineering, as applied by the Geological Survey, contributed largely to the war effort in 1941. Survey specialists in geologic and hydrologic fields and in topographic mapping conducted investigations and surveys in practically every State of the Union, Alaska, and Hawaii, and the geologists were active even in the faraway sister American Republics. About \$8,000,000 was made available to the Survey during the year, the larger part of which was expended in search for the minerals essential to national defense or in appraising or reappraising known deposits of such minerals; in measuring and recording the flow of streams and in furnishing to other defense agencies or industries hundreds of reports on surface and underground waters; and in surveys preliminary to topographic maps, without which neither war nor peacetime planning for land utilization can be successful.

Financed largely by special appropriations but in part by the regular appropriation for geologic surveys, the strategic and critical minerals investigations took precedence over all other geologic work. More than 150 detailed examinations were made of strategic minerals districts in the continental United States and Alaska and in other countries

of the western hemisphere. Investigations in California, Montana, Oregon, Wyoming, and Alaska resulted in preliminary estimates of tonnage and grades of chromite ore in those areas, reports of which were furnished to the defense agencies that were integrating domestic production with imports at a time when foreign sources of raw materials were being reduced. Comprehensive development work followed the Survey's studies in Montana. One chromite mine was opened and another started in the Stillwater district, and Survey geologists were hopeful that further explorations would permit the location of additional mines. In the Batesville district, Arkansas, important tonnages of medium and low-grade manganese were found, and in the Three Kids and Artillery Peak areas, Nevada, explorations made on the recommendation of the Survey revealed extensions of the known ore bodies of this vital mineral.

There were also successful studies of quicksilver mining districts. In the New Idria district, California, for example, which contains the mine of second largest total production in the United States, the Survey's investigations led to recommendations that search be made for the metal in relatively unexplored parts of the district, and in southeastern Oregon its geologic work revealed deposits so extensive, though of very low average tenor, as to suggest that they may prove a source of quicksilver under emergency conditions. An ore body of quicksilver was also uncovered in the Bottle Creek district, Nevada, as a result of the Survey's studies which disclosed, too, the presence of a large area of similar ground in which exploration is justified.

In the Yellow Pine antimony district, Idaho, the Survey pointed the way to exploration, and it seemed more than likely that further development would lead to the direct production of antimony in addition to the amount that is being recovered in antimonal lead as a byproduct of gold mining. But that is only part of the story of the Yellow Pine investigations. Microscopic examinations of its drill cores resulted in recognition of the tungsten mineral scheelite and that discovery, prompting further exploration, led to the finding of a large body of tungsten ore which promises to aid considerably the domestic production. Studies under the microscope also showed that scheelite is rather widespread in the Seven Devils district, Idaho, and these studies were being followed by a special search in the field for commercial concentrations of the mineral. Investigations of the tungsten districts in general and in California and Nevada in particular showed that the reserves of this mineral are larger than had been supposed and that the United States can at present prices supply a considerable part of its own demand during the next few years.

In Alaska, region of magnificent distances and untold mineral wealth, vitally important investigations of the strategic and critical minerals were begun in the field season of 1941 and carried into the next fiscal year. There were studies of chromite at Red Bluff Bay, Baranof Island; tungsten in the Hyder district, southeastern Alaska; antimony in the Kantushna district; nickel in Mirror Harbor, Chichagof Island, and Snipe Bay, Baranof Island; tin in the Hot Springs district, and Anikovik area, Seward Peninsula; quicksilver in the Sleitmut area, Kuskokwim region; and molybdenum in the Glacier Bay district. The Survey also assisted in drilling operations at Yakobi Island, off the northwest coast of Chichagof Island, and at Seldovia, near the southwestern tip of Kenai Peninsula, and carried forward its office and laboratory studies of those areas preparatory to the issuance of reports.

In the American Republics to the south, detailed examinations were made of tin, tungsten, and antimony ores in Bolivia, manganese and chromite ores in Brazil and Cuba, and tin ores in Mexico. Reconnaissance surveys were made of strategic mineral deposits in Venezuela, Colombia, Panama, Costa Rica, and Guatemala with a view to detailed studies later on. Geologic work in those countries has served the twofold purpose of revealing the sources of raw materials needed by the United States and of strengthening the ties of the Good Neighbor policy in both trade and cultural aspects. Meanwhile, the Survey continued some of its major geologic activities, notably the cooperative programs in the mining regions of Colorado, Idaho, and Oregon. Coordinated with the general strategic minerals program, they added materially to the basic information essential to the further development of mineral deposits.

In the field of topographic mapping the Survey surpassed its work of the previous year, covering nearly 30,000 square miles by the surveys that result in the 3-dimensional maps essential to the conduct of war as well as to the pursuits of peace. Mapping was done in 38 States, in the District of Columbia, Alaska, and in Puerto Rico. Largely of strategic areas selected by the War Department, the work was a major contribution to national defense. In addition, the Survey responded to many requests of the War Department for control-survey information. The most extensive service of this type was the preparation and rearrangement of material for microfilming copies of the results of all leveling, traverse, and triangulation done by the Survey, about 67,000 camera exposures being necessary to photograph the data. Aerial photographs acquired by the Survey during the year covered an area of several hundred thousand square miles, the larger part of which was for national defense mapping projects.

No less important to the defense program were the Survey's activities in the realm of hydraulic engineering. Basic data on existing sources of water supply and the quantity and quality of new sources of surface and underground waters were furnished for many types of defense projects, as was also much information concerning the danger to such projects from floods or low flow of streams in periods of drought. The Office of Production Management, the Army, the Navy, and numerous other Government and private agencies engaged in defense work were the recipients of this information. One of the prerequisites to the establishment of an Army cantonment, a Naval base, a powder plant, or other defense project is an adequate supply of water and water of suitable quality for the project. The needs of the defense agencies were met generally by research, compilation, and interpretation by the Survey of stream-flow records collected over a long period of time or by drilling test wells and installing pumps to ascertain whether there was a sufficient supply of water to serve the purpose. The Survey's advice in this specialized field influenced the selection of sites for many defense projects. Camp Claiborne, La., one of the Army's largest cantonments, was established only after the Geological Survey had solved the problem of finding a sufficient supply of water.

Geological Survey activities on the public lands also contributed to the national defense and conservation programs. The classification of those lands as to their mineral deposits and their water and power resources leads to their wisest use; and the supervision of private mineral development on public and Indian lands and naval petroleum reserves,

under leasing laws, protects the nation's interests as it guarantees efficient operation and standards of conservation that serve as examples to the mineral industry. During the year the Geological Survey made more than 8,100 reports upon mineral resources, water power, or storage possibilities of public lands, at the same time safeguarding the Government's ownership of great reserves of coal, oil, gas, potash, phosphate, and other minerals. Technical supervision was given to more than 5,200 properties containing oil and gas, more than 500 containing coal, and more than 100 containing other minerals. On Indian lands more than 4,100 oil and gas leases were supervised, in addition to more than 200 properties containing coal and other minerals. Minerals produced during the year from public and Indian lands and naval petroleum reserves under supervision of the Geological Survey, had an estimated value of \$71,000,000, and revenue received by the Government as a result of this supervision amounted to about \$7,000,000.

During the year the Survey published 643 reports, maps, etc., in total editions amounting to 1,377,805 copies, and distributed 1,301,160 copies.

GEORGE FOSTER PEABODY RADIO AWARDS. See RADIO PROGRAMS.

GEORGIA. A south Atlantic State. Area: 58,876 sq. mi., including 358 sq. mi. of inland water, but excluding Atlantic coastal waters, 48 sq. mi. Population (1940 census): 3,123,723. The urban population comprises 34.4 per cent of the total (U.S. average, 56.5 per cent), non-white population, 34.7 per cent (U.S. average, 10.2); elderly (65 years and over), 5.1 per cent. Georgia ranks 20th among the States in area, 14th in population, and 23d in density, with an average of 53.4 persons per square mile. The largest city and capital is Atlanta with 302,288 inhabitants. There are 159 counties and 19 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 730,894 pupils enrolled in the State School System during the school year 1937-38. Of this total, 619,315 were enrolled in kindergartens and elementary schools and 111,579 in secondary schools, 265,823 were in separate Negro schools. The instructional staff comprised 22,773 persons, who received an annual average salary of \$715 (U.S. average: \$1,374); 3,949 or 17.4 per cent were men. Expenditures for all public schools in 1937-38 were \$24,333,302, making a total cost per capita of \$7.81 (U.S. average: \$17.15). School buildings (1936 count) numbered 6,149; there were 2,632 one-room, one-teacher schools (1938). For higher education, see under *Georgia* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 11,741, of which 7,504 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 513,097; 412,439 were private and commercial automobiles, 2,982 busses, and 87,182 trucks and tractor trucks. Gross motor-fuel consumption was 400,296,000 gal. Net motor-fuel tax receipts were \$22,841,000, the rate being six cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$2,768,000.

Railways of all classes extended 6,335 miles (Dec. 31, 1939) 2.69 per cent of the total mileage in the United States. Class I steam railways (4,284 miles) reported 8,331,159 tons of revenue freight originating in Georgia in 1940 and 12,038,495 tons ending in Georgia. There are 49 airports and landing fields in the State (20 lighted fields) and two seaplane bases. On July 1, 1941, according to the Civil Aeronautics Authority, there were 330 civil aircraft in the State and 1,325 airline transport, commercial, and private pilots (1,013 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 10,414,100, as compared with 10,970,100 acres in 1940. According to the latest census, there are 216,033 farms, valued at \$480,344,531, averaging 109.6 acres each. Farm population numbered 1,369,719 or 43.8 per cent of the total. Leading crops with production were: Cotton lint, \$51,480,000, 624,000 bales; corn, \$29,400,000, 42,000,000 bu.; peanuts, \$24,194,000, 525,950,000 lb.; cottonseed, \$13,288,000, 278,000 tons, tobacco, \$11,408,000, 54,655,000 lb.; hay, \$9,207,000, 790,000 tons; velvetbeans, \$7,322,000, 505,000 tons; sweetpotatoes, \$6,520,000, 7,245,000 bu

Manufacturing. According to the latest census (covering the year 1939) the total value of manufactured products was \$677,402,657. For details, see 1940 YEAR BOOK.

Mineral Production. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$14,633,361 or .35 per cent of the United States total, raw clay and stone are the leading items (by value).

Trade. According to the 1940 census there were 3,032 wholesale establishments in Georgia, employing 24,501 persons, reporting net sales for 1939 of \$806,238,000 and annual pay roll of \$34,899,000. There were 32,870 retail stores with 78,947 employees, reporting sales of \$624,765,000 and pay roll of \$58,874,000. Service establishments numbered 10,098, employing 23,440 persons for \$14,382,000 per year, and reporting a business volume amounting to \$45,256,000. The leading business center of the State is Atlanta which reported wholesale sales of \$465,115,000, retail sales of \$172,279,000, and \$16,683,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Georgia was \$37,832,000. Under the Social Security program, financed by Federal funds matching State grants, 51,742 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$8.33 (U.S. average pension, \$21.08); 11,788 dependent children in 4,749 families received average monthly payments of \$21.95 per family (U.S. average, \$32.73); and 1,576 blind persons received \$10.84 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 5,880 and received \$6.52 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 6,684 (\$443,000); NYA student work program, 11,987 (\$71,000); NYA out-of-school work program, 12,021 (\$232,000); WPA, 30,061 (\$1,491,000); other Federal emergency projects, 140 (\$11,000); regular Federal construction projects, 13,048 (\$1,329,000). The Farm Security Administration certified subsistence payments totaling \$69,000 for the month to 1,241 cases.

Legislation. The General Assembly convenes in

regular session on the second Monday of January in odd years. It is composed of 52 Senators and 205 Representatives, all of whom are Democrats. The following is a summary of enactments of general interest signed into law by Governor Talmadge during the 1941 session of the Georgia Legislature.

General House Bills: No. 1—Fixing the powers of the Governors in administering appropriations acts; providing for ascertainment of surplus in appropriations and allocations and allocating above quarterly approved budgets, and providing for the disposition thereof and the appropriation of such surpluses *No. 21*—To prohibit and regulate the solicitation of votes in counties with a population of 200,000 or more *No. 34*—To require the payment of fees of clerks and sheriffs of the Superior Court in divorce cases. *No. 157*—Providing for auditing of claims against the Highway Department and approval of such claims for payment by the highway chairman, the governor and the state auditor *No. 20*—Amending election laws so as to provide for a secret ballot *No. 379*—Amending the intangibles classifications of the Tax Act to classify certain properties for taxation *No. 380*—Amending income tax laws relating to personal exemptions and credits *No. 599*—Providing for the survival of suits commenced by or against public officers in their official capacity in favor of or against their successors in office in the event of death, removal, resignation or expiration of the terms of such officers *No. 46*—Providing for establishment of Eastern Standard time throughout Georgia. **General Senate Bills: No. 1**—Amending act creating Public Safety Department to provide family drivers' licenses. *No. 2*—Abolishing old Highway Board and terminating terms of office of its members, creating a new board and providing for appointment of new members *No. 3*—Providing for suspension of the State Treasurer and the Comptroller General and for the appointment of suitable persons to discharge duties of the office in case of such suspension *No. 4*—Abolishing State Contractors Licensing Board *No. 6*—To limit issuance of paroles by requiring the evidence of satisfactory prison records and by requiring the approval of the Governor of such paroles before prisoners are released *No. 7*—To create the office of the state superintendent of prison farms and define its duties, fix compensation, etc. and to abolish the State Board of Penal Corrections. *No. 8*—Abolishing Georgia Radio Commission *No. 9*—Creating a new State Housing Authority *No. 12*—Reducing the salary of the Secretary of State from \$6,000 to \$5,000. *No. 13*—Reducing the salary of the State Treasurer from \$6,000 to \$5,000. *No. 14*—Reducing the salary of the Comptroller General from \$6,000 to \$5,000. *No. 15*—Reducing salary of state school superintendent from \$6,000 to \$5,000. *No. 16*—To repeal an act providing for the confirmation by the Senate of all appointees of the Governor for public office. *No. 21*—Requiring registration of guests under their true names at tourist camps and like places and providing penalties for violators. *No. 22*—To repeal the act providing for a general election to be held in June of odd years. *No. 23*—Providing capital punishment for grave desecrators. *No. 42*—Authorizing the commissioner of agriculture to exercise the powers and duties of the state veterinarian. *No. 43*—Abolishing office of state veterinarian. *No. 44*—To clarify terms and provisions of the Unemployment Compensation Law. *No. 49*—To amend law providing for consolidation of school districts by requiring the holding of elections to pass on such consolidations. *No. 55*—To allow members of group hospital associations to choose the hospitals to which they are sent. *No. 59*—To provide for registration of buyers of explosives with county ordinaries. *No. 124*—Fixing salaries as the sole compensation of tax collectors, receivers and tax commissioners in counties of populations of 83,000 or more. *No. 125*—To amend an act changing the classes and amounts of commissions allowed to tax receivers and tax collectors of state and city taxes

Resolutions signed by the Governor include *S. R. 10*—Proposal for ratification of constitutional amendment fixing term of office of state school superintendent at four years. *S. R. 13*—To authorize and direct surveyor general of Georgia to survey the state line between Georgia and North Carolina and Georgia and Tennessee. *H. R. 92A*—Proposal for ratification of a constitutional amendment to fix at four years the term of the governor and other constitutional officers. *No. 29*—To amend the act creating the Fulton County Planning Commission. *No. 31*—To provide that Fulton County may not levy a pauper's tax exceeding 1/4 mills except on the recommendation by two-thirds vote of two successive grand juries.

Seventy proposals were submitted to the voters of the State in 1941, out of a total of only 83 proposals submitted in all the States of the Union. It was the longest list voted upon by any State in recent years. Only one measure, regarding a change from biennial to annual legislative sessions, was re-

jected; this was the only measure which drew a substantial expression of public opinion in an off election year. Of the 70 proposals, 62 related to specifically-named subdivisions, most of them permitting incurrence, funding, or refunding of debt. Measures of general interest were: increase of the governor's term from two to four years, increase in the term of the State School Superintendent and other officers; increase in the jurisdiction of Justices' courts; and tax exemption for rural electrification projects. Georgia officials were authorized to advertise the State's resources, facilities, and assets; and counties and municipalities were allowed to contract with other public agencies for the hospitalization of the indigent sick.

Finances. Total tax collections in Georgia for the fiscal year ending in June, 1941, were \$59,973,000 (1940: \$52,935,000). Total sales taxes amounted to \$31,859,000, including motor fuel, \$24,621,000, alcoholic beverage, \$4,072,000. Taxes on specific businesses ran to \$3,149,000, general and selective property, \$4,705,000, unemployment compensation, \$9,046,000. The net income taxes were \$7,389,000. Cost payments for the operation of general government totaled \$38,956,000 in 1939, the latest year available. (Revenues for the general government for that year were \$69,271,000.) Cost of operation per capita was \$12.59. Total gross debt outstanding in 1941 was \$28,667,000, as compared with \$12,592,000 in 1932.

Officers and Judiciary. The Governor is Eugene Tal- madge (Dem.), inaugurated in January, 1941, for his third two-year term; Secretary of State, John B. Wilson; Attorney General, Ellis G. Arnall; State Treasurer, George B. Hamilton; State Auditor, B. E. Thrasher, Jr.; Comptroller General, Homer C. Parker. Chief Justice of the Georgia Supreme Court is Charles S. Reid; there are five associate members elected by popular vote for six-year terms.

GERMAN-AMERICAN BUND. See FASCISM.

GERMAN LITERATURE. With the war progressing it becomes increasingly difficult to trace German literature inside of Nazi Germany. The few literary magazines which still could be published have not reached this country. But presumably other than technical reasons may account for the difficulty, for thorough inquiry with people who should know and who have lately arrived from Germany or Europe reveals that the articulate voice of Germany seems to be mute for the time being and that there is nothing else offered in print than propagandist literature or books of third-rate authors. The only books mentioned are such as Georg von Hase's *Die Kriegs-Marine erobert Norwegens Fjorde* (The war fleet captures the Fjords of Norway), or Rolf G. Haebler's *Wie unsere Waffen wurden* (How our arms originated). The only cultural item that could be found was the foundation of a Paper Museum in Duren, with a collection of 28,000 different sorts of paper, the oldest dating from 1329.

In contrast to German conditions Switzerland, the only free German-speaking country, developed great literary activity during 1941. (See SWISS LITERATURE.) There has been an interesting publication of the autobiographical notes of Nietzsche's friend Franz Overbeck, edited by A. Vischer. The German edition of Hermann Rauschnig's *Conservative Revolution* was published in special editions

in Switzerland and in this country. Werner Richter wrote a biography about Crown Prince Rudolph von Oesterreich. Herbert Tauber gives a clear and subtle analysis of Franz Kafka's most important works.

As always during recent years a great number of American authors have been translated into German. We find Louis Bromfield, Pearl S. Buck, James Cain, Willa Cather, Francis Griswold, Hemingway's *For Whom the Bell Tolls*, published in Stockholm, Kenneth Robert's *Oliver Wiswell*, and Steinbeck's *Grapes of Wrath*.

German literature in exile, of course, has lost its last hold on the continent. There still exists the Bermann-Fischer Verlag in Stockholm which published, besides translations of Asch and Hemingway, Vicki Baum's last novel, *Die grosse Pause* (The Great Pause), backstage life at the Metropolitan Opera, the main character a famous woman singer; a small volume of selected verses by Richard Beer-Hofmann, the famous Austrian poet; a biography of Franz Schubert, by Annette Kolb; Stefan Zweig's *Ein Blick auf Brasilien*, past and present economical and political history of Brazil described by the famous author who is now living in that country; also the two most important publications of the year by exiled authors, Thomas Mann's *Die vertauschten Kopfe*, (known in America as *The Transposed Heads*), a most charming and meaningful love story on the background of an old Indian legend, and Franz Werfel's *Das Lied der Bernadette*, which will very soon be published in America under the title *The Song of Bernadette*, the story of the Saint from Lourdes.

Another short novel by Werfel, *Eine blass-blaue Frauen handschrift*, (The pale blue handwriting of a woman) has been published by a new German publishing house in Buenos Aires. The same publisher has printed a short novel by Paul Zech, a formerly well known German poet, *Ich suchte Schmied* (I was looking for Schmied), the adventures of a fugitive from Europe in South America. The literary agent, Barthold Fles, in New York became the publisher of two fine volumes of German poetry: Berthold Viertel's *Fürchte Dich nicht* (Don't be afraid), and the last poems of Max Hermann-Neisse, one of the most gifted and most sincere of German poets of this generation, who recently died in London.

Comparatively few was the number of books published by German writers in original American editions during 1941. There have been a few important books on the exciting adventures experienced by exiled authors during the fall of France: Lion Feuchtwanger's *The Devil in France*, and two German-Hungarian writers: Artur Koestler, *Scum of the Earth*, and Hans Habe, *A Thousand Shall Fall*. A similar report by Heinrich Mann has not yet been published. Curt Riess edited the book, *I was a Nazi Flier*, and wrote another revealing book, *Total Espionage*. Egon Erwin Kisch, now in Mexico, published the recollections on his life as a reporter, and the famous conductor Bruno Walter, a newly revised edition of his biography of Gustav Mahler.

German authors are strewn all over the country, especially in California, where Thomas Mann is working on the fourth volume of his Joseph Epic. The famous dramatist, Bert Brecht, arrived via Siberia and Japan from Finland. Martin Gumpert has given, in *First Papers*, an account of the American experiences of this generation of refugees. Leo Lania has published a volume of political recollections.

The magazine *Decision* has tried again during

1941 to be a refuge for European literature in exile and to create a new unity with young American literature. The magazine *Free World* tried to unite the different political groups in exile, partly German, and in Mexico a new German political magazine, *Das Freie Deutschland* started its career, editor Bruno Frei.

In New York the former German publishers Gottfried Bermann-Fischer and Friedrich Landshoff founded the new publishing house, G. B. Fischer, which probably will become the American voice for a number of former German authors. Books are in preparation by Leopold Schwarzschild, Josef Bornstein, Valeriu Marcu, Paul Stephan, Baerensprung, Klaus Mann.

There have not been too many dramatists among the exiled writers from Germany. A play by Carl Zuckmayer and Fritz Kortner on the fall of France did not reach Broadway, and the former German director, Piscator, gave at the "New School for Social Research" the old play *Die Verbrecher* (The Criminals), by Ferdinand Bruckner in a new version. Dr. Alfred Loewenberg's large collection of German plays was acquired by Johns Hopkins University, and the catalogue of 3,000 titles, edited by Dr. Ernst Feise, appeared under the title *Fifty years of German Drama*.

MARTIN GUMPERT.

GERMANY. A former Federal republic of Europe, transformed into a centralized, totalitarian state by the National Socialist revolution commencing in 1933. Capital, Berlin.

Area and Population The area and population of Germany and its political subdivisions at the census of May 17, 1939 (final returns), with comparative figures for the census of 1933, are shown in the accompanying table.

GERMANY: AREA AND POPULATION BY POLITICAL SUBDIVISIONS

Subdivisions	Area sq. miles	Population	
		June 16, 1933	May 17, 1939
Prussia ^a	113,012	39,934,011	41,655,252
Bavaria	29,336	7,681,584	8,222,982
Württemberg	7,530	2,896,234	2,896,920
Mecklenburg ^b	6,197	805,213	900,413
Baden	5,817	2,411,462	2,502,442
Saxony	5,785	5,196,652	5,231,739
Thuringia	4,540	1,659,510	1,743,624
Hesse	2,909	1,429,048	1,469,215
Oldenburg	2,480	573,853	577,648
Brunswick	1,417	512,989	583,338
Anhalt	893	304,415	451,422
Saarland	738	812,030	842,454
Lippe	469	175,538	187,220
Hamburg	160	1,218,447	1,711,877
Schaumburg-Lippe	131	49,955	63,195
Bremen	99	371,558	450,084
Total	181,688	66,030,491	69,459,825
Austria ^c	34,055		6,972,269
Sudetenland ^d	8,718		2,943,187
German Reich	224,461		79,375,281

^a Excluding Saarland and including Waldeck and Lüneburg. ^b Excluding Saarland. ^c Annexed Mar. 13, 1938. ^d Annexed Oct. 1, 1938.

The other table shows the area and population of territories formally incorporated into the Reich but not included in the May 17, 1939, census. It does not include territories under German protection, such as Bohemia-Moravia and the Government General of Poland, or the occupied countries (q.v.). About 500,000 German-speaking inhabitants of the protectorates and occupied countries were repatriated to the Reich during 1940. For the most part, they were settled in the provinces annexed from Poland, displacing an equal or greater number of Poles who were forced to migrate to the Government General of Poland.

OTHER AREAS INCORPORATED INTO THE REICH

	Date of annexation	Area sq miles	Population
Memel	Mar. 22, 1939	976	153,000 ^a
German Poland	Oct. 8, 1939	35,512	9,627,000 ^b
Danzig	Sept. 1, 1939	754	403,000 ^b
Eupen Malmédy Moresnet	May 19, 1940	386	62,000 ^b
Alsace-Lorraine	Nov-Dec, 1940	5,005	1,915,627 ^c
Total ^d		42,257	12,007,627

^a Estimate. ^b 1939. ^c 1936. ^d Excluding a part of Yugoslavia along the Austrian frontier annexed in 1941.

According to the foregoing tables, the area of Germany proper on Dec. 31, 1940, was about 266,718 square miles. The total population was approximately 91,382,908.

Living births in Germany in 1939 numbered 1,633,078, including Austria, the Sudetenland, Memel, and Danzig, as compared with 1,506,340 in 1938. Deaths totaled 1,009,290 as against 950,144 in 1938. The birth rate for Germany, including the Saar but excluding Austria and subsequent annexations, was 20.3 per 1,000, death rate, 12.3 per 1,000.

Populations of the chief cities at the May 17, 1939, census were: Berlin, 4,332,242; Vienna, 1,918,462; Hamburg, 1,682,220; Munich, 828,325; Cologne, 768,426; Leipzig, 701,606; Essen, 659,871; Dresden, 625,174; Breslau, 615,006; Frankfurt-on-Main, 546,649; Düsseldorf, 539,905; Dortmund, 537,000; Hanover, 472,527; Stuttgart, 459,538; Duisburg-Hamborn, 431,256; Nurnberg, 430,851; Wuppertal, 398,099; Königsberg, 368,433; Bremen, 342,113; Chemnitz, 334,563; Magdeburg, 334,358; Gelsenkirchen, 313,003; Bochum, 303,288; Mannheim, 283,801; Kiel, 272,311; Stettin, 268,915; Halle-on-Saale, 220,364; Kassel, 217,085; Graz, 210,175; Brunswick, 201,306. According to the census, the Jewish population was 330,892 in Germany, including Austria and the Sudetenland. This did not include half-Jews, of whom there were 72,733.

Education. Primary education is compulsory and there is little illiteracy. Excluding Austria and the Sudetenland, there were 50,592 elementary schools and 7,503,195 pupils in 1939, as compared with 51,118 schools and 7,596,000 students in 1938. In Austria there were 4,721 schools and 657,000 pupils; in the Sudetenland, 2,957 schools and 274,000 pupils. Other school enrollment (in 1937-38) was: Intermediate, 272,365; "gymnasien" and "realschulen," 370,985; universities and advanced schools, 69,981 (universities, 45,989; advanced technical schools, 9,554; others, 14,438). There are three new special colleges for the training of Nazi political leaders. At the beginning of 1941, a faculty for the study of foreign countries and languages was opened at the University of Berlin. Of the 3,300 foreign students enrolled in German universities in 1941, 1,500 came from the countries of Southern Europe, 470 from Latin America, 100 from China, and 50 from Japan. The number of students in theological faculties of the universities declined from the pre-war total of about 6,000 to 307 in the second term of 1940.

Religion. According to the 1933 census, 62.7 per cent of the German people were Protestants affiliated with the various Evangelical Churches, 32.5 per cent were Roman Catholics, 0.7 per cent were Jews, and 4.0 per cent professed other religious faiths. Beginning in 1934 the Hitler Government undertook to unite the Evangelical churches under a bishop appointed by the Reichsfuehrer, and made other efforts to coordinate the policies of the Evan-

gical and Catholic churches with the policies of the Nazi party and state. This provoked a serious conflict (see below under *History*; also preceding *YEAR BOOKS* for 1933-40). The Government also sponsored a neo-pagan German National Church based on doctrines of the official Nazi party philosopher, Alfred Rosenberg, but it gained relatively few adherents. According to statistics issued by the Reich Ministry of Church Affairs in 1941, there were 45,000 Evangelical pastors and other church functionaries excluding Austria and the Sudetenland, 9,300 Evangelical church establishments with 72,000 employees, 33,000 Roman Catholic priests, and 8,650 Catholic religious centers with over 100,000 monks and nuns. The number of school children belonging to Evangelical churches was 4,353,435; to the Catholic Church, 2,803,138.

Production. Excluding Austria and the Sudetenland, the 1939 census showed 40.3 per cent of the population dependent upon industry, 18 per cent upon agriculture (39.9 per cent in 1882), 16.2 per cent upon independent business and commercial enterprises (38.5 per cent in 1882), and 13 per cent upon pensions or independent incomes. The national income rose from an estimated 56,514,000,000 reichsmarks in 1933 to 100,000,000,000 in 1941 (including state levies of all descriptions, amounting to 43,600,000,000 reichsmarks in 1939).

Agriculture. The Reich (including Austria and the Sudetenland) had 55,302,000 acres of arable land in 1939, 27,601,000 in meadows and pastures; 2,470,000 in trees, shrubs, and orchards; and 42,032,000 acres of forests. The gross value of agricultural production in the harvest year 1938-39 was 14,050,000,000 marks, representing an increase of 7 per cent over 1937-38. Milk accounted for 23.5 per cent of the total. The potato crop for 1940 was estimated at 58,900,000 tons for Greater Germany, including Austria and the Sudetenland but excluding territory subsequently annexed by the Reich. The sugar-beet crop was said to total 18,400,000 tons, or double the pre-Hitler average. Yields of chief cereals in 1939 were (in metric tons): Wheat, 5,613,500; barley, 4,261,800; rye, 9,454,800; oats, 6,867,700, and corn, 379,600 (1938). In 1940 Germany devoted 918,840 acres to rapeseed, flax, and hemp. Meat production in 1938 totaled 3,676,800 metric tons, of which hogs accounted for 2,305,600 metric tons. The livestock census of December, 1939, showed 19,900,000 cattle, 25,200,000 swine, 4,900,000 sheep, 3,442,741 horses (1938), and 2,300,000 goats. Forests, covering 42,796,000 acres, were an important adjunct of the German economy. German sea fisheries in 1938 caught 722,000 metric tons of fish valued at 104,200,000 reichsmarks.

Mining and Manufacturing. The net value of industrial production in some of the larger categories was divided as follows in 1938: Shipbuilding, 273,500,000 marks, metal, 559,500,000 marks; leatherware, 106,300,000 marks; motor vehicles, 636,500,000 marks. The 1938 output of minerals and metals in metric tons was: Coal, 186,179,000; lignite, 232,000,000; iron ore, 3,100,000; lead, 185,200; copper (smelter), 66,000 (1939); pig iron, 18,595,000; steel, 23,208,000; aluminum (smelter), 3,000 (1939); cadmium, 432; zinc, 212,300 (1939); crude petroleum, 647,000 (1939). Rayon production was 66,500 metric tons; wood pulp, 2,544,000. Pig-iron production in Germany and German Poland during 1939 was estimated provisionally at 22,850,000 tons; steel, 30,950,000 tons; aluminum, 185,000 tons. Output of electric energy totaled 5,500,000,000 kilowatt-hours in 1938. Manufacture of rubber and other synthetic raw materials expanded rapidly

after 1933 as a result of the government's drive for economic self-sufficiency.

Foreign Trade. Imports for consumption in 1938 were valued at 5,449,000,000 marks (5,468,000,000 in 1937) and exports of German products at 5,256,000,000 marks (5,911,000,000 in 1937). For the first seven months of 1939, merchandise imports totaled 3,194,000,000 marks; exports, 3,314,000,000 marks. No trade statistics have been made public by the German Government since Aug. 1, 1939. For distribution of trade among countries, see 1939 *YEAR BOOK*, p. 315. Also see *TRADE, FOREIGN*.

Finance. Publication of a regular budget was discontinued in 1934. According to figures issued by the Assistant Minister of Finance in Berlin in September, 1941, the Reich's military expenditure during the first two years of the European War was 100 billion reichsmarks, as compared with the 90 billion reichsmarks spent on armaments during the period from January, 1933, to Sept. 1, 1939. Receipts from all sources other than loans were estimated at about 40 billion marks for the fiscal year ended Mar. 31, 1942. This sum included about 31 billion marks from taxes, 5 billion from other normal revenues, 1.4 billion from the German communes, and 2.6 billion contributed by Bohemia-Moravia and occupied territories (excluding France). Estimated expenditures for nonmilitary purposes in 1941-42 totaled 20 billion marks. Combined military and nonmilitary expenditures were estimated at 29,288,000,000 reichsmarks in 1938-39, 44,963,000,000 in 1939-40, more than 68,000,000,000 in 1940-41, and about 78,400,000,000 in 1941-42.

The disclosed public debt rose from 37,200,000,000 reichsmarks at the outbreak of the war to approximately 107,000,000,000 on Sept. 1, 1941. The nominal average exchange rate of the reichsmark was \$0.4016 in 1938, \$0.4006 in 1939, \$0.4002 in 1940. See *History*.

Transportation. The total railway mileage in Germany and German-occupied countries was 109,904 (excluding occupied France) on Dec. 31, 1940, compared with 86,000 miles on Oct. 1, 1939 (about 42,300 miles in Germany proper). Partly due to the taking over of railways in Belgium, Luxemburg, and Alsace-Lorraine and of former privately-owned railways in Germany, estimated receipts of the German State Railways rose from 5,800,000,000 reichsmarks in 1939 to 7,600,000,000 in 1940. Partly through territorial annexations, the German highway network increased from 132,094 on Mar. 31, 1937, to 263,267 miles in 1940, including over 2,000 miles of express highways. The length of German air services in operation on Oct. 22, 1940, was officially reported as 7,457 route miles. The Deutsche Lufthansa A.G. was reported in August, 1941, to be operating about two-fifths of the lines in service prior to the war. It reported the following traffic statistics for 1940: Distance flown, 5,000,000 kilometers; passengers, 95,000; baggage and parcels, 440 tons; freight, 900 tons; mails, 1,000 tons.

Inland waterways extend more than 7,000 miles (canals, 1,450 miles). Further extensions to the canal system were under construction in 1941, including the Oder-Danube and Rhine-Main-Danube canals. The final link of the great Midland Canal, under construction since 1906, was completed in 1940. It connects the Oder, Elbe, and Weser with the Rhine and many smaller rivers. As of June 30, 1939, the German merchant marine comprised 2,466 ships of 4,492,708 gross tons.

Government. Under the Enabling Act of Mar. 24, 1933, giving the cabinet unrestricted powers to

legislate by decree, dictatorial powers were assumed by Adolf Hitler in his dual capacity as Chancellor (appointed Jan. 30, 1933) and head of the National Socialist (Nazi) party, the only legal political organization. Upon the death of President von Hindenburg, Aug. 2, 1934, Hitler assumed the functions of both Chancellor and President under the title of Leader (Fuehrer) and Chancellor (Reichskanzler). On Oct. 16, 1934, it was officially announced that Hitler would occupy both offices for life. Rights of the former Federal States were abolished by the decree of Feb. 1, 1934. Between 1933 and 1941, the Nazi party progressively brought under its control not only the government and the army but virtually all departments of political, cultural, social, and economic life (see preceding YEAR BOOKS). The Reichstag of 855 members was elected Mar. 29, 1936, and Apr. 10 and Dec. 4, 1938, from nominees selected by the Nazi party. It is a purely advisory body, meeting infrequently at the call of the Fuehrer.

The cabinet was composed as follows at the end of 1941, with dates of appointment in parentheses: Fuehrer, Chancellor, and Minister of Defense, Adolf Hitler; Interior, Dr. Wilhelm Frick (Jan. 30, 1933); Foreign Affairs, Joachim von Ribbentrop (Feb. 4, 1938); Finance, Count Ludwig Schwerin von Krosigk (Jan. 30, 1933); Food and Agriculture, Dr. Walther Darré (Jan. 30, 1933); Economic Affairs, Dr. Walther Funk (Jan. 15, 1938); Labor, Franz Seldte (Jan. 30, 1933); Posts, Dr. Wilhelm Ohnesorge (Feb. 2, 1937); Transport, Dr. Julius Heinrich Dorpmueller (Feb. 2, 1937); Aviation, and Commissioner for the Four-Year-Plan, Field Marshal Hermann Goering (Jan. 30, 1933); Justice, Franz Schlegelberger (Jan. 31, 1941); Science, Education, and Public Instruction, Dr. Bernhard Rust (Apr. 30, 1934); Church Affairs, Hanns Kerrl (July 19, 1935); National Enlightenment and Propaganda, Dr. Joseph Goebbels (Jan. 30, 1933); Munitions, Dr. Fritz Todt (Mar. 20, 1940). Also Ministers without Portfolio Rudolf Hess (Jan. 30, 1933), Deputy Leader of the Nazi party (imprisoned in Great Britain); Dr. Hanns Frank (Dec. 19, 1934), chief of the Government General of Poland; Dr. Heinrich Lammers (Nov. 26, 1937), Chief of the Reich Chancery; Dr. Hjalmar Schacht (Nov. 26, 1937), former head of the Reichsbank (Nov. 26, 1937); Dr. Otto Meissner (Dec. 2, 1937), and Baron Konstantin von Neurath (Feb. 4, 1938), former Protector of Bohemia and Moravia.

On Aug. 30, 1939, Hitler named an Inner Council of Defense consisting of Marshal Goering (chairman), Rudolf Hess, Ministers Frick, Funk, and Lammers, and Gen. Wilhelm Keitel, chief of the general staff. The Council was authorized, in the event of Hitler's absence, to issue decrees and ordinances without his signature. In a speech to the Reichstag on Sept. 1, 1939, Hitler designated Marshal Goering as his successor "if anything should happen to me in this struggle." He named Rudolf Hess as Goering's successor.

HISTORY

Germany in Difficulty. German military fortunes during 1941 repeated in general outline their course in 1940. The first half of the year brought sensational victories that consolidated Nazi control over continental Europe and aroused bright prospects of an early and overwhelming triumph. The latter half of the year was marked by serious and costly reverses—far more significant than those of 1940—that dummed all hope of early victory and forced the German people to face the bitter prospect of ultimate defeat.

Bulgaria, Finland, Hungary, Rumania, and Japan entered the war on the side of the Reich. But their assistance was more than offset by the addition of the Soviet Union and the United States to the anti-German coalition. With the aid of the Japanese navy, Hitler at the end of 1941 was engaged in a desperate effort to break out of the confines of Europe and seize strategic naval and air bases in the Far East and Africa. The object was to nullify the Allied sea, land, and air blockade of the continent before the full weight of the United States could become effective in the world conflict.

Hitler's War Aims. The repulse of the German air assault upon Great Britain in the autumn of 1940 and subsequent British and Greek victories over the Italians in North Africa and Albania presented Hitler at the beginning of 1941 with several immediate military-political tasks. He had to break the British blockade of the continent either by an invasion or a more effective counter-blockade of the British Isles. He had to rescue the Fascist regime in Italy from threatened collapse, induced by Italian military reverses, and eradicate British and other anti-Axis influences in the Balkans. And he had to guard against the danger of attack from Russia while organizing Europe against the political, economic, and military consequences of growing American aid to Britain.

The Fuehrer showed no doubt as to Germany's ability to accomplish these objectives. On January 30, the eighth anniversary of his seizure of power, he spoke at the Sportpalast in Berlin, confidently predicting "that 1941 will be the crucial year of a great new order in Europe." "The world," he continued, "shall open up for everyone. Privileges for individuals, the tyranny of certain nations and their financial rulers shall fall." He said the number of Nazi land divisions had been "tremendously increased" and "equipped as never before in German history." "At sea," he said, "submarine warfare will begin in the spring, and you will find we have not been idle. The Air Force will introduce itself similarly. Our whole army will force a decision one way or another."

Conquest of the Balkans. In carrying out his program, Hitler turned his attention first of all to the rescue of Fascist Italy and the establishment of German control in the Balkans. Early in January German air and land forces that had been sent to Italy's aid in December, 1940, began to challenge British naval and air supremacy in the Mediterranean and to strengthen the retreating Italian forces in Libya. The terms and extent of further German assistance in extricating Italy from its military dilemma in Albania were discussed at a secret conference between Hitler and Mussolini on January 20. Both leaders were accompanied by their Foreign Ministers and high military officials. At the same time a German economic mission of 35 experts, headed by Dr. Karl Clodius, arrived in Rome. Arrangements were made for Germany to supply Italy with urgently needed raw materials in return for foodstuffs and the services of Italian laborers in German factories and fields.

An uprising in January of the Iron Guard in German-dominated Rumania (q.v.) delayed Hitler's plans somewhat. But by the beginning of February he was ready to bring to a rapid conclusion the negotiations begun in 1940 for the adherence of Bulgaria and Yugoslavia to the Rome-Berlin-Toyko alliance. By combined political and economic pressure and military threats, Bulgaria was brought formally into the Axis camp on March 1. On the following day German troops based in Rumania began to occupy the Bulgar kingdom.

With his armies poised along the Bulgarian frontiers of Turkey, Greece, and Yugoslavia, Hitler was now in a position to bring extreme pressure upon Turkey to remain neutral, upon Greece to end hostilities with Italy, and upon Yugoslavia to adhere to the Axis and join Germany's "new order" in Europe. The pressure upon Turkey was successful; despite its alliances and sympathies with both Greece and Britain, Turkey remained passive during the subsequent campaigns in Greece and Yugoslavia.

Bolstered by a pledge of British support, the Greeks refused to halt their successful offensive against the Italian armies in Albania. The Yugoslav Regents and Government proved less resolute. In the hope of avoiding extinction of their country's independence, they signed the Tripartite Pact, with some reservations, on March 25. This was followed on March 27 by a *coup d'état* in Belgrade, and the establishment with almost unanimous popular support of a Yugoslav Government which in effect repudiated the kingdom's adherence to the Tripartite Pact. On the same day Hitler issued secret orders to attack Yugoslavia and Greece.

The assault was launched at dawn on April 6, with the cooperation of Italian forces. Within 12 days the Yugoslav armies were forced to capitulate. Within another 12 days Greek resistance was crushed and the remnants of a battered British expeditionary force of some 70,000 men were driven from the Greek mainland. Meanwhile German armored forces had landed in Libya. They seized upon the opportunity presented by the diversion of British troops to Greece to regain all of the ground lost by the Italians in the British offensive of December-January. Beginning May 20 the Germans attacked the strategically important Greek island of Crete by air, and in another 12 days they had ended all effective British and Greek resistance.

These stunning victories ended Allied hopes of opening up a military front in the Balkans. They placed the economic resources of Greece and Yugoslavia at the disposal of the Axis, greatly weakened the British naval position in the Mediterranean, exposed the naval base at Alexandria and the Suez Canal to Axis air attacks, and revived the danger of an invasion of Egypt from Libya. They also endangered the British position in Asia Minor, virtually isolated Turkey from Britain, and greatly increased the pressure upon that country to throw in its lot with the Axis.

Intrigues in Iraq and Syria. It was generally expected that Hitler would move next to cut British Empire communications at the Suez Canal by a pincer movement directed from Libya on the one side and from Syria on the other. The oil fields of Iraq were another tempting objective seemingly within easy reach of the victorious Nazi armies.

The groundwork for a German invasion of Asia Minor had been laid through negotiations with the Vichy Government of France and through infiltration by Nazi agents into Syria and Iraq. On April 4 a *coup d'état* brought a pro-Axis Government to power in Iraq. On May 2, after British defeats in Greece and Libya, Iraqi troops attacked the small British forces near Baghdad and at Basra. German airmen and technicians were sent to assist Rashid Ali Beg Gailani's Iraqi forces through the connivance of Gen. Henri Dentz, the French High Commissioner in Syria. With the cooperation of Pro-British elements in Iraq and Trans-Jordan, the British were able to drive out Rashid Ali and restore the pro-British Regent to power in Iraq (q.v.) just as the Germans completed the occupation of Crete.

Meanwhile the "peaceful penetration" of Axis

agents into Syria had proceeded with the acquiescence of the Vichy authorities. German detachments and technicians were at Syrian airfields. German "tourists" were actively at work throughout the mandated territory preparing for Axis military occupation by way of Crete and the Italian Aegean Islands. To forestall this occupation the British and Free French forces on June 8 launched a general attack upon the Vichy forces in Syria, which ended with the capitulation of General Dentz on July 11.

To the surprise of most observers, Hitler did not follow up his advantages in Syria. The German troops and planes there were withdrawn during the fighting, although the Axis afforded France every facility for sending French reinforcements to Syria. From the German viewpoint, this had the advantage of widening the breach between Britain and the Vichy Government, thus forcing France into closer collaboration with the Reich. But it permitted the Allies to seize control of Syria, block German designs in Asia Minor, and reinforce Turkish resistance to German pressure.

Attack upon Russia. The reason for Hitler's policy in Syria became obvious on June 22 when German armies launched a sudden attack upon Russia along the entire front from the Arctic Ocean to the Black Sea. The crucial decision to attempt to knock out the Soviet Union before proceeding to attack the British at Suez or in their island stronghold apparently was reached by Hitler on the advice of his generals and only after a struggle among the Nazi leaders. His primary objectives were, first, to eliminate the danger that the Red Army might strike Germany in the rear just as the war against Britain was reaching its decisive stage. Secondly, he wanted to secure control of Russian agricultural and mineral resources, especially the oil fields of the Caucasus, in order to nullify the British blockade and defy both Britain and the United States in a long war.

Other important factors impelled Hitler to take his vital decision. British air power was rapidly increasing, as indicated by the growing severity of attacks upon German cities. The other defenses against a German invasion of the British Isles had been immensely strengthened. The German submarine and air offensive was proving unequal to the task of cutting British sea communications. Also the United States was increasing its aid to Britain and drawing steadily nearer to participation in a "shooting war" with Germany. According to a statement issued by Hitler to the German people on June 22, his military commanders advised him that such large German forces were needed to protect Germany's borders against Russia "that radical conclusion of the war in the west, particularly as regards aircraft, could no longer be vouchsafed."

Hitler's statement, and a simultaneous review of German-Russian relations issued by Foreign Minister von Ribbentrop, alleged that the Russians had overstepped the provisions of the Nazi-Soviet accord of 1939 in annexing the Baltic States, Bessarabia and Northern Bukovina, and in attacking Finland. They accused Moscow of carrying on underground Communist agitation within German Poland and other German-dominated areas, again in violation of the 1939 pact; of hostile actions toward Germany in the Balkans, particularly in Bulgaria and Yugoslavia; and of secretly collaborating with Britain against the Reich. It was charged that the Russians had failed to deliver the quantities of industrial raw materials, oil products, and foodstuffs provided for in the Soviet-German trade agreement of Jan. 11, 1941, under which Germany undertook to ship industrial equipment of equiva-

lent value to the Soviet Union. Alleged aggressions by Soviet troops along the German-Russian military frontiers were given as the specific provocation for the German attack.

Preparations for Russian Drive. In preparation for the grand assault upon Russia, Hitler withdrew most of his troops and planes from the Balkans, turning over police duties in the occupied regions—but not actual political control—to the Italians, Bulgarians, and Hungarians. The garrisons in the occupied territories of western and northern Europe also were reduced and in part replaced by second- and third-line German troops. German forces were landed in Finland, having received the Helsinki Government's permission to use that area as a base of attack upon the Russians in the North. With the collaboration of refugees from the Baltic States, preparations were made for the anti-Communist revolts that subsequently assisted the German advance into Lithuania, Latvia, and Estonia. Ukrainian exiles in Berlin helped to plot similar but less successful uprisings in the Ukraine. To safeguard Germany's southern flank during the Russian campaign, Hitler on June 18 concluded a ten-year non-aggression pact with Turkey. Nazi agents intensified their activities in Iran and Afghanistan, seeking to distract Moscow and divert both Soviet and British forces from the battlefronts.

Anti-Communist Crusade. Hitler also sought through the attack upon Russia to revive the "crusade against communism" which he temporarily discontinued in 1939. He hoped by this tactic to divide anti-Nazi forces in countries actively or potentially opposed to Germany, and to enlist allies among the anti-Communist governments of the world. Rudolf Hess, third ranking member of the Nazi hierarchy, who startled the world by bailing out of a Messerschmitt fighter plane over Scotland on the night of May 10, was apparently commissioned by Hitler to persuade the British Government to end hostilities with the Reich and even join in the projected German death struggle with Communist Russia. Prime Minister Churchill not only rejected the German peace offer but warned Stalin of Hitler's intentions. When the German invasion of the Soviet Union began, Churchill immediately pledged full cooperation with Russia. On July 13 an Anglo-Soviet mutual aid pact was concluded, later expanded into a full treaty of alliance.

Hitler's war on Soviet Russia intensified isolationist sentiment in the United States, but the American Government extended active diplomatic support and later material aid to the Stalin regime. The Vatican and most of the neutral countries of the world refused to modify their opposition to Nazism and the Hitler Government on the basis of Hitler's new concern for Christian civilization. However Italy, Slovakia, Hungary, Rumania, and Finland joined actively in the war upon Russia. Spain, the Vichy Government in France, and puppet governments in the German-occupied countries expressed sympathy for the German cause and authorized the recruiting of volunteers for service on the eastern front.

At a ceremony in Berlin on November 25, the Anti-Comintern Pact of 1936 was renewed for five years and expanded by the adherence of seven additional governments (see FASCISM). In conferences held in Berlin for three days following the November 25 meeting, the German Government sought to turn the spearhead of the revived anti-Communist alliance against Great Britain and the United States as the allies and supporters of bolshevism.

Adversity in Russia. Within a few weeks after the

German invasion of the Soviet Union it became apparent that the German high command, no less than foreign military experts, had gravely underestimated the Red Army's fighting powers. (The progress of the war, with its tremendously costly battles, is described in the article WORLD WAR.)

Instead of smashing the Russian forces in a few weeks, as he had anticipated, Hitler found himself engaged by an efficient and well equipped army that fiercely and stubbornly resisted every German advance and continued to pour new reserves of men and equipment into the struggle despite repeated German victories. Villages, factories, communications systems, and in so far as possible the growing crops, were destroyed by the retreating Russians in accordance with Stalin's "scorched earth" policy. Guerrillas waged bitter warfare behind the German lines, while throughout the German-occupied countries, and even in Germany and the territories of its allies, revolutionary elements seized upon German difficulties in Russia to intensify both active and passive resistance.

On October 3 Hitler returned to Berlin from his field headquarters in Russia and broadcast from the Sportspalast a report on the German progress since June 22. He declared that Russia "is already broken and will never rise again." The Nazis, he admitted, did not know "how gigantic" Russia's preparations "against Germany had been." However he claimed that the Germans had taken 2,500,000 Russian prisoners, captured or destroyed 22,000 guns and 18,000 tanks, and shot down 14,500 planes. New operations of "gigantic dimensions" were in progress, Hitler said, that would shortly crush the remaining Soviet forces. On October 9 the Reich press chief, Dr Otto Dietrich, announced the collapse of Russian resistance. Speaking again at Munich on November 8, Hitler placed Russian casualties at 8,000,000 to 10,000,000 men and said that German troops had occupied about 644,000 square miles of Soviet territory, including 60 to 75 per cent of all Russia's industries and raw materials. From such a blow, he asserted, "no army in the world could recover, not even the Russian."

Yet Russian resistance continued, and with the aid of winter rains, snow, and cold, the powerful German offensive was finally halted early in December on the outskirts of Moscow and after the capture of Rostov-on-Don had brought the Nazis almost within grasp of the greatly needed oil fields of the Caucasus. On December 8 a military spokesman in Berlin announced that German forces in Russia were forming a stationary defensive line. Speaking to the Reichstag on December 11, Hitler admitted that the German offensive "might well be stopped or hampered by winter conditions." But he declared that with the return of summer weather "there will be no obstacle to stop this forward movement from continuing."

It was now plain to the German people that the Red Army, far from having been annihilated, was taking the offensive all along the front. The difficulty of stabilizing the German lines was indicated by Goebbels' appeal of December 20 for all available warm clothing to be sent the troops on the Eastern front, and by Hitler's replacement of Field Marshal von Brauchitsch as commander-in-chief of the army on December 21. Hitler's assumption of direct responsibility for military operations, and reports of the ousting of other tried German commanders, was generally believed to indicate a fundamental disagreement between the army and the Nazi party over the conduct of the war. These changes came as a shock to the German people and greatly affected their morale.

RENEWAL OF THE ANTI-COMINTERN PACT AT THE REICH CHANCELLERY, NOVEMBER 25

Seated left to right are Premier Antonescu of Rumania, Foreign Minister Serrano Suñer of Spain, Premier Bardossy of Hungary, Foreign Minister Count Ciano of Italy, Foreign Minister von Ribbentrop of Germany, Ambassador Oshima of Japan, Premier Tuka of Slovakia (half-covered), Foreign Minister Popov of Bulgaria.

German Rule in Russia. Meanwhile the Reich Government on November 17 had officially confirmed the appointment of Dr. Alfred Rosenberg as "Reich Minister for the East," or chief civilian administrator of occupied Soviet territories. Local administration of this vast region was divided between two Reich Commissioners—one for the Ukraine and the other for the "Ostland," which comprised the Baltic States and White Russia. Eastern Galicia in the Russian Ukraine was placed under the administration of the Government General of Poland, while another big slice of the Ukraine, comprising Odessa and its hinterland, was transferred to Rumania.

Other Nazi Setbacks. The gravity of the German situation was mitigated to some extent by the successes achieved through Japan's surprise attacks upon United States and Allied bases throughout the Far East and the Pacific on December 7 (see *WORLD WAR*). This promised to divert American and British war materials and forces from the Atlantic and Libya to the Pacific area, thus relieving pressure upon Germany. However Japan's treacherous blow helped to solidify American unity and aligned most of the Latin American countries solidly behind the Anglo-American cause.

Meanwhile the British and Russians had crushed Nazi intrigues and conspiracies in Iran and Afghanistan. In November and December came the successful British offensive against Axis forces in Libya, which revived British prestige among the Arabs, and strengthened Turkish resistance to German pressure. The new turn of events appeared to encourage the Vichy Government's resistance to German demands for the use of the French fleet.

War with America. Japan's entrance into the war was conditioned upon a German declaration of war against the United States. The declaration, made on December 11, was accompanied by the publication of a pact between Germany, Italy, and Japan providing for joint prosecution of war against the United States and Britain with all the means at their disposal until the end of hostilities. The three governments agreed not to conclude an armistice or peace with either enemy "without complete and reciprocal agreement." They pledged themselves after the victorious conclusion of the war to "collaborate closely in the spirit of the Tripartite Pact in order to realize and establish an equitable new order in the world."

Revolts in Occupied Countries. The entrance of the United States into the war with a united home front and with a newly established war industry nearing full production was another severe blow to German morale and to Hitler's prospects of victory. It gave new hope to the subjugated peoples of Europe, already spurred to widespread sabotage and revolutionary activity by the German reverses in Russia. A formidable rebellion broke out in Yugoslavia early in the autumn and gained momentum as the months passed. In Greece, Poland, Norway, Czechoslovakia, Belgium, the Netherlands, and occupied France passive resistance gave way to more violent measures of rebellion. Opposition to the Nazi "new order" multiplied in Rumania, Bulgaria, Hungary, and Slovakia, under assiduous fanning by democratic, Communist, and other anti-Axis elements. As soon as the Baltic States and the Ukraine discovered that the Germans had no intention of conceding their independence, local nationalists turned from cooperation with the Reich to vigorous resistance. See the article on each of these countries under *History*.

The Germans and associated Axis regimes resorted to wholesale executions and other harsh reprisals to check the groundswell of revolt, but with-

out success. The United Press correspondent in Berlin reported that from the outbreak of the Russo-German war to November 22, the Germans officially admitted 2,225 reprisal executions in Hungary, Rumania, Bulgaria, and the German-occupied territories outside of Russia. This figure represented only a fraction of the actual number of killings, many of which were unrecorded. Italy, too, was again developing into a German liability as a result of raw materials poverty and growing internal opposition to the war.

Unrest in Germany. Hitler's greatest cause for concern, however, was the spreading discontent and declining morale among the German people. As early as October, Propaganda Minister Goebbels abandoned the attitude of confident optimism that had hitherto characterized Nazi propaganda and began to condition the Germans to face greater difficulties and dangers. On October 2 he again warned that death was the penalty for listening to British broadcasts. In November he published several warnings that to win through to victory and a glorious "new order," the German people would have to grudge themselves for further sacrifices and a hard and relentless war. He declared that behind the "humanitarian phrases" of the Allied spokesmen "lurks the naked will to annihilate us. The Axis Powers actually are fighting for the most elemental existence and the care and burdens that must be laid on all our shoulders in this war would pale before the inferno that awaits us should we lose the war."

Economic Strains. The last quarter of the year produced mounting evidence of the strains imposed upon the national economy and morale by the gigantic expenditure of men and supplies in Russia, the continuous British air raids on the cities, factories, and communications of Western Germany, and the progressive exhaustion of food and raw material supplies. The meat ration was cut 20 per cent in July. In October and November potatoes and tobacco were added to the rationed list for the first time. Clothing and linen rations were cut to about half the 1940 level, despite large-scale seizures of bedding and clothing in the occupied countries. Civilian passenger train services were further reduced at the end of October, and all travel considered unnecessary was banned. Serious disruption of all transportation facilities was reported.

Despite the rigid governmental controls over the financial and economic system, fear of inflation developed to the point at which many Germans sought to spend their money for anything representing tangible value. The Assistant Minister of Finance on October 29 assailed this practice as unpatriotic and foolish. To encourage savings, he announced that persons renouncing the right to ask repayment of their savings deposits until 12 months after the end of the war, would be exempted from income and other taxes on these deposits and the accrued interest.

The growing shortage of manpower in the army and in industry was reflected in measures to speed the flow of high school students into industrial and white collar jobs. Compulsory child labor on farms was introduced in the summer. The Government also arranged to expand the number of foreign workers in German agriculture and industry. At the end of November the number of foreign civilian workers employed in Germany was reported at nearly 2,000,000. Thousands of Italian and other foreign agriculturalists were recruited during the autumn months for the task of exploiting the rich agricultural resources of the conquered Ukraine.

Nazi-Army Friction. In December Stockholm

sources reported a serious spotted typhus epidemic in Poland and the occupied districts of Russia. There were evidences of growing friction between the German army and the Nazi party, as well as factionalism within the Nazi hierarchy. In December it was announced that Hitler had been instructed by his physicians to take a complete rest at Berchtesgaden because of physical and nervous exhaustion from his efforts in directing the Russian campaign.

Church-State Conflict. The struggle between the Nazi party and the Roman Catholic Church continued, despite the support accorded the war against Russia by many Catholic priests. Senator James M. Mead of New York submitted to the U.S. Senate on October 6 documentary evidence to substantiate his charge that the Nazis were destroying the Catholic Church in Germany. The dean of St Hedwig's Roman Catholic Church in Berlin was jailed by the Gestapo in October for criticizing the Nazis and offering prayers for Jews. A new and more drastic purge of the Jews was inaugurated during October, 1941. In August the Christian Science movement in Germany was completely outlawed "for the protection of public and state."

Other Events. Continuing his policy of bringing all German-speaking inhabitants of Europe under direct German rule, Hitler by the spring of 1941 had resettled half a million Germans in the provinces annexed from Poland. He also annexed to the Reich a section of Yugoslavia adjoining Austria, which contained a German-speaking minority. Wilhelm II died at Doorn, the Netherlands, where he had been an exile since the German collapse in 1918 (see NECROLOGY).

GIBRALTAR. A British crown colony and fortified naval base at the western entrance to the Mediterranean. It comprises a long mountain called the "Rock" which has an extreme height of 1,396 feet. A canal, 20 feet wide, built across the isthmus as a wartime safety precaution, now separates Gibraltar from the mainland. There is a deep-water Admiralty harbor with an area of 440 acres, containing three graving docks. Area, 1 $\frac{1}{8}$ square miles. Total fixed population (Jan. 1, 1939), 20,339, of whom 16,000 were evacuated to Great Britain, Madeira, and Jamaica because of the danger of heavy casualties in case of heavy attacks from the air.

Trade. Gibraltar is a free port and does an extensive shipping trade. During peacetime it is a popular tourist resort. The supply of provisions and fuel to shipping and the transit of cargoes to Spain and Morocco are the principal occupations of the people. Shipping (1938): 4,752 vessels aggregating 13,772,321 tons entered. Roads (1940): 23 miles.

Government. Chief sources of revenue are the port dues, rent of the Crown estate in the town, and duties on wine, tobacco, spirits, beer, gasoline, and perfumery. In 1938 revenue totaled £207,628 and expenditure £133,725. The governor is assisted in the administration by an executive council of seven members. There is no legislative council, the power to legislate being vested in the governor who, in addition, is the general officer commanding the garrison. Governor and Commander-in-Chief, Gen. Viscount Gort (appointed Apr. 26, 1941).

History. During 1941 the work of modernizing the fortress and extending the network of tunnels that honeycomb the "Rock" was carried forward night and day by the troops. Reservoir upon reservoir are built in the rock to receive the heavy fall of rain water from the outside catchment areas and thus provide enough water for the rest of the year. Masses of rock were blasted to accommodate everything necessary for thousands of men to live and fight for a prolonged time. A large three-storey barracks, hospitals fully equipped, electric light power stations, washrooms, and cookhouses are situated in the heart of the "Rock"

GLASS. The all-time high production, which was established in 1940 by glass manufactures, was broken for 1941, according to *The Glass Industry* magazine, which places the total manufactured value of all glass products for the year at \$470,000,000. This record volume was 28 per cent greater than in 1940 (\$368,000,000), and with \$320,000,000 in 1939.

Plate glass production amounted to 190,403,612 square feet or 16 per cent more than the 1940 total of 164,371,570 square feet. This output was the largest since 1937 when the industry produced 192,592,000 square feet.

Window glass production totalled 16,400,000 boxes or 20 per cent more than the 1940 figure. This represents a new production record for the window glass industry.

Glass container production for the 12 months of 1941 reached the record level of 70,440,010 gross which was 30 per cent greater than the previous record of 54,265,000 gross set in 1940. Shipment figures for all of 1941 exceeded the 1940 volume by 32 per cent, establishing the record total of 68,961,339 gross Stocks of all types of ware declined with the exception of food containers, liquor ware, milk bottles, and domestic jelly glasses which increased.

Miscellaneous glass products manufactured during 1941 was estimated at \$164,000,000 or an increase of 29 per cent over 1940's production estimate of \$127,000,000. Machine-made tumbler production amounted to 53,005,615 dozens—22 per cent above the previous year's level. The finished stocks of tumblers rose 6 per cent above the 1940 level to 8,936,310 dozens. Manufacturers' sales of machine-made table, kitchen, and household glassware increased 16 per cent over the 1940 total to 39,085,634 dozens. Illuminating ware sales were \$5,480,241 or one-third greater than in 1940.

It is estimated that the number employed in the glass industry during 1941 approximated 87,000 persons. Glass manufacturers paid out close to \$135,000,000 in wages during 1941 as compared to \$104,000,000 in 1940 and \$90,000,000 in 1939.

Foreign trade statistics have been suspended for the duration of the war so that this information cannot be used by the enemy. This is the same policy that other belligerent countries have followed in order to maintain secrecy relative to vital statistics. During the first 9 months of 1941, exports of glass and glass products totalled \$15,018,000 as compared with \$9,987,000 in 1940's comparable months and \$6,000,000 in 1937. Imports dropped from \$1,963,000 in 1940's January-September period to \$1,023,000 in 1941; this was less than one-seventh of 1937's corresponding trade.

GOLD. Total mine production of recoverable gold in the United States and Territories in 1941, according to the preliminary report of the U.S. Bureau of Mines, was 5,858,871 fine oz., 2 per cent less than 1940's output of 5,984,163 oz. Valued at \$35 per fine oz. it amounted to \$205,060,485 compared with \$209,445,705 in 1940. California mined 24 per cent of the total production; 19 per cent came from the Philippines, Alaska contributed 12 per cent, South Dakota 11 per cent, Colorado, Nevada, and Utah each 6 per cent, Arizona 5 per cent, Montana 4 per cent, Idaho 3 per cent, the remaining States and Puerto Rica, 4 per cent. A fall in these figures is expected in 1942 in view of the fact that all United States gold mines need new equipment or repairs to old and cannot get them because of priority ratings. The nation has greater need for copper, lead, or zinc, for instance, than for gold. For this reason the OPM excluded the United States placer mines (which produce one third of the nation's gold) when it gave all other United States

mines an A-8 priority for repairs in September, 1941.

The year 1940 was the peak year for gold imports. Gold imports for 1941, mostly from Canada, Latin America, and the Far East, were something less than \$1,000,000,000. By the end of the year gold stock earmarked for foreign account had increased to about \$2,200,000,000, compared with \$1,807,673,000 at the end of 1940. Monetary gold stock in the United States was \$22,750,000,000 at the end of 1941, compared with \$21,994,548,000 (1940).

The continued buying of gold on the part of the United States has meant \$700,000,000 a year in dollar exchange to Great Britain.

GOLD COAST. A British colony in West Africa, consisting of the Gold Coast colony (23,937 sq. mi.), Ashanti (24,379 sq. mi.), Northern Territories (30,486 sq. mi.), and Togoland (13,041 sq. mi.). Total area, 91,843 square miles, total population (1940 estimate), 3,962,520, including 3,182 non-Africans. Chief towns (1931 census figures): Accra, the capital (72,977), Kumasi (43,413), Sekondi (21,614), Cape Coast (19,412), Tamale (18,591). Education (1939-40): 62,218 pupils in schools of all kinds.

Production and Trade. The main products are cacao, kola nuts, palm kernels, copra, rubber, maize, yams, timber, gold, manganese, and diamonds. Gold production (1940): 880,929 troy oz. Trade in 1940 (sea-borne trade only, excluding specie and currency notes): £6,707,275 for imports (£7,141,789 in 1939) and £13,636,538 for exports (£12,864,472). Gold (£6,177,725), cacao (£5,101,219), manganese (£789,608), and diamonds (£464,438) were the chief exports in 1939. Shipping (1939): 4,334,463 tons entered and cleared. Roads (1940): 5,092 miles.

Government. Finance (1939-40): £4,956,086 for revenue and £4,853,054 for expenditure; public debt £10,400,000. Budget (1940-41): £3,965,000 for revenue and £3,620,000 for expenditure. A governor, assisted by executive and administrative councils, administers the Gold Coast colony. Ashanti, Northern Territories, and (British) Togoland are administered by the governor of the Gold Coast, and their statistics for trade, etc., are included in the general total for the Gold Coast. Governor and Commander-in-Chief, Sir Allan Burns (succeeded Sir Arnold Hodson during October, 1941).

GOLD IMPORTS, GOLD RESERVES. See FINANCIAL REVIEW; also, BANKS AND BANKING.

GOLF. Before it was struck a deadly blow late in the year by the news that golf balls would be unobtainable for the duration of the war, the ancient Scottish game was decidedly healthy, with championships falling to deserved golfers. The National open championship, most prized of all, finally went to the gifted blade of Craig Wood, who had been perennial runner-up for almost every worthwhile title in the world. The National amateur championship went to Bud Ward, the Spokane star, and the national women's title was taken by Mrs. Frank Newell, the former Betty Hicks, who turned professional soon after winning the silverware at Brookline, Mass.

Craig Wood's victory on a splendid 284 for the seventy-two hole trip around Fort Worth's Colonial Club course in June was, of course, the high spot of the year. For sixteen years this blond New Yorker had been tapping at the door, but never breaking

into regal society. This time his final score was good enough to beat out Denny Shute, who had beaten Wood in the British open eight years back in a play-off, by three strokes. Previous to this conquest of the field in Texas, Wood had shattered his jimx by capturing the Master's Tournament in Georgia. After a bad 79 on the third round, the defending champion, Lawson Little, eliminated himself in the open.

Ward's victory in the amateur, played in Omaha, was unpopular with the galleries, because Ward had made derogatory remarks about Omaha hospitality and the condition of the golf course. When he played Pat Abbott in the finals, he was booed every time he swung his club and at the end the loser was carried off high on the shoulders of the fanatics. Ward had called the course a "cow pasture."

Vic Ghezzi, one of the finest stylists in the game, finally broke through to win the Professional Golfer's Association crown in the latter part of the year at Denver, whipping Byron Nelson in the final.

There was no international competition because of the military wrangling.

GREAT BRITAIN. Official designation for the political union embracing England, Scotland, and Wales. Capital, London. Sovereign in 1941, George VI, who succeeded to the throne upon the abdication of Edward VIII on Dec. 10, 1936, and was proclaimed King on Dec. 12, 1936. Great Britain, together with Northern Ireland, the Isle of Man, and the Channel Islands, forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes, the Isle of Man, the Channel Islands, and in some cases Northern Ireland, are included under Great Britain. See BRITISH EMPIRE, IRELAND, NORTHERN.

Area and Population. The area of Great Britain, the census population of Apr. 27, 1931, and the estimated population on June 30, 1939, are shown by political divisions in the accompanying table.

GREAT BRITAIN AREA AND POPULATION

Divisions	Area in sq miles	Population ^a	
		1931	1939
England ^b	50,874	37,794,003	41,375,000
Wales	7,466	2,158,374	
Scotland	30,405	4,842,980	5,006,700*
Isle of Man	221	49,308	145,000
Channel Islands	75	93,205	
Total	89,041	44,937,444	46,526,700

* Exclusive of army, navy, and merchant seamen abroad.
^b Including Monmouthshire ^c 5,045,000 on June 30, 1940.

Live births in England and Wales in 1940 numbered 607,131 (14.6 per 1,000); deaths, 572,882 (14.3 per 1,000); marriages, 468,267. In Scotland there were 86,389 births (17.1 per 1,000), 72,775 civilian deaths (14.9 per 1,000), and 53,599 marriages. British emigrants to places outside of Europe in 1938 numbered 34,144; immigrants of British nationality into Great Britain, 40,611. Estimated populations of the chief cities in 1937 (except when

otherwise indicated) were: Greater London, 8,655,000; County of London, 4,094,100; Glasgow, Scotland, 1,131,800 (1940); Birmingham, 1,029,700; Liverpool, 836,300; Manchester, 736,500; Sheffield, 518,200; Leeds, 491,880; Edinburgh, Scotland, 475,500 (1940); Belfast, Northern Ireland, 438,112; Hull, 319,400; Bradford, 289,510; Newcastle-on-Tyne, 290,400; Stoke-on-Trent, 272,800; Nottingham, 278,800; Leicester, 262,900; Portsmouth, 256,200; Croydon, 242,300, Cardiff, Wales, 224,850; Plymouth, 210,460; Salford, 201,800.

Education and Religion. Enrollment in the 2,678 elementary schools in England and Wales numbered 4,971,357 in 1939, and the total net expenditure of local authorities for elementary education was £74,970,611 for 1939-40. In Scotland there were 2,899 primary schools with 604,977 enrolled pupils, and the total ordinary expenditure of educational authorities for 1939-40 was £14,348,639. England and Wales had 2,156 secondary schools recognized by the Board of Education as efficient, with 569,089 pupils in 1937-38. Of these schools, 1,398 received grants-in-aid. Total net cost of secondary education in 1939-40 was £23,724,843. In Scotland there were 252 secondary schools with an average enrollment of 157,388 pupils in 1939. There are 11 universities in England, 4 in Scotland, and 1 in Wales. The combined student enrollment in 1940-41 was 45,660; the teaching staff numbered 6,076.

The Church of England (q v), with an Episcopal form of government, and the Church of Scotland (Presbyterian) are the "established religions" in England and Scotland, respectively. Recent statistics of "full members" of leading denominations in England and Wales were: Anglican, 2,294,000; Methodist, 1,250,589; Congregational, 494,199; Baptist, 392,535; Calvinistic Methodist, 261,287. The number of Roman Catholics was estimated at 2,361,504 in 1937. The Church of Scotland had 2,522 congregations with 1,285,011 members on Jan. 1, 1940. There were 404 Scottish Episcopal churches and missions with 61,547 communicants in 1939, and 450 Roman Catholic churches, chapels, and stations, with 614,021 adherents in 1937.

Agriculture. Great Britain and the Isle of Man in 1939 had 11,923,000 acres of arable land, 17,355,000 acres of permanent pasture, and 312,149 acres of orchards and small fruits. The market value of agricultural and horticultural production in England and Wales in 1938-39 was estimated at £219,800,000 (livestock and products, £154,930,000, farm crops, £31,800,000, fruits and vegetables, £33,070,000). Yields of chief crops in 1939 in the United Kingdom were (in metric tons): Wheat, 1,680,000; barley, 903,300; oats, 1,760,800; potatoes, 5,197,100 (1938); beet sugar, 494,100; hops, 13,100 (1938). Livestock statistics for 1939 in Great Britain (exclusive of the Isle of Man and the Channel Islands) were: Cattle, 8,118,788; sheep, 25,992,793; swine, 3,767,365; horses, 987,415; poultry (including Northern Ireland), 69,119,000. The wool clip as in the grease was about 108,700,000 lb. in 1938.

Mining and Manufacturing. Statistics of industrial production have been withheld since the outbreak of the war. Mineral and metallurgical output of the United Kingdom in 1938 (except where otherwise indicated) was (in metric tons): Coal, 231,875,000; iron ore, 3,615,000, pig iron and ferro-alloys, 6,871,000; steel ingots and castings, 10,561,000; copper, 7,200, aluminum (smelter production), 25,500 (1939); tungsten ore, 154; lead ore, 30,200; zinc (smelter production), including some secondary metal, 50,400 (1939). The production of al-

coholic spirits was 58,011,000 U.S. gal.; beer, 1,066,775,000 gal. Vessels (of 100 or more tons) launched in 1938 aggregated 1,030,000 gross tons. A total of 447,561 motor vehicles were manufactured in 1938 (342,390 passenger cars and 105,171 trucks and buses). Rayon manufacture was 54,450 metric tons in 1939.

Fisheries. During 1938 the fisheries of England and Wales landed 776,635 tons of non-shell fish valued at £12,233,209 and those of Scotland 269,028 tons valued at £3,826,671. Great Britain's shell-fish catch was valued at £488,490. In order of value, the principal fish caught were cod, herring, haddock, hake, and plaice.

Foreign Trade. Recent trends in British foreign trade are shown in the accompanying table.

BRITISH FOREIGN TRADE^a
[In thousands of pounds sterling]

Calendar year	Imports ^b	Re-exports (imported)		Total of exports ^c	Excess of exports
		British products ^c	merchandise ^c		
1929	1,220,765	729,349	109,702	839,051	381,714
1932	701,670	305,024	51,021	416,045	285,625
1937	1,027,824	521,391	75,134	596,525	431,299
1938	1,019,509	470,755	61,525	532,280	387,228
1939	885,513	439,536	46,034	485,569	399,943
1940	1,099,869	413,084	26,189	439,273	660,596

^a Not including bullion and specie movements ^b C.i.f. value. ^c F.o.b. value

Of the 1940 imports, food, drink, and tobacco accounted for £421,004,000; raw and semi-manufactured materials, £336,495,000; manufactured articles, £336,209,000. Of the exports of British produce, £33,352,000 represented food, drink, and tobacco, £36,292,000 raw and semi-manufactured materials, and £335,960,000 manufactured articles. For the latest available data on the distribution of British trade, see YEAR BOOK for 1939, p 328.

Finance. Budget operations for the fiscal years ending March 31 are shown in the accompanying table.

UNITED KINGDOM. BUDGET OPERATIONS

March 31	Receipts	Expenditures	Deficit
1937-38	£872,580,000	£908,661,000	£36,081,000
1938-39	927,285,000	1,068,049,000	140,764,000
1939-40	1,049,189,000	1,816,873,000	767,684,000
1940-41	1,408,867,000	3,884,288,000	2,475,421,000
1941-42*	1,636,000,000	4,206,957,000	2,570,957,000

* Estimates

The drastic increase in expenditures was due almost entirely to the increased cost of defense services, which soared from £262,117,000 in 1937-38 to £3,220,000,000 in 1940-41 and an estimated £3,500,000,000 in 1941-42. The cost of civil services rose from £407,765,000 in 1937-38 to £434,957,000 (estimated) in 1941-42, while debt and other consolidated fund services increased from £238,779,000 in 1937-38 to £272,000,000 (estimated) for 1941-42. The principal sources of revenue in the 1941-42 budget estimates, with actual 1937-38 returns in parentheses, were: Income tax, £605,000,000 (£297,986,000); other internal taxes, £387,000,000 (£173,360,000); customs and excise, £578,000,000 (£335,261,000); motor-vehicle duties, £39,000,000 (£34,608,000); other non-tax revenue, £27,000,000 (£31,365,000). Of the deficit of £2,475,421,000 in 1940-41, more than half was financed by receipts from various savings issues and the remainder by increasing the floating debt.

The growth of the national debt during the war and its composition is shown in the accompanying table.

BRITISH NATIONAL DEBT
[In millions of pounds sterling]

	Mar 31, 1939		Mar 31, 1940		Mar 31, 1941	
	Amount	%	Amount	%	Amount	%
Floating debt	841	10	1,489	17	2,813	26
On-tap and savings issues ^a	385 ^b	5	490	5	1,139	14
Other debt	6,931	85	6,952	77	7,022	61
Total debt	8,144	100	8,931	100	11,394	100

^a Including interest-free loans and Savings Certificates. ^b Old issues of Savings Certificates.

The average free exchange value of the pound sterling was \$4.8894 in 1938, \$4.4354 in 1939, \$3.83 in 1940, and \$4.0318 in August, 1941.

Shipping. On June 30, 1939, the British merchant fleet aggregated 21,001,925 gross tons. New construction and acquisition of fleets from countries overrun by Germany offset war losses up to Nov. 1, 1940, when the total shipping available to the British was placed at 21,000,000 tons. During 1940 the 24 British liner companies, owning 479 ships of 3,572,758 gross tons, and 43 cargo companies, with 289 vessels of 1,373,310 gross tons, reported aggregate profits of £9,111,050.

Railways, etc. There were 20,162 miles of railway line open in Great Britain on Jan. 1, 1939 (51,000 miles of track). Net revenue for the year was £28,984,000. Roads and highways in the United Kingdom totaled 180,527 miles in 1940. The total length of British home and overseas civil air routes was 30,624 miles in August, 1939. Some were suspended for the duration of the war. Twice-a-week service between London and Lisbon, Portugal, was inaugurated on June 4, 1940. A North Atlantic air ferry and supply route was inaugurated via Botwood, Newfoundland, in 1941. Civil aircraft flew a total of 5,000,000 miles and carried nearly 30,000,000 airmail letters during 1940.

Government. The United Kingdom of Great Britain and Northern Ireland is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by universal male and female suffrage on the basis of one member for every 70,000 of population. The House of Lords in 1941 had 788 members, including 24 minors not seated, who are variously selected—by heredity, appointment, by virtue of office, and by election.

The standing of the government parties in 1941, modified slightly by by-elections, was as follows (names of leaders in parentheses): Conservatives (Winston Churchill), 374; Labor (Clement R. Attlee), 164; Liberal National party (Viscount Simon), 32; Liberals (Sir Archibald Sinclair), 18; Independents, 11; National Labor party (Malcolm MacDonald), 7; Nationals, 5, total, 611. The Opposition consisted of 3 Independent Laborites (leader, James Maxton) and 1 Communist.

The last general election was held in November, 1935. The election due in 1940 was postponed until the end of the war through an agreement reached by the principal political parties on Sept. 22, 1939. On May 12, 1940, Winston Churchill replaced Neville Chamberlain as Prime Minister and the Government was widened to include the Labor and Liberal opposition (see YEAR BOOK for 1940, p. 320 f.). There were successive reorganizations of the Churchill Government—on Oct. 3 and Dec. 22, 1940, and on Feb. 8 and May 2, 1941. On Sept. 3, 1939, Prime Minister Chamberlain replaced the Cabinet of 22 members with

a War Cabinet of 9 members, who assumed responsibility for coordinating the nation's war effort. The other Ministers (heads of Government departments) no longer retained Cabinet rank. The War Cabinet was assisted by committees of Ministers, usually acting under the direction of a Cabinet member.

Members of the War Cabinet as reorganized Feb. 8, 1941, with their party affiliations, were: Prime Minister, First Lord of the Treasury, and Leader of the House of Commons, Winston Churchill (C.); Chancellor of the Exchequer, Sir Kingsley Wood (C.); Foreign Affairs, Anthony Eden (C.); First Lord of the Admiralty, A. V. Alexander (Labor); War, David Margesson (C.); Air, Sir Archibald Sinclair (Liberal); Lord Privy Seal, Clement R. Attlee (Labor); Minister without Portfolio, Arthur Greenwood (Labor); Aircraft Production, Lord Beaverbrook (C.).

Other Ministers not in the War Cabinet were: Lord President of the Council, Sir John Anderson (C.); Lord Chancellor, Viscount Simon (Liberal National); Home Affairs, Home Security, Air Raid Precautions, Herbert Morrison (Labor), Dominions, Viscount Cranborne (C.); Colonies, Lord Moyne (non-party); India and Burma, L. S. Amery (C.); Chancellor of the Duchy of Lancaster, Lord Hankey (non-party); Scotland, D. J. Colville (Labor); Trade, Oliver Lyttelton (C.); Health, Ernest Brown (Liberal National); Agriculture and Fisheries, Robert Hudson (C.); Education, H. Ramsbotham (C.); Labor and National Service, Ernest Bevin (Labor); Supply, Sir Andrew Rae Duncan (C.); Transport, J. T. C. Moore-Brabazon (C.); Information, Alfred Duff-Cooper (C.); Postmaster-General, W. S. Morrison (C.); First Commissioner of Works, Lord Reith (C.); Food, Lord Woolton (C.); Attorney-General, Sir Donald B. Somervell (C.); Economic Warfare, Hugh Dalton (Labor); Pensions, Sir W. J. Womersley (C.); Solicitor-General, Sir William A. Jowitt (Labor); Lord Advocate, T. M. Cooper (C.); Solicitor-General for Scotland, James S. C. Reid. For changes in the Government during the remainder of 1941, see below under *History*.

HISTORY

In spite of serious setbacks encountered during the spring of 1941, the year as a whole witnessed a marked improvement in Britain's war prospects. In June, 1940, the British Empire and a few weak Allies had been engaged in a seemingly hopeless struggle with an Axis coalition dominating the European Continent and possessing immense superiority in all arms of warfare except at sea. But by the end of 1941 two of world's most powerful nations—the United States and Russia—and a score of smaller countries had joined forces with Britain in a world struggle with the Axis. British military resources had been enormously strengthened. Suffering from grievous wounds inflicted by the Red Army in Russia and by the British forces in Libya, at sea, and in the air, the German military colossus appeared doomed to defeat. Japan's entrance into the conflict with sudden, treacherous attacks upon Anglo-American bases in the Pacific and the Far East threatened to delay, but not to avert, the final defeat of the Axis. See *WORLD WAR* for a full account of military operations.

Failure in the Balkans. At the beginning of 1941, British prospects brightened as a result of Italian reverses in Libya, the Mediterranean, and Greece. But hope of Italy's military collapse vanished with the appearance of strong German air reinforcements in the Mediterranean area in January. There-

after the British naval, air, and land forces throughout the Near and Middle East were placed increasingly on the defensive. Despite Prime Minister Churchill's warnings, Bulgaria surrendered to German politico-military pressure and joined the Axis on March 1. Britain's ally, Turkey, yielding in part to the German "war of nerves," signed a declaration of friendship with Bulgaria February 17 and remained neutral during the subsequent German drive into Yugoslavia and Greece.

British diplomacy and pledges of further military support bolstered Greek resistance to German demands for termination of the Italo-Greek war. They also encouraged the spontaneous revolt of the Serb army and people on March 27, which balked Hitler's plans for a bloodless Axis conquest of Yugoslavia. Thus Britain succeeded in forcing Germany to open a second front in the Balkans and possibly averted a successful Nazi invasion of the Near East. But it did so at great cost to the Allied military and political position throughout the eastern Mediterranean area.

In April and May the smashing German victories in Yugoslavia and Greece quickly overwhelmed two promising British allies, and drove out the British expeditionary force with the loss of all its heavier weapons and equipment. The loss of Crete and of all the ground gained in Libya by the December-January offensive followed soon afterwards. The thinly-spread and inadequately equipped British forces in the Near East were forced to deal at the same time with a pro-Axis outbreak in Iraq and with Axis intrigues in Syria. In the evacuation of Greece and Crete, the British navy suffered severe losses. In June of 1941 there seemed to be little ground for hope that the British and Allied forces could prevent the German occupation of the Near East and seizure of the strategically important Suez Canal and Iraq oil fields.

Resurgence in Middle East. The gloomy outlook in the Mediterranean region changed as a result of Hitler's decision to attack Russia on June 22. The withdrawal of German forces in Iraq and Syria enabled small British forces to oust the pro-Axis regime in Iraq and, in collaboration with Free French troops, to carry out the occupation of Syria. The easy British victory over the main Italian forces in Italian East Africa was completed in time to shift Indian and South African divisions from East Africa to the imperiled Egyptian frontier. The strong Axis forces there were thus held in check while a steady inflow of fresh troops from the British dominions and of American tanks, planes and other arms through the Red Sea enabled the British to re-equip and strengthen the armies evacuated from Greece and Crete.

These developments, coupled with further extension of Anglo-American aid to Turkey, held that strategically-situated country neutral while the Allies consolidated their hold on Syria and Iraq and while Britain, with Russian cooperation, ended Axis intrigues in Iran and Afghanistan. By November, British forces in the Middle East were strong enough to crush the last Italian pocket of resistance in Ethiopia and launch a successful offensive against powerful Axis forces in Libya. By the year's end, the British had erected a firm military barrier hemming in the Axis from Benghazi in Cyrenaica on the west to the shores of the Caspian Sea. British naval supremacy in the Eastern Mediterranean was virtually unchallenged. Except for Crete and the lost foothold in Greece, the strategic and military setbacks of the spring had been more than recouped. The British sea blockade of the Axis-

dominated continent was reinforced by the Middle Eastern land blockade. Meanwhile the greatest leak in the blockade had been plugged when Hitler's invasion of Russia cut off the foodstuffs and raw materials entering Europe from the Soviet Union.

Effect of Russo-German War. The German assault upon the Russians conferred enormous benefits upon hard-pressed Britain in other respects. The offensive power of the German army was blunted at the cost of millions of Russian, rather than British, lives. Britain obtained a respite for the re-equipment and strengthening of its forces in all areas of combat. While most of the German air force was engaged in Russia, the Royal Air Force gained equality with the Luftwaffe and systematically blasted away at German economic and military nerve-centers in Western Germany and occupied Europe. German reverses in Russia revived hope among the conquered peoples of Europe for liberation from German rule, and the British were effectively aided by the numerous governments-in-exile in London in stirring up active and passive resistance to the Axis throughout Europe.

"V" for Victory. This situation was skillfully exploited by a propaganda campaign launched by the British Broadcasting Corporation on July 4, utilizing the letter "V" as the symbol for victory. Speeches in all European languages called upon the peoples of conquered countries to use the letter "V" or its Morse code equivalent—three dots and a dash—as a symbol of resistance to the Axis and of faith in eventual liberation. The opening bar of Beethoven's C minor symphony, consisting of three short notes followed by a long one, was used as the *leitmotif* of the "V" movement. The idea rapidly took hold throughout occupied Europe, and was generally credited with contributing to the anti-German revolt that gained headway during the autumn and winter months.

Anglo-Soviet Alliance. On May 12 Rudolf Hess, third ranking member of the Nazi hierarchy, landed by parachute in Scotland from a German fighter plane and was taken prisoner. This at first aroused belief in Britain that Hess had fled because of disagreement with Hitler and that a second blood purge was under way in Berlin. Subsequent indications were that Hess had been commissioned by Hitler to induce the British Government to accept a truce and, if possible, to join Germany in an attack upon the Soviet Union. Prime Minister Churchill not only rejected this offer, but warned Stalin that the German attack was impending.

On the day the attack began, Churchill declared that the destruction of "Hitler and every vestige of the Nazi regime" was Britain's "single, irrevocable purpose." "Any man or State who fights against nazism will have our aid," he said. "Any man or State who fights with Hitler is our foe. . . . It follows, therefore, that we will give whatever help we can to Russia and to the Russian people." His offer of technical and economic aid to the Soviet Union was immediately accepted. This paved the way for the conclusion in Moscow on July 12 of a Soviet-British pact pledging the two governments "to render each other assistance and support of all kinds in the present war against Hitlerite Germany" and not to "negotiate nor conclude an armistice or treaty of peace except by mutual agreement."

On August 16 the British signed another agreement in Moscow, promising to supply arms and other war materials to the Soviet Union on a credit basis, the preliminary advance being fixed at £10,000,000. In October an Anglo-American mission,

with Lord Beaverbrook representing the British, completed arrangements in Moscow to speed up the delivery of war supplies to the hard-pressed Red Army. British tank factories in September allotted a week's production to Russia. Arms and supplies from Britain began to reach Archangel and the Caucasus front (via Iran) in increasing quantities.

British forces in Iran and India rushed preparations to aid the Russians in the defense of the vital Caucasus oil fields, but the British Government rejected a Russian appeal for the opening of another front in Western Europe to relieve German pressure on the Soviet forces. During October and November, Leftist elements in Britain raised a growing clamor for a British invasion of the Continent as an aid to Russia. Government spokesmen and military experts pointed out that Britain had neither the ships, the arms, nor the men to undertake such a hazardous operation from the British Isles. But the clamor continued until the beginning of the British drive in Libya late in November fulfilled in part the appeal for a British diversion.

The Churchill Government fulfilled another Soviet demand by declaring war on Finland, Rumania, and Hungary on December 6, after first warning them to cease hostilities against the Soviet Union. The British repeatedly complained, however, that the Soviet Government refused to permit members of the British military mission in Moscow free access to the front. The Soviet Government, in its turn, declined to enter the war against Japan in December, although Russian air bases at Vladivostok offered the best hope for bombing Japanese cities and bringing the war in the Far East to an early conclusion. When the Red Army in December commenced its successful counter-offensives against the Germans, Soviet spokesmen tended to discount the British contribution to the weakening of German military power. Thus the stage was set for a renewal of Soviet-British antagonism once Germany's power began to disintegrate. To forestall greater dissension, Foreign Minister Eden went to Moscow in mid-December for "an exhaustive exchange of views on questions relating to the conduct of the war and to postwar organization of peace and security in Europe." A "full agreement" on these questions was reported Dec. 27, 1941.

Aid from United States. In contrast to the marriage of convenience with the Soviet Union, British relations with the United States became progressively closer. The Roosevelt Administration during the year threw America's political and economic weight increasingly on the side of Britain and her allies. The Japanese attack of December 7 and the subsequent German and Italian declarations of war upon the United States brought that country into full participation in the armed struggle. When Bulgaria declared war upon the United States, Britain immediately declared war on Bulgaria (December 13).

On March 8 the U.S. Congress gave final assent to the Lease-Lend Act, authorizing President Roosevelt to transfer American-made or government-owned war materials to Great Britain or its allies, and providing a method for financing further British war orders in the United States after existing credit facilities had been exhausted. It was hailed by Prime Minister Churchill, before a cheering House of Commons, as "a new Magna Carta . . . a monument of generous and far-seeing statesmanship." This was followed by an increasing flow of American tanks, planes, foodstuffs, and other supplies to the British Isles and the Middle East war fronts.

The final agreement for the leasing by the United States of naval and air bases in British possessions in the Western Hemisphere was signed in London March 27. Leases covering the individual sites were signed at the same time, with certain exceptions (for provisions, see ANTIGUA, BAHAMAS, BERMUDA, BRITISH GUIANA, JAMAICA, NEWFOUNDLAND, ST. LUCIA, and TRINIDAD, under *History*). On July 7 American forces joined in the military occupation of Iceland (q.v.), and subsequently the U.S. navy and air force began to assist the British in keeping the Atlantic sealanes as far as Iceland clear of German raiders and submarines.

Churchill-Roosevelt Meeting. After a secret crossing of the Atlantic, Prime Minister Churchill met President Roosevelt for a three-day conference on warships off the coast of Newfoundland early in August. Both statesmen were accompanied by high officials of their Governments and high-ranking officers of their military, naval, and air services. According to a statement issued in London and Washington on August 14 "the whole problem of the supply of munitions of war, as provided by the Lease-Lend Act, for the armed forces of the United States and for those countries actively engaged in resisting aggression has been further examined." The statement included a joint declaration drawn up by Churchill and Roosevelt "to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world." This soon became known as the Atlantic Declaration (for text, see ATLANTIC DECLARATION).

Lease-Lend Problems. Following this conference, Lord Beaverbrook, British Minister of Supply, proceeded to Washington to work out further details of the supply problems of both Great Britain and the Soviet Union with American officials. His visit paved the way for the joint Anglo-American economic mission to Moscow in September-October. Meanwhile in September some British newspapers began to complain of the inadequacy of American assistance reaching Britain under the lease-lend program. At the same time some American exporters charged that Britain was maintaining her export markets in Latin America with the help of materials supplied under the Lease-Lend Act.

An agreement adjusting Anglo-American commercial relationships to the lease-lend program was signed by the two Governments early in September and announced in Washington and London September 10. The British statement denied that lease-lend materials were used for export and promised that they would not be so used in the future, "subject to the principle that where complete segregation of lend-lease materials is impracticable, domestic consumption of the material in question shall be at least equal to the amounts received under lend-lease."

In the agreement the U.S. Government accepted the principle that British exports should be maintained at about two-thirds of their normal level in order to provide dollar exchange for essential purchases of materials not obtainable in the United States. Negotiations on a program for postwar settlement of Britain's lease-lend obligations were reported in November. In this connection it was stated that substantial progress had been made toward an agreement on broad economic principles to be followed by the two countries after the war.

British complaints as to the inadequacy of lease-lend shipments died down as the flow of these commodities and supplies steadily increased. By October food shipments to Britain reached 20,000,-

000 lb. valued at \$2,000,000 daily. The Minister of Food stated October 8 that Britain planned to rely upon lease-lend food shipments for 25 per cent of its total food supply. Besides the rapidly increasing production of American tanks, planes, and other war equipment, the lease-lend program provided Britain and her Allies with new merchant and naval shipping; gasoline and oil; American facilities for repairing, outfitting, and arming merchant and naval ships; technical assistance in the operation and maintenance of tools from American factories; plane ferry services across the United States and to Egypt via the South Atlantic; facilities for the training in the United States of thousands of British pilots; etc. American engineers, technicians, and materials were allocated for the construction of supply bases and improved transportation facilities in Egypt, Iraq, Iran, and other parts of the Middle East. In Northern Ireland naval and air base facilities were constructed by American workmen.

In addition to the lease-lend aid, the United States also extended direct financial assistance through a \$425,000,000 Reconstruction Finance Corp. loan, authorized July 22, against British-owned securities on deposit with the Federal Reserve Bank of New York. This helped London to pay for war supplies contracted for in the United States prior to the enactment of the Lease-Lend Act.

Armed Collaboration. During the autumn months the United States extended a growing measure of naval and air aid to the British in the Battle of the Atlantic (see UNITED STATES; WORLD WAR). Following the entrance of the United States into declared warfare, arrangements for closer armed collaboration on all fronts were quickly made. Prime Minister Churchill, accompanied by a large staff of experts, and by Lord Beaverbrook, Minister of Supply, arrived in Washington December 22 to join with President Roosevelt and American experts in establishing unity of action by all anti-Axis military forces. In a historic address before both houses of the American Congress on December 26, Churchill warned that the anti-Axis forces would not be ready to undertake a world-wide offensive until 1943. Representatives of the British dominions, China, the Soviet Union and other allied and associated powers participated in the discussions. Similar conferences were held at the same time in Moscow and Chungking.

Allied Agreements. The liaison program laid down at Washington supplemented the political accords concluded by the British and other Allied governments earlier in the year. On June 12 representatives of 14 Allied governments met in St. James's Palace, London, and signed the following resolution:

The Governments of the United Kingdom of Great Britain and Northern Ireland, Canada, Australia, New Zealand, South Africa, the Government of Belgium, the Provisional Government of Czechoslovakia, the Governments of Greece, Luxemburg, the Netherlands, Norway, Poland, and Yugoslavia, and the representatives of General de Gaulle, leader of Free Frenchmen, engaged together in the fight against aggression, are resolved:

1 That they will continue the struggle against German or Italian aggression until victory has been won and they will mutually assist each other in this struggle to the utmost of their respective capacities;

2. There can be no settled peace and prosperity so long as free peoples are coerced by violence into submission to domination by Germany or her associates or live under the threat of such coercion;

3 That the only true basis for enduring peace is the willing cooperation of the free peoples in the world in which, relieved of the menace of aggression, all may enjoy economic and social security; and that it is their intention to work together with other free peoples both in war and peace to this end.

British Prime Minister Winston Churchill (right) promised the Axis a lesson the world "will never forget" in an address to a joint session of the United States Congress in the Senate Chamber (below) December 26

Press Association

Another meeting of representatives of the 11 Allied Governments took place in the same hall on September 24, at which two resolutions were adopted. One announced the adherence of the Allies "to the common principles of policy" set forth in the Roosevelt-Churchill Atlantic Declaration and their intention to cooperate to the best of their ability in making them effective. The other resolution provided for cooperation in planning and executing the mutual economic rehabilitation of the Allied peoples after the war. To this end, the Allied Governments and authorities were requested to prepare estimates of the kinds and amounts of foodstuffs, raw materials and other necessities required and to indicate the order of priority in which they would desire supplies to be delivered. Similar planning was requested for the unified control of Allied shipping resources in reprovioning Europe.

To carry on these preparations, the British Government was asked to establish a bureau with which the other Allied Governments and authorities could collaborate. After collating estimates of requirements submitted by the various Governments, the bureau was to present recommendations for final consideration to a committee of Allied representatives under the chairmanship of Sir Frederick Leith-Ross. At the same meeting the Soviet Ambassador announced his Government's "agreement with the fundamental principles of the declaration of Mr. Roosevelt and Mr. Churchill."

Meanwhile the British Government assisted all of the Allied Governments and military forces financially and otherwise. They, in turn, contributed growing military aid against the Axis. Important financial-economic accords were concluded with the Netherland and Belgian Governments and with the Free French movement covering French Equatorial Africa, Belgian Congo, and the Netherlands Indies. Similar financial and economic support was extended to Britain's nonbelligerent allies, such as Egypt, Turkey, and Portugal. Additional financial and military assistance was extended to China to strengthen that country in its struggle with Japan. To keep Spain neutral, the British Government on June 20 signed a new agreement permitting shipment of large quantities of petroleum products through the blockade to Spain. See each of the above countries, under *History*.

Relations with Japan. In the Far East the British Government collaborated closely with Washington in trying to check Japan's southward expansion without forcing a showdown. This policy failed. When the Japanese took over all of French Indo-China late in July, London followed Washington's lead in freezing Japanese funds within the Empire, and denouncing the Anglo-Japanese, Indian-Japanese, and Burmese-Japanese trade agreements. Subsequently plans were laid by the British, American, Netherlands, Australian, New Zealand, and Chinese military and political authorities in the Far East for joint action in the event of Japanese aggression. These plans were put into effect when war came in December.

On November 10, Prime Minister Churchill stated that if war broke out between Japan and the United States, Britain would declare war on Japan "within the hour." On December 7 the Japanese attacked both British and American bases almost simultaneously. The following day the British Cabinet authorized a declaration of war on Japan without awaiting the action of the American Congress. This was followed on December 19 by the appointment of Alfred Duff Cooper as Resident Minister

for Far Eastern Affairs, with authority to preside over the Allied war council in Singapore. Establishment of an American-British-Chinese military council for joint prosecution of the war in the Pacific was announced in Chungking, December 26.

Empire Relations. Throughout the year the British dominions and colonies contributed a rapidly growing measure of support in all fields of war activity. The Empire Air Training Scheme was in considerable part responsible for the rapid expansion of the R.A.F. to a position of equality with the German Luftwaffe. Indian, Australian, and New Zealand troops played a prominent part in the campaigns in Greece, the Middle East, and Malaya. South African forces helped to liquidate the Italian empire in East Africa and then joined in the Libyan offensive of November-December. Canada and Newfoundland sent more land and air contingents to the British Isles, and a Canadian brigade participated in the defense of Hong Kong. All of the Dominions rapidly increased their production of war material, and became invaluable bases of supply for the widely scattered fighting fronts. The British Government contributed not only to the common defense of the Dominions, but also extended financial and economic support for the adjustment of their economies to war conditions.

Difficulties of coordinating the war policies of Britain and the Dominion Governments gave rise to a demand in some influential quarters for the creation of an Imperial War Cabinet. Such a body was opposed by the Canadian Prime Minister, and it was rejected in favor of the improvement of existing liaison arrangements. The Prime Ministers of Australia, New Zealand, and Canada visited London during the year for conferences with British officials. The Australian Government appointed a Minister with Cabinet rank as its representative in London, and obtained political as well as military representation in Singapore. Both Australia and Canada demanded separate representation on the Allied war strategy and control board established at Washington late in December.

India remained a sore spot in Empire relations, as the All-India National Congress continued to withhold its cooperation in the prosecution of the war. However a modification of its attitude was indicated in December as a result of the Japanese invasion of British Malaya. The colonies everywhere continued to display the steadfast loyalty manifested upon the outbreak of the struggle. See each Dominion and colony under *History*.

The Home Front. Some of the most crucial dangers of the war were successfully overcome by hard work and dangerous fighting on the home front. The German attempt to disrupt Britain's economic life by mass air raids on its cities, factories, and communications was beaten off. A similar fate befell the enemy effort to sever Britain's sea communications and starve it into capitulation. The problems of mobilizing British industry for greatly increased production of war materials, and of meeting the rapidly rising financial burden of the war without bringing on uncontrolled inflation were all met with a considerable measure of success. But it was only after anxious months that the nation was able to feel that each of these crucial problems was in process of solution.

Bombing Raids. German night air raids upon British cities increased in extent and ferocity during the first months of 1941. From January through May London suffered frequent heavy bombings. Particularly heavy raids on the nights of April 16 and May 10 did great damage to some of the city's most historic and treasured buildings. St. Paul's

Cathedral, Westminster Abbey, the House of Commons, Westminster Hall, the British Museum, and Queen's Hall were badly damaged or destroyed.

Meanwhile German bombers repeatedly attacked the other great cities that had been left relatively untouched during 1940. Cardiff, Bristol, Portsmouth, Hull, Glasgow, Liverpool, Plymouth, Belfast in Northern Ireland, and many other cities and towns suffered extensive damage. These raids forced the Government to institute compulsory service in civil defense services; to reorganize the kingdom's 1,400 fire brigades into less than 50 regiments under a general staff officer; to improve shelters, community feeding canteens, and temporary housing; and to reorganize and extend numerous emergency agencies. But although the civilian casualties from air raids mounted to a total of 41,488 dead and 53,498 wounded by June 30, 1941, the morale of the British people remained unshaken. Property damage in Great Britain from air raids during the first two years of the war was estimated by the London *Economist* at \$480,000,000, or only some 2 per cent of the estimated real estate value. During the latter half of 1941 improved British defenses against night bombing and the large-scale diversion of German planes to Russia and Libya brought welcome relief to Britain's badly mauled cities. Nevertheless preparations were made to meet the anticipated renewal of Nazi raids.

Shipping Crisis. An even more crucial danger was presented by the rapid rise in sinkings of British and Allied shipping by German submarines, surface raiders, and long-range aircraft during the first part of the year. On May 27 President Roosevelt pointed out that "the present rate of Nazi sinkings of merchant ships is more than three times as high as the capacity of British shipyards to replace them; it is more than twice the combined British and American output of merchant ships today." For the four months ended with June, Britain's shipping losses totaled more than 2,000,000 tons. Then counter-measures against the Axis raiders and naval-air help from the United States began to show results. Shipping losses declined steadily to less than 750,000 tons for the four months ended in October. This fact, combined with the rapid increase in the output of American and British shipyards, aroused confidence that the German sea threat was definitely waning.

Food Situation. The victory won in the Battle of the Atlantic was accompanied by a steady improvement in the food situation, which became difficult during the spring months. The Ministry of Food progressively tightened its rationing regulations during the first half of 1941. Rations of the armed forces were reduced to approximately the civilian level on March 1. In February the Government ordered that no restaurant might serve more than one main dish and one subsidiary dish, or two subsidiary dishes, at one meal. In May cheese was placed on the rationed list and the Government began to limit distribution of milk and eggs, and to control the price of fish. The rationing of clothing was introduced June 2.

At the end of May the first ship bearing American foodstuffs under the lease-lend program docked at a British port. Thereafter an increasing inflow of food from the United States, coupled with the expansion of British foodstuffs production, reversed the trend toward an acute food shortage. On September 14 the Minister of Food announced that Britain was better situated with regard to food than any country in Europe and that increased rations were possible. Fat and sugar rations were increased on November 17.

The rise in food prices, amounting to 23 per cent between September, 1939, and July, 1941, made it difficult for many to buy their full rations. To keep down prices of essential foods, the Food Ministry subsidized wheat, milk, and meat producers at a cost of some £100,000,000 annually and launched a determined drive against hoarding, speculating, and profiteering in foodstuffs. Prosecutions of such offenders totaled 2,300 in April. Workers engaged in heavy labor were able to supplement their rations through the establishment by the Government of special restaurants and canteens.

War Production and Conscription. Despite the handicaps imposed by blackouts and damage from air raids, British industry made steady and in some cases striking progress in the production of arms and war supplies. Notwithstanding the increasing flow of planes, tanks, artillery, and munitions from British factories, the British forces suffered defeats and excessive casualties in Greece, Crete, and Libya for lack of sufficient equipment. The Government was severely criticized in Parliament for its failure to speed up the nation's economic mobilization for total war, and this criticism continued as the new demands for equipment in Russia and then in Malaya imposed further burdens upon the war industries. In response to these criticisms, the Government proceeded gradually to extend its control over the entire national economy, to curtail production and consumption of nonessential commodities for civilian use, and forcibly to transfer both factories and workers from civilian to war production.

On March 4 the Government inaugurated its "concentration of production" plan under which some 90 separate industries, engaged in production of commodities for civilian use, were obliged to restrict operations to certain "nucleus firms," thus freeing the remaining factories and labor supply for war production. The compulsory registration for labor service of all adult males and females not in military service was begun in April. Meanwhile Minister of Labor Bevin had issued an order enabling him to forbid shifts of labor within certain essential industries.

On December 2 Prime Minister Churchill asked the House of Commons for authority to draft 3,000,000 more men for military duty and to require women to serve in the uniformed services. He declared that "the crisis of equipment" was almost over and that the "crisis of man power and woman power" would dominate 1942. Immediately afterward Minister of Labor Bevin introduced the most drastic conscription bill ever advanced by a democratic government, making every man and woman between 18½ and 51 years of age liable to national service in the armed forces, civilian defense, industry, or elsewhere at the Government's discretion. The measure passed by an overwhelming majority, and provision was made for calling up the first class of women conscripts on Jan. 10, 1942.

Finance Policy. In addition to meeting the deficit caused by rapidly mounting war expenditures, the Treasury faced the problem of siphoning off increased civilian purchasing power resulting from Government spending, checking competition between civilian consumption and the war machine, and curbing the inflationary price-wage spiral. This the Chancellor of the Exchequer sought to do in the 1941-42 budget bill, introduced April 7. The basic income tax rate was raised from 42.5 to 50 per cent, and a program of compulsory savings was introduced (see *Finance*). These measures, however, failed to eliminate excess purchasing power. The cost of living continued to rise, operations of illegal markets expanded, and increases in

wages awarded agricultural, shipbuilding, and engineering workers late in the year endangered the Government's entire price stabilization program.

Political Developments. Prime Minister Churchill remained the dominant figure and the main driving force behind his Government throughout 1941. Public opinion polls recorded only a slight decline in his overwhelming public support from the peak level reached during the crisis of the summer of 1940. The Government coalition retained its overwhelming control in Parliament. However the political truce arranged among the Government parties in 1940 began gradually to wear thin. Criticism of the Government in Parliament came from a widening front, while independent candidates began to poll more votes in by-elections.

There was constant and severe criticism of Cabinet Ministers, accompanied by several reorganizations of the Government (see under *Government* for changes announced February 8). On May 2 Lord Beaverbrook, at his own request, turned over the Ministry of Aircraft Production to Colonel Moore-Brabazon, Minister of Transport. The latter office was merged with the Ministry of Shipping and given to F. J. Leathers. Lord Beaverbrook remained Minister of State until June 29 when he replaced Sir Andrew Rae Duncan as Minister of Supply. Duncan succeeded Capt. Oliver Lyttleton as President of the Board of Trade. Lyttleton was assigned to special political duties in the Middle East. On July 20 Churchill's parliamentary private secretary, Brendon Bracken, was appointed Minister of Information in place of the much-criticized Alfred Duff Cooper, who, as Chancellor of the Duchy of Lancaster, was sent to the Far East to coordinate Empire and Allied political defense preparations. These changes, however, failed to check the vigorous parliamentary criticism of the Government's internal and foreign policies.

The annual conventions of both the Labor party and the allied Trades Union Congress voted overwhelmingly to prosecute the war to total victory. The Labor party, convening early in June before the outbreak of the Russo-German war, emphatically repudiated the campaign for a compromise peace then sponsored by the British Communist party and like-minded radicals. The British Communists effected the complete reversal of their party line with the same alacrity as Stalmists in other countries after June 22. Their subsequent anxious cooperation in the struggle against the Axis failed to bring withdrawal of the Government's ban on the party's official journal, *The Daily Worker*, and a pro-Communist newsletter, *The Week*, both of which Home Secretary Herbert Morrison suspended on January 21 for persistent opposition to the national war effort. On October 2 Morrison again reiterated the Government's view that the British "Communist party is not loyal to this country."

GREECE. A Balkan kingdom, occupied by German and Italian troops in April-May, 1941. Capital, Athens. Greece has an area of 50,147 square miles (mainland, 41,328; islands, 8,819). The population was estimated at 7,108,000 on Jan. 1, 1939, as against 6,204,684 at the 1928 census. Living births in 1939 numbered approximately 168,200 (23.5 per 1,000); deaths, about 92,800 (13.0 per 1,000); marriages in 1937 totaled 45,833 (6.6 per 1,000). Estimated populations of the chief cities in 1939 were: Athens, 392,781; Piraeus, 198,771; Salonika (Thessaloniki), 236,524, Patras, 61,278; Kavalla, 49,980; Canea, 26,608, Corfu (Kerkyra), 32,221.

Religion and Education. School attendance in 1936-37 was: Elementary, 967,588, secondary, 90,709; university, 10,561. The American-founded Athens College, with a normal enrollment of 500, was closed by order of the Greek Government in October, 1940. Illiteracy is high. The 1928 census returns showed 5,961,529 members of the Greek Orthodox Church, 126,017 Moslems, 72,791 Jews, 35,182 Roman Catholics, and 9,003 Protestants.

Production. Previous to Greece's involvement in the European War, approximately 54 per cent of the working population were supported by agriculture and fishing, 16 per cent by industry, and 8 per cent by commerce. Estimated yields of the chief crops in 1940 were (in metric tons): Tobacco, the main cash crop, 48,900; wheat, 896,000; currants, 121,775; raisins, 23,000; figs (exportable crop), 22,000; barley, 239,500; oats, 174,200; rye, 57,900; olive oil, 105,000. Other production in 1939 was (in metric tons): Ginned cotton, 13,600; potatoes, 163,300; corn, 261,500; wine, 5,000,000 hectoliters in 1938. Livestock in 1938 included 8,138,772 sheep, 967,322 cattle, 4,356,120 goats, 429,748 swine, 363,083 horses, 183,619 mules, and 404,379 asses.

Factory production in 1938 (excluding wine, olive oil, and wheat products) was valued at 13,552,000,000 drachmas. In 1939, 318 metric tons of rayon were produced; silk production in 1938 totaled 250 metric tons. Mineral output (in metric tons) in 1938 except as otherwise indicated was: Iron ore, 165,000, pyrites, 120,000; bauxite, 179,900; sulphuric acid, 43,000; chrome ore, 19,900 (1937); zinc, 10,900 (1937); lead (smelter), 9,200 (1937); lignite, 131,000 (1937); nickel, 1,000 (1937).

Foreign Trade. Imports in 1940 were valued at 12,215,326,000 drachmas (12,275,404,000 in 1939); exports, 9,079,380,000 (9,199,867,000 in 1939). Volume of imports, 1,450,102 metric tons in 1940 (2,483,646 in 1939); exports, 498,816 tons in 1940 (1,256,719 in 1939). Germany in 1940 maintained its leading position as a market and source of supply, taking 3,430,562,000 drachmas worth of exports (2,531,969,000 in 1939) and furnishing 2,871,301,000 drachmas of imports (3,674,423,000 in 1939). The United States in 1940 was second as a market for Greek exports, taking 2,273,842,000 drachmas worth, and third (preceded by Rumania) as a supplier of Greek imports, furnishing 1,389,253,000 drachmas worth. See **TRADE, FOREIGN.**

Finance. As revised after the outbreak of war with Italy on Oct. 28, 1940, budget estimates for the fiscal year ended Mar. 31, 1941, anticipated receipts of 15,030,341,000 drachmas and expenditures of 19,143,603,000 drachmas. Military expenses (excluding naval appropriations) totaled 6,471,000,000 drachmas. The public debt on Sept. 30, 1940, was 95,000,000,000 drachmas (85,000,000,-

000 on Sept. 30, 1939). Interest payments on the foreign debt were raised to 43 per cent from 40 per cent of the contractual interest rate by an agreement reached in London in January, 1940. The average annual exchange rate of the drachma was \$0.0090 in 1938 and \$0.0082 in 1939. The official selling rate was fixed at the equivalent of \$0.0066 on June 12, 1940.

Transportation. In 1940 Greece had approximately 1,864 miles of railways, 8,440 miles of highways, air connections from Athens to most of the principal European cities, and a merchant fleet of some 607 vessels (of 100 tons or over) aggregating about 1,780,700 gross tons. Much of the transportation and communication network was disrupted or destroyed by the Italo-German invasion of 1940-41. Half the merchant marine was destroyed or captured at the same time. The remainder (about 200 ships of 1,000,000 tons manned by 6,000 sailors) entered the service of the Allies under British direction.

Government. Premier John Metaxas administered Greece as a dictatorship from Aug. 4, 1936, until his death on Jan. 29, 1941. The government remained a monarchy in form, under King George II, who had been restored to the throne Nov. 25, 1935, in accordance with a plebiscite, to rule under the constitution of 1911. King George signed the 1936 decrees which suspended constitutional guarantees, dissolved Parliament, abolished political parties, and imposed strict control over the press and other means of communication. Thereafter, all legislation was enacted by royal decree. Premier Metaxas had indicated his intention of transforming Greece into a corporative state on the Italian model, with modifications to meet Greek conditions. For 1941 developments, see *History*.

HISTORY

Death of Metaxas. While Greece was still engaged in its epic struggle with Italy, initiated by the Italian invasion of Oct. 28, 1940 (see *YEAR BOOK* for 1940), Premier Metaxas died from an abscess of the throat on Jan. 29, 1941. Unpopular as a peacetime dictator, he had won the admiration and respect of Greeks of all political factions by his unflinching courage in the face of the Italian threat, and by his brilliant military strategy, credited in large measure for the success of the Greeks in driving the invading Italians back into Albania. The Premier's body, after lying in state in Athens Cathedral, was buried on January 31 while half the population of Athens stood hatless in an impressive demonstration of national unity.

The Korizis Cabinet. Immediately after the death of Metaxas, King George summoned an emergency Crown Council and appointed Alexander Korizis, Governor of the National Bank and long a close collaborator with the dead Premier, as head of a new Cabinet. Besides the Premiership, Korizis reserved for himself the posts of Foreign Affairs, Education, War, Marine, and Air. The Premier announced that his Government would resolutely continue the Metaxas program "whose initial point is victory against the enemy, and whose subsidiary aim is the benefiting of the working classes which compose the productive element of the nation." King George issued a proclamation giving the nation similar assurances. The war against the Italians in Albania was carried forward vigorously and successfully until German military intervention on April 6 transformed a hitherto victorious campaign into crushing defeat. See *WORLD WAR* for a full description of military developments.

Greeks Resist German Pressure. Before unleashing

his military machine against the Greeks, Reichsfuehrer Hitler exerted every effort to induce them to make peace with Italy, repudiate the British guarantee of Greece's territorial integrity, and peacefully accept a new role as a satellite of the Axis powers. Although backed up with repeated threats of an overwhelming military onslaught, this effort failed completely.

With Bulgaria's capitulation to German pressure on March 1, Nazi forces took up positions along the Greek-Bulgarian frontier ready for a drive against Salonika. Yugoslavia and Turkey, from whom the Greeks had expected military aid in the event of a German offensive, both showed signs of wavering. British forces in Greece at that time consisted of only a small air contingent, with ground crews and troops for the protection of air fields. British aid to Greece against Italy had been deliberately restricted by the Greeks in order not to provoke Hitler unduly. But despite these circumstances, the leaders of the Greek Government and army firmly rejected a separate peace with Italy. They decided to fight to the end against any aggression from Germany, whether or not Greece received aid from Britain or other potential allies.

This decision was made known to a British mission headed by Foreign Secretary Eden and Gen. Sir John G. Dill, Chief of the Imperial General Staff, which visited Athens on March 2-5. It was formally proclaimed by Premier Korizis on March 10. On the basis of this decision, the British agreed to send an expeditionary force to aid in the defense of Greece and to increase shipments of munitions and supplies for the use of the Greek armies. British and Dominion troops withdrawn from Libya began to arrive in Greece toward the end of March. However Turkey, despite close ties with Greece and an alliance with Britain, refused to give military aid in the event of a German attack. The Yugoslav Government on March 26 adhered to the Axis alliance and agreed to permit the transport of munitions across Yugoslav railways for the use of German forces in Bulgaria. Only two days before Athens authorities had announced that "Greece would consider the acceptance of such demands (by Yugoslavia) as an act abolishing all meaning of Yugoslav neutrality and at the same time hostile toward her (Greece)."

This move on the part of the Belgrade Government made the prospect of successful resistance even less than before. The news of the anti-German coup of March 27 in Belgrade consequently was received with the wildest joy in Athens. Thereafter the Greeks awaited the German attack with increased confidence. When it came at dawn on April 6, the Greeks rallied to the defense of their country with patriotic fervor.

Some 15 minutes after the Germans attacked the Greek fortifications along the Thracian frontier, the German Minister in Athens presented a note to the Greek Government. On the basis of documents alleged to have been found by the Germans at La Charité in France, the note accused the Athens authorities of secretly pursuing an unneutral policy toward Germany since the outbreak of the war. More recently, it stated, the Greek Government had allowed its territory to "become an operations area of English fighting forces." Consequently the German Government had ordered its forces to drive the British from Greece and to crush any opposition ruthlessly. The note asserted that the attack was aimed at Britain rather than Greece, and that Germany was "rendering an important service to the people of Greece and to the European community" in "expelling the British intruders."

The Nazi Conquest. The German invasion brought immediate and unmitigated tragedy to the Greek nation. On the first night of the attack, an air raid on the port of Piraeus set fire to a ship laden with munitions. According to a subsequent German report, the explosion destroyed 17 steamships in the harbor, wrecked port facilities valued at \$10,000,000, and caused extensive damage throughout the city. The port of Salonika was devastated by Greek and British engineers upon the Allied evacuation to lessen its usefulness to the Germans. Many other Greek cities were ruined or badly damaged by German air raids during the three-weeks' campaign and the evacuation of the British expeditionary force. Athens, however, was spared this fate, possibly due to a British threat to bomb Rome if Athens was attacked.

The unexpected Yugoslav military collapse exposed the flank of the Greek army in Albania, just as it had completed preparations for a new offensive against the Italians. The Army of the Epirus was forced to withdraw without fighting from all the Albanian territory it had won at the cost of much bloodshed and heavy sacrifice during five months of warfare. The withdrawal was carried out in good order, but the rapid German advance to Janina and Metsovo Pass cut off the Army of the Epirus and Macedonia from the Greek and British armies in central and eastern Greece. On April 21 the High Command of the surrounded forces asked Germany's terms and on April 23 a surrender convention was concluded by Gen. George Tsolakoglou with the German and Italian commanders.

Even after the surrender of the Army of the Epirus and Macedonia, other Greek forces continued the hopeless fight alongside the British rearguard to permit the evacuation of the bulk of the British and some Greek forces to Crete. As the defeated British and Dominion troops marched through Athens en route to their ships, the Athenians lustily cheered them and women and girls threw garlands of spring flowers at them in a gesture of defiance to the approaching invaders. On April 27 German armored forces entered the city and within a few days all of Greece except the island of Crete was in the hands of the Axis powers.

The Governmental Crisis. The early stages of the military catastrophe produced a governmental crisis in Athens in which the seizure of power by persons favoring immediate surrender was narrowly averted. The collapse of Yugoslavia spread defeatism and gloom among some members of the Korizis Cabinet. It was reported that anti-Axis posters and proclamations in Athens were hurriedly taken down. The censors banned unfavorable references to the Reich. The War Minister ordered a long leave for soldiers waiting to join the armies in the field. On the night of April 17 an official radio broadcast prematurely declared that Greek resistance had collapsed. Following an alarming report from the Greek commander-in-chief, Gen. Alexander Papagos, Premier Korizis committed suicide on April 18. A number of American war correspondents fled Athens, fearing immediate establishment of a pro-German Government which would betray the British expeditionary force and other anti-Axis elements into the hands of the invaders.

This expectation was frustrated by the firmness of King George and some of his associates and by the steadfastness of the Greek people, who rejected all talk of surrender. On the day of the Premier's death, there was a spontaneous demonstration in Athens for continuance of the war. Young men who had been told they were no longer needed for military service thronged the army headquarters de-

manding rifles. Although most of the Greek generals in the field were said to favor capitulation, the King received firm support from unexpected sources in his decision to fight on to the last.

On April 19 King George personally assumed both the Premiership and supreme command of the army to insure the greatest possible national unity behind his policy of resistance. He called on Kostas Kotziias, former Mayor of Athens, to accept the Vice Premiership. Kotziias, despite his previously well-known pro-German sympathies, supported the King's policy. However he advised the formation of a military government with the key positions in the hands of army and navy leaders willing to continue the struggle.

Accordingly Vice Admiral Alexander Sakellariou was summoned from his post as Chief of the Naval General Staff to accept the Vice Premiership and the Navy portfolio. Other leading offices were filled as follows: War, Major Gen. Panayot Panagakos, Air, Major Gen. P. Nikolaides, Communications and Railways, Major Gen. G. Korzas, Foreign Affairs, Finance and National Economy, Emmanuel Tsouderos, Interior and Public Security, Constantine Maniadakis, a holdover from the Metaxas and Korizis Governments.

The new Cabinet was sworn in on the afternoon of April 20. That evening the King in a radio broadcast announced the new military dictatorship, which he described as temporary, and called upon the Greek army and people to "continue the fight to the end." The next day the King relinquished the Premiership to the new Minister of Foreign Affairs and Finance, Emmanuel Tsouderos, a staunchly pro-British Venizelist and former leading opponent of the Metaxas dictatorship. Tsouderos retained Constantine Maniadakis as Minister of Security, even though the latter had sent him into exile less than a year before. Thus the most irreconcilable political enemies and men who had opposed war in the beginning united behind the King. On the evening of April 21 a 9 p.m. curfew was imposed in Athens to curb fifth column activities.

Last Stand in Crete. With the Germans advancing steadily toward Athens, the King and Government on April 22 fled by ship to Candia in the British-defended island of Crete. They left with a pledge to the Greek people to "fight on until final victory."

When the German air invasion of Crete began on the early morning of May 20, parachutists made a special effort to capture King George and Premier Tsouderos. However they and other members of the Government escaped, made their way to the southern coast, and were taken off by a British warship on the night of May 23. Crete was devastated even more than the Greek mainland in the terrific German air assault. Candia, Canea, and the other principal cities and towns were reported to have been reduced to rubble.

Government-in-Exile. At Cairo, Egypt, where the Greek Government was temporarily established, the Cabinet was reorganized on June 2 and reduced to five members. Premier Tsouderos assumed the Ministries of Foreign Affairs, Finance, and National Economy. Vice Admiral Sakellariou and General Nikolaides retained their portfolios. M. Dimitrakakis became Minister of War and Justice. The Government set about organizing in the Near East a new Greek army and air force. The remnants of the Greek navy—1 cruiser, 7 destroyers, 2 torpedo boats, and 5 submarines—joined the British Mediterranean fleet.

On September 22 the Government-in-Exile was transferred to London with the arrival there of King George II, Crown Prince Paul, Premier Tsou-

deros, and other governmental officials. The Cabinet was reshuffled again on September 29, with Premier Tsouderos retaining the Foreign Ministry. Vice Premier Sakellariou, M. Dimitrakakis, and General Nikolaidis remained in the Near East as heads of the Navy, Air, and War Ministries, respectively.

Axis Rule in Greece. The end of organized resistance in Greece found Germany in possession of most of the mainland and island possessions of the kingdom. Corfu, the Ciamura district on the mainland adjoining the Albanian frontier, and six islands of the Cyclades group in the Aegean were annexed by Italy. Soon afterward the Germans turned over to Bulgaria Western Thrace, the districts of Florina and Kastoria, and the islands of Samothrace and Thasos in the Aegean Sea. In June a large part of the German forces in Greece was transferred eastward for the attack upon Russia. The Germans retained direct control over Central Macedonia, including Salonika and adjacent islands, and over other important strategic points. The remainder of Greece was turned over to the Italians for policing. Italian troops replaced German occupationary forces in Athens June 25.

Meanwhile the Germans on April 29 had succeeded in organizing a pro-Nazi Government in Athens under General Tsolakoglou, who signed the surrender convention of April 23. His regime was denounced as illegal and traitorous by King George and the Tsouderos Government. It proceeded to arrest General Papagos and other former Greek officials and pro-British army leaders on charges of prosecuting war to the detriment of the state. The state of war declared Oct. 28, 1940, was lifted Aug. 18, 1941. In December it was announced that Tsolakoglou had deposed the head of the Greek Orthodox Church, Metropolitan Chrysanthos, for his outright opposition to the Athens regime.

The effort of the Germans to win the friendly cooperation of the Greek people achieved little success. Despite repeated warnings from the occupationary officials, emphasized by numerous court-martial and hangings, the Greek people as a whole continued to display strong antipathy to their conquerors. The German commander in Athens imposed a 10 p. m. curfew on June 1 and followed this with progressively severe repressive measures. Proclamations posted in Salonika and elsewhere warned that collective punishment would be inflicted upon areas where attacks upon occupationary forces occurred. Subsequently both Greek and German sources reported numerous executions of Greek hostages for acts of sabotage and attacks on German troops. In captured Crete, according to the Greeks, a number of towns were burned and 685 residents executed for "collective responsibility" for anti-German acts.

Atrocities also were charged to the Bulgarians in putting down an armed uprising near Drama, northwest of Salonika, late in September. The Greek Government-in-Exile estimated that 15,000 Greeks had been killed in the fighting or massacred. New risings, provoked by German and Bulgarian confiscations of the tobacco and other crops, were reported late in October in Bulgarian-occupied districts. Mass executions allegedly occurred at Doxato, Messovounies, Stavros, and a number of other villages and towns. The Bulgars were said to have deported 6,000 Greeks from Thrace and Macedonia into Bulgaria, replacing them with Bulgarians. Ruthless methods of denationalization were practiced against Greeks remaining in Bulgar-occupied territory.

Notwithstanding these harsh methods, guerrilla

warfare was waged with growing success against occupationary troops in various parts of the mainland and throughout the island of Crete. Prince Paul declared in a London statement on November 18 that Greek resistance was keeping 225,000 Italian and 70,000 German troops immobilized in Greece.

Meanwhile famine and disease spread throughout the country. The population of large areas was reported on the verge of starvation even before the German occupation. Crops of the previous autumn were a failure and the bulk of food reserves were consumed or destroyed during the warfare of the winter and spring. Prices of all commodities soared after the military collapse. Soon virtually all transactions were enacted on the black (illegal) market. Imposition on Greece of the cost of the Axis armies of occupation furthered rapid monetary inflation. Thousands of ragged, penniless, and hungry Greek troops, disarmed and disbanded by the Germans, roamed the country in search of their scattered families or en route to their homes.

Before turning the country over to the Italians, the Germans systematically looted it of olive oil, resin, turpentine, and all available food and raw materials stores. Axis commanders reportedly requisitioned all foodstuffs for their armies and retained the excess supplies to the civil population at exorbitant prices. In July it was indicated that famine was an actuality in many parts of Greece, and a cholera outbreak was reported. In September the Near East Foundation warned that only outside aid could save 2,000,000 Greek children from death by starvation during the winter. In response to appeals from the Greek Government-in-Exile, the British relaxed their blockade to permit shipment to Greece of foodstuffs and medical supplies purchased in Turkey with American and British funds. The supplies, distributed under an Axis guarantee by the International Red Cross, filled only a small fraction of the need. In November the Red Cross stated that it received upward of 50 starvation cases daily in Athens alone. The winter found Greece reduced to a state of bitter destitution unmatched in any part of Europe except Poland.

GREEK STUDIES. See PHILOLOGY, CLASSICAL.

GREENLAND. A large island off northeastern Canada. Denmark's only colonial possession, it has an area of 736,518 square miles, of which 705,234 square miles comprises the central plateau, averaging about 10,000 feet high and capped by ice 1,000 feet or more thick. The ice-free coastal area comprises about 31,284 square miles. Estimated population in 1940, 18,200 including about 17,800 Eskimos and 400 Danes. The area under direct Danish administration includes 46,740 square miles and is divided into three inspectorates as follows: South Greenland on the southwest coast (pop., about 7,000; capital, Godthaab); North Greenland on the west coast (pop., 9,000; capital, Godhavn); and East Greenland on the east coast (pop., 1,000). The chief settlements are Julianehaab (2,500 inhabitants), Godthaab (1,300), Godhavn, Angmagsalik, and Marmorilik.

Cryolite, mined at Ivigtut, accounts for nine-tenths of Greenland's total income of about \$800,000 annually. Marble is mined at Marmorilik in North Greenland. Other products are graphite, cod-

fish, halibut, Arctic salmon, fox and bear pelts, eider down, seal blubber, and some sheep. Commerce is a monopoly of the Danish Government and its representatives in Greenland. Exports to Denmark in 1938 totaled 5,939,000 Danish crowns; imports from Denmark, 3,064,000 crowns. Revenue in 1938-39 was 4,810,000 crowns; expenditure, 5,573,000.

Normally administration of Greenland is vested in a director (appointed by the King) in Copenhagen, who is represented by governors and administrative councils in North and South Greenland, respectively. After the German occupation of Denmark on Apr. 9, 1940, the administrative councils in Greenland met at Godhavn on May 3 and voted to take over the powers which the Danish Government was unable to exercise in the colony. While reaffirming their allegiance to King Christian X of Denmark, the councils expressed the hope that the U.S. Government would keep in mind the exposed position of the Danish flag and of the native and Danish population in Greenland.

History. The measures taken by the United States in 1940 to prevent German occupation or control of Greenland (see YEAR BOOK for 1940) were extended in 1941 when new evidences of growing German interest in the colony were reported.

On March 27 and 28, German bombers were reported to have flown over the eastern coast of Greenland. It was also indicated that meteorological reports were being sent from Greenland to the Reich to facilitate German air operations. This caused further consultations in Washington, followed by the conclusion on April 9 of an agreement which in effect placed Greenland under the protective custody of the United States for the duration of the European War. The accord was signed by Secretary of State Hull and the Danish Minister, Henrik de Kauffmann, "acting on behalf of his Majesty the King of Denmark in his capacity as sovereign of Greenland." It was concurred in by the Danish authorities in Greenland beforehand.

Under the agreement, the United States reiterated its recognition of Danish sovereignty and agreed to assist Greenland in maintaining its existing status. Washington received the right to construct and operate landplane, seaplane, radio, and meteorological facilities for this purpose. It was also authorized to install fortifications and other defense facilities and to take any measures needed to insure their efficient operation, including the improvement of harbors and the construction of roads and other communications. The United States also obtained the right to lease land and water areas necessary for the defense works and their protection; exercise exclusive jurisdiction over such leased areas; establish postal facilities and commissary stores for American military and civilian personnel; and import all equipment and supplies into Greenland free of customs or other charges.

The U.S. Government in turn undertook to respect all legitimate interests in Greenland as well as laws, regulations, and customs pertaining to the native population and the internal administration. The agreement was to remain in force "until it is agreed that the present dangers to the peace and security of the American Continent have passed." At that time either party could, after consultation between the American and Danish Governments, terminate the agreement on 12 months' notice.

In announcing this agreement on April 10, President Roosevelt stated that "we propose to make sure that when the German invasion of Denmark has ended, Greenland will remain a Danish colony." The German-controlled Danish Government in Co-

penhagen was not consulted in advance, and it immediately sought to repudiate the agreement. See DENMARK under *History* for details.

Construction of a \$20,000,000 U.S. air base and other defense installations in Greenland began in the autumn, and the work was continued all winter. In October U.S. forces in Greenland seized a powerful Nazi-controlled radio transmitter, used to dispatch weather and other information to Berlin, and captured a small German-controlled Norwegian freighter with a member of the Gestapo aboard off the coast of Greenland.

See UNITED STATES under *Foreign Affairs*.

GRENADA. See WINDWARD ISLANDS.

GROUP MEDICAL CARE. See CONSUMERS' COOPERATIVES.

GUADELOUPE. A French West Indian colony consisting of two main islands—Guadeloupe proper (Basse-Terre) and Grande-Terre—and the dependencies—the islands of Les Saintes, Désirade, St. Barthélemy, St. Martin (northern part only), and Marie Galante. Total area, 688 square miles. Population (1938 estimate), 310,000. Chief towns: Basse-Terre, capital (13,638 inhabitants), Pointe-à-Pitre (43,551). Chief products—sugar, coffee, rum, cacao, logwood, bananas, manioc. Trade (1938): 250,583,000 francs for imports and 296,472,000 francs for exports. Budget (1939): 83,608,979 francs (revenue and expenditure balanced). Public debt (Dec. 31, 1938), 12,110,210 francs (franc averaged \$0.0288 for 1938; \$0.0251, 1939). Roads (1940): 754 miles. A governor heads the administration of the colony. Governor, M. Ferin (appointed Dec. 13, 1940). See MARTINIQUE under *History*.

GUAM. An insular possession of the United States; the largest and most populous island of the Marianas group, in mid-Pacific. It lies about 5,100 miles from San Francisco, 3,300 from Honolulu, 1,350 from Yokohama, and 1,500 from Manila. Area, 225 square miles; estimated population (July 1, 1941), 23,394, which included 21,502 native-born, 812 foreign-born, and 588 members of the naval establishment. The 1940 census population was 22,290 (18,509 in 1930). Capital, Agana, 12,553 inhabitants.

The native population is mainly of Chamorro stock. The languages in use are English, Spanish, and Chamorro. Public instruction through high school grades is available to all children who make satisfactory progress. Commencing with the seventh grade, attendance is limited by competitive examination. The number of enrolled pupils in the public schools averaged 5,084 for the year 1940-41. Most of the pupils were in native schools, taught by native teachers. An American school, for children of nonnatives, was maintained. Copra, coconut oil, alligator pears, and kapok are exported. Products grown for the domestic market are cacao, coffee, rice, sugar, corn, sweet potatoes, and fruits. Trade (year ended June 30, 1941): \$994,010 for imports and \$84,278 for exports (copra was the main export).

Guam is a United States naval station; its Governor, who is also the commandant of the station, is a naval officer commissioned by the President. Governor, Capt. G. J. McMillin, U.S. Navy (assumed office June, 1940). An elective native Congress consisting of a House of Council (16 members) and a House of Assembly (27 members) has only an advisory voice in the government. Planes of Pan American Airways operating between Ala-

meda, Calif., Manila, and Hong Kong stopped regularly at Guam. A cable station on the island relays messages between San Francisco and the Philippines, China, and Japan.

History. During 1941 work on nonmilitary improvements on the island, including roads, hospitals, and harbor improvements was being carried forward. The natural harbor at Apra was being greatly improved by building up the natural barrier of the reef to make a breakwater, and in removing coral heads from the outer harbor and dredging the inner harbor. In an Executive Order of Feb. 14, 1941, President Roosevelt announced that after May 15, 1941, no unauthorized vessels or aircraft would be permitted within three miles of Guam. The U.S. Senate on Mar. 10, 1941, approved an appropriation for construction at Guam. On Aug. 3, 1941, a typhoon struck the island, causing damage to crops and property, but no lives were lost.

Guam was the first United States outpost in the Pacific to fall under the control of Japan. A U.S. Navy communiqué of Dec. 9, 1941, announced that Japanese aircraft in two flights had attacked Guam on Dec. 8, 1941, and admitted that the U.S. minesweeper *Penguin* had been sunk outside the island. Japanese troops landed on the island December 10 and forced the surrender of the garrison two days later. See WORLD WAR.

GUATEMALA. A republic in Central America. Capital, Guatemala City.

Area and Population. Area 48,290 square miles; population, 3,284,269 at census of Apr. 7, 1940. Some 65 per cent of the population are Indians and the bulk of the remainder are mestizos. The small ruling class is largely of European origin. Populations of the chief cities with their suburbs in 1940 were: Guatemala City, 176,780, Quezaltenango, 30,125, Cobán, 26,774, Zacapa, 18,094.

Defense. Military service is compulsory. As of November, 1940, the active army numbered about 5,000, trained reserves, 10,600; air force, 58. Under an agreement signed May 27, 1941, a U.S. Army officer was detailed to serve as Director of the Polytechnic School (Guatemalan military academy). Defense budget for 1941-42, \$1,900,000.

Education and Religion. About 80 per cent of the adult inhabitants are illiterate. In 1940 there were 142,335 pupils in 2,485 primary schools, 5,574 in 28 secondary schools, and 694 in the University of Guatemala. Most Guatemalans profess the Roman Catholic faith, but other creeds enjoy liberty of worship.

Production. Coffee and bananas account for about 90 per cent of all exports. The chief crops in 1939-40 were (in quintals of 101.4 lb. except as indicated): Coffee, 1,139,753; bananas, 12,849,752 stems; corn, 10,019,980; beans, 1,268,088; wheat, 330,912; rice, 262,458; plantains, 1,330,292; white sugar, 352,692; brown sugar, 781,738. Coffee exports in 1940-41 were 745,303 bags (of 132 lb.). The production of chicle in 1940-41 was 2,500,000 lb. Livestock, gold, and hardwoods are other products. Industrial establishments are confined largely to coffee-cleaning, sugar-refining, and flour mills, and shoe, soap, and pottery factories.

Foreign Trade. Imports in 1940 were reported at \$12,666,970 (\$15,295,729 in 1939); exports, \$12,039,492 (\$16,985,310). The 1940 export value is not comparable with the 1939 figure due to changes in the method of evaluating exports. The United States supplied 73.8 per cent of the 1940 imports (54.5 in 1939); Germany, 2.9 (27.0). Of the exports, the United States in 1940 took 91 per cent (70.7 in 1939); Germany, 0.0 (11.5).

Finance. Actual ordinary budget returns in the fiscal year ended June 30, 1940, were \$12,150,173 (affected by a new method of accounting with respect to National Properties); expenditures, \$11,035,523. Budget estimates for 1940-41 balanced at \$10,258,000; for 1941-42, \$10,223,000. The public debt on Dec. 31, 1940, totaled 10,341,000 quetzales (6,153,000 quetzales representing £1,520,000 of sterling indebtedness and 4,188,000 quetzales in dollar and quetzal obligations). The quetzal equalled \$1.

Transportation. The International Railways, with 509 miles of track, carried 1,466,780 passengers and 90,122,830 ton-miles of freight in 1940. The only other railway is a small 30-mile line. A total of 202 miles of new highways were completed during 1940, bring the total mileage to 3,986. An additional 506 miles were under construction. In January, 1941, the franchise of the TACA air network was abrogated. A new local air-transport company, known as Aerovías de Guatemala, S.A., was organized as an affiliate of Pan American Airways. During 1940 737 vessels of 1,613,626 gross tons entered Guatemalan ports (1,100 of 2,794,108 tons in 1939).

Government. The Constitution of Jan. 1, 1928, as amended, provides for a President elected for 6 years and ineligible for reelection, a single-chambered National Assembly of 74 members elected by popular vote for 4 years, and an appointive Council of State of 7 members which supervises public contracts and concessions. President in 1941, Gen. Jorge Ubico, who assumed office Feb. 14, 1931, and had his term extended by a hand-picked Constituent Assembly on July 10, 1935, to Mar. 15, 1943.

History. Although his term of office was not due to expire until 1943, President Ubico in 1941 completed arrangements to succeed himself for another six-year term ending in 1949. First a so-called "workers' front" asked the President's Liberal Progressive party for permission to support him as candidate for another term. In June a convention of Indians met in the capital and approved Ubico's candidacy. A Constitutional Congress was convened on September 1 and on September 11 it reelected Ubico for the 1943-49 term.

The Ubico regime extended its policy of close cooperation with the United States. A ban on war discussions favoring the Axis powers was imposed January 28. On June 3 the President aligned Guatemala economically with the United States by prohibiting the export or reexport of native and imported products except to the United States or to other American republics which had adopted similar export control measures. On August 5 Guatemala's federal reserve bank, the Banco Central, ousted four German members of the board of directors. The Guatemalan correspondent of Transocean, the pro-Nazi news agency, was ordered to leave the country because of his Nazi activities.

German planters, who owned or controlled 50 per cent of Guatemala's coffee production, were faced with bankruptcy through a Government decree forbidding steamship lines to load coffee owned by the Germans. The November 7 supplement of the United States blacklist contained some 234 names of Axis sympathizers in Guatemala, mostly owners of Coffee fincas. To lessen the adverse effect of the blacklist on Guatemala's economy, the United States agreed to import restricted quantities of coffee from German-owned estates.

When Japan attacked Hawaii by surprise on December 7, President Ubico immediately wired assurances of his support to President Roosevelt. On

December 8 a special session of the National Assembly declared war on Japan. Immediately after the Guatemalan Government was notified of the German and Italian war declarations against the United States, the National Assembly again convened and declared Guatemala in a state of war with Germany and Italy (December 11).

A Coffee Advisory Board was established July 29, 1941, to study problems of the coffee industry. A National Petroleum Committee, appointed September 12, was given complete control over the transportation and distribution of petroleum products.

GYMNASTICS. The year 1941 marked the fifth straight year that George E. Wheeler, a school teacher of East Washington, Pa., has assumed top rank in gymnastics. In the national championship meet at Union City, N.J., Wheeler reigned supreme in free calisthenics, long horse, parallel bar, and horizontal bar, and accumulated sufficient points in other events to command all honors.

Other national champions were William L. Taylor, Union City, side horse, Joseph Goldenberg, Bloomington, Ind., flying rings, Vernon S. Gilmore, Ohio State, indian clubs, George Szypula, Temple University, tumbling; and Roman N. Pico, Penn State, rope climb. The University of Illinois took the national crown, the Western Conference, and the N.C.A.A. meet.

HADHRAMAUT. See *ARABIA* under *Aden Protectorate*.

HAITI. A West Indian republic, occupying the western third of the island of Haiti or Hispaniola. Capital, Port-au-Prince.

Area and Population. Area, 10,204 square miles, population, estimated on Dec. 31, 1939, at 3,000,000 (1,631,000 at 1918 census). With the exception of some 3,000 white foreigners (467 United States citizens on Jan. 1, 1940) and a few thousand mulattoes, the inhabitants are all Negroes. Estimated populations of the chief cities in 1936: Port-au-Prince, 105,000 (125,000 in 1940); Cap Haitien, 15,000; Aux Cayes, 15,000; Gonaives, 10,000; Saint Marc, 10,000; Jacmel, 10,000. French is the language of government and the educated class. The peasants, comprising more than 80 per cent of the population, speak Creole French.

Religion and Education. Most of the inhabitants profess the Roman Catholic faith. About 85 per cent of the people are illiterate. There are about 1,060 primary schools, with 87,000 pupils; 21 secondary schools, with 6,000 pupils; 68 farm and vocational schools, with 12,200 pupils; 2 normal schools, and colleges of medicine, law, applied science, and agriculture. A National Law School was opened at Port-au-Prince Apr. 6, 1942.

Defense. The armed constabulary, organized by United States officers during the American military intervention (1915-34) and since 1934 under Haitian command, comprises about 2,500 officers and men. A United States military mission was contracted for by the Haitian Government in 1938 to reorganize the military school and act as technical advisers to the general staff of the Garde d'Haiti (constabulary). See *History*.

Production. Agriculture supports the mass of the population. The country's prosperity is largely dependent upon export crops, mainly coffee. For the fiscal year ended Sept. 30, 1941, the chief exports were coffee, 22,641,275 kilos (kilo equals 2.2 lb.) valued at 12,918,466 gourdes (gourde equals \$0.20); bananas, 3,283,645 stems valued at 7,761,732 gourdes; sisal, 10,797,222 kilos valued at 4,316,865 gourdes; raw cotton, 2,630,405 kilos valued at 2,313,791 gourdes; raw sugar, 19,819,590 kilos valued at 2,046,122 gourdes; cacao, 1,504,570 kilos valued at 683,242 gourdes. Manufacturing is confined to sugar refining, rum distilling, and the preparation of tobacco products, canned fruit, and vegetable lard.

Foreign Trade. During the fiscal year 1940-41, imports were valued at 37,156,000 gourdes (39,701,000 in 1939-40) and exports at 33,287,000 gourdes (26,995,000 in 1939-40). The United States supplied 83 per cent of the 1940-41 imports (73 in 1939-40); British Commonwealth, 8 (12); Japan, 3 (3). Of the exports the United States took 88 per cent in 1940-41 (52 in 1939-40); British Commonwealth, 6 (30).

Finance. For the fiscal year 1940-41, government receipts totaled 26,929,883 gourdes (26,873,411 in 1939-40) and expenditures from revenues were 25,565,000 gourdes (28,478,000 in 1939-40). In addition there were expenditures from the United States public works credit during 1940-41 of 7,254,000 gourdes, bringing the total loan expenditure under this account to 24,747,000 gourdes. Unobligated Treasury reserves on Sept. 30, 1941, totaled 1,858,000 gourdes. The gross public debt on Sept. 30, 1941, was 68,096,000 gourdes.

Transportation. In 1940 there were 158 miles of railways, 1,545 miles of roads, and a connection at Port-au-Prince with Pan American Airways Caribbean network. Shipping (1939-40): 498 vessels with a net registered tonnage of 1,412,023 called at Haitian ports.

Government. The Constitution of June 17, 1935, as amended Aug. 8, 1939, vested executive powers in a President elected for five years by a two-thirds vote of the National Assembly. The National Assembly consists of 37 Deputies, elected for four years by the vote of literate property owners, and 21 Senators, 11 elected by the Chamber of Deputies and 11 appointed by the President for six-year terms. Presidents completing their terms since 1930 become life members of the National Assembly, President, Elie Lescot who replaced Sténio Vincent on Apr. 15, 1941.

HISTORY

Election of Lescot. The preparations made in 1940 for continuing President Sténio Vincent in office for another five-year term (see *YEAR BOOK* for 1940, p. 331) were carried forward on Mar. 10-11, 1941, when the Chamber of Deputies and Senate unanimously approved a resolution calling upon him to remain in office because of "exceptional circumstances confronting the nation." Dr. Vincent's decision to accept another term in violation of the constitutional bar to reelection aroused strong popular opposition in Haiti. A revolutionary outbreak appeared likely. It was rumored that Washington also expressed disapproval through its new Minister to Haiti, John Campbell White, who arrived in Port-au-Prince March 10.

Whatever the reason, Dr. Vincent on April 4 announced that he would not accept another term. Consequently the Chamber and Senate met in joint session on April 15 and elected Elie Lescot, Minister to Washington, President for the new term begin-

ning May 15, by a vote of 56 to 2. Lescot, who was known as a Vincent supporter, pledged himself to carry on Dr. Vincent's policies. His election represented another victory for the small mulatto elite, which dominated the mass of Haitian Negroes. His candidacy provoked a seemingly spontaneous protest demonstration by several thousand residents of the capital on April 9. Lescot's chief rival for the Presidency was Amilcar Duval, who resigned as Minister of Justice to enter the race.

Economic Conditions. There was a turn for the better during 1941 in the extremely critical economic situation prevailing at the end of 1940 (see *YEAR BOOK* for 1940). The inter-American coffee quota agreement brought an improvement in the prices and export market for coffee, Haiti's main cash crop. The shipping shortage was counterbalanced by improved foreign demand for Haiti's bananas, sisal, cotton, and sugar. On June 7, the Government placed control of coffee exports and the fixing of sales prices in the hands of the National Bank of the Republic.

Relations with United States. Another important factor in the improved economic outlook was the additional financial and economic aid extended to Haiti by the U.S. Government. By another agreement signed in Washington Feb. 13, 1941, the Haitian Government was authorized to postpone payment of one-third of the interest due on the Republic's outstanding bonds on Apr. 1, and Oct. 1, 1941. As a result of improved coffee prices and consequent higher government revenues, the Government on September 5 announced its intention to resume full debt service on October 1, and at the same time to pay the balance of one-third of the service still due on the April coupons.

On May 6 the Haitian and U.S. Government announced an agreement in principle on a long-term program of cooperation in the development of Haiti's agriculture and general economy. The plan called for the development of the rubber industry in Haiti through planting 50,000 to 60,000 acres of rubber trees; an increase in banana plantings; the planting of oil crops, spices, drug plants, food plants, and fiber plants; improvement of cacao production; and the stimulation of small handicraft industries. The program was based on surveys and experimental plantings by the U.S. Dept. of Agriculture in Haiti. Washington undertook to provide further technical information and assistance, and to advance \$500,000 to supplement the 1938 credit of \$5,000,000 which was granted to finance the public works program executed by the J. G. White Engineering Corp. The \$500,000 was needed to complete certain highway and irrigation projects and provide transportation facilities to areas suitable for rubber and general agricultural development.

Another agreement in principle announced at the same time, and concluded in detailed form on September 13, modified the American control of Haiti's finances established under the agreement of Aug. 7, 1933. The offices of the American Fiscal Representative and Deputy Fiscal Representative were abolished, and the duties of collecting revenues, controlling the budget, and supervising the republic's finances were entrusted to the National Bank of Haiti. Of six voting members of the bank's Board of Directors, three were to be Haitian citizens appointed by the President of Haiti and three citizens of the United States chosen by agreement between the two Governments. Two copresidents of the bank, one Haitian and one American, were provided for. Interest and amortization service of the outstanding 1922 and 1923 dollar bonds were

declared an irrevocable first lien upon Haitian revenues. Until amortization of the bonds was completed, the Haitian Government agreed not to increase its public debt except in agreement with the United States. If Haiti's revenues exceeded \$7,000,000 annually, the Government undertook to apply additional sums to the redemption of the bonds.

A new military accord, replacing that of 1938, was concluded by Haiti and the United States May 23. It provided for continuation and expansion of the instruction of the Garde d'Haiti by a detail of U.S. Army officers for the ensuing four years. The Haitian Government at about the same time reportedly authorized U.S. military planes patrolling the Caribbean to use an air base near Port-au-Prince.

War with the Axis. Haiti's close relations with Washington were reflected in growing friction with the Axis powers. On August 12 the Government disclosed that it had rejected a German protest against the United States black list of Haitian firms trading with the Axis. Later the same month Haiti ousted all Nazi consular officials and the Reich asked Haiti to withdraw its consular officials from Germany and all German-occupied territories. A Haitian decree of September 8 froze the funds of German and Italian firms on the U.S. black list and prohibited commercial transactions with them. After the Japanese attack of December 7 upon the United States, President Lescot declared war on Japan December 8 and on Germany and Italy December 12 with the unanimous approval of the National Assembly.

HANDBALL. Joseph Peter Platak, left-handed Chicago handball player, continued to dominate his sport in 1941, winning his seventh National A.A.U. four-wall title, by crushing the Harrishburg switchboard operator, Stanley Hitz, in straight games in the final. Eddie Linz and Frank Coyle of the New York Athletic Club regained the doubles title. In the one-wall game, practiced for the most part at the beaches in summertime, Artie Wolfe emerged champion in the singles and Marvin Hecht and Morton Alexander retained the doubles honors. Miss Marie Zanetti of the Bronx, N.Y., was considered the best women's player.

HAWAII, Territory of. A Territory of the United States, composed mainly of the eight inhabited islands of the Hawaiian Island group, in the North Pacific Ocean and within the tropics. Capital, Honolulu, on Oahu Island, 2,408 miles from San Francisco.

Area and Population. The islands that form the Territory have a combined area of 6,407 square miles. Their population of Apr. 1, 1940 (U.S. census), numbered 423,330; 1930, 368,336. Approximate population of June 30, 1940, by areas: city of Honolulu, 180,986; rural part of Oahu, 79,899; city of Hilo, 16,641; rural Hawaii (island), 65,922;

Kalawao, 465; Kauai, 35,956; Maui, 7,809. According to the U.S. Census of 1940, the population, by origins, numbered 157,905 racially Japanese, 64,310 wholly or partly of Hawaiian aboriginal stock, 103,791 Caucasian, 52,569 Filipino, 28,774 Chinese, 6,851 Korean, 8,296 Puerto Rican, and 834 other.

The Census of 1940 showed 30,089 (or 40.8 per cent) more Caucasians than the Census of 1930, 18,274 more Japanese, 13,450 more Hawaiians (including part-Hawaiians), 1,595 more Chinese, 1,225 more Puerto Ricans, 390 more Koreans, and 10,483 fewer Filipinos. An estimate of June 30, 1940, set the proportion of U.S. citizens among all inhabitants at 81.79 per cent; among the Japanese group (mainly born in Hawaii), at 77.9, among the Hawaiian racial group, at 97.85.

Education. The enrollments of pupils in the public schools totaled 91,821 for June, 1940; this comprised 53,378 in elementary grades (from 1 through 6) and 38,443 in upper grades (7 through 12). The elementary enrollments had decreased by 4,901 since 1933, but the enrollments in the upper grades had risen. For the year 1939-40 the public schools cost \$6,996,947 in current expense and \$335,825 in capital outlay. The University of Hawaii had (year 1939-40) 1,947 undergraduate students and 478 graduate students, not to count other groups, particularly the heavy attendance in the summer session.

Employment and Production. The gainful industries of the Territory are predominantly agriculture and the processing of agricultural products. The main exports, cane sugar and the products of the pineapple, accounted for more than \$50,000,000 each, in the Hawaiian exports of 1939. The two covered well over nine-tenths of yearly exports. In the case of the pineapple as well as that of the cane, agriculture and manufacture were closely associated, in the hands of large companies or associations. Thus, of the \$9,099,832 paid to farmers in the Territory during the fiscal year 1940 under the provisions of the Agricultural Adjustment Act, \$8,975,614 went to a group of 2,068 growers of sugar cane. Workers on sugar plantations numbered 44,810 in 1938. The pineapple industry, though somewhat less in yearly value of product than the sugar industry, was estimated by the Pineapple Producers Cooperative Association to have employed 78,000 persons in 1939, or nearly one-fifth of the population. The Hawaii Experiment Station was reported in 1940 to have found a practicable way of treating the papaya fruit so that it would stand exportation, and there appeared some prospect that the small yearly exports of the papaya might in their turn expand. Manufacturing, proper, employed 16,842 wage earners in 1939 and put out \$133,655,947 in products.

The season of harvesting and grinding sugar cane late in 1940 and early in 1941 yielded an estimated 865,000 short tons of sugar. Occasional reports around and after the middle of 1941 indicated active business in Hawaii and exports above the corresponding dates of the year previous; but official summaries of the Territory's commerce for the full year were hindered by warfare. The quota of sugar allowed by the U.S. Government as marketable in the Continental United States in 1941 was set at 961,764 short tons, raw.

For the calendar year 1940 the estimated shipments of canned fruit or juice of the pineapple rose to \$54,000,000. The sales of cane sugar apparently fell to 916,500 short tons, as against 940,060 tons for 1939 and allowable exports of 938,037 tons to the Union under the quota system.

Oversea Trade. In the calendar year 1940 Hawaii's imports from the United States amounted to \$127,439,539; exports of Hawaiian products to the United States totaled \$96,924,908. Data for 1940 did not cover Hawaiian trade with the other countries. Despite shipments of \$5,165,942, additional, from Hawaii, under the head of U.S. products returned, the totals for 1940 left Hawaii an apparent debtor in trade with the United States for some \$25,000,000 of imports in excess of exports. In view of unusual military and naval outlay in the Territory, involving many kinds of shipments from the United States, the heavy adverse excess of trade did not necessarily represent an upset in the usual balance of actual commerce. Among the chief sub-totals of the imports above, \$18,109,684 of vegetable foodstuffs, \$19,880,238 of machinery and vehicles, \$18,589,368 of other iron and steel manufactures, and \$12,312,290 of products of petroleum, furnished the greater part of the total imports of U.S. goods.

Transportation. Steam railroads, on the islands of Oahu, Hawaii, and Maui, aggregated 322.64 miles of track in 1940. Motor vehicles registered in 1940 numbered 71,058—this made one to every six inhabitants. The Inter-Island Steam Navigation Co. transports passengers and freight among the chief islands by sea. Inter-Island Airways covers similar routes by air. The mileage of vehicular roads was stated in 1940 as 2,040. Ship-lines connect Honolulu with North and South America, Australia, and the Orient. Pan American Airways touch at Honolulu in passage between the United States and the Far East; the same system started in 1940 a service between San Francisco and New Zealand via Hawaii.

Government. The Governor of the Territory (in 1941 Joseph B. Poindexter) holds office by appointment of the President of the United States, for a term of four years. The registered voters of the Territory elect quadrennially 15 Senators and biennially 30 Representatives, constituting the Legislature. This body passes appropriations and other acts within the Territorial authority. The popular vote elects to each U.S. Congress a Delegate, with a voice, but no vote, in the House of Representatives; Samuel W. King, reelected Delegate in 1940.

HISTORY

Japanese airplanes, without warning, bombed Pearl Harbor and Manila at sunrise on December 7, simultaneously with the Japanese envoys' declaration to the U.S. Government at Washington, breaking off diplomatic relations. The military aspects of the Japanese raid are discussed in the article *WORLD WAR*. In its aspect to Hawaii the event overshadowed every other that had occurred under American rule. One of its most rapid effects was to shift public attention from other concerns to the unfamiliar business of self-protection against a foreign enemy. While the Japanese directed the raid of December 7 mainly on the U.S. Naval base of Pearl Harbor and on air and military bases, thus causing great loss of life among men in the armed services, a considerable number of the civilian population also were killed. Subsequent minor Japanese air raids on the Territory kept up the feeling of alarm through December.

The Territorial Government had to deal immediately with plans for protecting the population, in case of further attack. The problem of food, unexpectedly to those unfamiliar with Hawaiian economics, also assumed pressing importance. Measures against disloyal aid to the enemy became an urgent need. The main industries of the Islands,

being closely connected with the U.S. mainland normally but now threatened with an interruption of regular shipping, faced serious disturbance.

The Problem of Food. Governor Poindexter gave particular attention, from the first, to assuring, for the inhabitants, the importation of a proper reserve of food. Hawaii had imported, in 1939, about \$24,000,000 of food and beverages—\$55 to every inhabitant. Though largely fertile and cultivated, the Territory specialized in sugar cane and pineapples; hence it needed much meat and breadstuffs from the Continental United States. A stock great enough to carry it for a fairly long time could alone enable it to stand a siege or even a blockade, all the more as its own fisheries would then be hindered.

The Hawaiian Government did not wait until December 7 to begin to think about the eventuality of war with Japan. On the contrary, in the spring and summer it gave much attention to precautions for meeting such a case. Poindexter visited Washington in July and, with Territorial Delegate King, talked Hawaii's problems over with Federal authorities. The accumulation of the proposed food-stock called for an outlay much beyond the Territory's financial means, even though this outlay would probably in great part be recovered in time. Application was therefore made for Federal funds. Eventually the Government put \$10,000,000 at the Territory's disposal for purchases of food. This did not suffice in Poindexter's judgment of the situation after December 7. Late in December he requested \$35,000,000 more from Washington for the same purpose. The emergency as to food, however, did not at any moment become acute; the need related to a more or less distant future, though the provision had to be prompt. A degree of supervision over the food stores started just after the raid on Pearl Harbor, at a moment when people in Honolulu, suddenly becoming sensitive to the food question, started buying up foodstuffs in alarming quantities. Later, supplies of food in much the usual variety became available in ordinary plenty.

Protecting Persons and Property. A great deal was accomplished toward the protection of the population and goods of Hawaii well in advance of the outbreak of hostilities with Japan. Honolulu, a city of about as many people as Richmond, Va., was the most exposed large community of its size under American rule (cities of the semi-independent Philippines of course excepted). Poindexter summoned the Hawaiian Legislature in special session after his visit to the United States. The session voted measures providing for the protection of the people. It enacted a so-called M-Day Bill which gave Poindexter extraordinary powers in emergency and shaped the details of a system of control over civilians. As early as May 20 Hawaiian communities' lights were blotted out for part of a night, as a drill to teach inhabitants how to foil raiding airplanes. The standard routine worked out by the U.S. Office of Civilian Defense was adopted for Honolulu. The schools were closed after December 7. The consumption of gasoline was limited to 10 gals. a month for each automobile. A plan under way at the end of the year sought the removal of 60,000 dwellers from crowded parts of Honolulu to camps naturally sheltered by mountains, in case of peril.

Treasonable Agents. Persons of Japanese racial origin made up three-eighths of all the Territory's inhabitants. Yet the Japanese immigration, a relatively old story, had virtually ended in the '20s. Hawaiian-born children now prevailed in number

over their Japanese-born elders and parents. The rest of the population looked on the Hawaiian-born Japanese without particular suspicion, for these had acquired American ways in the public schools. The immigrant Japanese none the less still numbered about 35,000—quite enough to include many covert agents of Japan even, though most of the immigrants were trustworthy. In March a Federal grand jury in the Islands indicted 71 Japanese in cases where alleged Japanese owners had registered fishing vessels in the names of Japanese who were U.S. citizens. A belief had long prevailed that Japanese fishing vessels thus disguised spied on the Hawaiian coasts and defenses.

Reports in the press told that Japanese agents had cut out the growing sugar cane in places, fashioning gaps in the outline of great arrows to guide the raiders of December 7; that a Japanese known at Schofield Barracks had been arrested on that day for sending messages by a short-wave radio; and that Japanese dealers in vegetables, serving naval vessels, had gained knowledge needful to the raiders. These and other such stories, true or false, showed people in Hawaii by no means disposed to trust all of Japanese race. The Territory was put under martial law on December 10, but no extensive segregation of Japanese was reported.

See ENEMY ALIENS; JAPAN under *History*, LABOR LEGISLATION; WORLD WAR.

HAY. The hay crop in 1941 was estimated by the U.S. Department of Agriculture at 94,107,000 tons which included 82,358,000 tons of tame hay and 11,749,000 of wild hay, less than 1 per cent smaller than the 94,541,000 tons harvested in 1940 and compared with the 1930-39 average of 78,733,000 tons. The 71,893,000 acres harvested averaged 1.31 tons per acre and the 71,806,000 acres harvested in 1940 1.32 tons per acre compared with the 1930-39 average, 1.16 tons per acre and 67,893,000 acres. The combined hay and forage crop of 1941 was one of the largest ever produced, and there was also a large tonnage of hay carried over from the 1940 crop, and a heavy growth of feed on western ranges and southwestern wheat pastures. States leading in production of tame hay were Wisconsin 6,720,000 tons, Iowa 5,581,000, Minnesota 5,453,000, California 4,588,000, New York 4,189,000, Illinois 3,619,000 and Missouri 3,405,000 tons; and of wild hay Nebraska 2,243,000 tons, North Dakota 1,686,000, Minnesota 1,489,000, and South Dakota 1,323,000 tons.

Important kinds of tame hay and States with the highest production in each class included alfalfa 32,346,000 tons from 14,929,000 acres, California 3,198,000 tons; clover and timothy 23,106,000 tons from 19,176,000 acres, Wisconsin 3,484,000 tons; lespedeza 5,521,000 tons from 5,413,000 acres, Tennessee 1,366,000 tons; soybeans 4,741,000 tons from 3,649,000 acres, Illinois 544,000 tons; sweet clover 1,277,000 tons from 972,000 acres, North Dakota 504,000 tons; cowpeas 1,614,000 tons from 1,941,000 acres, Texas 546,000 tons; peanuts 987,000 tons from 1,894,000 acres, Georgia 264,000 tons; small grains cut green for hay 4,445,000 tons from 3,716,000 acres, California 1,154,000 tons; sweet sorghum (sorgo) for forage and hay 15,040,000 tons from 8,582,000 acres, Kansas 4,173,000 tons; and other hay crops 8,321,000 tons from 7,542,000 acres, Minnesota 777,000 tons.

Production of seed of important kinds of hay included alfalfa seed 1,017,100 bu., red clover 1,525,200 bu., alsike clover 327,000 bu., sweet clover 827,300 bu., timothy 1,218,000 bu., and les-

pedeza 169,251,000 lb. The aggregate production of the six principal grass and clover seeds sown for hay production, 445,897,000 lb., was 9 per cent smaller than in 1940, but well above the 1930-39 average. The season average price per ton received by farmers for all hay was \$9.01 (December 1 price) and the estimated value of production was \$847,475,000 in 1941 compared to \$7.50 and \$710,188,000 in 1940.

HEATING AND VENTILATING. The war affected heating and air conditioning in three ways during 1941: (1) the large volume of building, especially for manufacturing plants and defense housing, coupled with extremely active private building, made the year the greatest ever experienced by the industry in physical volume of goods produced and sold; (2) the demand for experienced engineers for such specialized work as designing ventilating and air conditioning systems for buildings, war vessels, merchant ships, and so on, finally resulted in a shortage of available engineers, (3) the industry was sharply handicapped by the shortages which developed, especially the scarcity of copper, and to some extent by the restrictions on freon, a refrigerant widely used in air conditioning. Installment selling curbs, instituted in 1941, may have been responsible for slowing down sales of some types of equipment, such as oil burners and room coolers.

Heating. Commercially, 1941 was the heating industry's greatest year. Radiator sales were up 25 per cent over 1940, steel boiler sales rose 50 per cent, unit heaters, used for factory heating, reflected the high volume of industrial building by an 80 per cent increase in sales over the previous year. Residential stoker installations were up 31 per cent, the winter air-conditioning type of warm air furnace showed a gain of 46 per cent, gravity furnaces 18 per cent, and cast iron sectional boilers 8 per cent. Oil burner sales, up 17 per cent, were severely handicapped by the oil-shortage scare at mid-year. The only important decline in heating equipment sales was in unit ventilators which, due to the slowing down of schoolhouse construction, showed a drop of 25 per cent from 1940 levels.

There was a marked decrease in the number of new types of equipment introduced, apparently due to the sellers' market with no need to change designs to move materials. In connection with small low cost defense houses, for which it was claimed there has been no suitable small warm-air furnace burning coal, Public Buildings Administration engineers developed an 18-inch furnace now being made by several manufacturers.

House chimney draft, a subject greatly neglected in past research, was investigated during the year by the National Bureau of Standards. At the University of Illinois a residence built for the purpose was dedicated early in the year for use in conduct-

ing research on radiator heating, a project sponsored by the boiler and radiator manufacturers. The first studies were those on hot-water heating; some results of these tests were reported at the close of the year. But progress in hot-water heating was not confined to house heating for high-pressure, high-temperature hot-water heating, originally developed in Europe, was applied to a few industrial plants in the United States during 1941.

A short-cut method of estimating heat losses for sizing warm-air heating systems was developed by the research staff at the University of Illinois and officially adopted by the warm-air furnace manufacturers association. A slow but steady increase in installations of radiant heating is noted, these systems now number over two hundred in this country. Central station or district heating continued practically unchanged, except that in New York the steam corporation reported many change-overs from privately-operated heating plants burning oil to the utility's steam lines, another result of the oil-shortage alarm.

Ventilating. The growth of mechanical ventilation is indicated by 1941 sales of two types of fans. Blower type fans, used for central system ventilation, had sales up 28 per cent over 1940, while the axial or propeller type increased 123 per cent.

Toxic dusts and gases are found in numerous industries, and the list of these is still growing. War work during the year brought to light at least two relatively new toxic gases, both in foundries; one in connection with magnesium casting is being carefully watched, the other, now found where thin castings requiring smooth finishes are made, originates with the core wash which breaks down under heating and recombines to form phosgene. The latter, too, is under observation. With each type of dangerous dust or gas it is necessary to determine just what the allowable concentration is, so that the ventilating system can be properly designed. During 1941 the American Standards Association set up a committee to set the limits of concentration, following study, for eight toxic substances used in war industries.

Microscopic and ultra-microscopic dust particles have harmful effects on many substances, materials and organisms, and probably only the borders of this field of knowledge have been explored. Considerable gains were made during the year in applications of electrostatic precipitators which clean the air of these fine particles and the specific uses to which they are being put increased greatly. The same is true to a somewhat lesser extent of the older types of air cleaners which, since they are not so new, show a less striking advance.

Odor removal in connection with ventilation or air conditioning reached a relatively high stage of development in 1941. A new portable odor adsorber was introduced; an outstanding installation of the conventional canisters of activated carbon for odor adsorption was made in the new Criminal Courts Building in New York which houses the jail replacing the old Tombs.

Air Conditioning. Industrial air conditioning is reported as 76 per cent higher than in 1940 and seven times as high as in 1934, reflecting the rapidly-growing awareness of the part air conditioning can play in increasing production, not so much from the standpoint of comfort as for improving process conditions. In these applications one or more of the following functions may be used separately or in combination: cooling, heating, humidifying, dehumidifying, cleaning, circulation, bacteria control, and even barometric pressure control.

Among the important process applications in 1941 were those for conditioning the air in spaces for storing bombs, loading fuses, airplane engine testing, powder drying, super-precision metal working, chemical works, a copper mine, instrument plants, and many others. Drying of the air supplied to blast furnaces, which increases the output of the furnace at least 10 per cent, was applied to several units during the year. The windowless blackout plant must be air conditioned and a number of these were built. Among especially large air-conditioned plants, all for plane or engine production, were the Ford Pratt & Whitney engine plant in Detroit, the Douglas factory in California, Wright's Lockland plant, Curtiss-Wright's Columbus plant, a new Glenn Martin plant, two Boeing plants, three Studebaker plants, and a Buick plant.

Chemical dehumidifying made a place for itself in numerous industrial applications. An important nonindustrial installation was that in the new War Department building in Washington where comfort was the objective.

There were two important developments in new equipment. To overcome the economic loss in space occupied by the large ducts in large air-conditioned commercial buildings, a method employing small conduits, through which chilled air at high velocity and under pressure is carried to a mixing device in the room where the air is tempered to the desired temperature, was introduced. An absorption type summer-winter conditioner, gas-fired, for residential use, made its appearance also. In addition there were two minor new equipments: one was equipment for utilizing the waste heat from the jacket of Diesel engines for building heating; the other for use in buildings used a few hours per day or week, such as churches and mortuaries, and which uses a small cooling plant which operates a high number of hours to build up ice on coils to a sufficient thickness to carry the cooling load of short duration. See GAS INDUSTRY.

HOCKEY. The Boston Bruins completely dominated the ice hockey campaign in 1941, winning the Stanley Cup with ease, after topping the National Hockey League, and then going on to conquer in the complicated play-off session, which annually makes a joke of the regular schedule. The Boston six had a five-point margin over the Toronto Maple Leafs at the end of the regular season, 67 to 62, with the Detroit Red Wings and the New York Rangers following. In the postseason play-offs, form was well maintained, with the Bruins defeating the Red Wings in four straight games for the Stanley Cup, after defeating Toronto, four games to three, for the league championship. The Boston club also scooped up most of the individual laurels,

with the Hart Trophy, for most valuable player, going to the Bruin center, Bill Cowley, and the Lady Byng Trophy, for best conduct, going to Bruin Bobby Bauer, right wing. The Bruins also went twenty-three games at one stretch without a defeat, bettering a 1940 mark set by the Rangers by four games. Walter Broda of the Toronto team won the goal-tending award, and the Calder Trophy for the season's best rookie, was sent to Johnny Oulry of the Canadiens.

The Cleveland Barons led all the way to take the championship of the American Hockey League, entering the final by eliminating Providence and then whipping Hershey. And St. Louis won the American Association championship while the Allan Cup, emblematic of Canadian amateur supremacy, fell to the Regina Rangers, who came from behind with three straight after losing the first two and tying the third against the Sydney Millionaires. The junior championship and Memorial Cup, Canadian fixtures, were taken by Winnipeg.

Hockey suffered considerably from the war, because most of the best players are Canadians. And the Canadian colleges were inactive, meaning that the United States colleges were on their own. Princeton won the title.

HOGS. See GARBAGE AND REFUSE DISPOSAL, LIVESTOCK; VETERINARY MEDICINE.

HOLIDAYS. In the United States, holidays are designated by the legislatures of the various States or proclaimed by their respective governors. The legal holidays observed in two or more of the States are listed below, with dates for the year 1942. Those marked with an asterisk (*) are celebrated in all States.

- *New Year's Day, January 1 (Thursday)
- Lee's Birthday, January 19 (Monday)
- Lincoln's Birthday, February 12 (Thursday)
- *Washington's Birthday, February 22 (Sunday)
- Good Friday, April 3 (the Friday before Easter)
- Patriots' Day (Battle of Lexington), April 19 (Sunday)
- Confederate Memorial Day, April 26 (Sunday) in Alabama, Florida, Georgia, and Mississippi, May 8 (the second Friday in May) in Tennessee, May 10 (Sunday) in North Carolina and South Carolina; June 3 (Wednesday) in Louisiana.
- Decoration Day (Memorial Day), May 30 (Saturday)
- Jefferson Davis's Birthday, June 3 (Wednesday)
- Flag Day, June 14 (Sunday)
- *Independence Day, July 4 (Saturday)
- *Labor Day, September 7 (the first Monday in September)
- Columbus Day, October 12 (Monday)
- Election Day, November 3 (Tuesday after the first Monday in November)
- *Armistice Day (Victory Day), November 11 (Wednesday)
- *Thanksgiving Day, subject to proclamation (traditionally the last Thursday in November)
- *Christmas Day, December 25 (Friday)

A number of days, while not constituted as legal holidays, are widely celebrated throughout the country. Among these are Arbor Day (in the spring), Army Day (April 6), Father's Day (the third Sunday in June), Halloween (October 31), May Day (May 1), Mother's Day (the second Sunday in May), Pan American Day (April 14), Pulaski Day (October 11), St. Patrick's Day (March 17), and St. Valentine's Day (February 14). In the British Empire, the outstanding holidays are, in addition to church festivals, Victoria or Empire Day (May 24) and the King's Birthday, arbitrarily celebrated on June 12.

Thanksgiving Day, 1941. In 1941 President Roosevelt repeated his practice of the previous two years by proclaiming November 20 as Thanksgiving Day instead of the traditional last Thursday of November; 32 States followed him by celebrating No-

ember 20, while the remainder adhered to November 27. The President announced that in future the last Thursday of November would be observed. On December 26 legislation declaring that the fourth Thursday in each November shall be Thanksgiving Day was signed by President Roosevelt.

HOMICIDES. See PRISONS; VITAL STATISTICS.

HONAN. See CHINA under *Area and Population*.

HONDURAS. A Central American republic. Capital, Tegucigalpa.

Area and Population. Area, 46,332 square miles. Population, estimated at 1,038,061 on June 30, 1940 (854,154 in 1930). The people are mainly of mixed Spanish and Indian blood, except for a considerable Negro element in the north coast banana region and some 35,000 aborigines. Population of Tegucigalpa (with suburbs), 47,223 in 1940; of other cities in 1935: Comayagua, 15,095; San Pedro Sula, 32,721; Tela, 14,460.

Defense. Every male citizen is liable to six months compulsory military service at the age of 21 and to service in the reserves from 23 to 40. As of Nov. 1, 1940, the army comprised 2,325 active soldiers and about 2,600 trained reserves. Defense budget for 1941-42, 2,368,000 lempiras

Education and Religion. According to the 1935 census, about 67 per cent of the inhabitants over seven years old were illiterate. Of 102,651 children of school age in 1937-38, 47,764 were receiving instruction. Secondary, normal, and commercial schools had 2,239 students and the National University at Tegucigalpa 298. Roman Catholicism is the prevailing religious faith.

Production. Agriculture, stock raising, and mining are the chief occupations. Bananas accounted for 65.5 per cent of all exports in 1939-40 and silver for 15 per cent. The sigatoka (leafspot) diseases reduced banana exports from 29,083,665 stems worth \$22,981,400 in 1929-30 to 12,677,737 stems worth \$6,323,144 in 1939-40. Gold, coffee, live-stock, tobacco, hardwoods, coconuts, and grapefruit are other export products, while corn, beans, sugar, etc., are grown for local consumption.

Foreign Trade. For the year ended June 30, 1940, imports were \$10,085,069; exports, \$9,657,294. Besides bananas (see *Production*), the chief exports were silver (\$1,447,114) and gold (\$863,975). The United States supplied 62.7 per cent of the imports; Japan, 13 2; Germany, 6.5. Of the exports, 95 6 per cent went to the United States.

Finance. Budget estimates for 1940-41 and 1941-42 balanced at 10,848,000 and 11,446,000 lempiras, respectively. For 1939-40 actual revenues were 10,843,000 lempiras; expenditures, 12,041,000. For the years 1935-36 to 1939-40, the accumulated budget deficit was 8,456,000 lempiras. Public debt on June 30, 1940: internal, 12,306,849 lempiras; external, 5,123,875. The lempira exchanged at \$0.50 in 1939 and 1940.

Transportation. Railways extended 816 miles in 1941; highways, 693 miles. The TACA airways network links Tegucigalpa with all parts of Honduras and the chief centers of Nicaragua and El Salvador. Pan American Airways planes stop at Tegucigalpa. The chief ports are Tela and Puerto Cortes on the Caribbean and Amapala on the Pacific.

Government. President in 1941, Gen. Tiburcio Carías Andino (Nationalist), who was elected Oct. 30, 1932, for a four-year term. By constitutional amendment, his term was extended in 1936 for a further six years and in December, 1939, until Jan-

uary, 1949. The Constitution of Apr. 15, 1936, extended the terms of the President, Vice-President, and members of Congress from four to six years; it stipulated that the Constituent Assembly of 59 members (all Nationalists) should automatically become the regular National Congress with the members holding office until Dec. 4, 1942.

History. Continuing its policy of close cooperation with the United States, President Carías Andino's dictatorial government during 1941 gradually drifted into open hostilities with the Axis powers. Early in the year a stricter curb was placed on German agents and on the anti-United States activities of the German colony in Honduras. In February visas granted to 35 German "tourists" by the Honduran consul in Hamburg were cancelled in Tegucigalpa. Christian Zinsser, German chargé d'affaires in Tegucigalpa, left Honduras on March 14 after having been declared *persona non grata* by the government for his propaganda activities. Berlin retaliated by expelling the Honduran consul in Hamburg. The Honduran Government then forbade Hondurans to employ German and Italian citizens, with the result that many were forced to leave the country.

Following similar action by the United States, President Carías Andino on June 28 ordered the closing of the two German and two Italian consulates in Honduras. On July 29 the President declared that if the United States entered the war, Honduras "would maintain solidarity" with that country. The United States black list in September forced a German firm which had a monopoly on transportation between Tegucigalpa and the Pacific port of Amapala to sell out to Honduras.

Addressing the opening session of Congress on December 4, President Carías Andino charged that enemies of his Government were working with Nazi and Fascist agents, who sought to provoke internal disturbances in Central America in order to place pro-Axis governments in power. He said the Honduran Government would be in complete accord with Washington's policy at all times and in all circumstances. In line with this declaration, the Honduran Congress unanimously declared war on Japan (December 8) and on Germany and Italy (December 12).

See ARCHAEOLOGY; LEND-LEASE ADMINISTRATION.

HONDURAS, British. See BRITISH HONDURAS.

HONG KONG. A British crown colony comprising the island of Hong Kong (32 sq. mi.), Old Kowloon (3 sq. mi.), and the New Territories (356 sq. mi.) leased from China (June 8, 1898) for 99 years. Total area, 391 square miles; total population (1939 estimate, excluding the garrison and 750,000 refugees from China), 1,050,256, of whom 1,026,645 were Chinese and 23,611 non-Chinese. A rough census, taken during 1941 for defense purposes, revealed that there were approximately 2,000,000 people living in the colony. Capital, Victoria. Vital statistics (1939): 46,675 births and 48,283 deaths. Education (1939): 118,193 students in schools of all kinds.

Production and Trade. Twenty per cent (50,187 acres) of the area is under cultivation, the main crops being rice, sweet potatoes, groundnuts, sugar cane, and fruits. Fishing and shipbuilding are important industries. There are factories where cement, flashlights, rubber shoes, matches, gas respirators, and war implements are produced. Trade (1940): HK\$752,880,000 for imports and HK\$622,320,000 for exports (HK\$ averaged

\$0.2298 for 1940). Shipping (1939): 29,198,466 tons entered and cleared. Roads (1940): 384 miles.

Government. Budget (year ending Mar. 31, 1942): HK\$56,786,000 for revenue and HK\$60,-642,715 for expenditure. Public debt (1940): HK\$27,000,000. The colony is administered under Letters Patent of Feb. 14, 1917, and Royal Instructions of the same and following dates, by a governor, aided by an executive council of 9 members. There are 17 members in the legislative council, of which the governor is president. Governor, Sir Mark Young (appointment announced during July, 1941), succeeded Sir Geoffry Northcote who retired for reasons of health.

History. The 100th anniversary of the founding of Hong Kong as a British colony occurred on Jan. 26, 1941. This was the date, 100 years ago, of the British landing. Messages were exchanged between the King and the legislative council of Hong Kong, the latter body passing a special resolution reaffirming the colony's loyalty to the British Crown.

On Mar. 15, 1941, Sir Geoffry Northcote, the governor, who had recently returned from England and Singapore, announced that the colony's assignment in the event of war in the Pacific was to fight. He added, "Certainly we are prepared to defend Hong Kong and we are in a position to do so. I see no reason why such an occasion should arise, but if it does we can hit back." The defenses of the colony continued to be strengthened during 1941. Additional guns of various types were added and a defense plan was adopted for the use of almost all able-bodied male Europeans, many British women, and thousands of British Chinese.

Emergency food stocks were accumulated, miles of air-raid tunnels constructed, small air-raid shelters built, enormous amounts of ammunition stored, and night-raid precautions perfected by frequent blackout drills. All approaches to Hong Kong were mined and Hong Kong Island became a fortress similar to Malta. On Apr. 2, 1941, a wartime measure forbade the export from Hong Kong of a long list of commodities, except by special license. The list included many foodstuffs; iron, steel, non-ferrous metals, and certain alloys; animal, vegetable, and fish oils; fuels, fertilizers, explosives, hides, skins, industrial diamonds, machine tools, plywood, rubber tires, etc.

It was announced in April of 1941 that during 1940 Hong Kong had contributed £400,000 to the Imperial Treasury and, in addition, £100,000 was raised by voluntary subscription for the bomber fund. Other emergency measures were taken to conserve sugar, fish, salt, and other foodstuffs. The Hong Kong government, on Nov. 25, 1941, told the Chinese population what to do in the event of an air attack.

War came to Hong Kong on Dec. 8, 1941, when 9 Japanese planes bombed Kowloon. The Japanese land forces attacked the mainland at Kowloon and after several days fighting the British forces withdrew to the island of Hong Kong where they were under siege until Dec. 25, 1941, when the British Colonial Office in London announced that Sir Mark Young, the governor, had been advised by the naval and military commanders at Hong Kong that further effective resistance was impossible and that he had arranged a negotiated surrender with the Japanese. See JAPAN under *History*; WORLD WAR.

HOPEI. See CHINA under *Area and Population*.

HORSES AND MULES. See LIVESTOCK; VETERINARY MEDICINE. For statistics, see the principal countries under *Production*. For HORSE RACING, see RACING.

HORTICULTURE. The following table, compiled from data released by the U.S. Department of Agriculture, shows that the 1941 fruit crop was apparently the largest yet produced. The total tonnage of fruit was estimated to be 5 per cent over production figures of 1940, although only 2 to 3 per cent above the record crops of 1937 and 1939. Peaches, pears, grapes, cherries, plums showed increased harvest, while prunes and apricots were somewhat under normal production. Citrus fruits were assumed to be only slightly (2 or 3 per cent) under the record haul of 1940-41. Prices, on the average, remained stable throughout the year.

Crop	1941	Unit	1940
Apples	126,076,000	Bu	114,391,000
Peaches	69,610,000	"	54,430,000
Pears	30,819,000	"	31,622,000
Grapes	2,651,430	Tons	2,547,910
Cherries	162,810	"	178,310
Prunes (dried)	188,410	"	177,710
Oranges	84,482,000	Boxes	84,082,000
Grapefruit	41,490,000	"	43,033,000
Lemons	14,680,000	"	17,099,000
Cranberries	743,200	Bbl	580,500
Pecans	86,201,000	Lb.	88,426,000

Total value of sales of commercial truck crops in 1941 was \$354,153,000, as compared with \$284,029,000 in 1940 and the ten-year average, 1930-39, of \$231,557,000, according to the U.S. Department of Agriculture. The following table gives an excellent picture of how truck crop prices increased for the year.

Crop	1941	Unit	1940
Strawberries	\$34,352,000	Crates	\$34,198,000
Asparagus	17,297,000	"	15,984,000
Beans (Snap)	26,747,000	Bu	22,467,000
Beets	2,325,000	"	1,884,000
Cabbage	23,678,000	Tons	15,072,000
Cauliflower	7,193,000	Crates	5,722,000
Cantaloupes	16,547,000	"	14,316,000
Celery	26,331,000	"	21,988,000
Lettuce	39,136,000	"	32,187,000
Onions	27,247,000	Sacks	21,247,000
Peas	26,664,000	Bu	24,196,000
Spinach	6,663,000	"	6,756,000
Tomatoes	78,483,000	"	56,631,000
Watermelons	9,052,000	Melons	8,059,000

Foreign Trade. It was estimated that exports of fruits and fruit preparations dropped 59 per cent in 1941. For the nine-month period ending September, 1941, exports of fruits and preparations totaled \$24,868,002, while vegetables and preparations came to \$22,957,048. Imports of fruits and preparations were \$33,360,456, vegetables and preparations, \$14,855,378.

HOURS OF WORK. See LABOR CONDITIONS under *Hours of Work*; LABOR LEGISLATION; WAGE AND HOUR DIVISION.

HOUSING. See ARCHITECTURE; BUILDING; CONSUMERS' COOPERATIVES; FEDERAL HOUSING ADMINISTRATION; HOUSING AUTHORITY, U.S.; LIVING COSTS; NATIONAL BUREAU OF STANDARDS; PHILANTHROPY under *Buhl Foundation*. For DEFENSE HOUSING, see ARCHITECTURE under *Defense Housing*; HEATING AND VENTILATING; PLANNING; SEWERAGE, UNITED STATES under *Legislation*.

HOUSING AUTHORITY, U.S. (USHA). The United States Housing Authority was created in 1937 as a permanent Federal corporation to assist the several States and their political subdivisions "to remedy the unsafe and insanitary housing conditions and

the acute shortage of decent, safe, and sanitary dwellings for families of low income, in rural or urban communities, that are injurious to the health, safety, and morals of the citizens of the Nation" and "to alleviate present and recurring unemployment."

To achieve these purposes the USHA assists local public agencies (known as "Local Housing Authorities") set up under local law and responsible for planning, building, and operating the new housing, in two ways: First, it makes loans, at low interest, for 90 per cent of the cost of their slum-clearance and low-rent housing projects (which must include the elimination of unsafe and insanitary dwellings in the locality in the same number as the number of new dwellings provided by the project). Second, after the new homes are completed, the USHA makes annual contributions to enable Local Authorities to operate their projects at rents within reach of low-income families from substandard quarters.

At present 39 States, the District of Columbia, Hawaii, Puerto Rico, and the Virgin Islands have low-rent housing legislation. The number of Local Authorities established has reached a total of 616. By the end of December, 1941, 360 urban and rural Local Authorities in all parts of the country had USHA assistance contracts covering 739 projects to house 182,600 low-income families. These contracts amounted to a total of \$756,996,000 out of a \$800,000,000 USHA loan authorization. Under these contracts 142,266 family units were under construction or completed by the end of December; and 97,527 low-income families had moved from unfit quarters into decent new homes.

Only low-income families from substandard housing are eligible as tenants in USHA-aided homes. The rents achieved in the projects have set an all-time low for decent new housing, public or private. In urban slum-clearance projects with rents approved by Dec. 31, 1941, the average monthly shelter rent, excluding utilities, was only \$12.64 per family. The anticipated average family income in the projects with rents approved is \$818 a year, though some families with annual incomes as low as \$300 and \$400 are being served.

The average net construction cost on the 462 USHA-aided projects under construction or completed by the end of December, 1941, was only \$2,726 per dwelling unit. This figure is about 24 per cent lower than the comparable cost of new private housing in the same communities—despite the fact that USHA-aided projects, unlike much private construction, are built for a long life, by labor paid prevailing wages. Meanwhile 87,552 dangerously unsafe and insanitary slum quarters had already been eliminated under local programs as required by the Housing Act.

Authority for utilizing the Nation-wide public housing framework in the solution of housing needs arising from the national defense emergency was provided in legislation enacted by the Congress in 1940 and 1941. By the end of December, 1941, 20 USHA-aided projects, comprising 6,344 family units, had already been opened for occupancy for defense workers and their families and 88 other projects with 23,371 dwelling units were either completed or under construction out of Lanhani Act funds.

Widespread housing needs of both permanent and emergency character thus continued to be met under the USHA program during 1941. Significantly, where emergency needs were being satisfied, there was assurance that the accommodations provided would be available to low-income fami-

lies from the slums as soon as—and long after—the defense emergency is over. See ARCHITECTURE. NATHAN STRAUS.

HOWLAND ISLAND. A mid-Pacific island (0° 49' N. and 176° 40' W.), belonging to the United States. It lies athwart the main steamship lanes and the Pan American Airways route from Honolulu to New Zealand and Australia. An aerological station was established here during 1936 by the U.S. Department of the Interior (see YEAR BOOK for 1936, p. 79, under BAKER, HOWLAND, AND JARVIS ISLANDS). An airfield was constructed during 1937.

HUMANITIES. See PHILOLOGY, CLASSICAL; ROCKEFELLER FOUNDATION.

HUNAN. See CHINA under *Area and Population*.

HUNGARY. A kingdom in central Europe. Capital, Budapest. Regent in 1941, Nicholas Horthy de Nagybanya.

Area and Population. As of Sept. 1, 1940, the area of Hungary was 61,872 square miles and its population about 12,708,439. Of this total, 4,605 square miles and 1,044,438 inhabitants were ceded by Czecho-Slovakia under the Italo-German arbitral award of Nov. 2, 1938. Another 4,690 square miles with a population of 671,962 were acquired through annexation of Ruthenia (Carpatho-Ukraine) and additional parts of Slovakia in March-April, 1939. On Aug. 30, 1940, an Italo-German award transferred to Hungary from Rumania 16,642 square miles in Northern Transylvania with 2,392,603 inhabitants. In April, 1941, Hungarian troops occupied the Yugoslav counties of Backska, Banat, and Baranya, with a population of about 1,200,000.

Living births in 1939 numbered 172,628 (18.9 per 1,000) for that part of Hungary within the frontiers of the Treaty of Trianon; deaths, 123,135 (13.5 per 1,000); marriages totaled 73,287 (8.1 per 1,000) in 1938. Populations of the chief cities at the census of Nov. 18, 1939, were: Budapest, 1,115,877; Szeged, 131,893; Debrecen, 122,517; Pestszenterzsebét, 71,150; Kecskemét, 83,732; Kispeszt, 62,797; Újpest, 72,940; Pécs, 70,547; Miskolc, 73,503.

Defense. As of Jan. 1, 1941, the active army was estimated at 200,000; trained reserves, 1,100,000, active air force, 6,000. Compulsory military service was reintroduced Jan. 28, 1939. Military appropriation for 1941, 385,838,000 pengos. There were four police patrol craft on the Danube but no naval vessels.

Education and Religion. The 1930 census showed 9.6 per cent of the population over six years of age to be illiterate. In 1938-39 there were 1,407 infants' schools with 133,288 children, 8,103 elementary schools with 1,104,916 pupils, 263 middle schools with 79,435 pupils, numerous primary and secondary vocational and special schools, five state-supported universities with 9,823 students (excluding the University of Kolozsvár in Northern Transylvania, acquired from Rumania on Aug. 30, 1940), and 29 theological colleges with 1,229 students.

According to the 1930 census, Roman Catholics comprised 64.9 per cent of the population within the Treaty of Trianon boundaries, Helvetian Evangelicals 20.9 per cent, Augsburg Evangelicals 6.1 per cent, Jews 5.1 per cent, Greek Catholics 2.3 per cent.

Production. Slightly more than half of the working population is engaged in agriculture and nearly one-fourth in industry and mining. Estimated yields of the chief crops in 1940, including all annexed

territories except Northern Transylvania, were (in metric tons): Wheat, 2,067,463; rye, 724,122; barley, 693,102; oats, 434,324; corn, 2,964,038; potatoes, 3,441,353; sugar beets, 1,758,209; tobacco, 16,548; fodder turnips, 3,975,845 in 1939. The wine output in 1939 was 96,145,590 gal. The same territory had 2,605,490 cattle, 1,750,221 sheep, 4,648,463 swine, and 989,450 horses in 1940. An area of 4,921,762 acres was under forest. The production of coal in 1939 was 10,625,452 metric tons; lignite in 1940, 10,308,000 metric tons; bauxite in 1939, 500,193 tons. There were 4,334 factories in 1939, employing 341,636 workmen. The principal manufacturing lines are milling, distilling, sugar refining (130,400 metric tons in 1939), iron and steel, hemp and flax. Pig iron production was 409,292 metric tons in 1939; steel, 732,615 metric tons.

Foreign Trade. According to preliminary returns, imports in 1940 totaled 597,700,000 pengös (489,900,000 in 1939); exports, 503,600,000 (603,700,000 in 1939). In millions of pengös, the leading 1940 imports were: Machinery and apparatus, 47.5; coal and coke, 45.4; wood and timber, 37.8; paper, wood pulp, etc., 36.1 nonferrous metals (except iron), 32; pig iron, iron products, etc., 26.4. Chief exports (in million pengös): Live animals, 89.9; food of animal origin, 71.7; wheat and flour, 59.7; machinery and apparatus, 32.5; feathers, 22.2; iron products, 20.9. Leading sources of 1940 imports (in million pengös): Germany, 316.3; Italy, 55.7; United States, 35.5; Yugoslavia, 33.1; Czecho-Slovakia, 24.4; Rumania, 23.8. Distribution of exports (million pengös): Germany, 249.0; Italy, 76.4; Switzerland, 32.2; Yugoslavia, 22.3; Czecho-Slovakia, 14.9; United Kingdom, 11.7.

Finance. For the calendar year 1941 budget estimates anticipated receipts of 2,036,230,000 pengös and expenditures of 2,084,442,000. The public debt on June 30, 1940, totaled 2,514,498,003 pengös (foreign, 949,800,000; domestic, 1,564,700,000), compared with 2,088,527,230 pengös on June 30, 1939. The average exchange value of the pengö was \$0.1924 in 1939 and \$0.1848 (nominal) in 1940.

Transportation. Excluding Northern Transylvania, the railway trackage in 1940 extended 9,321 miles (mostly state-owned). There were 51,049 miles of roads. Air lines connect Budapest with the principal Hungarian cities and with Vienna, Breslau, and Berlin. The Danube and its tributaries form an important transportation artery.

Government. The monarchical constitution in effect prior to the republican revolution of Oct. 31, 1918, was restored in 1920, but the throne remained vacant. The head of the state in 1941 was the Regent, Admiral Horthy (elected Mar. 1, 1920). A law of July 15, 1937, ended the Regent's responsibility to Parliament. Parliament consisted in 1941 of an Upper House of about 290 members (76 elected by counties and cities, 62 life members appointed by the Regent, and the rest representing various privileged groups) and a Lower Chamber of 335 members, including representatives of annexed territories, chosen for five years by popular male and female suffrage. In 1939 the secret ballot was introduced for the election of Deputies. The Upper Chamber is partly reconstituted every five years.

The composition of the Lower Chamber at the beginning of 1941 was: Party of Hungarian Life (government party), 184; Transylvanian bloc, 42; Cross Arrow party (National Socialists), 42; Hungarian Renaissance party, 17; Independent Farmers, 14; United Christian People's party, 8; Ruthe-

nian bloc, 7; Social Democrats, 5; Civil Liberty party, 5; others, 11. Premier at the beginning of 1941, Count Paul Teleki (appointed Feb. 16, 1939). See below for developments in 1941.

HISTORY

Hungary, by the side of Germany, made war in 1941 successively on Yugoslavia and on Russia. It augmented its territories with a strip of northern Yugoslavia which Hungary had itself ceded in the territorial shifts following the previous European war; but the aim to recover the lost soil still in Rumanian possession did not come to the same quick fulfillment, and indeed it remained uncertain at the end of the year what recompense Hungary might expect for the cost of her help against Russia.

Hungarian help to Germany against Russia cost the giver more, in disturbance of national policies and internal antagonisms than even in the drain on economic and human resources. It involved challenging anew the Hungarian radical peasants, with whom the governing landholders had sought for years to establish a basis of mutual toleration. Similarly, cooperation against Yugoslavia compelled the breaking of a freshly signed pact of "eternal friendship" with the Government of that neighboring state and potentially useful friend. Indeed the advent of close military cooperation with Germany drew Hungary so strongly under German domination as very nearly to suspend the exercise of anything like a national will. The political disaster of entanglement in the German orbit was reflected in the suicide of Count Teleki, Hungarian Premier, in protest against German demands for Hungary's participation in war on Yugoslavia.

Failure of Teleki's Policies. Premier Teleki's last conspicuous manifestation of a nationalist policy at variance with the intentions of the German Government was the conclusion of the treaty of friendship with Yugoslavia on Dec. 12, 1940. Count Stephen Csaky, Teleki's Foreign Minister, in whose department the negotiation of the treaty particularly lay, ranked in general opinion as pro-German, but was at the same time keenly and above all pro-Hungarian. His diplomatic course had led to frequent yielding to Germany in 1940 but seldom if ever to yielding where another method would avail. Csaky's death, Jan. 27, 1941, cost the Ministry a member that it could ill spare.

His successor, Ladislaus de Bardossy, taking office February 4, was called within a few weeks to a conference with German leaders in Munich. There, March 21-23, took shape an arrangement to put Hungary into the ranks of the belligerents on Germany's side; the negotiators did not officially announce what happened at Munich, but the sequel came swiftly. A German note, delivered on March 31, reportedly presented a formal demand for immediate military cooperation on the part of Hungary. Premier Teleki told the Cabinet, April 2, that the outlook was hopeless. He ended his life with a pistol in the night that followed. De Bardossy became Premier, April 4, by appointment of Regent Nicholas Horthy. Within a few days thereafter, German forces peaceably occupied vital points in the country, forestalling any chance of an uprising against the new domination. The British Government broke off relations with Hungary on April 7, and simultaneously hostilities with Yugoslavia began.

Hungary at War. For Hungary's part in the military operations of 1941, see WORLD WAR. The war against Yugoslavia was brief and fruitful. Hostilities with the regular forces of that country lasted less than a fortnight. The Hungarian troops aided

Germany by invading and occupying, without grave difficulty, the formerly Hungarian area north and northwest of Belgrade. Popular sentiment warmly approved the reconquest of this territory lost in the settlements that had followed the war of 1914-18. The Yugoslav forces, overwhelmed elsewhere, lacked men and arms for adequate resistance. On April 12 the Russian Government, through a published declaration, notified Hungary of its disapproval of the latter's attack on Yugoslavia. A Hungarian official statement of April 15 defended the invasion, saying that the overthrow of the regency in Yugoslavia and the secession of Croatia had left that country without any government able to protect the population of the districts that the Hungarian troops entered. In May an agreement with Germany assigned to Hungary a liability of 1,600,000 crowns of the public debt of the former Yugoslavia and, in the way of compensation for this burden, granted all state assets in the territory under Hungarian occupation. In its economic effect, the acquired area tended normally to augment the Hungarian surplus production of foods. One potentially serious difficulty attended the territorial acquisitions: The Rumanian Government showed itself desirous of getting, through German influence, a part of what Hungary had taken from the Yugoslavs.

Hungary would no doubt have refrained from further part in Germany's wars. But this it could not well do; once enlisted, the country found itself bound to continue in active service. Hungary broke off relations with Russia, June 23. Four days later Premier de Bardossy told Parliament that war with Russia had started. With less political difficulty than in April, the country joined the German attack on this second and more dangerous opponent. However Hungary's actual military contribution was limited. The widespread survival of communistic sympathies among the hired workers in Hungarian agriculture and factories assured Russia of many friends among the Magyars themselves. Sending away too many soldiers, under these circumstances, would invite a new Communist revolution like the reign of Bela Kun. At the very outset of war with Russia an outbreak of bombing caused reported explosions among munitions and in a refinery of petroleum. In November came a report via Istanbul that six big Hungarian factories had been bombed or set on fire. Hungary therefore conserved its military resources as a precaution against a possible Axis defeat.

At the same time it was obliged to link its political future more firmly with the Reich. On November 25 the Government joined in the ceremonies in Berlin extending the Anti-Comintern Pact for another five years. On December 6 Great Britain declared war on Hungary when it refused to end hostilities with Russia. The Budapest Government followed Germany still farther on December 13 by declaring war on the United States. This policy of political subservience to Berlin further alienated Hungarian exiles abroad. In October a Free Hungary movement was launched under the leadership of Count Michael Karolyi in London and Dr. Tibor Eckhardt in the United States.

Racial and Political Groups. Locally strong minorities received conciliatory treatment in some respects, prior to German domination. Thus, a decree of March 2 allowed priority to a minority's language in any of the numerous minority schools. Serbians and Jews who had entered after 1918 the territory regained from Yugoslavia, were ordered out of such territory and forbidden to take with them more than small quantities of chattels and

of valuables. A group of some 13,000 Magyars, established in Bukovina for nearly two centuries but still distinct, was "repatriated" into Hungary in June, after the Russian occupation of Bukovina and just before the outset of war with Russia.

The policy as to the Jewish population continued to put restrictions on those of Hungarian citizenship; but for foreign Jews not naturalized, a policy of expulsion was put into effect in August.

HURRICANES. There were six hurricanes in the North Atlantic during September and October, 1941. The first tropical disturbance of the season appeared in the northern Gulf of Mexico on the evening of September 11. This was the first time in over 25 years that the North Atlantic area had been free from tropical disturbances until so late in the season. Annual records from 1887 to the present time show only two other seasons when tropical storms failed to develop before the 11th of September; these seasons were 1907 and 1914 when the first tropical disturbances were observed on September 16th and 14th, respectively. After this very late start in 1941, four disturbances developed in rapid succession in September and these were followed by two others in October.

The hurricane of September 11-15 began as a Gulf disturbance of slight intensity centered about 120 miles southeast of Port Eads, La. The center moved very slowly toward the Texas coast, and as it approached the coast it decreased greatly in intensity and no property damage or injuries were reported. The lowest observed pressure was 29.61 inches.

The hurricane of September 18-26 started near the same place as the preceding one, that is, about 180 miles south of Port Eads, La. The center first moved southward toward the Yucatan coast and the winds increased to gale force. During the night of September 20-21 the storm turned, and moving northward retraced its path until on the evening of the 21st it was again near the region where first observed; it then took a northwestward course through the western Gulf of Mexico and moved inland on the Texas coast near Madagorda on September 23. After moving inland the storm changed its course and traveled in a northeasterly direction and with a rapidly increasing speed. The storm passed over Lake Huron into Canada on the 25th, but by this time it had lost most of the characteristics of a tropical storm. Most of the damage done by this hurricane was along or near the Gulf coast where it passed inland; damage to tangible property was estimated at over \$2,000,000, while damage to crops was even greater, that to the rice crop alone was \$4,000,000. Due to the wide distribution of warnings, 25,000 people left their homes for safer surroundings and only four people were known to have lost their lives. The lowest recorded pressure along the path of the hurricane was 28.66 inches at the Houston, Texas, Airport and the highest wind velocity recorded was 83 m.p.h. at Texas City; stronger winds were probably experienced closer to the storm center. Tidewater covered all the Galveston Island beaches, much of the island beyond the seawall, and entered the lower residential and business sections of Galves-

ton as backwater from the bay. This was the most destructive hurricane of the season.

There was another hurricane of September 18-26; this second one on these dates was confined to the Atlantic instead of in the Gulf; when first noticed its center was about 150 miles east of Titusville, Fla. Its track was quite unusual, for it first moved northward thence eastward, and on the night of the 20th when the center was about 600 miles east of Jacksonville, Fla., it turned and moved northwestward toward the North Carolina coast; finally on the night of the 22nd it changed its course again and moved northeastward and gradually diminished in intensity. Several ships encountered this storm and a few of them reported winds of force 11; the lowest barometer reading reported was 29.39 inches on September 20. No damage was reported from this hurricane.

The hurricane of September 23-30 started as a slight disturbance 75 miles northwest of Barbados. It moved almost due west passing just south of St. Lucia and into the Caribbean Sea where it developed hurricane intensity. On the morning of the 25th the hurricane-buffed freighter *Ethel Skakel* radioed a distress message from 125 miles north of Aruba, Dutch West Indies, and later went down with her cargo of steel rails; of the crew of 33 men only 13 were rescued. Two other vessels sent distress signals from locations near the path of the storm, and one of these was lost with her entire crew of 27 men. The hurricane continued its westerly course until the morning of the 27th when it was just east of Cape Gracias, Nicaragua; it then moved with increased speed in a northwesterly direction across extreme northern Honduras into the Gulf of Honduras and then across British Honduras into the Bay of Campeche. Finally it diminished in intensity and moved inland into Mexico near Vera Cruz as a weak depression on the 30th. Besides the ships at sea which were lost in this hurricane a large amount of damage was reported along the Central American Coast; the lowest barometer reading was 29.32 inches and estimated winds of over 100 m.p.h. were reported.

The fifth hurricane of the season took place from October 3-12; it was first observed over the Atlantic 300 miles north of the Virgin Islands on the evening of October 3. Moving in a west-northwesterly direction, the storm crossed the Bahama Islands and passed a short distance south of Nassau on October 5, at which time it was a small but highly developed storm. On the 6th it crossed the Everglades south of Lake Okeechobee and passed into the Gulf of Mexico between Everglades City and Fort Myers; curving to the north in the Gulf, the storm center moved up the west Florida coast some distance off shore and moved inland again at Carrabelle. The storm diminished somewhat in intensity at this time but was still accompanied by winds with gusts as high as 75 m.p.h. From Carrabelle, Fla., the storm center moved northeastward across Georgia and into South Carolina and finally into the Atlantic. The lowest pressure observed in this hurricane was 28.48 inches at The Bight on Cat Island, one of the Bahamas, and the highest wind velocity was 102 m.p.h. at Nassau. Considerable damage was caused by this hurricane all along its path and a number of persons were drowned, or injured.

The last hurricane of the season was from October 18-21. This hurricane began off the west Florida coast, then moved north-northwestward and passed inland at Cedar Key. Very heavy rains, from 10 to 15 inches, fell near the center of this storm but the strongest winds were only from 40

to 50 m.p.h., nevertheless considerable damage was done and one person killed.

Tropical storms in the northern half of the Pacific Ocean are known as typhoons. There were at least 18 typhoons in the 1941 season and about half of these were known to have caused considerable damage. See RICE.

RICHMOND T. ZOCH.

ICC. See INTERSTATE COMMERCE COMMISSION.

ICELAND. An island state in the North Atlantic, situated 200 miles east of Greenland and about 540 miles northwest of Scotland. It was occupied by British troops May 10, 1940, and proclaimed a United States protectorate for the duration of the World War on July 7, 1941. Area, 39,709 square miles, only one-fourth of which is habitable. Estimated population in 1941, 120,000. Populations of the chief towns in 1939: Reykjavik (capital), 37,366; Akureyri, 4,930; Hafnarfjordur, 3,652; Vestmannaeyjar, 3,506. Elementary education is compulsory and there is virtually no illiteracy. Reykjavik has a university. Over 98 per cent of the people are members of the Evangelical Lutheran Church.

Production Fishing is the chief industry; it supports nearly 30 per cent of the population directly and provides 85 per cent of the nation's exports. In 1937 the fishing fleet numbered 1,000 craft totaling 22,806 tons and including 38 steam trawlers. About 36 per cent of the inhabitants live by agriculture. Potatoes, turnips, and hay are the principal crops. Sheep raising is an important industry; there were 592,000 sheep in 1938. There are few trees and no mineral resources, but extensive peat deposits are used for fuel and many buildings in Reykjavik are heated by water from hot springs. Manufactures include fish, dairy, food, and foundry products, leather, beverages, clothing, shoes, gloves, ship's equipment and stores, paint, furniture, etc.

Foreign Trade. Imports in 1940 were equivalent to 11,121,000 U.S. dollars (\$10,879,000 in 1939); exports, \$20,447,000 (\$12,294,000 in 1939). In 1939 the United Kingdom supplied 22 per cent of the imports by value, Denmark 21 per cent, Germany 16 per cent. Exports went chiefly to the United Kingdom (17 per cent) and to Denmark, Germany, and the United States, each of which took 11 per cent. In 1940 and 1941 Iceland's trade with Denmark and Germany was almost completely interrupted, while commerce with the United Kingdom and the United States greatly increased. United States exports into Iceland rose from \$442,000 in 1939 to \$2,254,000 in 1940 while United States imports from Iceland were \$1,374,551 in 1939 and \$2,672,774 in 1940. Iceland's exports are mainly fish, cod-liver oil, and other fish products, mutton, wool, sheepskins, horses, furs, and eider down.

Finance. Budget estimates for 1941 placed revenues at 18,478,173 Icelandic crowns and expenditures at 18,016,263 crowns (18,594,830 and 17,857,448, respectively, in 1940). The total public and state-guaranteed debt on Jan. 1, 1940, was 56,648,000 crowns (foreign, 49,245,000; domestic, 7,403,000). Official exchange rate of the crown (krona) in 1941, 6.505 crowns equal 1 U.S. dollar, or 1 crown equals \$0.1537.

Transportation. There are no railways. In 1940 there were about 3,000 miles of highways, with 2,288 motor vehicles. A fleet of small Icelandic merchant vessels provides shipping services to the United States and Great Britain. Coastal shipping and a local air line help to maintain communication between Iceland's chief towns. There are nearly 10,000 miles of telephone and telegraph lines.

Government. The Constitution of May 18, 1920 (amended in 1934) provides for a constitutional monarchy. The King exercises executive power through a responsible Cabinet. Legislative power rests conjointly with the King and the Althing, the oldest parliament in the world, established 930 A.D. The Althing consists of 49 members elected by the people. One-third of its members are elected to the upper chamber by the whole Althing; the other two-thirds form the lower chamber. Premier in 1941, Hermann Jónasson (Progressive), heading a coalition Government representing all parties except the Communists, who held three seats in the Althing.

Iceland was acknowledged by the Act of Union of Nov. 30, 1918, to be an independent, sovereign state having a personal union with Denmark through a common king. This treaty expires in 1943, when it may be denounced by either Iceland or Denmark. In 1938 the Althing voted to terminate the union with Denmark upon expiration of the treaty, and a popular referendum was to have been held on this issue during 1940. This program was interrupted by the German occupation of Denmark on Apr. 9, 1940. On April 10 the Althing authorized the Government temporarily to exercise the sovereign powers vested in King Christian X and to assume full charge of Iceland's foreign affairs, previously conducted by Denmark under the Act of Union. On May 10, 1940, British troops occupied Iceland "to insure the security of Iceland against a German invasion." The British Government gave a written pledge to withdraw from the island upon the conclusion of hostilities and to avoid interference with the existing administration (see YEAR BOOK for 1940, p. 344). For 1941 developments, see *History*.

HISTORY

Iceland and the War. Iceland was drawn closer to the vortex of the spreading World War during 1941. On February 9 German long-range warplanes, flying presumably from Norway, circled over Reykjavik and machine-gunned the British-held airport nearby. There were repeated German air attacks upon shipping in Icelandic waters, particularly after the Reich Government on March 25 extended its anti-British blockade zone over all the waters surrounding Iceland and westward to within three miles of the Greenland coast. The Germans claimed that Reykjavik was being used as a transshipment point for United States munitions and other cargoes consigned to Great Britain.

During April the Iceland Government reportedly obtained licenses to purchase \$1,568,287 worth of military and commercial airplanes and munitions in the United States. (For many years previously, Iceland had remained completely defenseless.) During May the British reported large concentrations of German troops, transport planes, and ships in Northern Norway and an attempted invasion of Iceland was believed imminent. About the same time a group of United States army officers visited Iceland.

Independence Declared. On May 16 the Althing took steps to cancel Iceland's personal union with Denmark. It adopted four constitutional amendments, three of them unanimously and the other by a vote of 38 to 3. The first proclaimed Iceland's right to declare itself independent because Denmark was unable to exercise its governmental functions in accordance with the Act of Union of 1918. The second incorporated Iceland's decision not to prolong the Act of Union upon its expiration in 1943. The third provided for the election of a

regent to exercise the King's functions, which had been temporarily assumed by the Althing on Apr. 10, 1940. The fourth provided for the establishment of a constitutional republic as soon as union with Denmark was formally terminated.

Early in June the Danish Government was formally notified of Iceland's decision to end the union. However assurances were given, according to Danish officials, that action on the matter would be postponed until the end of the war, when negotiations could be undertaken. The Althing's action was interpreted as a move to dissociate Iceland from any connection with a German-controlled "new order" in Europe, to which Denmark might be forced to adhere. See DENMARK under *History*.

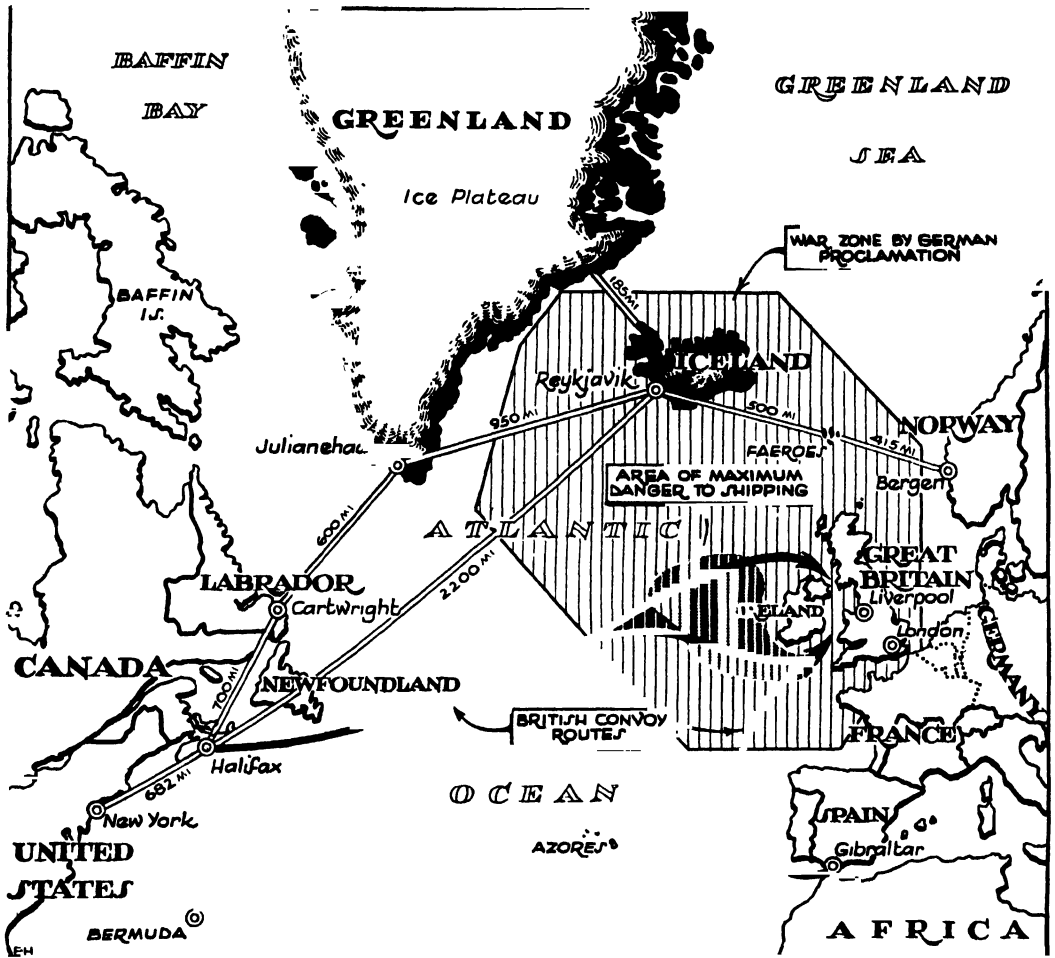

Sveinn Björnsson, Iceland's former Ambassador to Denmark, was elected regent on June 17. In his acceptance speech, he stated that Iceland was still endeavoring to be neutral in the European struggle, although the British occupation and the German sea blockade and attacks on Icelandic citizens had "practically dragged us into the war against our will." Shortly afterwards the British Government revealed that the Government of Iceland had protested against the deportation of a Communist member of the Althing and the banning of a Communist daily paper by British occupation authorities. Relations between the British occupationary forces and the Icelandic people remained friendly, according to reports from the island.

U.S. Protection Accepted. On July 7 President Roosevelt announced to the Congress in Washington that in accordance with an agreement reached between him and the Premier of Iceland on July 1, U.S. naval forces "have today arrived in Iceland in order to supplement, and eventually to replace, the British forces which have until now been stationed in Iceland in order to insure the adequate defense of that country."

The background of this unexpected development was revealed in the correspondence between President Roosevelt and Premier Jónasson of Iceland, appended to the President's message to Congress. On July 1 Premier Jónasson informed Mr. Roosevelt that the British Minister to Iceland on June 24 had told him the British forces there were required elsewhere. According to the Premier's message, the Minister stated that President Roosevelt was prepared to send troops to Iceland "to supplement and eventually to replace the British force" but was unwilling to do so without an invitation from the Iceland Government. The Premier's message continued:

After careful consideration of all circumstances the Iceland Government, in view of the present state of affairs, admit that this measure is in accordance with the interest of Iceland, and therefore are ready to entrust the protection of Iceland to United States on the following conditions:

1. United States promise to withdraw all their military forces, land, air and sea from Iceland immediately on conclusion of present war.
2. United States further promise to recognize the absolute independence and sovereignty of Iceland and to exercise their best efforts with those Powers which will negotiate the peace treaty at the conclusion of the present war in order that such treaty shall likewise recognize the absolute independence and sovereignty of Iceland.
3. United States promise not to interfere with Government of Iceland neither while their armed forces remain in this country nor afterward.
4. United States promise to organize the defense of the country in such a way as to insure the greatest possible safety for the inhabitants themselves, and to assure that they suffer minimum disturbance from military activities, these activities being carried out in consultation with Iceland authorities as far as possible. Also because of small population of Iceland and consequent danger to nation from presence of a numerous army, great care must be taken that only picked troops are sent here. Military authorities should be also instructed to keep in mind that Icelanders have been unarmed for centuries and are en-

Courtesy of The New York Times

THE CRUCIAL NORTH ATLANTIC BATTLEGROUND

tirely unaccustomed to military discipline, and conduct of troops toward the inhabitants of the country should be ordered accordingly.

5. United States undertake defense of the country without expense to Iceland and promise compensation for all damage occasioned to the inhabitants by their military activities

6. United States promise to further interests of Iceland in every way in their power, including that of supplying the country with sufficient necessities, of securing necessary shipping to and from the country and of making in other respects favorable commercial and trade agreements with it

7. Iceland Government expects that declaration made by President in this connection will be in agreement with these promises on part of Iceland, and Government would much appreciate its being given the opportunity of being cognizant with word of this declaration before it is published.

8. On part of Iceland, it is considered obvious that if United States undertake defense of the country it must be strong enough to meet every eventuality and particularly in the beginning it is expected that as far as possible effort will be made to prevent any special danger in connection with change-over. Iceland Government lays special stress on there being sufficient airplanes for defensive purposes wherever they are required and they can be used as soon as decision is made for United States to undertake the defense of the country.

This decision is made on the part of Iceland as an absolutely free and sovereign state and it is considered as a matter of course that the United States will from the beginning recognize this legal status of the country, both states immediately exchanging diplomatic representatives.

On the same date (July 1), President Roosevelt replied that the conditions set for by Premier

Jónasson were "fully acceptable to the Government of the United States and . . . will be observed in the relations between the United States and Iceland." He added that the agreement of the U.S. Congress would be asked to permit the exchange of diplomatic representatives. Stating that troops would be sent immediately, the President's reply continued:

The steps so taken by the Government of the United States are taken in full recognition of the sovereignty and independence of Iceland and with the clear understanding that American military or naval forces sent to Iceland will in no wise interfere in the slightest degree with the internal and domestic affairs of the Icelandic people; and with the further understanding that immediately upon the termination of the present international emergency, all such military and naval forces will be at once withdrawn, leaving the people of Iceland and their Government in full sovereign control of their own territory.

Following the landing of the American forces on July 7, Premier Jónasson in a radio broadcast to the nation read the texts of these messages and announced that more detailed explanations would be given at an extraordinary session of the Althing. The Althing met on July 10 and by a vote of 39 to 3 approved the "agreement between the Government and the President of the United States for American military protection of Iceland while the present war lasts."

British Evacuation Delayed. Premier Jónasson told parliament that Britain had promised to remove all military forces from the island as soon as the United States could land enough men to offer adequate protection. On the previous day Prime Minister Churchill announced in the House of Commons that Britain proposed to keep armed forces in Iceland to cooperate with American forces "in resistance to any attempt by Hitler to gain a footing."

Subsequent developments failed to clear up these seemingly contradictory statements. The British Foreign Minister, Anthony Eden, told the House of Commons on July 16 that all British forces eventually would be withdrawn from Iceland, leaving the island to be guarded by U.S. forces. The Consul General of Iceland in New York on July 22 stated that under the agreement made by the Icelandic and British Governments, "the American forces are in Iceland to replace the British forces which will be withdrawn entirely from Iceland as soon as circumstances allow." However Prime Minister Churchill, stopping at Reykjavik in mid-August following his conference with President Roosevelt off Newfoundland, told a street crowd that Britain and America would jointly defend Iceland and assure it of independence after the war. Despite the arrival of a field force of the U.S. Army in Iceland in mid-September, British forces were still there at the year's end.

Relations with United States. On August 14 Icelandic authorities announced an agreement under which the American Government undertook the large-scale improvement and extension of Iceland's harbor facilities, using American materials and Icelandic labor. Secretary of the Navy Frank Knox announced November 8 the establishment of a U.S. Naval operations Base in Iceland (presumably at Reykjavik) under the commander in chief of the U.S. Atlantic Fleet.

A special Icelandic delegation arrived in Washington August 24 and opened negotiations with the U.S. Government on trade, finance, shipping, and related economic issues. On November 21 the U.S. Government signed a lend-lease agreement with Iceland through which Washington undertook to pay dollars for fish and fish oil exported from Iceland to Britain. The cash advanced to Iceland, estimated at \$20,000,000 annually, was to be charged off to the British under the lend-lease program. The Iceland Government used the dollar exchange placed at its disposal for the purchase in the United States of cereals, machinery, coal, etc., which the British Government had previously undertaken to supply to Iceland. The British-Icelandic trade accord was annulled. On the same day this agreement was signed, President Roosevelt accepted the credentials of Iceland's first Minister to the United States. The intention of the U.S. Government to negotiate a reciprocal trade agreement with Iceland was announced by Secretary of State Hull November 17.

Internal Problems. The influx of British and American troops, the shipping shortage, and the transfer of labor from the farms to work on harbor projects, roads, and fortifications produced a 67 per cent rise in living costs between Jan. 1, and Oct. 22, 1941. This and other "unsettled difficulties" led the coalition government headed by Premier Hermann Jónasson to hand in its resignation on October 22. The Regent, however, postponed acceptance of the resignation "until it is seen how Parliament will handle the problems of rising living costs." Premier Jónasson and his Cabinet resigned for the second time on November 7 when Parliament rejected a bill to limit living costs, introduced by his Progress-

sive party. The Regent this time accepted the resignation, but asked the Government to remain in office until a new government was formed.

See LEND-LEASE ADMINISTRATION; MILITARY PROGRESS; UNITED STATES under *Foreign Affairs*; WORLD WAR.

IDAHO. A mountain State. Area: 83,557 sq. mi., including 749 sq. mi. of inland water. Population: (1940 census) 524,873. The urban population comprises 33.7 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 1.0 per cent (U.S. average, 10.2); elderly (65 years and over), 6.0 per cent. Idaho ranks 12th among the States in area, 42nd in population, and 43rd in density, with an average of 63 persons per square mile. The largest city and capital is Boise with 26,130 inhabitants. There are 44 counties and 7 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 121,411 pupils enrolled in the State School System of Idaho during the school year 1937-38. Of this total, 88,563 were enrolled in kindergartens and elementary schools and 32,898 in secondary schools. The instructional staff comprised 4,471 persons, who received an annual average salary of \$1,087 (U.S. average: \$1,374); 1,413 or 32.9 per cent were men. Expenditures for all public schools in 1937-38 were \$10,047,019, making a total cost per capita of \$20.01 (U.S. average: \$17.15). There were 1,295 school buildings in the State, of which 638 were one-room, one-teacher schools. The value of public property used for school purposes was \$26,599,115. For higher education, see under *Idaho* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 4,872, of which 4,011 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 167,066; 129,454 were private and commercial automobiles, 128 busses, and 33,758 trucks and tractor trucks. Gross motor-fuel consumption was 107,644,000 gallons. Net motor-fuel tax receipts were \$4,825,000, the rate being five and one-tenth cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$2,768,000.

Railways of all classes extended 2,836 miles (Dec. 31, 1939) 1.21 per cent of the total mileage in the United States. Class I steam railways (2,679 miles) reported 5,280,219 tons of revenue freight originating in Idaho in 1940 and 3,317,789 tons terminating in Idaho. There are 46 airports and landing fields in the State (12 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 103 civil aircraft in the State and 727 commercial and private pilots (665 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 2,935,000, as compared with 2,909,000 acres in 1940. According to the latest census, there are 43,663 farms, valued at \$339,194,391, averaging 235.8 acres each. Farm population numbered 203,616 or 38.8 per cent of the total. Leading crops with production were: Wheat, \$23,649,000, 27,822,000 bu.; hay, \$20,191,000, 2,391,000 tons; potatoes, \$14,274,000, 27,450,000 bu.; dry beans, \$6,013,000, 1,888,000 bags; barley, \$5,814,000, 11,400,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 549 manufacturing es-

tablishments in Idaho, employing 10,877 wage earners who received \$12,754,127 in wages for the year. The total value of products was \$90,475,147; value added by manufacture, \$31,770,204.

Mineral Production. Leading mineral products are: Silver, of which 16,605,000 fine oz. valued at \$11,808,000 were produced in 1941, according to preliminary figures of the U.S. Bureau of Mines; zinc, 155,200,000 lb., \$11,795,200; lead, 207,000,000 lb., \$11,592,000; gold, 150,000 fine oz., \$5,250,000. Production of zinc increased about 10 per cent as compared with the previous year, but silver production declined by 5 per cent. Total value of mineral production in 1939 was \$33,138,635 or 78 per cent of the total for the United States. See GEOLOGICAL SURVEY; TUNGSTEN.

Trade. According to the 1940 census there were 989 wholesale establishments in Idaho, employing 4,695 persons, reporting net sales for 1939 of \$105,510,000 and annual pay roll of \$5,282,000. There were 6,804 retail stores with 16,549 employees, reporting sales of \$175,873,000 and pay roll of \$16,189,000. Service establishments numbered 2,140, employing 2,397 persons for \$2,038,000 per year, and reporting a business volume amounting to \$8,630,000. The leading business center of the State is Boise which reported wholesale sales of \$16,878,000 and retail sales of \$22,103,000. Ada County, including the city of Boise, is the leading county in the State in the volume of receipts for its service establishments (\$1,541,000).

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Idaho was \$11,466,000. Under the Social Security program, financed by Federal funds matching State grants, 9,318 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$22.76 (U.S. average pension, \$21.08); 7,666 dependent children in 3,048 families received average monthly payments of \$30.10 per family (U.S. average, \$32.73); and 278 blind persons received \$22.48 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 1,410 and received \$13.81 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 670 (\$44,000); NYA student work program, 1,650 (\$14,000); NYA out-of-school work program, 1,345 (\$33,000); WPA, 6,444 (\$382,000); other Federal emergency projects, 30 (\$3,000); regular Federal construction projects, 1,232 (\$132,000). The Farm Security Administration certified subsistence payments totaling \$14,000 for the month to 445 cases.

Legislation. The Legislature convenes in regular session on the first Monday after January first in odd years. It is composed of 44 Senators (23 Democrats and 21 Republicans in 1941) and 64 Representatives (38 Democrats and 26 Republicans). The following summary of 1941 legislation is reprinted from the Boise (Idaho) *Capital News*:

Few changes were made in Idaho's governmental structure as scores of new laws were placed on the statute books after the Idaho legislature adjourned its 26th session. On the financial side, the record of the 26th legislative session was good—the ad valorem tax levy was reduced despite increased appropriations for State governmental functions and only one new tax measure was enacted. It was the bill increasing State tax on liquor 20 per cent and its passage provided revenue for balancing of the 1941-42 budget for State departments. It was expected to raise more than \$1,000,000 during the next two years and retire outstanding warrants left by the last administration. On the strictly governmental side, the house and

senate passed legislation which will lead to reform of the State's fiscal and penal systems. Appropriation measures tied up the final days of the session, but when the smoke had cleared the total was \$18,274,485—about \$2,123,000 less than the amount of appropriations which had been approved by the Governor.

Gov. Chase A. Clark did not obtain extra money for relief during the session, but he obtained control of the State liquor dispensary, State insurance fund, and taxing agencies. His "pet bills" constituted only a portion of the laws which were enacted during the session from a maze of legislation.

Three companion senate joint resolutions provided the Idaho electorate with three constitutional amendments to be voted on in November, 1942. If the voters approve, the result will be complete remodelling of Idaho's penal system. Jointly, the bills call for amendment of the constitution to abolish the present State Board of Prison Commissioners and permit the State legislature to establish a non-partisan board to be known as the Board of Correction. The three-man board, appointed by the Governor, would have complete authority over prison operations. At best the change can not go into effect until 1943. A fourth constitutional amendment was contained in a resolution to permit sale of State-owned land at the rate of \$5 per acre.

Some of the most important governmental changes enacted into law concerned State bookkeeping and fiscal procedures. Governor Clark signed a series of bills, sponsored by State Auditor Calvin E. Wright, which will start the fiscal year on July 1, instead of January 1. This was regarded as important because it puts the State in line with the federal government, and simplifies the process of appropriating funds for State departments. Under the old fiscal year system, the legislature had to make emergency appropriations to carry the departments through the 60 days of the session, or until regular allocations were made.

Also approved was a \$50,000 fund to conduct a State inventory and set up a "general ledger." The latter will provide the State with a day to day check on expenditures and income—helping to prevent over-spending. To supplement the general ledger, laws were passed to make it compulsory for State department heads to prepare requests for funds needed to carry them through quarterly periods. By making it necessary to ask for funds in advance, the legislature hoped to prevent over-drawing of appropriations. Under new laws, each appropriation must be "tagged" for a specific use. This was done to prevent use of certain funds for purposes which the legislature did not intend. The auditor must also issue quarterly reports on expenditures and disbursements. All appropriations must be spent by June 30 of the year following the next session of the legislature, preventing carry over of unexpended funds.

Changes were made in income tax laws to require federal and State employees to file State tax returns, eliminating federal income taxes as a deductible item from State income taxes, and repealing the 1939 law which permitted gasoline dealers to deduct their license taxes from income computations.

Governor Clark's program of abolishing State commissions was adhered to, and by the end of the session the State tax commission, liquor commission, insurance compensation commission, and noxious weed commission had been abolished. In the case of the noxious weed commission, its duties were transferred to the Department of Agriculture, but the other boards were replaced by single superintendents appointed by the Governor.

Scores of minor bills were enacted, some enabling counties and cities to perform functions heretofore prohibited, some changing court procedures, others relating to dozens of various governmental functions. Court procedures were revised in several minor instances, and the maximum penalty for rape was changed to permit discretion of the judge. The minimum sentence for rape was reduced from five years to one year imprisonment.

Although several attempts were made to change Idaho's election system, only one revision will be made in the ballot. It provides that names of presidential and vice-presidential candidates be placed on the ballot along with names of electors grouped by parties.

Henceforth, Idaho potatoes will appear on the market under new grading designations. The new grades are Idaho deluxe, Idaho standard, and Idaho utility. The designations were based on weight, size, and condition of the product.

Finances. Total tax collections in Idaho for the fiscal year ending in June, 1941, were \$14,915,000 (1940: \$14,053,000). Total sales taxes amounted to \$5,574,000, including motor fuel, \$5,356,000. Taxes on specific businesses ran to \$1,538,000, general and selective property, \$2,613,000, unemployment compensation, \$2,058,000. The net income taxes were \$2,156,000. Cost payments for the operation of general government totaled \$15,486,000 in 1939, the latest year available. (Revenues for the

general government for that year were \$17,760,-000.) Cost of operation per capita was \$29.84. Total gross debt outstanding in 1941 was \$1,986,000, as compared with \$7,525,000 in 1932. See above under *Legislation*.

Officers and Judiciary. The Governor is Chase A. Clark (Dem.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Charles C. Gossett; Secretary of State, George H. Curtis; Attorney General, Bert. H. Miller; State Treasurer, Myrtle P. Enking; State Auditor, Calvin E. Wright. Chief Justice of the Idaho Supreme Court is Alfred Budge; there are five justices elected by popular vote for six-year terms.

ILLINOIS. An east north central State. Area: 56,400 sq. mi., including 453 sq. mi. of inland water, but excluding part of Lake Michigan, 1,526 sq. mi. Population: (1940 census) 7,897,241. The urban population comprises 73.6 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 5.0 per cent (U.S. average, 10.2); elderly (65 years and over) 7.2 per cent. Illinois ranks 23rd among the States in area, third in population, and ninth in density, with an average of 141.2 persons per square mile. The capital is Springfield with 75,503 inhabitants; largest city, Chicago, 3,396,808. There are 102 counties and 59 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to John A. Wieland, Superintendent of the Department of Public Instruction, there were 1,287,085 pupils enrolled in the public schools of Illinois for the school year ended June 30, 1940, 907,922 in elementary schools and 379,163 in secondary schools. Teachers numbered 49,132 and received an annual average salary of \$1,714.23. Total expenditures for the year \$126,697,905.37. For higher education, see *Illinois* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 11,566, of which 11,503 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 1,941,206; 1,706,639 were private and commercial automobiles, and 219,175 trucks and tractor trucks. Gross motor-fuel consumption was 1,540,441,000 gallons. Net motor-fuel tax receipts were \$41,824,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$24,760,000.

Railways of all classes extended 11,981 miles (Dec. 31, 1939) 5.10 per cent of the total mileage in the United States. Class I steam railways (9,713 miles) reported 77,711,313 tons of revenue freight originating in Illinois in 1940 and 78,745,721 tons terminating in Illinois. There are 70 airports and landing fields in the State (23 lighted fields) and one seaplane base and six seaplane anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 1,230 civil aircraft in the State and 3,838 airline transport, commercial, and private pilots (3,038 private). See *ROADS AND STREETS; WATERWAYS, INLAND*.

Agriculture. Gross value of farm crops produced in 1941 totaled \$497,762,000, an increase of 43 per cent over 1940, and the highest since 1924. Corn rose to \$276,940,000 or 56 per cent of the total value of principal crops for the year. Acreage harvested in principal crops came to 18,617,000, as compared with 18,319,000 acres in 1940. According to the latest census, there are 213,439

farms, valued at \$2,537,117,306, averaging 145.4 acres each. Farm population numbered 976,964 or 12.4 per cent of the total. Leading crops with production were: Corn, \$276,940,000, 401,362,000 bu.; soybeans, \$73,692,000, 49,128,000 bu.; wheat, \$36,586,000, 35,520,000 bu.; oats, \$58,563,000, 154,112,000 bu.; commercial truck crops, \$5,527,-000.

Manufacturing. According to the latest census (covering the year 1939) the total value of manufactured products was \$4,794,860,733. For details, see 1940 YEAR BOOK.

Mineral Production. Leading mineral products in 1940 were (with 1939 figures in parentheses): Petroleum, 146,788,000 bbl. (94,912,000 bbl. valued at \$101,200,000), coal, 49,495,000 net tons (46,450,000 net tons, \$76,178,000); pig iron shipped from furnaces, 4,093,623 net tons valued at \$73,882,065 (3,203,846 net tons, \$57,718,814); coke, 3,014,840 net tons (1,884,240 net tons, \$11,-963,932); stone, 9,209,170 short tons, \$7,556,497 (8,420,120 short tons, \$7,820,589); cement, 4,937,-127 bbl., \$7,209,431 (4,801,292 bbl., \$7,056,746); sand and gravel, 10,103,214 short tons valued at \$5,578,309 (8,755,193 short tons, \$4,686,487). Clay products (other than pottery and refractories) were valued at \$7,107,144 in 1939. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$210,295,738 or 4.97 per cent of the total United States production. (Duplications are eliminated in State totals; e.g. pig iron and coke are omitted.) Illinois ranks sixth among the States in value of minerals produced.

Trade. According to the 1940 census there were 14,498 wholesale establishments in Illinois, employing 122,741 persons, reporting net sales for 1939 of \$4,998,766,000 and annual pay roll of \$228,407,000. There were 109,132 retail stores with 332,003 employees, reporting sales of \$2,857,-646,000 and pay roll of \$339,072,000. Service establishments numbered 42,697, employing 84,810 persons for \$98,074,000 per year, and reporting a business volume amounting to \$294,956,000. The leading business center of the State is Chicago which reported wholesale sales of \$4,080,415,000, retail sales of \$1,514,829,000, and \$212,532,000 receipts for its service establishments. Peoria reported sales of \$83,323,000 wholesale and \$61,-146,000 retail; Springfield, \$29,637,000 and \$41,-040 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Illinois was \$212,964,000. Under the Social Security program, financed by Federal funds matching State grants, 146,636 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$23.17 (U.S. average pension, \$21.08); 16,526 dependent children in 7,409 families received (without Federal aid) a total payment of \$172,535; and 7,410 blind persons received (without Federal aid) a total payment of \$223,427. General relief cases, which are supported by State and local funds only, numbered 113,900 and received \$21.55 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 6,754 (\$447,-000); NYA student work program, 25,762 (\$225,-000); NYA out-of-school work program, 24,104 (\$511,000); WPA, 95,519 (\$5,649,000); other Federal emergency projects, 1,463 (\$184,000); regular Federal construction projects, 25,376 (\$5,574,000). The Farm Security Administration certified sub-

sistence payments totaling \$14,000 for the month to 653 cases.

Legislation. The General Assembly convenes in regular session on Wednesday after the first Monday of January in odd years. It is composed of 51 Senators (23 Democrats and 28 Republicans in 1941) and 153 Representatives (73 Democrats, 79 Republicans, and one vacancy). The 62d General Assembly convened Jan. 8, 1941, and adjourned sine die on June 30. In addition, a special session convened on December 18 and was still in session at the end of the year. Appropriations of the regular 1941 session were the highest in history, exceeding \$510,000,000. The reduction of the sales tax from 3 to 2 per cent, effective July 1, caused loss of \$65,000,000 in anticipated revenue, and an unusual number of new taxes were accordingly imposed. They included a one-mill tax on cigarettes, doubling of the tax on liquor and beer and a substantial increase in the tax on wine, and imposition of a 3 per cent tax on oil production. A summary of other important enactments follows, as condensed from the *Chicago Tribune*, June 29, 1941:

Banks. H B 432 prescribes that double liability of bank stockholder shall be limited to one year

Cities, Villages, etc. S. B. 10 revises cities and villages act S B 505 authorizes tax increase for Chicago Public library from 1.2 mills but not to exceed 2 mills H B 165 authorizes creation of medical center in Chicago H B 537 authorizes cities to operate parking lots H B 663, 664, and 665 provide for permanent registration in downstate area

Civil Service S B. 268 to 271 and 359 requires applicants for civil service examinations to pay fees

Counties S B. 61 authorizes counties to operate and maintain airports. S. B. 115 and 116 increases sheriff's fees and authorizes county boards to purchase and maintain police radio systems H B 161 provides for election of county auditors in all counties under township organization having population between 75,000 and 300,000

Courts. S. B. 470 liberalizes provisions for judicial pensions S. B. 565 authorizes women to serve on grand juries H. B. 241 prohibits demands in garnishment upon employe or employer before judgment is obtained

Crime, Parole, etc. H. B. 103 revises parole act Authorizes judges in criminal cases to make minimum and maximum advisory recommendations within limits of indeterminate sentence act. H. B. 411 creates new state department of public safety

Elections. H. B. 501 and 502 makes all general election days holidays. H. B. 552, 553, and 554 provide for punishment of giver of election bribe as well as recipient, increase penalties

Fireworks. H. B. 70 prohibits sale or use of explosive fireworks except at supervised displays

Horse Racing. S. B. 68 abolishes Illinois Racing commission and creates Illinois Racing board. Increases take from tracks from 7½ per cent to 10 per cent of money wagered

Labor and Welfare. S. B. 682 and 683 increases work man's compensation 10 per cent for disability from occupational disease. S. B. 691 extends workmen's compensation act in 1942 to cover establishments employing one or more positions. H. B. 850 requires payment of the prevailing rate of wage on state work H. B. 46 eliminates insurance policies, \$500 or less from applications for relief H. B. 899 to 401 bring Illinois under federal aid to dependent children [ADC] plan. H. B. 681 and 918 revises the law relative to mentally ill persons; permits voluntary self-commitment to institutions. H. B. 837 renames the Illinois Emergency Relief commission as the Illinois Public Aid commission

Motor Vehicles and Roads. H. B. 221 increases from 25 to 50 cents drivers' license or drivers' permit for operators under 18 years old. H. B. 429 requires instructions in highway safety and traffic regulations in all educational institutions supported wholly or partly by state funds H. B. 758 repeals section of traffic code under which courts have convicted motorists for certain serious driving offenses without suspending driver's license H B 761 and 764 licenses and regulates new and used car dealers Reduces fee for duplicate dealer's auto plates from \$10 to \$3. H. B. 763 reduces to 50 cents chauffeurs' license now \$5 with \$3 renewal fee. H. B. 765 increases from \$200 to \$300 bond requirement for truckers paying ton-mile tax H. B. 766 adds hit and run to traffic offenses revoking driver's license. H. B. 794 increases from 35 to 40 feet legal maximum length of tractor and semitrailer combination S. B. 141 to curb cheating, bars ownership of both chauffeur's license and driver's license

National Preparedness S. B. 154 authorizes creation of state council of defense. H. B. 11 to 14, 16 to 22, 24, 25 prohibits aliens from obtaining professional licenses to

practice in Illinois. [Vetoed] H. B. 129 preserves civil service pension rights of employes of municipal corporations who enter army or navy service H. B. 297, 298, and 299 bars communists, Nazis, and other un-American organizations from the election ballot H. B. 800 prohibits paying of salaries or expenses to state employes who advocate un-American principles S B 178 preserves civil service rights for state employes entering military or naval service. H B 198 requires employers to rehire former employes returning from military or naval service.

Miscellaneous S. B. 520 and 521 authorizes creation of Illinois State Public Building authority to buy buildings for state offices and exempt them from taxation. S. B. 710 creates commission to investigate strip mining in Illinois. H. B. 87 directs legislative reference bureau to draft revision of Illinois statutes H B 149 fixes one day minimum requirement for applications to wed H B 279 regulates practice of professional engineering. H B 329 prohibits employer from selling to his employes any merchandise he does not produce or handle H B 331 and 832 make Lincoln's birthday, Feb. 12, a school and legal holiday, and if it falls on Sunday makes following Monday a legal holiday H B 622 designates June 14 as Flag day H B 930 requires at least two officers of a corporation operating a drug store to be registered pharmacists S B 694 provides for conservation of oil, gas, and coal resources by department of mines H B 131 ratifies interstate oil and gas compact. See LABOR LEGISLATION

Finances. Total tax collections in Illinois for the fiscal year ending in June, 1941, were \$280,872,000 (1940: \$270,148,000). Total sales taxes amounted to \$156,205,000, including general sales, \$101,761,000, motor fuel, \$43,302,000. Taxes on specific businesses ran to \$21,597,000, general and selective property, \$513,000, unemployment compensation, \$70,625,000 Cost payments for the operation of general government totaled \$165,883,000 in 1939, the latest year available. (Revenues for the general government for that year were \$275,406,000) Cost of operation per capita was \$21.11 Total gross debt outstanding in 1941 was \$160,783,000, as compared with \$222,737,000 in 1932.

Officers and Judiciary. The Governor is Dwight H. Green (Rep.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Hugh W. Cross; Secretary of State, Edward J. Hughes, Attorney General, George F. Barrett, State Treasurer, Warren Wright; State Auditor, Arthur C. Lueder Chief Justice of the Illinois Supreme Court is Walter T. Gunn; there are six associate members elected by popular vote for nine-year terms.

ILLITERACY. See the countries under *Education*.

ILLUMINATION. Fluorescent lighting, four-year-old infant in the field of illumination, continues in pre-eminence. Introduced in 1938, fluorescent lamps were produced and used in that year to the extent of only some 200,000. This figure has grown—in 1939 to 1,600,000; 1940, 7,000,000; 1941, 22,000,000 This prodigious growth in manufacture no more than kept pace with the expanding demand for fluorescent lighting, principally for industrial and commercial installations Hundreds of industrial plants, backbone of the nation's rapidly expanding war effort, have installed lighting equipment providing illumination intensities of 50 foot-candles or more, and 85 per cent of these are fluorescent. The first plant to be designed for and devoted exclusively to the manufacture of fluorescent lamps was built and placed in operation during 1941 near Fairmont, W. Va., with an initial capacity of 50,000 lamps per day and an ultimate of 200,000. This five-acre windowless blackout plant makes full use of its own products including more than 5,000 40-watt fluorescent lamps to produce 40 foot-candles of illumination at the working plane; also germicidal lamps to irradiate the conditioned air that is distributed throughout the plant.

Fixtures, commercial and industrial, for the use of fluorescent lamps were notably improved in quality and appearance in 1941, and extended in range of types available. By the end of the year 10 different sizes of these lamps had become available, ranging from 9 to 60 inches in length and from 6 to 100 watts. In color range, all of these were available in 3,500° white and in daylight; most of them also in red, pink, gold, green, blue, and "soft" white.

Incandescent lamps also set a new record with a total output of 1,328,000,000 lamps—718,000,000 large and 610,000,000 small lamps including flashlight, automobile, and other such lamps. This is a third more than were reported for 1940, when the billion mark was reached for the first time. In 1931 the reported total was 570,000,000. Comparison of these totals gives a good rough measure of the increased use of electric energy for illumination.

Germicidal lamps, something of a byproduct of fluorescent-lamp development, are finding ever-widening and apparently successful use in controlling the growth of various molds and fungi involved in various manufacturing processes, and also in controlling the air-borne bacteria which spread respiratory diseases. With better food and health now matters of especially vital national concern, significant additions to the line of available sunlamps are of interest. One of these for 1941 is the common S-4 lamp element placed in a reflector-type globe to multiply its effectiveness. Another is a 275-watt self-contained unit small enough to be carried in a woman's handbag. This latter is a reflector-type lamp utilizing the high-intensity capillary mercury-arc lamp which made its debut in some of the powerful searchlights at the New York World's Fair in 1939.

A new photoflash lamp about the size of a walnut reaches its peak output of light in 0.005 second and completes its flash in 0.015 second, a characteristic very useful in open-lens flash photography. Another new flashbulb is designed to give the sustained flash required for use with focal-plane shutters. A "blackout flashbulb" giving off invisible infra-red radiations has been used for photography during blackouts in England and has been announced for early availability in the United States. Film sensitive to infra-red is required for use with this lamp.

The sealed lamp-and-reflector type of units developed for passenger automobiles in 1940 has been adapted to trucks, busses, and transports, and is being adapted to various military uses.

Highway and street lighting is given importance by statistics which show that some 50 per cent of all motor-vehicle accidents and 60 per cent of all traffic fatalities occur during night hours in spite of the greatly reduced volume of traffic during those hours. Thirty or more of the larger cities and towns of the United States, and many smaller ones, initiated or continued programs of street-lighting improvement during 1941—for added safety and to increase the effective use of streets and highways as a defense measure. For blackout protection, rapid progress has been made in the development of low-intensity glow-lamps and also ultra-violet lamps for use in conjunction with fluorescent paints and other materials for roadway markers that will accommodate slow-moving traffic under emergency conditions. Longest continuous lighted highway in the world is the new Queen Elizabeth Way, now completed from Toronto to Niagara Falls, Canada, (70 miles) and to be extended another 21 miles to the Canadian entrance to the Peace Bridge connecting with Buffalo, N.Y. Standard installation on

this highway are 6,000-lumen fixtures 200 feet apart and 26 feet above the pavement, supplemented by sodium luminaires at intersections and other danger points.

In terms of dollars and cents, a report presented to the Illuminating Engineering Society during 1941 covering a survey of some 200 miles of hazardous highways in the United States showed that an investment of about \$200,000 (\$1,000 per mile) had in the course of from one to four years reduced both the rate and the severity of traffic accidents, 195 fewer deaths and \$6,000,000 less in accident costs.

Many of the year's improvements in lighting equipment and applications are serving national defense and military purposes.

G. ROSS HENNINGER.

ILO. See INTERNATIONAL LABOR ORGANIZATION.
IMMIGRATION AND NATURALIZATION SERVICE. See IMMIGRATION, EMIGRATION, AND NATURALIZATION.

IMMIGRATION, EMIGRATION, AND NATURALIZATION. The Immigration and Naturalization Service of the U.S. Department of Justice administers the Federal immigration and nationality laws.

Improvements in Administration. The transfer of the Service in June, 1940, from the Department of Labor to the Department of Justice was followed by the establishment in Washington of an improved system of administering the Field Service. Chief Supervisors of Immigration, the Border Patrol, Special Inspections, and Naturalization function under the Deputy Commissioner in charge of the Field Service. In the Central Office at Washington, the office of General Counsel has been established and administrative functions, which have increased with the growth of the Service and the increases of its work, have been newly organized under an Executive Officer, assisted by an Assistant Executive Officer, a Budget and Fiscal Control Officer, and an Instructions Officer. The Board of Immigration Appeals, formerly known as the Board of Review, has been expanded to five members, and the Examining Division of the Board has been enlarged to cope with increased work caused by new statutes and the institution of new procedures. These improvements had resulted by the end of the fiscal year, June 30, 1941, in more effective administration.

Immigration and Emigration. During the fiscal year which ended June 30, 1941, 51,776 persons, comparatively few of whom may have been here before, left their homes in foreign countries and were admitted to the United States for permanent residence, a decrease of 18,980 from the 1940 total. Aliens admitted for temporary stay or after a brief sojourn abroad, chiefly visitors, transits, and returning residents, numbering 100,008 were admitted, a decrease of 38,024, or about 27 per cent from 1940. While this does not include cruise passengers, travelers between continental United States and outlying possessions, and persons habitually crossing and recrossing the international land boundaries, it is thus clear that the number of aliens being admitted into the United States from abroad is relatively small. However, unsettled international conditions have made it imperative that the qualifications and credentials of all aliens coming to the United States be examined with even more thoroughness than heretofore.

The greatest volume of movement into and out of the United States takes place across the land boundaries. During fiscal 1941 there were 38,974,008 such entries (including each individual crossing of the border by any traveling alien or United

States citizen), of which 18,617,633 were by aliens and 20,356,375 were by citizens. The total number of admissions of all classes into the United States, after inspection by officers of the U.S Immigration and Naturalization Service, was 40,554,347.

The admissions of aliens who commenced their permanent residence in the United States and the departures of aliens for permanent residence in other countries are shown in Table I. The admissions as quota immigrants for permanent residence from countries which are assigned quotas under the Quota Act of 1924 are shown in Table II.

TABLE I—IMMIGRANT ALIENS ADMITTED AND EMIGRANT ALIENS DEPARTED, FISCAL YEARS 1940 AND 1941, BY COUNTRIES OF LAST OR INTENDED FUTURE PERMANENT RESIDENCE

Countries	Immigrants		Emigrants

Australia	156	137	126	106
New Zealand	51	57	36	50
Other countries	160	237	1,533	2,025

Note 1.—The number of immigrants given above as admitted include not only quota immigrants as shown in Table II but nonquota immigrants, being wives of citizens, husbands who married citizen wives prior to July 1, 1932, children of citizens, etc. It will also be noted that this table is based on the country of last residence of the immigrant. These figures do not, therefore, agree accurately with the immigration quota figures included in Table II, because the quota under which any immigrant is admitted is that of the country of his birth, not that of the country of his last residence. Note 2.—Immigrants admitted from the "barred zone" of Asia are mainly persons of the white race.

The number of aliens debarred at ports of entry during 1941 was 2,929. Of these 2,076 were not permitted to enter because they were without valid consular visas, and 322 were refused entry because they were likely to become public charges.

Repatriations and Deportations. The Immigration

and Naturalization Service is authorized to remove to other countries at government expense aliens who have fallen into distress or need public aid from causes arising after their entry and who want to be so removed. Under these provisions, 185 applications were received during the fiscal year 1941. Of these 167 were granted and 152 aliens were so repatriated.

TABLE II—ANNUAL QUOTAS ALLOTTED UNDER 1924 ACT, AND QUOTA IMMIGRANTS ADMITTED, FISCAL YEARS 1940 AND 1941, BY COUNTRIES OR REGION OF BIRTH AND SEX

American colonies		374	250
Other quota regions	1,850 ²	396	508
Sex: Male		26,463	18,291
Female		25,534	17,929

¹ Includes aliens to whom visas were issued during the latter part of the preceding year which were charged to the quota for that year. Nationality for quota purposes does not always coincide with actual nationality. See section 12 of the act.

² Quota for colonies, dependencies, or protectorates included with allotment for the European country to which they belong.

During the fiscal year, 4,407 aliens were deported under warrants of deportation, and 6,531 deportable aliens were allowed to depart at their own expense without warrants of deportation. The total of enforced departures was thus 10,938, as compared with 15,548 during the previous year. The use of more effective methods in preventing illegal entry and the present impossibility of obtaining transportation for aliens deportable to many European countries are among the reasons for this decrease.

The principal classes of aliens deported under warrants were, in order, "entered without valid visa," "criminals," "previously debarred or deported," and "remained longer than authorized." Over half of the aliens deported, or 2,752, were returned to Mexico; 957 were returned to Canada; 251 to Europe; 135 to Asia; and 312 to other countries.

The Border Patrol. Unsettled international conditions increase the responsibilities of the Border Patrol. The average size of the force of Border Patrol officers and employees of all grades on duty during the fiscal year 1941 was 1,465. The transportation

consisted of 514 automobiles, 36 trucks, 26 saddle horses, 15 patrol boats, and 15 outboard motor craft.

During the fiscal year, officers of the Border Patrol patrolled 12,207,780 miles and questioned 3,518,353 persons. Criminal prosecutions totalling 1,804 resulted from Border Patrol apprehensions of persons for violation of the immigration laws. These were disposed of by 1,746 convictions and but 58 acquittals and dismissals.

Aliens and Alien Registration. Under the Alien Registration Act of 1940 (see YEAR BOOK for 1940), the Immigration and Naturalization Service was required to register and fingerprint, through post offices, all aliens in the United States, except foreign government officials and members of their families. Aliens in the United States on Aug. 27, 1940, were given until Dec. 26, 1940, to register. Aliens coming to the United States after Aug. 27, 1940, and expecting to remain more than 30 days, are required to be registered and fingerprinted within that time. During the four-months' period, 4,741,971 aliens were registered in continental United States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Their States of residence are shown in Table III. By Oct. 24, 1941, 4,921,452 aliens had registered in continental United States, its Territories, and possessions. Their classification by continent and country of birth is shown in Table IV. See the article entitled ENEMY ALIENS.

TABLE III—DISTRIBUTION OF ALIEN REGISTRANTS BY STATES
(Registrations completed during the registration period ending Dec. 26, 1940)

State	Alien population	Percentage	Order
New York	1,212,622	25.7	1
California	526,937	11.1	2
Pennsylvania	361,475	7.6	3

³ Includes Russia in Asia

⁴ Does not include Northern Ireland, British Asiatic Possessions, British Pacific Possessions, British African Possessions, British West Indies, and British Guiana

⁵ Does not include Korea and Japanese Pacific Possessions

Naturalization. The desire of aliens to become citizens of the United States continued with increased intensity. In the fiscal year 1941, 224,123 declarations of intention were filed, as compared with 203,536 in 1940 and 155,691 in 1939. Petitions for naturalization numbered 277,807, and certificates of naturalization issued, 277,294.

The nations to which aliens admitted to citizenship during the fiscal year, 1941, formerly owed allegiance were: British Empire, 72,760; Italy, 40,827; Poland, 31,654; Germany, 27,719; Soviet Russia, 19,939; Czechoslovakia, 10,890; Sweden, 8,128; Hungary, 7,992; Yugoslavia, 7,867; Greece, 4,913; all other countries, 44,605.

New Legislation. Of the numerous proposals advanced in Congress affecting aliens, several of importance were enacted into law.

The Act of July 1, 1940, required aliens admitted into the United States as officials of foreign governments either to maintain their status or to depart from the United States, with the approval of the Secretary of State.

The Act of July 2, 1940, provided that native-born women who have heretofore lost their citizenship by marriage to aliens, were restored to citizenship if they had resided continuously in the United States since the date of marriage.

Another Act of July 2, 1940, related to the naturalization of certain aliens who entered the United States under 16 years of age, and who filed petitions to become citizens within one year after reaching their twenty-first birthday. This Act, however, has been regarded as being in conflict with the Nationality Act (see YEAR BOOK for 1940) which became effective Jan. 13, 1941.

Two bills of a fiscal nature were enacted into law, that of Aug. 22, 1940, providing for the deposit of certain collections for overtime service to the credit of the appropriation for the payment of such compensation, and that of Oct. 10, 1940, providing better facilities for the enforcement of customs and immigration laws relating to ports, as well as the erection of fences and gates at the international boundaries.

The Act of June 20, 1941, authorized the re-

fusing of visas to aliens whose admission to the United States would endanger public safety.

The Act of June 21, 1941, extended the provisions of the Act of May 22, 1918, providing that during the existence of the present national emergency which was proclaimed by the President on May 22, 1941, or when the United States is at war, the President may, by proclamation, restrict the entry and departure of persons from the United States. See REFUGEES.

LEMUEL B. SCHOFIELD.

IMPORTS. See TRADE, FOREIGN and articles there referred to. For import revenues, see CUSTOMS.

IMRO. See BULGARIA under *History*.

INAUGURATION. See DEMOCRATIC PARTY; UNITED STATES.

INCENDIARIES. See BOMBS.

INCINERATION. See GARBAGE AND REFUSE DISPOSAL.

INCOME, INCOME TAXES. See AGRICULTURE; LIVING COSTS AND STANDARDS; NATIONAL INCOME; PUBLIC FINANCE; TAXATION.

INDIA. A dependency of the British Empire, consisting of British India, or the territories subject to British law, and the Indian States, ruled by native princes but under the indirect control of the British Parliament. Capital, New Delhi. Summer seat of government (April to October), Simla.

Area and Population. The total population of British India and the Indian States under British control (except Burma) was officially estimated at 365,900,000 on Jan. 1, 1939. The area and population of the British (governors') provinces and of the Indian States and Agencies at the 1931 census are shown in the accompanying table.

BRITISH PROVINCES AND INDIAN STATES—
AREA AND POPULATION

British Provinces	Area in sq. miles	Population, 1931
Ajmer-Merwara	2,711	560,292
Andamans and Nicobars	3,143	29,463

^a Separated from India in 1937.

NOTE.—Figures for the Provinces include those of the States attached to them except in the case of Madras, where they exclude Cochin and Travancore.

According to preliminary results of the census taken in March, 1941, the population was 388,-

800,000, of whom 200,928,000 were males and 187,872,000 females. The Provinces of British India contained 295,827,000 inhabitants and the Indian States and Agencies 92,973,000. The total population increased by 50,681,000, or 15 per cent, between 1931 and 1941 as compared with a 10.6 per cent increase between 1921 and 1931. The largest percentage increases in the British Provinces during 1931-41 were: Delhi, 44.1; Northwest Frontier Province, 25.2; Punjab, 20.4; and Bengal, 20.3; and in the States and Agencies: Punjab States, 21.4; Travancore, 19.1; and Cochin and Rajputana, 18.1 each. Calcutta, with a population of 2,100,000 in 1941 (excluding suburbs), replaced Bombay as the largest city; it showed an increase of 968,000, or nearly 85 per cent, for the decade. There are only about 34 towns with a population of 100,000 or more as nearly three-fourths of the inhabitants are agricultural, living in some 750,000 villages.

Registered births in the British provinces in 1938 numbered 9,398,011 (34.1 per 1,000); deaths, 6,685,120 (24.3 per 1,000). Populations of the chief cities at the 1931 census, with provisional 1941 returns in parentheses, were: Calcutta, with suburbs and Howrah, 1,485,582; Bombay, 1,161,383 (1,490,000); Madras, 647,230; Hyderabad, 466,894; Delhi (including Shahdara, New Delhi, and Cantonment), 447,442; Lahore, 429,747; Ahmedabad, 313,789 (592,000); Bangalore, 306,470; Lucknow, 274,659 (382,000); Amritsar, 264,840; Karachi, 263,565 (360,000); Poona, 233,855 (238,000); Cawnpore, 243,755 (437,000); Agra, 229,764 (284,000); Nagpur, 215,165; Benares, 205,315 (259,000).

Education and Religion. Of 296,301,570 persons over five years of age enumerated for literacy at the 1931 census, 28,138,856 were able to read and write. Those with a knowledge of English numbered 3,600,000, but only 319,000 used English as their normal medium of speech. The rest of the population was divided into more than 20 major language groups and innumerable subsidiary groups. In British India there were 226,331 schools of all kinds in 1937-38 with an enrollment of 13,831,707 pupils. About one-half of the primary schools were aided or maintained by the government. Universities numbered 15 with 10,139 students. The 1931 census showed 229,195,140 Hindus, 77,677,545 Moslems, 12,786,806 Buddhists, 8,280,347 followers of tribal cults, 6,296,763 Christians, 4,335,771 Sikhs, 1,252,105 Jains, 109,752 Zoroastrians, and 24,141 Jews.

Production. Recent harvests in metric tons (in the 1939-40 season unless otherwise stated) were: Wheat, 10,093,400; rice, 38,532,000 (excluding several States); cane sugar, 2,770,000; tobacco, 495,800 (excluding most Indian States); cotton, 907,200; barley (excluding Indian States), 2,119,500 (1938-39); corn (excluding Indian States), 2,080,800 (1938-39); coffee (incomplete returns), 16,000 (1938-39); tea, 205,000 (1938-39). Jute production (1939) was 1,748,100 metric tons. Estimated production of oil seeds in British India in 1939-40 was (in long tons): Peanuts, 3,002,000; rape and mustard, 1,097,000; linseed, 467,000; castorseed, 94,000; sesame, 415,000. India has nearly one-third of the world's total cattle population. In British India alone there were over 84,000,000 cattle, 30,000,000 water buffaloes, 22,000,000 sheep and 26,000,000 goats in 1935.

Metallurgical and mineral output was (in metric tons): Steel ingots and castings, 1,365,000 in 1940; pig iron, 2,000,000 in 1940; coal (British India only), 25,044,000 in 1939; iron ore, 1,790,000 in

1938; copper (smelter), 6,800 in 1939; manganese ore, 669,000 long tons in 1939; rock salt, 166,000 long tons in 1939. The 1940 gold output was 9,000 kilograms. The leading manufacturing industries, with the number of workers employed in 1937, were: Cotton spinning and weaving, 474,134; jute mills, 305,785; cotton ginning and pressing, 133,210; railway and tramway workshops, 104,691; sugar factories, 76,523; tea factories, 65,453; rice mills, 43,856; general engineering, 43,571; iron and steel smelting and steel rolling mills, 39,818. The European War forced a rapid expansion of manufacturing after 1939.

Foreign Trade. The accompanying table shows the development of India's merchandise trade in 1939 and 1940 (calendar years).

	1939 rupees	1940 rupees
Exports:		
Indian merchandise	1,803,687,000	2,083,547,000
Reexports	89,834,000	101,598,000
Imports	1,893,522,000	2,185,145,000
Export surplus	1,610,313,000	1,630,124,000
Export surplus	283,209,000	555,021,000

For the 12 months ended Nov. 30, 1940, the chief exports were (in 1,000 rupees): Jute manufactures, 596,374; tea products, 262,535; raw cotton, 267,673; raw jute, 165,928; cotton manufactures, 131,617; oilseeds, 114,541. Leading imports were (in 1,000 rupees): Grain, 284,595; petroleum products, 189,703; machinery, 136,818; cotton goods, 123,343; raw cotton, 97,139. The distribution of exports for the period January–November, 1940, was (1,000 rupees): United Kingdom, 715,083; other parts of British Empire, 447,513; United States, 247,655; Japan, 100,997. The principal sources of imports for the same period were (1,000 rupees): United Kingdom, 392,257; other parts of British Empire, 488,185; United States, 221,659; Japan, 189,264.

Finance. For the fiscal year ending Mar. 31, 1942, the Central Government's budget estimates anticipated revenues of 1,063,900,000 rupees and expenditures of 1,268,500,000. Actual receipts in 1940–41 totaled about 1,037,100,000 rupees; expenditures, 1,121,300,000. Defense appropriations in the 1941–42 budget were 841,300,000 rupees; civil expenditure estimates, 427,200,000 rupees. Defense costs covered only the expense of defending India's own borders. Indian troops abroad were supported by the British Treasury and the British Government provided without charge much of the equipment for modernizing the army in India (see *History*). The funded debt as of Mar. 31, 1940, amounted to 4,502,300,000 rupees and £280,100,000. Early in 1941 the government effected compulsory repatriation of all of India's outstanding terminable sterling debt to a total of £90,000,000. It was replaced by rupee and other securities bearing a lower rate of interest. Average exchange value of the rupee was \$0.3328 in 1939 and \$0.3016 in 1940.

Transportation. The Indian railway mileage on Mar. 31, 1940, was 41,156 (Imperial state lines, 29,731; Indian state lines, 7,131). The Imperial state lines in 1940–41 reported a surplus of 145,900,000 rupees and gross traffic revenues of about 1,092,500,000 rupees. Roads in British India in 1940 extended 319,131 miles. Highway expenditures were increased from 7.8 million rupees in 1939–40 to 10.8 million in 1941–42. Air service was provided by local airlines and by the British and Dutch international trunk lines. Vessels entering the ports with cargoes in the coastal trade in 1938–39 had a tonnage of 16,444,179.

Government. The King of Great Britain and Northern Ireland also bears the title of Emperor of India. The Constitution, known as the Government of India Act, 1935, provided for an Indian federation and provincial autonomy. Provincial autonomy went into effect Apr. 1, 1937, when elective legislative assemblies with responsible ministries were established in the 11 Governors' Provinces under direct British rule. In October–November, 1939, the All-India Congress ministries in seven of the 11 provinces resigned and on Nov. 5, 1939, the Governor General utilized his emergency powers to restore all governing powers in these provinces to the appointive British governors (see 1939 YEAR BOOK, p. 360). Parliamentary government was retained in the other three provinces throughout 1941.

The federation scheme provided for the union under a central government of the 11 Governors' Provinces and the 584 Native States ruled by Princes owing suzerainty to the British Crown. For different and often contradictory reasons federation was opposed by most of the politically vocal elements in India (see preceding YEAR BOOKS). Following the outbreak of the European War, the Governor General announced Sept. 11, 1939, that no further steps toward federation would be taken until peace was concluded.

In the meantime executive powers were concentrated in the hands of the Governor General, or Viceroy, who is appointed by the Crown, usually for five years, and assisted by an appointive Council, composed of high officials responsible for the various administrative departments. The Governor General also holds the separate office of Crown Representative (established Apr. 1, 1937) through which he performs the functions of the Crown in relation to the Native States. Pending the federation of the Governors' Provinces and Native States, the Governor General remained under the direction of the Secretary of State for India in the British Cabinet, and the Central Legislature of British India, established in 1921, continued in existence. The Legislature consisted of a Council of State of 32 elected and 26 nominated members (serving five years) and a Legislative Assembly of 102 elected and 39 nominated members (serving three years). The Central Legislature's actions were not binding on the Governor General and his Cabinet.

The All-India Congress, the most powerful Indian political party, captured 57 of the 102 elective seats in the Legislative Assembly in the 1934 elections. Due to delay in putting the federation scheme into effect, the Governor General extended the life of the 1934 Legislative Assembly by four successive acts to Oct. 1, 1941. Governor General and Crown Representative, the Marquess of Linlithgow, who assumed office Apr. 18, 1936. See below for political developments during 1941.

HISTORY

India in 1941 took an active part in the war of the British Empire against Germany and Italy, yet none the less carried on her own political struggle against British domination and for self-government. She thus offered the strange spectacle of a third party at grips with both at once of a pair of antagonists engaged in a struggle of their own. It helps to an understanding of India's position if one bears in mind, first that the several warlike Indian minority peoples gave abundant military aid to Britain, while the agitation for immediate and full self-government had behind it a great body of Hindus opposed to direct violence in every form. The number of political leaders who both opposed Great Britain and advocated violence in that op-

position was almost nil. Among the warlike minority peoples few individuals shared in the nationalist enthusiasm so keenly as to dull the readiness to enlist in the Indian forces.

The political institutions underwent little actual change, but throughout the year the possibility of such change repeatedly appeared in the course of the dispute over the country's future status. The manufacturing industries of India, steadily augmenting their output of a wide variety of goods essential to war, made the country the British Empire's chief arsenal in the Orient. The abnormal suspension of changes in the tenure of places of high authority continued. The British Crown extended the Marquess of Linlithgow's term as Viceroy until April, 1943. The Viceroy added a year to the terms of members of the Central Legislature. The British Parliament prolonged for the same period the emergency powers of appointive Governors to rule the seven provinces in which the All-India Congress's parliamentary ministries resigned in 1939. In the four remaining provinces, where ministers responsible to the provincial parliaments had not been overthrown, the parliamentary system weathered another year.

The Viceroy's Executive Council was augmented in July to a total of 12 members, from the previous seven; by this measure the Viceroy sought, not only to lighten the assigned tasks that the activity incidental to war had made heavy for the individual members, but also to bring Hindus of good standing into contact with the central administration even though many leading Hindu bodies held aloof in protest against the deferment of nationalistic aims.

Campaign for Indian Autonomy. Linlithgow's proposal of Aug. 8, 1940, which embodied an offer to let representatives of India write their own constitution, under which the land could take rank as a dominion in the British group of autonomous governments, brought no more accord in 1941 than it had brought in the year before. L. S. Amery, Secretary of State for India, pointed out in the British House of Commons, April 23, that the British Government attached to this offer two conditions: India must provide for due fulfilment of obligations that Great Britain's long connection with India had imposed; and the proposed constitution must spring from "agreement between the principal elements of India's national life," lest it make strife and chaos instead of order.

These British offers again failed to win the favor of the All-India Congress party. The Nationalists objected, in part, that they wanted an immediate settlement of their political status and would not willingly wait until the end of the war. Some of them had reason, as devotees of non-resistance, to dislike Amery's reference of April 23 to the need for "growth of India's own capacity to defend herself unaided." The offer to let Indians make their own constitution did not necessarily signify that they should make it by universal suffrage; but Nationalists demanded the election, by universal adult vote, of the members of a constituent assembly—that is, by a vote in which souls, those of pacifists included and prevailing, would outweigh swords. The ambition to bring about this triumph of the lamb over the lion inhered in the very beliefs of the non-resistants; but it caused them to put aside the thought that at this very moment the British power was relying on the pugnacity of about 750,000 men recruited mainly from the warlike minorities of India to help in many such violent tasks as driving Britain's enemies from northern Africa, holding Suez and Singapore, and shutting off

hostile access to India itself through Iraq or Iran. Amery rejected the desired universal vote in a speech at Manchester November 18.

New irritants found their way from time to time into the controversy. A gathering in the spring, at Bombay, including a number of Indian statesmen not associated with either of the chief parties (Congress Party and Moslem League), produced a resolution for creating a new Executive Council, responsible during the war to the Crown alone and not to the legislature. The leader of the Moslem League rejected the resolution's proposal and denounced the document as a trap set up by some friends of the Congress Party in order to catch and discredit opponents. The Nationalists as a body had reason to feel bitterly antagonistic to a proposal the very reverse of their demands for the immediate establishment of a government on their own terms, war or no war. Amery's speech of April 23 in the British House of Commons made it plain, at some length, that the British Government had no liking for the Bombay resolution nor for its advocacy by Sir Tej Bahadur Sapru, veteran of the Round Table Conferences of 1930-32. The proposal, disowned by all who could have made it formidable, was finally dropped. Presently, however, the issue in August of the Atlantic Charter (q.v.) raised in India the question whether the broad declarations of the Charter were to apply there. Churchill declared at Westminster, September 19, that "the joint declaration did not qualify in any way the various statements of policy which had been made from time to time about the development of constitutional government in India." Indian discontent with this exclusion of the country from any concessions that it might have claimed by benefit of the Atlantic Charter took form in resolutions of the Indian Legislature expressing "deep discontent."

Gandhi and the Congress Party. While the formal political situation in India showed little or no improvement over 1940, a gradual but material change occurred in sentiment within the Congress Party. This body held the majority of the seats in the lower house of the Central Legislature; it controlled the vote of a great mass of the non-Moslem majority of the population; and it consisted essentially of a relatively small number of constantly active members. The chief of these at the outset of the year were Mohandas K. Gandhi, Maulana A. K. Azad, and Jawaharlal Nehru. Gandhi, member of the party's working committee, better known in India and out of it than any other Indian, veteran commander in the bloodless war of "civil disobedience" waged against British rule, led the party and shaped its course. Azad was President of the party, Nehru former president. Gandhi's campaign of passive resistance to the British, started in September, 1940, was in operation. Though no acceptable estimate of the number participating in it appeared, it evidently disturbed the country's routine of life enough to embarrass and worry the government. Gandhi's object was to compel the British regime to grant India self-government right away, on the party's own terms, without consideration of the hindrance that the incidental popular disturbance and change might make for Great Britain as a belligerent against Germany, Italy, and potentially Japan.

The Viceroy's government stood firm against acts of civil disobedience involving offense against the Defense of India Act. It had sent Nehru to prison in November of 1940; Azad in turn was arrested, Jan. 3, 1941, and sentenced to prison for 18 months. Hundreds of other active members of the

party were put in prison for more than brief terms between September, 1940, and December, 1941. Gandhi himself remained at liberty, having on a former occasion made himself more formidable in confinement than at large. On his part, Gandhi took care in various ways so to limit civil disobedience as to avoid reproach of giving palpable help by it to Britain's enemies. He declared, April 21, that the movement was neither anti-Moslem nor anti-British; at the same time he denied that the movement was causing a then-active outbreak of riots between Moslems and Hindus, which kept up over much of the year and brought about the deaths of many hundreds of the common people. Gandhi declared, October 12, the hope that Britain and Germany would grow exhausted and soon make peace without either's defeat.

Gandhi's plan to win self-government in the moment of Britain's necessity formed a serious threat to British rule. It made use of the impatience of the Congress Party to deliver to the people the blessings promised. Yet it lost ground during 1941 and by the end of the year had apparently come to the verge of failure. Two troubles developed in its functioning. The active men of the Congress Party had begun to find that civil disobedience had failed to obtain the results desired. At the same time the German advance through western and southern Russia in the autumn brought German forces near enough to India to furnish a subject of real concern. The British authorities seized the consequent opportunity to win the party from Gandhi's control. They released simultaneously, December 4, about 500 imprisoned members of the party, among them, Azad and Nehru, all of the number had been imprisoned on account of acts of civil disobedience. After the wholesale release the press reported expectation that the Congress Party would change its attitude to Britain; and soon Gandhi, requesting to be relieved of leadership of the party, was accordingly put aside by the party's working committee. Gandhi's letter to the committee declared that he would separately continue civil disobedience in concert with people of his selection. He intimated that the committee was no longer altogether against participation in aid to Britain in the war. He was taken to mean that he laid down his partisan stewardship from disapproval of an impending shift in the Congress Party toward some degree of cooperation with the British authorities.

Indian Military Effort. India, even without its hundreds of millions of pacifist supporters of the Congress Party, commanded great human and material resources for war and put them in great measure to use. The armed forces of India were reckoned at some 500,000, as stated in the Indian Legislative Assembly, February 28. Gen. Wavell gave the number as nearly 750,000, August 14. The corresponding total before the war (1938) was 292,000. The later approximations no doubt included most or all of a considerable total of Indian forces serving elsewhere. Early in 1941 the total serving abroad was estimated at 60,000. The warlike elements of the population displayed readiness for voluntary enlistment, and many of the native princes took a vigorous part in the military effort. The Indian manufacturing industries were stated in April to be supplying some nine-tenths of all the supplies necessary to the country's armies and in particular to be turning out rifles, machine-guns, and cannon, as well as some tanks. A factory was preparing to make airplanes. Much of the output of the divers warlike industries depended chiefly on the rising and prosperous Indian industry in the production of iron and steel.

In connection with India's place in the war, the establishment of a direct diplomatic link with the United States helped the Indian effort. The governments of India and the United States assigned envoys to each other, July 20-21. Sir Girja Shankar Bajpai went to Washington as Agent General for India in the United States. Thomas M. Wilson became United States Commissioner to India. Sir Girja reported early in December that goods were beginning to pass from the United States to India under the lease-lend act.

See BIRTH CONTROL; CHEMISTRY, INDUSTRIAL; GREAT BRITAIN under *History*; SEISMOLOGY.

INDIA, Portuguese. See PORTUGAL under *Colonial Empire*.

INDIANA. An east north central State. Area: 36,291 sq. mi., including 86 sq. mi. of inland water, but excluding part of Lake Michigan, 228 sq. mi. Population: (1940 census) 3,427,796. The urban population comprises 55.1 per cent of the total (U.S. average, 56.5 per cent); non-white population, 3.5 per cent (U.S. average, 10.2); elderly (65 years and over), 8.3 per cent. Indiana ranks 37th among the States in area, 12th in population, and 11th in density, with an average of 94.7 persons per square mile. The largest city and capital is Indianapolis with 386,972 inhabitants. There are 92 counties and 35 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Clement A. Malan, Superintendent of Public Instruction, there were 656,229 pupils enrolled in the public schools of Indiana during the school year 1940-41, 459,434 in elementary schools and 196,795 in secondary schools. Teachers numbered 23,240 and received an annual average salary of \$1,321.15. Gross total expenditures for the year were \$66,067,493 (current, \$52,932,410). For higher education, see *Indiana* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,789, of which 9,765 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 1,003,240; 856,528 were private and commercial automobiles, 1,321 busses, and 136,157 trucks and tractor trucks. Gross motor-fuel consumption was 700,360,000 gallons. Net motor-fuel tax receipts were \$26,068,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$10,596,000. See ROADS AND STREETS.

Railways of all classes extended 6,899 miles (Dec. 31, 1939) 2.93 per cent of the total mileage in the United States. Class I steam railways (3,277 miles) reported 28,388,569 tons of revenue freight originating in Indiana in 1940 and 38,333,148 tons terminating in Indiana. There are 46 airports and landing fields in the State (15 lighted fields) and two seaplane anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 646 civil aircraft in the State and 1,971 airline transport, commercial, and private pilots (1,682 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 9,986,000, as compared with 9,845,800 acres in 1940. According to the latest census, there are 184,549 farms, valued at \$1,251,491,614, averaging 107.3 acres each. Farm population numbered 818,220 or 23.9 per cent of the total. Leading crops with production were: Corn, \$122,151,000, 177,030,000 bu.; wheat, \$34,705,000, 34,665,000

bu.; hay, \$24,081,000, 2,435,000 tons; oats, \$21,648,000, 54,120,000 bu.; soybeans, \$21,100,000, 14,552,000 bu.; commercial truck crops, \$12,762,000.

Manufacturing. According to the latest census (covering the year 1939) the total value of manufactured products was \$2,227,648,011. For details, see 1940 YEAR BOOK.

Mineral Production. Leading products in 1940 were (with 1939 figures in parentheses): Pig iron, 5,333,915 net tons valued at \$97,407,801 (3,780,364 net tons, \$68,164,618); coke, 6,412,716 net tons (4,878,033 net tons, \$28,532,944); coal, 18,565,000 net tons (16,650,000 net tons, \$24,642,000), stone (incomplete figures) 4,498,490 short tons, \$5,822,006 (4,338,690 short tons, \$7,469,659). Clay products other than pottery and refractories were valued at \$5,629,014 in 1939. The total value of production in 1939, according to the U.S. Bureau of Mines, was \$53,423,223 or 1.26 per cent of the United States total. (Duplications are eliminated in State totals; e.g. pig iron and coke are omitted.) Indiana ranks 19th among the States in value of minerals produced.

Trade. According to the 1940 census there were 4,842 wholesale establishments in Indiana, employing 23,555 persons, reporting net sales for 1939 of \$847,035,000 and annual pay roll of \$42,844,000. There were 47,317 retail stores with 123,192 employees, reporting sales of \$1,066,383,000 and pay roll of \$110,895,000. Service establishments numbered 16,662, employing 20,434 persons for \$17,479,000 per year, and reporting a business volume amounting to \$64,131,000. The leading business center of the State is Indianapolis which reported wholesale sales of \$374,483,000, retail sales of \$188,553,000, and \$17,976,000 receipts for its service establishments. Fort Wayne reported sales of \$47,614,000 wholesale and \$56,175,000 retail; Evansville, \$51,544,000 and \$45,234,000, respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Indiana was \$68,812,000. Under the Social Security program, financed by Federal funds matching State grants, 67,236 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$18.52 (U.S. average pension, \$21.08); 35,108 dependent children in 17,032 families received average monthly payments of \$29.05 per family (U.S. average, \$32.73); and 2,369 blind persons received \$20.84 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 23,490 and received \$13.75 (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 2,651 (\$176,000); NYA student work program, 7,872 (\$53,000); NYA out-of-school work program, 10,886 (\$227,000); WPA, 34,067 (\$1,858,000); other Federal emergency projects, 62 (\$6,000); regular Federal construction projects, 41,392 (\$8,839,000) The Farm Security Administration certified subsistence payments totaling \$4,000 for the month to 178 cases.
